Regulation of organization and representation of employees; collective bargaining, and employer and union practices; proceedings under the National Labor Relations Act and related federal statutes and analogous state acts.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**LAW 746 – LEGISLATION**

3 credits.

Use of statutes and legislative materials in litigation and decision; problems of the lawyer in the interpretation of statutes, in representation of the client before legislative bodies, and in the presentation and argument of statutory authorities to a court.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**LAW 747 – EMPLOYMENT LAW**

3 credits.

Broadly explores the role of law in policy development and regulation of the individual employment relationship with a focus on hiring and firing, leave, privacy, health and safety, unemployment insurance, and compensation. Content is largely exclusive of questions of discrimination and collective bargaining.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Recognize and understand key doctrines and concepts rooted in common law, statutes, regulations, policy, and customs that govern the relationship between individual employees and their employers

Audience: Graduate

2. Develop a facility for interpreting these doctrines and concepts and applying them to realistic scenarios

Audience: Graduate

3. Identify and discuss key debates regarding the virtues and limits of these doctrines and concepts as means of regulating the employment relationship

Audience: Graduate

4. Discuss the history and contemplate the future of law and policy in this realm

Audience: Graduate

**LAW 748 – ANTITRUST**

3-4 credits.

Law relating to trade regulation and competitive practices; anti-trust and comparable laws dealing with monopoly, restraint of trade, and unfair methods of competition.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**LAW 749 – TRADEMARKS**

2-3 credits.

Practical introduction to a neglected but socially and economically important field. Interaction of a developing common and federal law with the behavior and interests of businesspersons and consumers.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**LAW 750 – LEGISLATION AND REGULATION**

3 credits.

Legislation and regulation play the dominant role in shaping law in the modern American legal system. All lawyers, irrespective of the area of law must understand statutes and regulations. An introduction providing a deeper understanding of these forms of law and the institutions that make this law, and to help them better appreciate the role that lawyers play in the American legal system as it operates in practice. To think like a lawyer, and hence to represent or advise clients, requires an ability to do so in the context of the regulatory state.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Explain the role of legislatures, administrative agencies, and courts in the U.S. legal system

Audience: Graduate

2. Explain the relationship between and among these institutions

Audience: Graduate

3. Describe the role that lawyers play in furthering their clients' interests in each of these institutions

Audience: Graduate

4. Explain the differences in the forms of legal argument that occur in these different institutions

Audience: Graduate

5. Relay how courts interpret statutes

Audience: Graduate

6. Describe how administrative agencies interpret and implement statutes

Audience: Graduate

7. Describe how courts oversee the interpretation and implementation of statutes by administrative agencies

Audience: Graduate

**LAW 751 – PATENT LAW**

2-4 credits.

Survey of the law of industrial property, including the law of patents and trade secrets.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **LAW 752 – COPYRIGHT LAW**

2-4 credits.

Survey of state and federal laws affecting a variety of intellectual and creative products.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

### **LAW 753 – INTRODUCTION TO INTELLECTUAL PROPERTY LAW**

3-4 credits.

Survey of the laws of patents, copyrights, trade secrets, trademarks. Discussion of relationship of these laws to the laws of property, trade regulation, and privacy. Exploration of competing or complementary policy rationales for each intellectual property area.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **LAW 754 – TECHNOLOGY LAW**

3 credits.

Examines how the legal system and technology interact. Topics include the economic and social impacts of technology; the uncertainties technology raises for the law; the strategies through which courts, legislatures, administrative agencies, and international institutions resolve these uncertainties; and efforts by incumbent and newcomer industries to use the legal system to advance their interests. Technologies discussed may include smartphones, autonomous weapon systems, domestic drones, robotics, driverless cars, cyberwarfare, the railroad, the internet of things, social media, big data analytics, the sharing economy, generative AI, and other breaking developments.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Articulate the recurring law and policy questions raised by new technologies

Audience: Graduate

2. Identify the strengths and limitations of legal responses including law-by-analogy, making new law, and reconfiguring legal institutions

Audience: Graduate

3. Evaluate legal challenges and appropriate responses with respect to specific technologies at the center of current regulatory debates

Audience: Graduate

### **LAW 760 – ROLE OF THE POLICE IN A FREE SOCIETY**

3 credits.

Major problems especially in large urban areas. Specific aspects of the police function, such as their role in responding to serious deviant conduct, to self-destructive behaviour, to community conflict, and to the need for protecting constitutional rights and democratic processes. Problems that arise in defining police authority, in reviewing and controlling police discretion, and in seeking to achieve accountability of the police to the citizenry.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2019

### **LAW 765 – EQUAL EMPLOYMENT LAW**

3-4 credits.

The growth, development, and implementation of equal employment opportunity law.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**LAW/NURSING 768 – HEALTH JUSTICE CLINIC**

1-7 credits.

Interdisciplinary health advocacy clinic providing broad individual and system advocacy for patients facing life changing health events. Advocacy topics include: medical decision-making, insurance, medical debt, disability and related policies and laws.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify and describe personal values and beliefs related to patient advocacy.

Audience: Graduate

2. Identify how racism, sexism, homophobia, transphobia, ablism and other forms of oppression impact clients and the delivery of health care in the US.

Audience: Graduate

3. Communicate effectively in writing and in conversation to a range of audiences including patients.

Audience: Graduate

4. Recognize opportunities for advocacy in individual client situations.

Audience: Graduate

5. Design effective advocacy plans to address client needs.

Audience: Graduate

6. Recognize ethical dilemmas and develop informed plans for ethical practice.

Audience: Graduate

**LAW 771 – SELECTED TOPICS IN ESTATE PLANNING**

1-3 credits.

Intermediate and advanced topics in estate planning; topics reflect interests of available faculty and students.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**LAW 772 – THE USE OF TRUSTS IN ESTATE PLANNING**

2-3 credits.

Survey of common uses of trusts in estate planning, with a focus on drafting of appropriate provisions to accomplish estate planning objectives.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**LAW 785 – INTRODUCTION TO ISLAMIC LAW & JURISPRUDENCE**

2-3 credits.

Provides an understanding of the internal workings of Islamic law at its theoretical roots. Analyzes the various methodologies that are represented in Islamic legal literature, identify modern manifestations of these methodologies in contemporary Muslim discourses. Attention to the specific doctrinal areas of Islamic family law and criminal law. Contextualizes the subject of Islamic law within various governmental and constitutional structures, beginning with the classical period, continuing through colonialism and reaching into the present day.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**LAW 790 – LAW OF DEMOCRACY**

3 credits.

Examine the laws that structure the U.S. democratic system, including voting rights, electoral districting, the regulation of political parties, and campaign finance. Addresses the key constitutional principles and federal statutory provisions that govern these areas, with special emphasis on recent legal developments. In addition to covering doctrine, consider the theoretical underpinnings of the electoral system, the role of courts in overseeing the system, and proposals for reform.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand and apply the key legal doctrines and rules that structure our democratic system, including the law governing the right to vote, electoral districting, political parties, and the financing of campaigns

Audience: Graduate

2. Recognize the complex ways in which laws governing the democratic process interact with one another to shape our politics and policies

Audience: Graduate

3. Examine and discuss the dilemmas the judiciary faces when it is asked to intervene in democratic disputes

Audience: Graduate

4. Compare and contrast the benefits and drawbacks of our existing legal regime and of potential reforms and alternatives

Audience: Graduate

**LAW 795 – STATE AND LOCAL GOVERNMENT LAW**

3 credits.

Study the allocation of authority within and between state and local governments. Begin with analysis of state constitutions and the three branches of state government. Study how state and local governments interact, covering home rule and intrastate preemption as well as conflicts between localities. Analyze how local governments are financed. Consider the practical, normative, and theoretical implications of current doctrines and policies and explore how state and local government law plays out in the context of contemporary disputes, including over housing, education, and more.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Define and explain the distinctive features of state constitutions and state government institutions

Audience: Graduate

2. Define and explain how state and federal constitutional law shape the structure and powers of state and local governments

Audience: Graduate

3. Define and explain the legal rules that define the relationships between states and local governments and among local governments

Audience: Graduate

4. Discuss, practically and normatively, the allocation of power between state and local governments

Audience: Graduate

**LAW 796 – CRIMINAL DEFENSE PRACTICE**

3 credits.

Preparation for the Public Defender Project summer externship with the Wisconsin State Public Defender. Covers basic lawyering skills like client interviewing and counseling, investigation and negotiation, and various aspects of criminal defense practice in Wisconsin including initial appearances, preliminary hearings, discovery, sentencing and revocation hearings.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify and apply interview techniques that both ascertain essential facts and facilitate the development of a good attorney-client relationship.

Audience: Graduate

2. Develop an investigation plan based on the relevant law and facts in a specific case.

Audience: Graduate

3. Develop a theory of a case that can be used during both negotiation and litigation.

Audience: Graduate

4. Develop a negotiation plan to effectively engage in plea bargaining on behalf of a defendant in a criminal case.

Audience: Graduate

5. Explain and apply relevant factual details related to initial appearances, preliminary hearings, discovery, sentencing and revocation hearings as needed for successful defense practice.

Audience: Graduate

6. Recognize and relay basic criminal procedure in Wisconsin.

Audience: Graduate

**LAW 797 – PROSECUTION FUNCTION**

3 credits.

Focus on understanding the role of the prosecutor in the criminal justice system; developing skills related to making informed charging decisions, drafting charging instruments, effective motion practice, and representation of the state in various court proceedings such as initial appearances, guilty pleas, sentencing, and post-conviction motions.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the history of the American prosecutor and the varied reactive and proactive approaches to the prosecution function

Audience: Graduate

2. Develop a command of substantive law doctrine in Wisconsin

Audience: Graduate

3. Develop a command of the procedural requirements in Wisconsin criminal cases based constitutional law, statutes, and local practices

Audience: Graduate

4. Develop an in-depth understanding of how local justice systems are organized and how the various shareholders interact and share authority

Audience: Graduate

5. Develop an understanding of the complexity and importance of the charging decision

Audience: Graduate

6. Differentiate the direct and collateral consequences of different enforcement strategies on perpetrators, victims and the community

Audience: Graduate

7. Develop an understanding of professionalism – to conduct oneself with integrity, courtesy, punctuality, and quality in work and in interactions with others

Audience: Graduate

8. Identify and apply the skills necessary to function as a trial level state prosecutor

Audience: Graduate

9. Formulate strategies for effective self-directed learning in anticipation of summer externships

Audience: Graduate

**LAW 798 – PROFESSIONAL RESPONSIBILITY AND CRIMINAL PRACTICE**

2-3 credits.

Covers the Wisconsin Rules of Professional Conduct as specifically applied to criminal defense practice. Topics covered include perjured testimony, confidentiality, client counseling, witness interviewing, handling evidence, hard bargaining, statements regarding judicial qualifications and contempt of court.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply the Rules of Professional Conduct to factual situations that typically arise when representing clients charged with crimes.

Audience: Graduate

2. Articulate the ethical rules regarding the regulation of the attorney-client relationship in a way that is accurate and understandable to a client.

Audience: Graduate

3. Make well-reasoned and ethically sound choices when confronted with situations where ethical rules are in conflict.

Audience: Graduate

4. Develop strategies for dealing with unethical behavior in judges and prosecutors.

Audience: Graduate

5. Identify the ethical obligations of defense attorneys when they have excessive caseloads.

Audience: Graduate

6. Understand the unique ethical challenges faced by lawyers who regularly represent indigent criminal defendants.

Audience: Graduate

## **LAW 801 – EVIDENCE**

3-4 credits.

Concepts of relevancy and policy in admission of evidence; hearsay, opinions, and other exclusionary rules; examination of witnesses, judicial notice, and procedural considerations.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply the Rules of Evidence to determine the admissibility of evidence in a litigation context.

Audience: Graduate

2. Consider and incorporate the effects of the Rules of Evidence when structuring transactions and interactions even where there is no litigation.

Audience: Graduate

3. Articulate how the Rules of Evidence are shaped by, and in turn reinforce, our adversary system of justice.

Audience: Graduate

4. Determine appropriate strategy and make decisions in the course of legal representation in light of the Rules of Evidence.

Audience: Graduate

## **LAW 802 – ADVANCED CIVIL PROCEDURE**

3-4 credits.

Study a set of procedural concepts that are fundamental to legal practice in the U.S., including jurisdiction over parties, subject matter jurisdiction, and federal-state conflict of laws. In addition to learning key doctrines, engage in a theoretical inquiry into explanations of and justifications for those doctrines.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify which courts have jurisdiction over a given case and explain why

Audience: Graduate

2. Resolve questions concerning which body of law applies to a given case

Audience: Graduate

3. Distinguish substantive from procedural law and explain why the distinction matters

Audience: Graduate

4. Identify plurality decisions and appreciate the problems that they pose for the doctrine of precedent

Audience: Graduate

5. Develop an understanding of the difference between "published" and "unpublished" decisions

Audience: Graduate

6. Clearly and accurately apply the doctrines we cover to fact patterns, identify legal grey areas, and make compelling arguments about how cases in these grey areas should be resolved

Audience: Graduate

7. Identify and evaluate venue options

Audience: Graduate

**LAW 805 – STATUTORY INTERPRETATION**

3 credits.

Learn the basics of the federal legislative process and develop an understanding of the fundamentals of how courts interpret statutes in a variety of areas of law. Focus on applying the courts' techniques, learning to make arguments in favor of or against particular interpretations of a given statute based on the specific techniques courts use, and recognizing the relative strength of different arguments.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Learning Outcomes:** 1. Describe the basics of the federal legislative process

Audience: Graduate

2. Learn and apply the fundamentals statute interpretation by the courts  
Audience: Graduate

3. Employ the techniques of statutory interpretation to interpret statutes  
Audience: Graduate

4. Practice making arguments in favor of or against particular interpretations of a given statute based on the specific techniques courts use  
Audience: Graduate

5. Recognize the relative strength of different arguments  
Audience: Graduate

**LAW 808 – ADVANCED LEGAL WRITING**

2-3 credits.

Uses simulated practice scenarios to teach students how to analyze the law and convey that legal analysis in a manner that is precise, accurate, clear, and concise.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Read legal sources critically and accurately to identify relevant information

Audience: Graduate

2. Apply legal rules to a client's facts to predict legal consequences  
Audience: Graduate

3. Write clearly and concisely in different professional contexts  
Audience: Graduate

**LAW 811 – ACCOUNTING FOR LAWYERS**

3 credits.

Principles of accounting for lawyers.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Understand and apply the double-entry bookkeeping process that produces financial statements

Audience: Graduate

2. Read, analyze, and apply financial statements (and the notes that accompany those statements) in business and legal contexts  
Audience: Graduate

3. Apply the latitude and judgment that management exercises to arrive at reported numbers and to know the potential economic and legal consequences of those choices  
Audience: Graduate

4. Recognize and understand financial accounting issues important to every lawyer  
Audience: Graduate

5. Appropriately apply accounting terminology or concepts when drafting or negotiating agreements or settlement agreements  
Audience: Graduate

6. Recognize potential "red flags" that suggest financial difficulties or even financial fraud  
Audience: Graduate

7. Recognize opportunities to obtain accounting-related information about an underlying legal situation and, when appropriate, to be familiar with potential ways to use that information in litigation  
Audience: Graduate

**LAW 814 – APPELLATE ADVOCACY**

1-3 credits.

Introduction to federal appellate practice and procedure. Learn the fundamentals of appellate argument and brief writing, with multiple opportunities to practice and improve these skills.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Develop familiarity with the specific skills necessary to practice effective appellate advocacy

Audience: Graduate

2. Practice effective appellate brief writing and revision

Audience: Graduate

3. Practice effective oral argumentation skills

Audience: Graduate

**LAW 815 – MOOT COURT**

1-3 credits.

Practice and refine research, writing, and revision specific to the appeal process. Participate in simulated appellate oral arguments and receive feedback and coaching.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop skills/strategies for making effective legal arguments

Audience: Graduate

2. Plan, organize, and prepare briefs and develop skills necessary for effective oral argument

Audience: Graduate

3. Recognize and employ core principles of collaboration and working productively in teams

Audience: Graduate

**LAW 817 – BUSINESS ORGANIZATIONS: PARTNERSHIP, LLC, AND CLOSELY HELD CORPORATIONS**

3 credits.

Law of agency, partnership, limited liability companies, and closely held corporations.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize the primary legal forms for doing business in the United States, from the basic relationship of principal and agent, through the general partnership, to the corporation

Audience: Graduate

2. Identify how fiduciary duties interact with contracting and with statutory norms in structuring entity governance

Audience: Graduate

3. Recognize the basic drivers of business entity choice, especially limited liability, tax treatment, and financing

Audience: Graduate

4. Compare and contrast a wide range of business relationships and their legal structures

Audience: Graduate

**LAW 820 – CONFLICT OF LAWS**

3-4 credits.

Rules applied by courts in recognizing and enforcing rights involving elements which occurred in a sister state or foreign country.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**LAW 821 – BANKRUPTCY LAW**

2-4 credits.

Consumer credit regulation, enforcement of judgments, attachments, garnishments, fraudulent conveyances, assignments for the benefit of creditors, and bankruptcy.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**LAW/SOC WORK 822 – FAMILY LAW: MARRIAGE AND DIVORCE**

2-4 credits.

Marriage and less formal spousal relationships, husband-wife relationships in on-going marriage; divorce and its economic and custody consequences; post-divorce relationships.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**LAW/SOC WORK 823 – FAMILY LAW: PARENT AND CHILD**

3-4 credits.

The relationship of parent and child; the rights of unmarried mothers and fathers and their children; parental rights to custody vis a vis third parties; parents' rights to make decisions affecting children; neglect; termination of parental rights; the foster care system and adoption.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**LAW 824 – FEDERAL JURISDICTION**

3 credits.

Examines the structure and authority of the federal courts and the relationship between those courts and other governmental institutions.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**LAW 825 – INSURANCE LAW**

3-4 credits.

Substantive law of property, life and liability insurance, including study of the fire and automobile forms; regulation of insurance companies, policies and practices.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**LAW 827 – INTERNATIONAL LAW**

2-3 credits.

Problems in private and governmental practice affected by international relations; the law applicable to questions of recognition and non-recognition of governments and nations; interpretation of treaties and other international agreements; jurisdiction of nations; effect of peace and war; formation, operation and function of various international agreements, and matters of international claims.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**LAW 828 – INTERNATIONAL BUSINESS TRANSACTIONS**

3 credits.

Problems inherent in international commercial transactions; risks, benefits, and assumptions underlying business with or in a foreign country; international commercial transactions, investments and claims.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Articulate and describe some of the primary legal issues that arise in an international sale of goods transaction.

Audience: Graduate

2. Describe and explain the function, structure, and operation of a letter of credit.

Audience: Graduate

3. Explain the choice of law/private international law process and its significance in international commercial contracts.

Audience: Graduate

4. Identify and summarize the main alternatives to cross-border trade as a means of conducting international business.

Audience: Graduate

5. Identify and explain at least six sources of the "law" which may apply to international business transactions.

Audience: Graduate

**LAW/URB R PL 830 – LAND USE CONTROLS**

3 credits.

Limitations imposed upon the use of privately owned land by the court-made law of nuisance, by private covenant, and by public action; master plan, official map, subdivision regulation, zoning, and urban redevelopment.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**LAW 838 – REAL ESTATE TRANSACTIONS II**

2-3 credits.

Acquire an understanding of legal agreements associated with real estate investing, legal aspects of real estate financing, the zoning process, and documentation of real estate entitlements.

**Requisites:** LAW 732**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop an understanding of the various and numerous legal agreements associated with real estate investing, especially purchase and sale agreements, loan agreements and leases.  
Audience: Graduate

2. Explain and apply the legal aspects of real estate financing, particularly with regard to real estate loan documentation.  
Audience: Graduate

3. Develop a basic understanding of zoning process and the documentation of real estate entitlements.  
Audience: Graduate

**LAW 840 – TAXATION II**

2-4 credits.

Overview of the federal income taxation of partnerships, LLCs, and corporations, with a focus on issues of real property ownership and transfers.

**Requisites:** LAW 742**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**LAW 845 – WATER RIGHTS LAW**

2-3 credits.

Acquisition and nature of private rights in water comparing the riparian and appropriation legal systems; public rights as limitations on private rights, the firming up of rights by grant, contract, compulsory purchase and prescription and the administrative systems for water quality management.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2024**LAW 848 – INTRODUCTION TO ENVIRONMENTAL LAW**

3 credits.

Overview of major environmental statutes, regulations and cases, and their implementation by regulatory agencies, as well as currently applicable common-law doctrine.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2022**LAW 849 – PRE-TRIAL ADVOCACY**

3 credits.

The skills that lawyers use up until the time of trial.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**LAW 850 – PROFESSIONAL RESPONSIBILITIES**

1-3 credits.

The ethical and professional responsibility of practicing lawyers.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Summer 2025**LAW 852 – TRIAL ADVOCACY**

2-4 credits.

Techniques involved in the examination of witnesses, including the lawyer's preparation, the preparation conference with the witness, direct examination, cross examination, objections, and the introduction of exhibits. Teaching methods include demonstrations by trial lawyers and practice sessions by the students under the supervision of trial lawyers.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**LAW 853 – MOCK TRIAL**

1-3 credits.

Basic trial skills and competition practice that vary by topic; may include combination of traditional lectures, classroom demonstrations, and weekly sessions where you work closely with faculty members, lawyers, and judges. Prepare for mock trial competition.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Develop an understanding of the phases of a trial.

Audience: Graduate

2. Develop the skills necessary to execute effective trial conduct.

Audience: Graduate

3. Recognize and apply professional and ethical behavior throughout trial practice.

Audience: Graduate

**LAW 854 – CLINICAL PROGRAM**

1-10 credits.

Provides hands-on lawyering experiences with real people – clients, victims, witnesses, family members, lawyers, and judges – enhancing understanding of the roles and responsibilities of practicing attorneys.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify and apply substantive and procedural family law to their cases, including common law, state statutes, and state administrative regulations

Audience: Graduate

2. Gather, examine, and analyze facts; distinguish the legal and non-legal issues; and explain the relationship between the facts and issues identified either verbally or in a written memo

Audience: Graduate

3. Articulate various legal and strategic options facing a client, how opposing parties will respond to actions taken by the client and explain those options and the expected result to the client

Audience: Graduate

4. Develop and refine their own personal definition of what it means to be a legal professional, incorporating the rules of professional conduct and their personal values

Audience: Graduate

5. Competently and ethically interview and counsel clients

Audience: Graduate

6. Competently and ethically represent clients in court and/or in administrative proceedings as appropriate in client matters

Audience: Graduate

**LAW 855 – FIELD PLACEMENT**

1-10 credits.

A unique, hands-on opportunity to participate in the many facets of legal practice, including (but not limited to) litigation, drafting, policy creation and implementation, and the regulatory process. Under the supervision of on-site externship supervisory attorneys, and through reflection led by Law School faculty, gain first-hand understanding of working in the legal community.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Integrate legal knowledge and skills into practical legal experience.

Audience: Graduate

2. Reflect on legal experiences to assess skills.

Audience: Graduate

3. Develop professional identity.

Audience: Graduate

**LAW 860 – ADVANCED CRIMINAL PROCEDURE**

2-3 credits.

Various important procedural problems arising in federal and state criminal proceedings.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**LAW 862 – LEGAL ASSISTANCE TO INCARCERATED PEOPLE**

1-10 credits.

Represent people in prison in Wisconsin seeking relief from excessive sentences; may include people suffering from severe mental illness. Interview clients at correctional institutions, conduct legal and factual research, draft letters and motions, and possibly deliver oral argument in court; work on motions for sentence modification, petitions for sentence adjustment, and parole advocacy; reflect on the lawyer's role in the criminal legal system, explore the causes of the disparate impact of criminal punishment on marginalized populations.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Identify client goals and assist them in achieving these goals.

Audience: Graduate

2. Develop proficiency in factual investigation, issue spotting and legal research and writing, including advocacy and client communication.

Audience: Graduate

3. Collaborate with clients, other students, supervisors, and other actors in the criminal legal system.

Audience: Graduate

4. Recognize ethical issues and resolve or respond to them within the Rules of Professional Responsibility.

Audience: Graduate

5. Engage in self-assessment and reflection about the clinical work, the role of lawyers, and the criminal legal system.

Audience: Graduate

**LAW 868 – STATE AND LOCAL TAXATION**

2-4 credits.

Survey of state and local tax law, principally income taxes, sales and use taxes, and property taxes. Explores the typical statutory structures under which these taxes are imposed. Significant emphasis will be given to policy issues faced by state and local governmental bodies.

**Requisites:** LAW 742**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2020**LAW 870 – INTERNATIONAL TAX**

3 credits.

International taxation concepts and issues including jurisdiction rules, tax avoidance and evasion, fiscal relations between industrialized countries and less developed countries; host country taxation of foreign persons and home country taxation of foreign income.

**Requisites:** LAW 742**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**LAW 871 – INTERNATIONAL TRADE LAW**

3 credits.

Legal institutions affecting international transactions with a focus on U.S. laws and the principal treaties involved.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**LAW 872 – LEGAL ISSUES INVOLVING NORTH AMERICA AND EAST ASIA**

2 credits.

Public and private laws affecting international trade and investment flows between North America and East Asia as well as other issues that affect relations between the countries.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2019**LAW 873 – IMMIGRATION LAW**

3 credits.

Survey of the immigration law of the United States.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**LAW 895 – WISCONSIN INTERNATIONAL LAW JOURNAL**

1-3 credits.

A student published law journal dealing with legal issues having significant international aspects. Each volume is comprised of student case notes and comments as well as articles by legal scholars and practitioners.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025

### **LAW 896 – WISCONSIN JOURNAL OF LAW, GENDER, AND SOCIETY**

1-3 credits.

A student-published journal devoted to the intersection of law and gender with issues of race, ethnicity, socioeconomic status, and sexual orientation.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **LAW 899 – LAW REVIEW**

1-3 credits.

A journal of legal analysis and commentary. Review select and edit the articles and participate in every stage of the publication process.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **LAW 901 – FIRST AMENDMENT**

3-4 credits.

Explores American constitutional law governing speech, association, the press, and religion. It focuses on the leading First Amendment cases that have created the most expansive protection for expression anywhere in the world. Consider not only the reasons for protecting these rights, but also countervailing interests - such as public safety, national security, and equality - that may justify restrictions on expression. Consider arguments that the U.S. Supreme Court has gone too far in protecting some forms of speech and association, such as false statements, sexually explicit materials, hate speech, and corporate political spending.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Learn First Amendment doctrine, including freedom of speech, freedom of association, freedom of the press, and religion.

Audience: Graduate

2. Develop the analytic, strategic, and communication skills needed to succeed as lawyers, including applying the law to other contexts, as well as the formulation of logical and rigorous arguments.

Audience: Graduate

3. Think critically and creatively about how the law is applied.

Audience: Graduate

### **LAW 904 – SELECTED PROBLEMS IN CONSTITUTIONAL LAW**

2-4 credits.

Select topics relating to the study of local, state, or federal constitutional law.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize the historical background and evolving social contexts of local, state, or federal constitutions and associated amendments

Audience: Graduate

2. Recognize and practice application of relevant articles and sections as necessary for interpretation of constitutional law

Audience: Graduate

3. Practice written and oral communication through application of relevant constitutional doctrine

Audience: Graduate

### **LAW 913 – MENTAL HEALTH LAW**

2-3 credits.

Introduction to cases, statutes, and legal doctrines related to rights, treatment, and hospitalization and incarceration of mentally ill persons. Includes topics such as involuntary civil commitment; the historical arc of psychiatric hospitals; competency to stand trial assessment and restoration; insanity defense evaluations; moral panics and socio-legal repercussions; right to refuse psychiatric treatment; effectiveness of psychotropic medicine; dangerousness and risk; social science research of eyewitness memory, interrogation and confessions, and jury decision-making; juveniles and treatment; regulation of the mental health system and mental health providers; confidentiality and duty to protect clients; policing functions; and personal mental health for lawyers.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Identify and explain the complex intersection between the law and mental health issues

Audience: Graduate

2. Develop an understanding of the role of lawyers when there are criminal/civil issues involving mental health problems

Audience: Graduate

3. Explore several specific nettlesome psycho-legal topics and evaluate how the legal system reaches dispositions in these areas

Audience: Graduate

4. Develop a deeper and more realistic understanding of mental health law issues, with regard to how lawyers work inside and around the clinical paradigm in their representation of clients - i.e., mental health evaluation and treatment

Audience: Graduate

### **LAW 914 – SECURITIES REGULATION**

3 credits.

Problems under the Securities and Exchange Act and other federal and state regulatory measures; operation of the S.E.C.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **LAW 915 – SELECTED PROBLEMS IN CRIMINAL JUSTICE ADMINISTRATION SEMINAR**

2-3 credits.

Topics reflect interests of instructor and students.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **LAW 916 – SENTENCING AND CORRECTIONS**

3 credits.

Using a variety of interdisciplinary readings, ranging from fiction to philosophy to psychology, examine the types of punishment used by the America criminal justice system, and the varied justifications offered for them.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Identify and explain the traditional purposes of punishment, tensions between them, and how they manifest in today's criminal justice system

Audience: Graduate

2. Identify and explain the kinds of sanctions imposed by American courts and the uses and limitations of each

Audience: Graduate

3. Develop the skills necessary to successfully use interdisciplinary research to augment understanding of the legal implications of sentencing and correctional issues, and better advocate for clients

Audience: Graduate

### **LAW 917 – INTERNATIONAL COMMERCIAL ARBITRATION**

3 credits.

Provides introduction to international commercial arbitration, arguably the most important means of resolving international commercial disputes. Learn and apply the rules governing international commercial arbitration, research and write a professional-quality claimant's memorandum based on a current problem.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Learn and apply the rules governing international commercial arbitration

Audience: Graduate

2. Conduct research identifying relevant arbitral awards and scholarly commentary on international commercial arbitration using the UW law library and the Kluwer Arbitration online resource

Audience: Graduate

3. Draft a high-quality legal argument in the style and formatting suitable for professional use/application

Audience: Graduate

### **LAW 918 – SELECTED PROBLEMS IN INTERNATIONAL LAW-SEMINAR**

2-3 credits.

Topics reflect interests of instructor and students.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**LAW 919 – INTERNATIONAL HUMAN RIGHTS LAW**

3 credits.

Provides an introduction to international human law. Examines its history, evolution, structure, remedies and effectiveness and the relationship with other areas of international law. Discussion of legal and institutional framework at international and regional levels-UN human rights institutions (Charter-based and treaty-based) and regional systems of human rights.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate an understanding of international human rights law and its application

Audience: Graduate

2. Compare and contrast the international human rights law system and regional human rights systems

Audience: Graduate

3. Critically assess specific areas of international human rights law with regard to specific issues such as genocide and torture as well as vis-a-vis marginalized/vulnerable groups such as women, children and indigenous groups

Audience: Graduate

4. Examine the principles governing human rights, substantive and procedural rights as well the major human rights treaties

Audience: Graduate

5. Examine the linkages with other areas such as economic development, poverty, socio-economic rights, and sustainable development

Audience: Graduate

6. Evaluate emerging rights such as environmental rights and rights of nature

Audience: Graduate

**LAW 920 – CLIMATE CHANGE, HUMAN RIGHTS, AND THE ENVIRONMENT**

3 credits.

Examines the link between climate change and human rights, the pros and cons of using a human rights approach and the specific challenges that climate change poses to the international legal system such as the disappearance of states, displacement and mass movement of people, and adjudication. Discuss the plight of vulnerable populations especially, indigenous peoples, women, and climate "refugees" within a human rights framework.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Develop an understanding of the relationship between environmental degradation, climate change and human rights

Audience: Graduate

2. Develop an understanding of the pros and cons of using a human rights approach to environmental issues and especially, climate change

Audience: Graduate

3. Gain knowledge of the relevant international law principles and mechanisms applicable to global climate change

Audience: Graduate

4. Gain knowledge of how a claim under international human rights law can be brought for damage caused by environmental issues in general and climate change in particular

Audience: Graduate

5. Examine the linkages with other areas such as economic development, poverty, socio-economic rights, and sustainable development

Audience: Graduate

**LAW 921 – INTERNATIONAL ENVIRONMENTAL LAW AND POLICY**  
3 credits.

Discussion of the root causes of global environmental problems, the international legal framework and principles, and the role of sustainable development in addressing these environmental issues. Discussion of specific international environmental legal regimes such as biodiversity, movement of hazardous waste, climate change and international trade as well as governance mechanisms, the role of non-state actors and dispute resolution.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Develop an understanding of the role of international law in protecting the global environment  
Audience: Graduate

2. Gain knowledge of existing international mechanisms and law in protecting different segments of the environment  
Audience: Graduate

3. Develop an understanding of the interdisciplinary nature of environmental protection and linkages with issues such as economic development, poverty, trade and investment, and socio-economic rights including global pandemics  
Audience: Graduate

4. Develop an understanding of the disproportionate impact of environmental degradation on vulnerable and marginalized communities and how these vulnerabilities intersect and compound  
Audience: Graduate

5. Gain knowledge of the role of sustainable development in addressing intersecting issues  
Audience: Graduate

**LAW 922 – SELECTED PROBLEMS IN JURISPRUDENCE-SEMINAR**  
2-3 credits.

Topics reflect interests of instructor and students.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**LAW 926 – SELECTED PROBLEMS OF TORT LAW-SEMINAR**  
2-3 credits.

Topics reflect interests of instructor and students.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2022

**LAW 928 – SELECTED PROBLEMS IN LAND LAW-SEMINAR**  
2-3 credits.

Topics reflect interests of instructor and students.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**LAW 932 – SELECTED PROBLEMS OF ADMINISTRATIVE LAW-SEMINAR**  
2-3 credits.

Topics reflect interests of the instructor and students.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2018

**LAW 935 – HEALTH LAW**  
2-3 credits.

Provides an overview of the complex laws governing the health care industry and the practical realities of lawyers specializing in this practice area. Covers the key laws and regulations that comprise the practice of health care law.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the major federal and Wisconsin laws governing health care.  
Audience: Graduate

2. Apply these laws to practical common health care scenarios.  
Audience: Graduate

3. Recognize the practical realities facing health care entities in an ever-changing environment.  
Audience: Graduate

**LAW 937 – ADOPTION LAW AND POLICY**

2-3 credits.

Addresses the fundamental and evolving issues arising when adoptive families are created by law and considers the historical, societal and geopolitical elements shaping adoption law. Study state, federal and international regulations governing adoption, including constitutional limitations on regulation and practice. Examine the role and ethical obligations of attorneys, social workers and physicians in adoption practice. Examine the legal system's regulation of "gray market" adoptions and explore current challenges related to adoption of Native American children and the Indian Child Welfare Act, adoption by queer individuals, adoption of children from foster care, and openness in adoption.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Learning Outcomes:** 1. Identify adoption law issues and understand underlying legal theories.

Audience: Graduate

2. Apply the law to various factual scenarios and develop a contextual framework for analyzing adoption law issues.

Audience: Graduate

3. Develop an understanding of how the history and evolution of adoption law, policy and practice relates to and is influenced by the broader social, economic and geopolitical context in which it is situated.

Audience: Graduate

4. Formulate policy goals to address the legal needs surrounding families and children.

Audience: Graduate

5. Evaluate and critically analyze adoption law and the family regulation system.

Audience: Graduate

6. Conduct original research about proposed adoption legislation and write an analytical research paper.

Audience: Graduate

7. Develop an understanding of the role, ethical obligations, and strategic choices of lawyers in adoption law matters.

Audience: Graduate

**LAW 938 – DOMESTIC VIOLENCE LAW**

3 credits.

Focuses on state and federal laws, policy and practices impacting victims and perpetrators of domestic violence. Topics examined include dynamics of domestic abuse; restraining orders; mandatory arrest law via law enforcement, prosecution defense responses; family law, including custody/physical placement, mediation, effects on children who witness violence; relief for battered immigrants, and human trafficking.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Learning Outcomes:** 1. Identify and address the dynamics of domestic violence that may be present in clients and cases.

Audience: Graduate

2. Develop an understanding of and begin to employ best practice for providing trauma-informed legal services for survivors of domestic violence.

Audience: Graduate

3. Identify, explain, and apply Wisconsin statute and case-law addressing domestic violence.

Audience: Graduate

**LAW 939 – SELECTED PROBLEMS IN FAMILY LAW-SEMINAR**

2-3 credits.

Topics reflect interests of instructor and students.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**LAW 940 – LAW AND CONTEMPORARY PROBLEMS**

1-3 credits.

Topics reflect current issues relevant to the practice of law.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Recognize the historical, cultural, and contemporary contexts of a given topic.

Audience: Graduate

2. Describe and apply relevant core principles and sources of law.

Audience: Graduate

3. Develop skills in critical thinking and analysis.

Audience: Graduate

**LAW 942 – EUROPEAN UNION LAW**

1-2 credits.

Introduction to European Union (EU) law, including the relationship between EU and Member State law, EU institutions, the law of the common market (i.e., free movement of goods, persons, services and capital) and environmental law and social policy.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Develop an understanding of the basic historical, political, and structural basis of European public law.

Audience: Graduate

2. Identify the basic similarities and differences between a civil-law system and the U.S. common-law system.

Audience: Graduate

3. Identify the similarities and differences between how judges in the U.S. and Europe approach constitutional questions.

Audience: Graduate

4. Explain how both the United States and European Union member states approach particular constitutional questions.

Audience: Graduate

**LAW 945 – LAW AND CORRECTIONAL INSTITUTIONS-SEMINAR**

2-3 credits.

Practice of criminal corrections and the law governing it; probation, parole, rehabilitative efforts, prison administration, and legal and administrative procedures for testing the propriety of restrictions.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2019

**LAW 950 – LAWYERING SKILLS**

1-6 credits.

An introduction to, and skills training in, a number of areas of general law practice. Hone skills in interviewing, counseling, negotiation, and legal writing.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize and practice skills and techniques for use during first years of law practice.

Audience: Graduate

2. Develop skills and employ resources necessary to respond to basic, recurring issues in multiple areas of general legal practice.

Audience: Graduate

3. Practice professional communication.

Audience: Graduate

**LAW 953 – SELECTED PROBLEMS IN BUSINESS ORGANIZATION-SEMINAR**

1-3 credits.

In business planning and business organizations including proprietorships, partnerships, corporations and trusts.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**LAW 954 – CORPORATE FINANCE LAW**

3 credits.

Presents the basics of finance for business lawyers, and the law and legal strategy surrounding the creation of debt instruments.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2018

**LAW 955 – PUBLIC SECTOR LABOR RELATIONS LAW SEMINAR**

2-3 credits.

Legal and public policy issues relating to public sector unionism in a multiplicity of jurisdictions, including representation questions, scope of bargaining, limitations on the right to strike, impasse procedures, and grievance arbitration.

**Requisites:** Declared in Law JD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2019

**LAW 957 – INTRODUCTION TO ESTATE PLANNING**

2-3 credits.

Issues related to estate planning; including function of the lawyer, ethical issues, estates not subject to tax, basic elements of tax-oriented planning, living trusts, health care issues, gift strategies.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**LAW 981 – LAW AND MODERNIZATION IN THE DEVELOPING WORLD SEMINAR**

2-3 credits.

Law as a system of social engineering in the economic and social modernization of developing countries. Problems of developing rules with a high probability of inducing behavior likely to lead to modernization.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**LAW 988 – SELECTED PROBLEMS IN ENVIRONMENTAL LAW-SEMINAR**

2-3 credits.

Topics reflect interests of instructor and students.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Fall 2024**LAW 989 – ENVIRONMENTAL LAW AND PRACTICE**

3 credits.

Presents environmental statutes, cases, and regulations, and discusses their implementation. Focuses on both law and practice. Provides a survey of substantive environmental law and their application in permitting, commercial transactions and enforcement.

**Requisites:** Declared in Law JD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**LAW 990 – DIRECTED RESEARCH**

1-12 credits.

Faculty supervision on research; scope and subject arranged between student and faculty.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**LAW 991 – DIRECTED READING**

1-3 credits.

Independent readings from a list prepared by instructor. Subject matter determined by agreement between instructor and student.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**LEGAL STUDIES (LEGAL ST)****LEGAL ST/SOC 131 – CRIMINAL JUSTICE IN AMERICA**

3-4 credits.

Day-to-day functioning of the elements of the criminal justice system in the U.S. Nature of crime in the U.S., ideas about causes and solutions. Emphasis on the sociology of the components of criminal justice system--organization and roles of police, lawyers, court and correctional personnel.

**Requisites:** None**Course Designation:** Breadth - Social Science

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Assess evidence and critically evaluate research-based arguments concerning criminal justice in academic journals, policy studies, or popular media.

Audience: Undergraduate

2. Build arguments clearly and effectively and critically analyze evidence in both oral presentations and papers.

Audience: Undergraduate

3. Think critically about the functioning of law and its effects on society, going beyond the surface of crime as a social phenomenon, discovering the "why" and "how" of the socio-legal order, and assessing alternate explanations for phenomena.

Audience: Undergraduate

4. Analyze sentencing and carceral practices of the United States criminal legal system in the context of larger political, social, legal, and economic forces.

Audience: Undergraduate

5. Evaluate social phenomena and diversity in global perspective, comparing how different cultures, groups, and societies understand and respond to crime.

Audience: Undergraduate

6. Work effectively in groups, responding to group dynamics among people from different backgrounds with different strengths and weaknesses.

Audience: Undergraduate

**LEGAL ST/RP & SE 135 – DISABILITY AND THE CRIMINAL JUSTICE SYSTEM**

3 credits.

Explores the interaction between the criminal justice system and disability. Explores common experiences of persons with disability such as limited access to community services, poverty, and homelessness and the connection of these experiences to mass incarceration. Explores federal disability rights laws and the implementation of these laws in education, legal, and incarceration settings. Introduction to criminal justice reform to address the experiences of persons with disabilities in this system.

**Requisites:** None**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Identify the causes for over-incarceration of people with disabilities in the United States

Audience: Undergraduate

2. Demonstrate knowledge and understanding of the federal and state policies related to the incarceration and community monitoring of persons with disabilities who have been involved in the criminal justice system

Audience: Undergraduate

3. Demonstrate knowledge of roles and functions that rehabilitation professionals fill within the criminal justice system

Audience: Undergraduate

4. Demonstrate knowledge of treatment programming for individuals with disabilities who are incarcerated and the efficacy of different interventions in increasing community re-integration

Audience: Undergraduate

5. Demonstrate knowledge of community supports for individuals with disabilities subsequent to their release from institutional care

Audience: Undergraduate

6. Develop an awareness of the ethical standards of professional practice that rehabilitation professionals working with individuals with disabilities within the legal system

Audience: Undergraduate

**LEGAL ST/ENGL 160 – TRUTH AND CRIME**

3 credits.

Examines the development, scope, and effects of the "True Crime" genre in the United States. Using literary analysis and legal studies methods, explore various areas of the genre (written, podcasts, documentaries, etc.) and try to find answer as to why we are so compelled by true crime narratives and what true crime's "truth" is. Untangle the complex relationship between law and narrative (background on each will be provided) and the various epistemological systems it combines, including the role of science and technology. Gain a detailed understanding of what our culture's relationship to "real life" crime narratives tells us about the fundamental and complex role criminality plays in defining us as a society.

**Requisites:** None**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Identify the fundamentals of legal narrative and its relationship to criminal law functions (what are the elements of a crime, and what is "evidence"?)

Audience: Undergraduate

2. Identify the ways the legal system is subject to human, social, and literary construction—not only in a theoretical sense but through actual cases.

Audience: Undergraduate

3. Analyze the various ways in which media "tells" crime stories and what the potential motivation for these stories might be.

Audience: Undergraduate

4. Develop a nuanced understanding of the true crime genre through a close examination of exemplary representations of the genre (literature, podcasts, documentaries, etc.)

Audience: Undergraduate

**LEGAL ST/JEWISH/RELIG ST 203 – JEWISH LAW, BUSINESS, AND ETHICS**

3 credits.

Explores the development of Jewish law from antiquity to modernity, with a focus on legal questions related to business practices and ethics. Consider issues ranging from ethical practices in agriculture to how to run a modern multi billion-dollar kosher industry; from the ethics of Jews celebrating Thanksgiving to regulations governing the preparation, consumption, and sale of coffee.

**Requisites:** None**Course Designation:** Breadth - Humanities

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. articulate the general development and evolution of Jewish law

Audience: Undergraduate

2. apply different strategies that different Jewish communities have used to regulate business and ethical practices

Audience: Undergraduate

3. analyze, in both written and oral form, Jewish legal texts

Audience: Undergraduate

4. apply Jewish legal principles to new material

Audience: Undergraduate

**LEGAL ST/POLI SCI 217 – LAW, POLITICS AND SOCIETY**

3-4 credits.

Introduction to the legal process. Examination of the various concepts of law, the perennial problems of the law, legal reasoning, and the nature and function of law and the courts.

**Requisites:** Freshman or sophomore standing only**Course Designation:** Breadth - Social Science

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Increase knowledge about the components of the U.S. legal system.

Audience: Undergraduate

2. Understand how disputes evolve in the context of the U.S. legal system.

Audience: Undergraduate

3. Improve ability to synthesize social science readings and formulate arguments in written and oral form.

Audience: Undergraduate

4. Improve oral advocacy skills through active classroom discussion.

Audience: Undergraduate

**LEGAL ST/HISTORY 235 – PRISONS: FROM ANTIQUITY TO SUPERMAX**

3-4 credits.

Examines the development of prisons from the ancient Mediterranean world to the present in the US and Europe. Pays particular attention to the way in which imprisonment has been used against marginalized populations. Examines the development of carceral tactics across a number of registers, including the prison as an ancient political tactic, the economic logic of early modern debtors' prisons, the relationship of prisons and workhouses to forms of capitalism, prisons and colonial expansion, the relationship between mass incarceration and democratic forms of government, as well as the connections between the abolition of slavery and modern carceral practices. Also looks at the legal and constitutional limitations that have been put on imprisonment by the American legal system. Relies on interdisciplinary approaches to the study of prisons, including History, law, literature, and political theory.

**Requisites:** None**Course Designation:** Breadth - Either Humanities or Social Science

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Analyze and articulate arguments about how social, political, and cultural phenomena shape law and legal systems, and in particular shape practices of imprisonment.

Audience: Undergraduate

2. Analyze and articulate arguments about the impact of imprisonment on social practices and political organization.

Audience: Undergraduate

3. Explain how legal ideas and ideologies have changed over time and have shaped law and legal systems.

Audience: Undergraduate

4. Find, interpret, and utilize resources relevant to law and society.

Audience: Undergraduate

5. Construct clear and persuasive arguments about legal systems and imprisonment.

Audience: Undergraduate

**LEGAL ST/CURRIC/ED POL 250 – INCARCERATION AND EDUCATION**

3 credits.

Investigates how the systems of incarceration and education operate alongside, within, around and through one another. Provides a historical examination of how education and incarceration have interacted. Examines how prisons operate as 'teaching institutions,' what it teaches all of us impacted by it, and what interventions have been designed to facilitate particular kinds of learning. Presents firsthand accounts of those who work and live in the carceral system currently.

**Requisites:** None**Course Designation:** Breadth – Social Science

Level – Elementary

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Learning Outcomes:** 1. Analyze the relationship between schooling and incarceration including issues related to discipline, gender, and disability

Audience: Undergraduate

2. Articulate and evaluate your understanding of experiences of incarceration including the sources, assumptions, and implications behind your understanding

Audience: Undergraduate

3. Synthesize the lived experiences of diverse individuals impacted by incarceration to understand the range of forms learning takes place inside carceral facilities;

Audience: Undergraduate

4. Evaluate different policies and practices that operate at the intersections of education and incarceration.

Audience: Undergraduate

**LEGAL ST/HISTORY 261 – AMERICAN LEGAL HISTORY TO 1860**

3-4 credits.

Surveys the development of American law down to the U.S. Civil War.

Reviews the English historical background, and examines how law changed in colonial America, culminating in the framing of the U.S. Constitution.

Explores how territorial expansion, democracy, and slavery shaped nineteenth-century American law. Emphasis is on how law interacts with political, social, and cultural change, with a focus on the origins of modern civil and constitutional rights.

**Requisites:** Sophomore standing**Course Designation:** Breadth – Either Humanities or Social Science

Level – Intermediate

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze how the social, political, and cultural context of England and colonial America helped to shape early American legal and political systems.

Audience: Undergraduate

2. Analyze how early legal and political systems impacted Americans of all types: men and women; landowners and the poor; settlers and indigenous people; free people, servants, and slaves.

Audience: Undergraduate

3. Assess how and why the Declaration of Independence, the U.S. Constitution, and other founding documents were shaped by traditions of representative government, Common Law, and the political philosophies of republicanism and liberalism.

Audience: Undergraduate

4. Find, interpret, and utilize resources relevant to early American law and society, including colonial charters, slave codes, the Declaration of Independence, the U.S. Constitution, and Supreme Court decisions.

Audience: Undergraduate

5. Analyze legal arguments in historical context, write clearly and persuasively, and construct original arguments.

Audience: Undergraduate

## LEGAL ST/HISTORY 262 – AMERICAN LEGAL HISTORY, 1860 TO THE PRESENT

3-4 credits.

Surveys the development of American law from the Civil War to the early Twenty-First Century. After a review of the U.S. Constitution and its modification by the Civil War amendments, examine the legal dimensions of such topics as race relations and the Civil Rights movement, the growth of modern business, the New Deal, labor rights, the women's movement, the individual rights revolution of the postwar period, and the contemporary conservative reaction. Emphasis on how law interacts with political, social, and cultural change.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Either Humanities or Social Science Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze how social, political, and cultural phenomena, such as the Civil War, industrialization, and the rise of modern mass education and administrative government shaped U.S. law and legal systems.

Audience: Undergraduate

2. Analyze how changes in U.S. legal and political systems impacted Americans, both as individuals of all sexes, races, and classes and as members of families and business and civic organizations.

Audience: Undergraduate

3. Assess how twentieth-century changes in legal ideas and ideologies have affected understandings of the law, the U.S. Constitution, and broader legal and political systems.

Audience: Undergraduate

4. Find, interpret, and utilize resources relevant to law and society, including political speeches, state and federal laws, and decisions of federal courts and of the Supreme Court.

Audience: Undergraduate

5. Analyze legal arguments in historical context, write clearly and persuasively, and construct original arguments.

Audience: Undergraduate

## LEGAL ST 325 – WRONGFUL CONVICTIONS

3 credits.

Study of evidentiary causes of wrongful convictions, including eyewitness misidentifications, false confessions, the use of jailhouse informants, and flaws in forensic science. Procedural and institutional causes of wrongful convictions, and within this context, question whether constitutional rights adequately protect against illegitimate outcomes. Explore potential ways to broaden conceptions of wrongful convictions, looking at mass surveillance, mass prosecution, mass conviction, sentencing severity, and the system's racially disproportionate impact at all intercept points.

**Requisites:** LEGAL ST/SOC 131 or 217

**Course Designation:** Breadth - Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Demonstrate an understanding of what constitutes and what causes wrongful convictions.

Audience: Undergraduate

2. Identify methods of investigating crime, and understand how the use of these methods may lead to inaccurate results.

Audience: Undergraduate

3. Demonstrate an understanding of procedural/institutional conditions that limit a defendant's access to information.

Audience: Undergraduate

4. Summarize the constitutional rights of criminal defendants, and identify institutional forces that limit the ability of criminal defendants to avail themselves of these protections.

Audience: Undergraduate

5. Display an understanding of structural issues that inform a broader understanding of wrongful convictions.

Audience: Undergraduate

**LEGAL ST/POLI SCI 352 – TRANSITIONAL JUSTICE IN WORLD POLITICS**

3-4 credits.

Provides an introduction to the study of transitional justice (TJ), or how institutions – local, domestic, and international – address the legacies of human rights abuses. Explore several key questions motivating the study of transitional justice: Why do societies pursue accountability for past repression in general? How do transitioning societies go about these pursuits? What effects might TJ policies have on prospects for democracy, rule of law, and future human rights abuses? Special attention to how local and global politics interact to influence both the development and the effects of different transitional justice policies.

**Requisites:** Sophomore standing**Course Designation:** Breadth – Social Science

Level – Intermediate

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Learning Outcomes:** 1. Describe the history and political foundations of transitional justice

Audience: Undergraduate

2. Describe and differentiate between transitional justice mechanisms at the international, domestic, and local level

Audience: Undergraduate

3. Explain the role of different international and domestic actors in designing and implementing transitional justice

Audience: Undergraduate

4. Analyze and evaluate the implications of different transitional justice mechanisms for democracy, peace, and stability

Audience: Undergraduate

**LEGAL ST 400 – TOPICS IN LEGAL STUDIES AND THE SOCIAL SCIENCES**

3-4 credits.

Addresses a variety of issues linking various social sciences perspectives to the central themes of law and legal institutions.

**Requisites:** Sophomore standing**Course Designation:** Breadth – Social Science

Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Analyze how social, political, and cultural phenomena shape law and legal systems.

Audience: Both Grad &amp; Undergrad

2. Analyze the social, political, and cultural impacts of law at the societal and individual levels.

Audience: Both Grad &amp; Undergrad

3. Assess how legal ideas and ideologies have changed over time and have shaped law and legal systems.

Audience: Both Grad &amp; Undergrad

4. Find, interpret, and utilize resources relevant to law and society.

Audience: Both Grad &amp; Undergrad

5. Analyze legal arguments and information in broad social and historical contexts, write clearly and persuasively, and construct original arguments.

Audience: Both Grad &amp; Undergrad

6. Analyze research methods, engage critically with scholarly literature, and assess debates among scholars and others who have shaped understandings of this topic and field.

Audience: Graduate

**LEGAL ST/GEN&WS/SOC 406 – LAW, SEXUALITY, & SOCIETY**

3-4 credits.

Examines the legal and social development and implications of laws governing sexual behavior, human reproduction, media, privacy, and topics related to sexuality, sex and gender. Includes historical analyses of laws connected to present day regulations of sexuality, demonstrating the origins of many of the world's most frequently debated civil rights issues. Chief focus on the United States legal system, with some content including examinations of institutions around the world. Investigates taken-for-granted knowledge and assumptions about sexuality and look at legal, cultural and social constructions of sex in society. Covers intersectional social implications, including race, (dis)ability, class, etc. Topics include: obscenity, pornography, sex work, sexual surrogacy, birth control, abortion, sex education, sexual violence, sex offenders, sexual citizenship rights, trans and intersex legal topics.

**Requisites:** GEN&WS 101, 102, 103 or SOC/LEGAL ST 131

**Course Designation:** Breadth - Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Discuss social theory about law and human behavior, particularly human sexuality

Audience: Undergraduate

2. Explain historical roots of modern sexuality-related laws and legal systems worldwide

Audience: Undergraduate

3. Analyze topics related to sexuality and society; constructing arguments based on academic, peer-reviewed research

Audience: Undergraduate

4. Examine sociolegal governance over a wide variety of sexual behaviors and gender/sex topics in a critical, thorough, and thoughtful manner

Audience: Undergraduate

5. Comprehend and apply legal history, precedent, and course concepts to specific sociolegal cases concerning sexuality

Audience: Undergraduate

**LEGAL ST 407 – JURISPRUDENCE AND SOCIAL ISSUES**

3 credits.

Examines fundamental questions about the nature and content of law, addressing both analytic and normative jurisprudence. Questions in analytic jurisprudence include: What does it mean for something to be the law? Why are some things a matter of law, while others are not? What is the relationship between law and morality? Is the law exhausted by the meaning of words in constitutions and statutes? Questions of normative jurisprudence concern the proper content of law, such as, what should the law permit, prohibit, and promote? These questions are examined by looking at a number of topics that are at issue in U.S. (and other nations') laws. These will include interpreting criminal law statutes, policies promoting public welfare, and the justifications for property, especially intellectual property rights.

**Requisites:** SOC/LEGAL ST 131, POLI SCI/LEGAL ST 217, or graduate/professional standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Demonstrate familiarity with major issues in jurisprudence and the ability to examine critically various ways of understanding the nature and content of law

Audience: Both Grad & Undergrad

2. Demonstrate knowledge about how ideas and ideologies have changed over time and have shaped social and moral arguments concerning the law

Audience: Both Grad & Undergrad

3. Develop ability to articulate and discuss complex issues and arguments surrounding legal, social, and moral questions

Audience: Both Grad & Undergrad

4. Demonstrate the ability to analyze information, to write clearly and persuasively, and to construct original arguments

Audience: Both Grad & Undergrad

5. Demonstrate an advanced understanding of the legal, political, and philosophical contexts and current scholarly debates concerning jurisprudence.

Audience: Graduate

**LEGAL ST 409 – HUMAN RIGHTS IN LAW AND SOCIETY**

3 credits.

Introduction to the theory, the politics and the sociology of human rights. Main themes: international human rights legal regime, questions of why human rights have become "legalized," and what the consequences of this legalization are on the ground.

**Requisites:** LEGAL ST/SOC 131, POLI SCI/LEGAL ST 217, or Junior standing

**Course Designation:** Breadth – Social Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Articulate and analytically discuss the origins, structure, justification, and impact of the international human rights system. Students will know the main international institutions and treaties governing human rights in our world, as well as the main policy debates about human rights.

Audience: Both Grad & Undergrad

2. Articulate and analytically discuss human rights' potential and limits in creating social and political change.

Audience: Both Grad & Undergrad

3. Recognize the challenges facing human rights law and institutions in light of the changing geopolitical world order.

Audience: Both Grad & Undergrad

4. Articulate and critically discuss the distinct ways in which various academic disciplines approach the same topic, revealing the structure of how we create knowledge.

Audience: Both Grad & Undergrad

5. Identify opportunities for employment or further study, assess their qualifications for these opportunities, and identify strategies for gaining the necessary knowledge and experience.

Audience: Graduate

6. Develop and maintain portfolios of their written work and educational experiences to aid them in preparing applications and to learn how to present their materials.

Audience: Graduate

**LEGAL ST/GEN&WS 422 – WOMEN AND THE LAW**

3 credits.

Legal system, laws, and proposed legislation that have specific impact on the lives of women. Topics investigated in both the social and legal contexts.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Social Science

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate an understanding of feminist legal theories and methodologies and apply them to real-world cases and historical legal scenarios.

Audience: Both Grad & Undergrad

2. Examine historical roots of modern gendered/sexed legal systems in the United States and worldwide.

Audience: Both Grad & Undergrad

3. Identify key court cases related to gender and civil rights; summarize the major holdings of those cases.

Audience: Both Grad & Undergrad

4. Investigate and research original projects about sex and society, construct research arguments, and plan legal/policy brief proposals.

Audience: Both Grad & Undergrad

5. Analyze sociolegal governance trends/patterns in the U.S. and internationally over a wide variety of sex/gender topics, including family rights, economic and financial rights, employment, voting, politics, sexuality, sport, education, abortion, birth control, and health.

Audience: Both Grad & Undergrad

6. Effectively present legal arguments in oral form, using the "Before the Courts" style, and in written form, using the style of law review articles.

Audience: Graduate

**LEGAL ST/GEN&WS/SOC 425 – CRIME, GENDER AND JUSTICE**

3 credits.

Focuses on the intersection between gender, crime and justice from a cross-cultural perspective. The gendered nature of the criminal justice system, female experiences of crime, prosecution and incarceration as well as the extent to which women are victims, offenders, and participants in the criminal justice system will be explored. Special emphasis will be placed on the theoretical implications of offending behavior and the intersection of gender with sexuality, race, ethnicity and class. The goal of this course is to provide a foundation for critically assessing the often controversial issues surrounding race, gender, crime, and criminal justice in society.

**Requisites:** SOC/LEGAL ST 131, GEN&WS 101, 102, 103 or graduate/professional standing

**Course Designation:** Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Analyze the U.S. criminal justice system, including incarceration, sentencing, and policing, through the lens of gender studies  
Audience: Undergraduate

2. Identify and describe criminological theories, specifically those focused on gender, race, class, and feminist academic thought  
Audience: Undergraduate

3. Explore inequalities amongst gender groups and various other social intersections (race, class, ability, sexuality, age, parenthood, etc).  
Audience: Undergraduate

4. Investigate topics related to gender and justice by conducting thorough literature reviews and preparing policy briefs with recommendations for legal change.  
Audience: Undergraduate

5. Examine and discuss real-world experiences in criminal justice systems, both in the U.S. and abroad.  
Audience: Undergraduate

**LEGAL ST/HISTORY 426 – THE HISTORY OF PUNISHMENT**

3-4 credits.

Examines punishment across a vast range of historical traditions, examining how wrongdoing and punishment have been figured in law, literature, art and philosophy. Examines ancient, medieval and modern traditions.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**LEGAL ST/ENVIR ST/HISTORY 430 – LAW AND ENVIRONMENT: HISTORICAL AND CONTEMPORARY PERSPECTIVES**

3 credits.

Explores environmental studies through a focus on law and legal history. Although its main concentration is on U.S. environmental law, the course will begin and end with broader historical and global perspectives.

Topics include a survey of English, European, and early American legal approaches to land use, natural resources, and pollution through World War II as well as an examination of the development and practice of contemporary U.S. environmental law and consideration of the recent emergence of international environmental law.

**Requisites:** Sophomore standing

**Course Designation:** Gen Ed - Communication Part B

Breadth - Either Humanities or Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze and articulate their own arguments about how social, political, and cultural phenomena shape law and legal systems.  
Audience: Both Grad & Undergrad

2. Analyze and articulate their own arguments about the social, political, and cultural impacts of law at the societal and individual levels.  
Audience: Both Grad & Undergrad

3. Demonstrate knowledge about how legal ideas and ideologies have changed over time and have shaped law and legal systems.  
Audience: Both Grad & Undergrad

4. Demonstrate their abilities to find, interpret, and utilize resources relevant to law and society.  
Audience: Both Grad & Undergrad

5. Demonstrate their abilities to analyze information, to write clearly and persuasively, and to construct original arguments.  
Audience: Both Grad & Undergrad

6. Analyze the causes of and solutions for the sustainability challenge of the conservation of natural resources, especially insofar as their governance involves and impacts local stakeholders.  
Audience: Both Grad & Undergrad

7. Analyze the social, economic, legal, political, and environmental dimensions of the sustainability challenge of regulating and governing biodiversity, clean air and water, and other, larger earth systems (such as climate).  
Audience: Both Grad & Undergrad

8. Demonstrate an advanced understanding of the historiography or other scholarly debates that have shaped the study of conservation and environmental law.  
Audience: Graduate

**LEGAL ST/AFROAMER 435 – CIVIL RIGHTS: POLICING, PRISONS, VOTING, HOUSING, EMPLOYMENT**

3-4 credits.

Exploration of civil rights. Question what it means to discriminate (on the basis of race, sex, national origin, religion, and disability), how we might investigate and detect acts of discrimination, and the legal constraints on governmental efforts to remedy discrimination in employment, housing, and voting. Explore the intersection of government power and civil rights. Examine how the government targets groups during times of national crisis. Consider what constitutes acceptable conditions of incarceration for prisoners. Finally, learn police use-of-force doctrine, and discuss the challenge of protecting both officer and civilian safety.

**Requisites:** Sophomore standing**Course Designation:** Breadth - Social Science

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Identify key historical events that led to the conception and creation of civil rights.

Audience: Both Grad &amp; Undergrad

2. Identify constitutional justifications for the use of federal authority to legislate in the area of civil rights.

Audience: Both Grad &amp; Undergrad

3. Summarize statutes and cases that protect against discrimination in employment, housing, and voting.

Audience: Both Grad &amp; Undergrad

4. Demonstrate an understanding of major civil rights controversies surrounding political detainees, prison inmates, and those subject to police force during street encounters.

Audience: Both Grad &amp; Undergrad

5. Demonstrate an advanced understanding of the historical context, constitutional arguments, and current scholarly debates concerning civil rights law.

Audience: Graduate

**LEGAL ST/CHICLA/SOC 440 – ETHNICITY, RACE, AND JUSTICE**

3-4 credits.

An examination of ethnicity, race, and justice, with a specific emphasis on US Latinos, the largest minority group in the United States.

**Requisites:** C&E SOC/SOC 140, 210, 211, SOC 181, FOLKLORE/AFROAMER/AMER IND/ASIAN AM/CHICLA 102, CHICLA 201, CHICLA 210, CHICLA 230, POLI SCI/CHICLA 231, HISTORY/CHICLA/GEN&WS 245, LEGAL ST/SOC 131, or POLI SCI/LEGAL ST 217

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Social Science

Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Discuss ethnic and racial differences in crime and criminal justice outcomes and analyze these patterns through the application of theory and empirical data in the social sciences.

Audience: Undergraduate

2. Engage major theoretical debates in social and legal scholarship. Why are there racial/ethnic disparities in crime and violence? How and why have these disparities changed over time? Are minorities treated differently by legal officials? Has mass incarceration mitigated or exacerbated racial and ethnic inequality? How has the Supreme Court viewed issues of ethnicity, race, and the law?

Audience: Undergraduate

3. Competently interpret representations of data and critically analyze study design in published research on ethnicity, race, and justice.

Audience: Undergraduate

4. Critically assess the often-controversial issues surrounding ethnicity, race, crime, and the law in society, drawing on readings and class discussion.

Audience: Undergraduate

### LEGAL ST/ELPA 442 – CIVIL RIGHTS LAWS, THE COURTS, AND PUBLIC EDUCATION

3 credits.

Examines several legal issues confronting students and educators within the U.S. education system with a particular focus on race discrimination. Examines how civil rights laws and constitutional provisions can help create more equitable schooling experiences for students and educators from historically marginalized populations. Identifies pragmatic approaches to the law, and explores issues of the democratic underpinnings of education.

**Requisites:** Junior standing

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Analyze the U.S. constitutional provisions and civil rights laws in the U.S. that impact U.S. public education, demonstrating an awareness of history's impact on the past and present.

Audience: Both Grad & Undergrad

2. Describe various legal documents related to education, recognizing how assumptions about minoritized populations may play out in school policy.

Audience: Both Grad & Undergrad

3. Explain and engage in discussions about racial injustice through the discussion of case law, demonstrating a consciousness or awareness of how the issue impacts themselves and others in a public school setting.

Audience: Both Grad & Undergrad

4. Identify ways to become more effective participants in a multiracial society through the examination of current issues and social movements rooted in education law and policy.

Audience: Both Grad & Undergrad

5. Examine issues in civil rights law in education using peer-reviewed research

Audience: Graduate

### LEGAL ST/CHICLA/SOC 443 – IMMIGRATION, CRIME, AND ENFORCEMENT

3-4 credits.

A study of immigration, crime, and border enforcement, engaging both historical and present-day debates, focusing on Latino immigration and the U.S.-Mexico border.

**Requisites:** C&E SOC/SOC 140, 210, 211, SOC 181, FOLKLORE/AFROAMER/AMER IND/ASIAN AM/CHICLA 102, CHICLA 201, CHICLA 210, CHICLA 230, POLI SCI/CHICLA 231, HISTORY/CHICLA/GEN&WS 245, LEGAL ST/SOC 131, or POLI SCI/LEGAL ST 217

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Discuss trends in immigration, crime, and border enforcement in recent decades and analyze these patterns through the application of theory in the social sciences and empirical data.

Audience: Undergraduate

2. Engage major theoretical debates in migration scholarship. Why do people (not) move? How are migration decisions made? What effect does migration have on (a) receiving societies, (b) sending societies, and (c) migrants themselves? How is migration organized by gender? What differentiates forced and unforced migration? How are immigrants incorporated into new societies?

Audience: Undergraduate

3. Develop a broader understanding of border enforcement through critical analysis of immigration policies and practices from an international perspective. That is, are recent trends in border enforcement unique to the United States?

Audience: Undergraduate

4. Critically assess the often-controversial issues surrounding ethnicity, race, crime, and the law in society, drawing on readings and class discussion.

Audience: Undergraduate

**LEGAL ST 444 – LAW IN ACTION**

3 credits.

A review of the interaction of law (judicial decisions, legislation, administrative actions) with public policy by studying the approaches used to resolve a number of significant issues by use of law and examining the actual impact of such efforts.

**Requisites:** Sophomore standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Evaluate how law operates across different areas of practice

Audience: Undergraduate

2. Recognize the role of legal institutions, actors, and processes in specific contexts

Audience: Undergraduate

3. Articulate how different groups are situated unequally in relation to the law

Audience: Undergraduate

4. Explain the ways politics, culture, and society shape the working of law

Audience: Undergraduate

5. Compose effective arguments supported by evidence and critical thinking skills

Audience: Undergraduate

6. Recognize and access different kinds of legal documents and other legal resources

Audience: Undergraduate

**LEGAL ST/POLI SCI 445 – LEGAL WRITING, FROM COUNSELOR TO ADVOCATE**

3 credits.

Introduction to legal reasoning, writing, and research. Draft memos and briefs based on fictional case files and independent legal research, simulating the practice of law. Topics include precedent, sources of law, reading and interpreting legal texts, objective legal analysis, persuasion, and oral argument.

**Requisites:** Sophomore standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Read legal sources critically and accurately to identify relevant information.

Audience: Undergraduate

2. Recognize the weight and significance of legal authorities within the American legal system.

Audience: Undergraduate

3. Analyze and synthesize legal authorities to explain and formulate controlling rules.

Audience: Undergraduate

4. Apply legal rules to a set of facts—both to predict legal consequences and to advocate for a preferred result.

Audience: Undergraduate

5. Use research strategies to find controlling and persuasive legal authority.

Audience: Undergraduate

6. Write clearly and concisely about the law in different professional contexts, including objective office memoranda and persuasive legal briefs.

Audience: Undergraduate

7. Articulate legal analyses and argue legal positions via oral communication and advocacy.

Audience: Undergraduate

### LEGAL ST 450 – TOPICS IN LEGAL STUDIES AND THE HUMANITIES

3-4 credits.

Addresses a variety of issues linking various humanities perspectives to the central themes of law and legal institutions.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2024

**Learning Outcomes:** 1. Analyze how social, political, and cultural phenomena shape law and legal systems.

Audience: Both Grad & Undergrad

2. Analyze the social, political, and cultural impacts of law at the societal and individual levels.

Audience: Both Grad & Undergrad

3. Assess how legal ideas and ideologies have changed over time and have shaped law and legal systems.

Audience: Both Grad & Undergrad

4. Find, interpret, and utilize resources relevant to law and society.

Audience: Both Grad & Undergrad

5. Analyze information, write clearly and persuasively, and construct original arguments.

Audience: Both Grad & Undergrad

6. Analyze research methods, engage critically with scholarly literature, and assess debates among scholars and others who have shaped understandings of this topic and field.

Audience: Graduate

### LEGAL ST/SOC 451 – RACE, FAMILY & THE STATE

3 credits.

Examines the politics of state involvement in family life in America, particularly in poor and minoritized families. Investigates the state's role in the regulation of the family through systems of governance such as criminal justice, immigration, and welfare that shape the legal possibilities for family life. Incorporates sociological, historical, and legal scholarship to critically assess the structural influences shaping the experiences, choices, and legal possibilities for families of color.

**Requisites:** Junior standing

**Course Designation:** Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Identify and describe key social science theories of race, ethnicity, and racism.

Audience: Undergraduate

2. Articulate how the concept of family is a social construct.

Audience: Undergraduate

3. Enumerate the ways state institutions intervene in family life, and how the role of race and racism these processes.

Audience: Undergraduate

4. Explain how cultural assumptions about the meanings and purpose attached to families influence policy making.

Audience: Undergraduate

5. Apply sociological research findings to evaluate family policy positions

Audience: Undergraduate

6. Communicate contemporary family policy issues to non-specialists through public speaking and writing.

Audience: Undergraduate

### LEGAL ST/HISTORY 459 – RULE OF LAW: PHILOSOPHICAL AND HISTORICAL MODELS

3-4 credits.

From the perspectives of history and political theory, examines the multiple meanings of the idea of the rule of law, and its uses in American history. Explore prominent critiques of the rule of law ideal.

**Requisites:** Junior standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**LEGAL ST/LIS 460 – SURVEILLANCE, PRIVACY, AND POLICE POWERS**

3 credits.

Examines individual privacy and government information collection in law enforcement, security, public health, administrative law, and other contexts from a variety of disciplinary perspectives.

**Requisites:** Junior standing

**Course Designation:** Breadth – Humanities

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2016

**LEGAL ST 473 – HEALTH IMPACTS OF UNMET SOCIAL NEEDS**

3 credits.

Engage in service learning through direct work with patients in the Community Resource Navigator Program. Develop a better understanding of how social determinants of health equity affect peoples' lives. Partner with patients to identify social and legal services, assist patients in connecting to needed resources, follow up with patients to be sure that the connection was made and evaluate the quality of the resources provided. Reflect on experiences in the clinic and further explore how social location impacts health, legal and social service delivery. Working directly in local primary care clinics will provide the opportunity to communicate directly with the health care team to problem solve barriers patients are facing in accessing resources for their social needs.

**Requisites:** Consent of instructor

**Course Designation:** Breadth – Either Humanities or Social Science

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Frame your understanding of how social location and wider political and social constructs affect institutional interactions, self-determination, access to resources and your own perceptions of individual experiences.

Audience: Undergraduate

2. Identify how the interconnectedness of social, legal, and health experiences are actualized in peoples' lives.

Audience: Undergraduate

**LEGAL ST/HISTORY 476 – MEDIEVAL LAW AND SOCIETY**

3 credits.

Introduction to the central historical developments of law and legal institutions in the European middle ages (400-1500).

**Requisites:** Sophomore standing

**Course Designation:** Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2023

**LEGAL ST/HISTORY 477 – HISTORY OF FORENSIC SCIENCE**

3 credits.

Examines the diverse paths followed by forensic science (including medical jurisprudence or forensic medicine) in various times and places, focusing on the English-speaking world from the nineteenth century until the present. Explore the many ways that law and science have worked together--or at cross-purposes--to generate and assess evidence at the crime scene, in the lab, in the courtroom, and beyond.

**Requisites:** Sophomore standing and (LEGAL ST/HISTORY 261, SOC/LEGAL ST 131, or POLI SCI/LEGAL ST 217), or graduate/professional standing

**Course Designation:** Breadth – Either Humanities or Social Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**LEGAL ST/HISTORY 510 – LEGAL PLURALISM**

3 credits.

Historical and anthropological perspectives on non-state "law," or systems of rules generated by normative orders that lay beyond the state; case studies include the mafia, Tokyo tuna traders' court, orthodox Jewish diamond merchants, California gold miners' courts, Inuit song dueling.

**Requisites:** Sophomore standing and (LEGAL ST/HISTORY 261, SOC/LEGAL ST 131, or POLI SCI/LEGAL ST 217), or graduate/professional standing

**Course Designation:** Breadth – Social Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**LEGAL ST/ED POL/ELPA 542 – LAW AND PUBLIC EDUCATION**

3 credits.

Examines the legal issues related to the policy decisions and delivery of public education (elementary and secondary) in the United States. Learn how law impacts both curriculum development and curricular delivery, explore current legal controversies, constitutional issues, and learn about legal reasoning and analysis. Examines how both legislation and litigation affects public education. Particular attention is paid to law as public policy and the analysis of the same.

**Requisites:** Junior standing**Course Designation:** Breadth – Social Science

Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Identify various analytic frameworks that guide legal analysis.

Audience: Both Grad &amp; Undergrad

2. Analyze the use of principles and/or frameworks to a situation or issue.

Audience: Both Grad &amp; Undergrad

3. Understand the role of analytic frameworks in the development and implementation of law and policy.

Audience: Both Grad &amp; Undergrad

4. Describe the many legal issues inherent in daily school practice.

Audience: Undergraduate

5. Discuss various legal principles.

Audience: Undergraduate

6. Examine the sources of law and the various interests that the law seeks to balance.

Audience: Undergraduate

7. Recognize and identify independently the many legal issues inherent in daily school practice.

Audience: Graduate

8. Explore and apply various legal practices and their application.

Audience: Graduate

9. Examine the sources of law and the various interests that the law seeks to balance, provide varying arguments in written form.

Audience: Graduate

10. Find and understand primary sources of legal authority (e.g. actual cases, statutes, and administrative rules).

Audience: Graduate

**LEGAL ST 600 – SPECIAL TOPICS IN LEGAL STUDIES**

1-3 credits.

Special seminars are designed for opportunities such as short international seminar courses, the summer forum, and other special opportunities.

**Requisites:** Junior standing**Course Designation:** Level – Intermediate

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2019**Learning Outcomes:** 1. Analyze how social, political, and cultural phenomena shape law and legal systems.

Audience: Both Grad &amp; Undergrad

2. Analyze the social, political, and cultural impacts of law at the societal and individual levels.

Audience: Both Grad &amp; Undergrad

3. Assess how legal ideas and ideologies have changed over time and have shaped law and legal systems.

Audience: Both Grad &amp; Undergrad

4. Find, interpret, and utilize resources relevant to law and society.

Audience: Both Grad &amp; Undergrad

5. Analyze information, write clearly and persuasively, and construct original arguments.

Audience: Both Grad &amp; Undergrad

6. Analyze research methods, engage critically with scholarly literature, and assess debates among scholars and others who have shaped understandings of this topic and field.

Audience: Graduate

**LEGAL ST/LAW/SOC 641 – SOCIOLOGY OF LAW**

3-4 credits.

Theory and research on the social origins, processes and effects of law; examination of law-related behavior, legal institutions, law and social structure, and law and social change; linkage to contemporary theoretical and political debates.

**Requisites:** Junior standing**Course Designation:** Breadth – Social Science

Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Fall 2024

**LEGAL ST/L I S 645 – INTELLECTUAL FREEDOM**

3 credits.

An examination of intellectual freedom in the United States including censorship, minors' rights, the Internet, privacy, and copyright with focus on theoretical questions related to the First Amendment to the U.S. Constitution, and historical developments.

**Requisites:** Junior standing**Course Designation:** Breadth - Social Science

Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Fall 2023**LEGAL ST/L I S 663 – INTRODUCTION TO CYBERLAW**

3 credits.

The emphasis is on critical thinking about a broad variety of legal and policy problems that arise because of ever-changing information and communication technologies.

**Requisites:** Junior standing**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Fall 2024**LEGAL ST 681 – SENIOR HONORS THESIS**

3-4 credits.

Individual study for majors writing theses for honors degree.

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No**Last Taught:** Summer 2025**LEGAL ST 682 – SENIOR HONORS THESIS**

3-4 credits.

Individual study for majors writing theses for honors degree.

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No**Last Taught:** Spring 2025**LEGAL ST 691 – SENIOR THESIS**

3 credits.

Individual study for majors writing senior thesis (nonhonors).

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024**LEGAL ST 692 – SENIOR THESIS**

3 credits.

Individual study for majors writing senior thesis (nonhonors).

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**LEGAL ST/SOC 694 – CRIMINAL JUSTICE FIELD OBSERVATION**

2-3 credits.

Field placements and seminar sessions to develop sociological understanding of criminal justice processes. Placement in criminal justice agencies and lectures and discussions applying concepts and theories to field experience.

**Requisites:** Declared in Criminal Justice certificate and LEGAL ST/SOC 131**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Workplace - Workplace Experience Course

**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Explain the role that mental health or substance abuse can play in one's contact with the criminal legal system.

Audience: Undergraduate

2. Assess how an individual's race and socio-economic class can impact the likelihood of contact with the American criminal legal system, as well as how it impacts their experience.

Audience: Undergraduate

3. Evaluate how consideration of a client's/ individual's cultural heritage and practices can improve one's effectiveness in providing services.

Audience: Undergraduate

4. Analyze the potential effects of trauma exposure on a practitioner or service provider and compare self-care strategies to deal with this.

Audience: Undergraduate

5. Conduct client interviews based on knowledge of the steps needed to prepare for interviews and document the information gathered.

Audience: Undergraduate

6. Describe the breadth of stakeholders to the work being conducted by community agencies.

Audience: Undergraduate

**LEGAL ST 699 – DIRECTED STUDY**

1-4 credits.

Directed study in legal studies.

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025

# LIBRARY AND INFORMATION STUDIES (L I S)

## L I S/COMP SCI 102 – INTRODUCTION TO COMPUTING

3 credits.

Provides a broad overview of computing at an introductory level, including topics such as security, robotics, and artificial intelligence. Increases understanding of how computers work and how algorithms solve problems. Design and implement creative applications in an introductory coding environment. Provides a broad overview of computing and algorithms without an emphasis on programming.

**Requisites:** MATH 96 or placement into MATH 141. MATH 118 does not fulfill the prerequisite. Not open to students with credit for COMP SCI 300 or 320

**Course Designation:** Gen Ed – Quantitative Reasoning Part A  
Breadth – Natural Science

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop a fundamental understanding of the key concepts of computer science in a variety of contexts.

Audience: Undergraduate

2. Create art, music, stories, games and other programs in a visual, introductory programming language

Audience: Undergraduate

3. Understand how computers use algorithms to solve problems and act in intelligent ways.

Audience: Undergraduate

4. Understand how computers utilize large sets of data to provide insight and knowledge.

Audience: Undergraduate

5. Learn how software and hardware make modern computers work

Audience: Undergraduate

## L I S 201 – THE INFORMATION SOCIETY

4 credits.

Examines important social, legal, and historical contexts of information and information technologies, and explores significant social, legal, and moral questions that surround those technologies.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Gen Ed – Communication Part B

Breadth – Either Humanities or Social Science

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

## L I S 202 – INFORMATIONAL DIVIDES AND DIFFERENCES IN A MULTICULTURAL SOCIETY

3 credits.

Explores the impact of and barriers to access to information on the lives of low-income ethnic/racial minority communities in the United States. Provides introduction to contemporary information society from a sociological perspective.

**Requisites:** None

**Course Designation:** Ethnic St – Counts toward Ethnic Studies requirement

Breadth – Either Humanities or Social Science

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

## L I S 220 – DIGITAL FOOTPRINTS: PRIVACY AND TECHNOLOGY

3 credits.

Each of us leaves behind digital information traces, our "digital footprint", as we go about our daily lives. Learn about the different kinds of technologies involved in capturing this information, who owns it and controls it, and how it is used to make our lives easier and less private at the same time. Consider what information can be tracked and inferred about us based on our digital traces, what is gained (and lost) as individuals and society by allowing our digital footprints to continue to expand, and debate what future technologies and policies concerning this information should be like.

**Requisites:** Satisfied Communications A requirement or concurrent enrollment

**Course Designation:** Breadth – Social Science

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Define "privacy" and describe what it means for them in their own lives

Audience: Undergraduate

2. Understand the basics of technologies involved in collecting and inferring digital information about people.

Audience: Undergraduate

3. Read and understand privacy policies, and consider how the use of different platforms and systems might impact their own privacy and the privacy of others.

Audience: Undergraduate

4. Think critically about how the future design of technologies and policies might impact privacy.

Audience: Undergraduate

**L I S 301 – INFORMATION LITERACIES IN ONLINE SPACES**

3 credits.

Explores information and digital literacies needed by today's online consumers and producers. Covers skills and topics related to access (digital divides, power relations in online communities, regulation), analysis (assessing credibility, evaluating risks, analyzing representation) and production (blogging, videosharing, gaming).

**Requisites:** None**Course Designation:** Breadth - Social Science

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2022**L I S 340 – TOPICS IN INFORMATION STUDIES - SOCIAL ASPECTS**

3 credits.

Exploration of contemporary issues related to information in society. Subject will vary. Examples include, but not restricted to: Information Ethics, Digital and Print Culture, Global Information Flows.

**Requisites:** Sophomore standing**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Fall 2023**L I S 341 – TOPICS IN INFORMATION STUDIES - TECHNOLOGICAL ASPECTS**

1-3 credits.

Exploration of information technology and information management subjects. Subjects will vary. Examples include, but not restricted to: A Social History of Information Infrastructure, Digital Productivity Tools and Debates, Digital Publishing Standards and Tools, Digital Preservation.

**Requisites:** Sophomore standing**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Fall 2021**L I S 350 – HISTORY AND FUTURE OF BOOKS**

3 credits.

Framed by a question about what books are, what books have been, and what books might be: past, present, and future. It assumes that "book" is a placeholder term for an object that becomes the site of questions and debates about a variety of media, expressions, and recording practices. A goal of the class is to understand the book as an active technology that shapes peoples, perceptions, and cultures rather than serving as a passive receptacle of them. This course will approach the book from a number of perspectives including book history, digital humanities, media studies, and human computer interaction, as well as examining industry-oriented interests such as e-reader manufacturing, book retail, and publishing.

**Requisites:** Satisfied Communications A requirement**Course Designation:** Gen Ed - Communication Part B

Breadth - Humanities

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025**L I S 351 – INTRODUCTION TO DIGITAL INFORMATION**

3 credits.

Prepares students to use information technologies to solve problems and help people through implementing information infrastructures such as websites, databases and metadata. Students will explore information access, information representation, usability and information policy issues, and increase their understanding of the social impacts and social shaping of information infrastructures.

**Requisites:** Satisfied Communications A requirement**Course Designation:** Breadth - Social Science

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025**L I S 399 – INDEPENDENT READING AND RESEARCH**

1-3 credits.

Concentrated work on a subject or problem of interest.

**Requisites:** Consent of instructor**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Investigate an information science topic in conjunction with other investigator(s) to develop a deep understanding of a research problem.

Audience: Undergraduate

2. Identify a research problem and develop a basic knowledge of the academic literature on this topic.

Audience: Undergraduate

**L I S/COMP SCI/STAT 401 – UNDERGRADUATE COOPERATIVE EDUCATION**

1 credit.

Full time work experience which combines classroom theory with practical knowledge related to Computer Sciences, Data Science, Statistics, or Information Science.

**Requisites:** Consent of instructor**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Workplace - Workplace Experience Course

**Repeatable for Credit:** Yes, for 3 number of completions

**Learning Outcomes:** 1. Apply academic experience gained through coursework in a professional setting.

Audience: Undergraduate

2. Experience the nature and demands of a professional career in computer science, information science, and/or statistics/data science

Audience: Undergraduate

3. Develop professional and transferable skills like time management, collaboration, problem-solving, and communication in the workplace.

Audience: Undergraduate

**L I S 407 – DATA STORYTELLING WITH VISUALIZATION**

3 credits.

Introduction to data visualization including how and why visualization can be an effective tool for summarizing, analyzing and communicating about data, the limitations and challenges in using data visualizations, including misrepresentation and bias and planning appropriate types of visualization(s) based on source data, audience, and goals. Instruction will include hands-on experience with popular visualization software platforms to develop visualizations and presentations.

**Requisites:** Sophomore standing and satisfied Quantitative Reasoning (QR) A requirement

**Course Designation:** Breadth - Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Understand theories of data visualization

Audience: Undergraduate

2. Explain how and why visualization can be an effective tool for summarizing, analyzing and communicating about data

Audience: Undergraduate

3. Understand and apply best practices for communicating about data for targeted and broad audiences

Audience: Undergraduate

4. Understand and apply theories and best practices for creating visualizations

Audience: Undergraduate

5. Design and develop informative and persuasive visualizations

Audience: Undergraduate

6. Identify and choose appropriate software for creating visualizations

Audience: Undergraduate

7. Choose appropriate visualization types based on source data, audience, and goal

Audience: Undergraduate

8. Critically analyze visualizations created by others for effectiveness and bias

Audience: Undergraduate

9. Understand the limitations and challenges of data visualization

Audience: Undergraduate

**L I S 440 – NAVIGATING THE DATA REVOLUTION: CONCEPTS OF DATA & INFORMATION SCIENCE**

3 credits.

Provides an introduction into the world of Data Science. Includes hands-on projects using scenarios involving analysis of real-world data and development of graphical visualizations. Introduces statistical tests, data management, data programming, data ethics and visualization of data.

**Requisites:** Satisfied Quantitative Reasoning (QR) A requirement, Satisfied Communications A requirement, and sophomore standing

**Course Designation:** Gen Ed - Quantitative Reasoning Part B  
Breadth - Natural Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Understand and communicate the different types of data science projects, and be familiar with the tools and methods used in data science

Audience: Undergraduate

2. Apply data analysis to primary data sources to solve problems

Audience: Undergraduate

3. Communicate about data and analyses clearly and persuasively in written, spoken, and graphical/visualized form

Audience: Undergraduate

4. Identify probability distributions commonly used as foundations for statistical modeling

Audience: Undergraduate

5. Reason around ethical and privacy issues in data science conduct and apply ethical practices.

Audience: Undergraduate

**L I S/AFRICAN/COM ARTS 444 – TECHNOLOGY AND DEVELOPMENT IN AFRICA AND BEYOND**

3 credits.

Surveys the past 20 years of digital technology and communications culture on the African continent, cross-referenced with discourse on technology experiences in other parts of the developing world, through the framework of development studies. Readings include case studies of micro-tech practices as well as political and social use of new media, and government and NGO-led tech interventions. Information Communication Technology for Development (ICT4D) is a key area of focus. Cross-discipline areas include communications and media studies, African, Latin American and International area studies, as well as the social anthropology of technology and science, and design. Think critically about technology use in the context of different tech cultures from around the world. Apply this perspective towards new media solutions to social problems.

**Requisites:** Junior standing**Course Designation:** Breadth – Either Humanities or Social Science Level – Intermediate

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Identify canonical authors and texts, historical forms, genres, and structures in African culture studies and information and communication studies. Students will demonstrate their understanding of major theories, approaches, concepts and current and classical research findings.

Audience: Both Grad &amp; Undergrad

2. Understand their own learning processes and possess the capacity to intentionally seek, evaluate and learn from information, and recognize and reduce bias in their thinking.

Audience: Both Grad &amp; Undergrad

3. Communicate effectively through essays, oral presentations and discussion and project based work, so they may share their knowledge, wisdom and values with others across social and professional settings.

Audience: Both Grad &amp; Undergrad

4. Write and speak across disciplinary boundaries with regard to existing research about Africa, the African diaspora and international development.

Audience: Graduate

5. Explain the social, economic, and/or environmental dimensions of the sustainability challenge(s) of the historic and contemporary challenges of development-oriented tech projects, and identify areas within ICT which could assist in their sustainability. [Sustainability]

Audience: Both Grad &amp; Undergrad

6. Analyze sustainability issues and/or practices using a systems-based approach of information access and media communications within the sustainability framework with regards to environmental change, public infrastructure for clean water and sanitation, urban growth, education, governance and democracy, and public health. [Sustainability]

Audience: Both Grad &amp; Undergrad

**L I S/LEGAL ST 460 – SURVEILLANCE, PRIVACY, AND POLICE POWERS**

3 credits.

Examines individual privacy and government information collection in law enforcement, security, public health, administrative law, and other contexts from a variety of disciplinary perspectives.

**Requisites:** Junior standing**Course Designation:** Breadth – Humanities

Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2016**L I S 461 – DATA AND ALGORITHMS: ETHICS AND POLICY**

3–4 credits.

An introduction to ethical, legal and policy issues related to analytics, "big data" and algorithms to support decision making. Gain familiarity with major debates and controversies in a variety of contexts. Critically analyze course materials and apply moral reasoning and legal concepts to assess case studies and critique arguments made by others.

**Requisites:** Sophomore standing**Course Designation:** Breadth – Humanities

Level – Intermediate

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify, analyze, and evaluate moral problems relevant to data science

Audience: Undergraduate

2. Distinguish and explain different types of legal and moral concerns including harm, discrimination, procedural unfairness, respect for persons, and democratic legitimacy.

Audience: Undergraduate

3. Examine and critique the arguments, and to bring original and creative ideas to bear on those arguments in oral and written form.

Audience: Undergraduate

4. Understand and apply theories and concepts to problems in data and ethics in a variety of domains

Audience: Undergraduate

**L I S 464 – APPLIED DATABASE DESIGN**

3 credits.

Introduces the applications of databases to real-world data and information problems. Overview of the principles and practices of user-oriented database design, management, and application. Discussion and practice cover database application lifecycle, data modeling, relational database design, SQL queries, reports and other interfaces to database data, and database documentation.

**Requisites:** Sophomore standing and satisfied Quantitative Reasoning (QR) A requirement

**Course Designation:** Breadth - Natural Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand the technical vocabulary and concepts used to describe databases and related technologies

Audience: Undergraduate

2. Understand, and critically evaluate and implement the full spectrum database design process, from the initial user needs analysis, to conceptualization, development of schemas, and final production

Audience: Undergraduate

3. Apply normalization techniques to reduce data redundancy and improve data integrity

Audience: Undergraduate

4. Understand the concepts of de-normalization and its rationale in real-world applications

Audience: Undergraduate

5. Create, modify, and query relational databases using the SQL language

Audience: Undergraduate

6. Perform a real-world database design and implementation in MySQL

Audience: Undergraduate

7. Understand the concept of No-SQL database models and the difference between SQL and NO-SQL database

Audience: Undergraduate

**L I S 470 – INTERACTION DESIGN STUDIO**

3 credits.

Introduces interaction design, an approach to designing digital information systems that places humans and their needs at the center of the design process. Explores how core principles of design, design processes, cognition, information science and human values inform the design of interactive information systems. Discussion and practice apply the data-driven process of human-centered interaction design to develop new digital products and services.

**Requisites:** (Sophomore standing, satisfied Quantitative Reasoning (QR) A requirement, and satisfied Communications A requirement), or graduate/professional standing

**Course Designation:** Breadth - Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the systematic design process of human centered interaction design.

Audience: Undergraduate

2. Apply core concepts to both critique the design of existing digital products and services and to create new design ideas.

Audience: Undergraduate

3. Engage in and respond to constructive critique with peers as part of design work.

Audience: Both Grad & Undergrad

4. Communicate design concepts clearly and persuasively in oral, written and visual communications.

Audience: Both Grad & Undergrad

5. Apply the systematic design process of human centered interaction design.

Audience: Graduate

6. Synthesize core concepts to both critique the design of existing digital products and services and to create new design ideas.

Audience: Graduate

7. Evaluate contemporary design best practices.

Audience: Graduate

**L I S/COMP SCI 472 – INTRODUCTION TO WEB DEVELOPMENT**

3 credits.

Applied web development introduces methods and tools for creating/maintaining secure and interactive web content. Topics include programming fundamentals to support core web concepts, application development essentials, and content management systems. Web best practices – such as accessibility, design, and critical thinking about relevant ethics and organization – will be incorporated throughout. Gain practical skills to design and implement websites using popular scripting languages and frameworks, content management systems (CMSs), and related tools.

**Requisites:** Junior standing, declared in Library and Information Studies MA, Information MS, or Capstone Certificate in Computer Sciences for Professionals. Not open to students with credit for COMP SCI 272.

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop understanding and application of current web scripting languages and development tools and frameworks.

Audience: Both Grad & Undergrad

2. Install, configure, and customize open source content management systems.

Audience: Both Grad & Undergrad

3. Understand and apply user experience and accessibility best practices in building accessible websites.

Audience: Both Grad & Undergrad

4. Design solutions to problems using multi-step scripting, logical operations, and functions.

Audience: Both Grad & Undergrad

5. Understand ethical issues and concerns related to website development and its related technologies.

Audience: Both Grad & Undergrad

6. Analyze the management challenges, and ethical considerations inherent in web development projects.

Audience: Both Grad & Undergrad

7. Critically evaluate and compare different frameworks and libraries for extending scripting capabilities.

Audience: Graduate

**L I S/FOLKLORE 490 – FIELD METHODS AND THE PUBLIC PRESENTATION OF FOLKLORE**

3 credits.

Combines a fieldwork practicum with scrutiny of the cultural, political, and ethical dimensions underlying the documentation and public presentation of folklore through festivals, exhibitions, publications, audio-visual productions, and digital archival collections.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Understand how to employ folkloristic fieldwork, archival methodologies, and community engagement in documenting and presenting local communities.

Audience: Both Grad & Undergrad

2. Explain key concepts of folklore studies in the context of wider public humanistic research.

Audience: Both Grad & Undergrad

3. Create a final project demonstrating critical thinking, civic knowledge, and collaboration with coordinating communities.

Audience: Both Grad & Undergrad

4. Understand how to coordinate effectively with community organizations to undertake multidisciplinary arts and humanities grant-funded project planning with public programming goals such as festivals, exhibitions, publications, audio-visual productions, and digital archival collections.

Audience: Graduate

**L I S 500 – CODE AND POWER**

3 credits.

Prepares students to analyze and critique the portrayal of race, gender and computing in various media outlets and to consider their own potential as contributors to the computing industries in light of media portrayals and their own self-perceptions. As students confront assumptions about gender race and computing, this course will also equip them with the skills necessary to confidently design, develop, and discuss web scripting aspects related to PHP website development.

**Requisites:** Junior standing

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**L I S 501 – INTRODUCTION TO TEXT MINING**

3 credits.

Introduces computational methods and tools for processing, analyzing, and understanding text data. Topics include text data preparation and preprocessing, models of text content and meaning, exploratory text analytics, text classification, information extraction from texts, ethical issues in natural language processing (NLP), and related applications in information sciences and other fields. Develops practical skills to design and implement text mining solutions using popular NLP tools and programming packages.

**Requisites:** Junior standing and Satisfied Quantitative Reasoning (QR) A requirement or graduate/professional standing

**Course Designation:** Breadth – Natural Science

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand and apply the general natural language processing (NLP) pipeline to process text data

Audience: Both Grad & Undergrad

2. Understand and use computational models to represent text contents and meanings

Audience: Both Grad & Undergrad

3. Perform exploratory text analysis to understand the contents, topics, and characteristics of a text corpus

Audience: Both Grad & Undergrad

4. Design, implement, and evaluate solutions to categorize texts and extract information from texts

Audience: Both Grad & Undergrad

5. Understand ethical issues and concerns related to natural language processing and language technologies

Audience: Both Grad & Undergrad

6. Critically evaluate and compare different text mining solutions

Audience: Graduate

**L I S 510 – HUMAN FACTORS IN INFORMATION SECURITY**

3 credits.

Introduction to personal, social, and organizational concepts, skills, and processes related to the information security of individuals and organizations. Preparation to help individuals and organizations enhance their own security and privacy, especially but not exclusively online.

**Requisites:** Junior standing

**Course Designation:** Breadth – Social Science

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Communicate clearly and effectively to non-expert audiences about security vulnerabilities and security-related incidents.

Audience: Both Grad & Undergrad

2. Mitigate common human-centered risks to information security and privacy.

Audience: Both Grad & Undergrad

3. Develop awareness of the structure of the information security field, and career opportunities within it.

Audience: Both Grad & Undergrad

4. Build strategies and sources for current awareness of security issues.

Audience: Both Grad & Undergrad

5. Demonstrate understanding of professional competencies important for management of information organizations.

Audience: Graduate

6. Demonstrate understanding of societal, legal, policy or ethical information issues.

Audience: Graduate

7. Demonstrate understanding of issues surrounding marginalized communities and information.

Audience: Graduate

**L I S/NURSING 517 – DIGITAL HEALTH: INFORMATION AND TECHNOLOGIES SUPPORTING CONSUMERS AND PATIENTS**

3 credits.

Increases student understanding of appropriate and accurate materials for consumer health and family education; the ethical and organizational policy issues that arise when providing consumer and family health information in different settings; the role of the public media in disseminating health information; the health-related information needs and preferences of racial/ethnic minority populations. It also provides an introduction to health information technologies, from search engines to websites to apps, that put people in charge of managing their own health information.

**Requisites:** Junior standing**Course Designation:** Breadth - Social Science

Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025**L I S 601 – INFORMATION: PERSPECTIVES AND CONTEXTS**

3 credits.

Provides an introduction to major themes and topics in information studies as well as the language and literature of the field and related disciplines. This course is about information, information agencies, and being an information professional. We look at social, historical, ethical, legal and political issues surrounding information dissemination, use, control, and management.

**Requisites:** Graduate/professional standing**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025**L I S 602 – INFORMATION: ORGANIZATION AND SEARCH**

3 credits.

Introduces basic concepts and principles of information organization and online searching. Gain knowledge of information organization and retrieval theories and methods and knowledge of large database structures and database searching techniques. Critically examine the impact of information organization practices on organizations and culture. Learn how to develop information organizing systems and to evaluate and improve search systems.

**Requisites:** Graduate/professional standing**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Fall 2024**L I S 603 – RESEARCH AND ASSESSMENT FOR INFORMATION PROFESSIONALS**

3 credits.

Introduces students to research, evaluation and assessment practices. Prepares students to design and implement a research or assessment project. Provides an overview of commonly employed data collection methodologies and introduces students to both qualitative and quantitative analysis approaches that may be employed in evaluation, assessment and research.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Summer 2025**L I S/COMP SCI 611 – USER EXPERIENCE DESIGN 1**

3 credits.

Introduction to the user experience design including key stages of the design process, design ethics, and the methods and tools involved at each stage of design. Conduct formative research on clients, users, use contexts and tasks. Gain experience with user research methodologies and learn to create intermediate design tools such as personas. Develop and present a design proposal for a chosen project.

**Requisites:** Declared in Information MS, Design + Innovation MS , or Capstone Certificate in User Experience Design**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Apply fundamental concepts and practices of user experience design

Audience: Graduate

2. Understand the ethics of design including practices of inclusive design and accessibility

Audience: Graduate

3. Conduct formative research to inform design

Audience: Graduate

4. Apply common user data collection methods

Audience: Graduate

5. Analyze and visualize processes across time and interfaces

Audience: Graduate

6. Create and apply common UX design tools such as personas, scenarios and user journey maps

Audience: Graduate

7. Effectively convey the output of user research and initial design through oral and written communication.

Audience: Graduate

**L I S/COMP SCI 612 – USER EXPERIENCE DESIGN 2**

3 credits.

Advanced study of UX design. Introduces processes of ideation, key concepts of visual design, conceptual and interaction design, low and high-resolution prototyping of design techniques. Applications include drafting designs based on user models and initial testing of prototypes.

**Requisites:** COMP SCI/L I S 611 and Declared in Information MS, Design + Innovation MS, or Capstone Certificate in User Experience Design

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop design ideas and communicate them through brainstorming, sketching, and modeling;

Audience: Graduate

2. Create designs that follow principles of and best practices in visual and interaction design;

Audience: Graduate

3. Prototype designs using rapid prototyping methods for communication and testing;

Audience: Graduate

4. Understand human perceptual, cognitive, and motor processes involved in interaction;

Audience: Graduate

5. Evaluate designs using expert- and empirical-evaluation methods;

Audience: Graduate

6. Integrate design, prototyping, and evaluation methods and principles into a process toward addressing a design problem

Audience: Graduate

7. Communicate their ideas to others, integrate feedback into their design work, and critique the work of others constructively.

Audience: Graduate

**L I S/COMP SCI 613 – USER EXPERIENCE DESIGN 3**

3 credits.

Conduct formal evaluations of the user experience (UX) or usability of a digital system. Gain familiarity with the evaluation and research process including key stages, tasks for each stage, common data collection and analysis methods, and common tools employed in the field. Gain experience with a variety of UX evaluation approaches. Collect pilot data and develop a proposal for further UX testing.

**Requisites:** COMP SCI/L I S 612 and Declared in Information MS, Design + Innovation MS, or Capstone Certificate in User Experience Design

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate understanding of a variety of UX testing approaches

Audience: Graduate

2. Plan and implement all phases of testing for a digital system including planning, data collection, analysis and reporting

Audience: Graduate

3. Demonstrate understanding of the relationship among research design, instruments, metrics, and data analysis

Audience: Graduate

4. Implement major testing approaches such as task-based, information architecture and accessibility

Audience: Graduate

5. Have knowledge of contemporary tools used for UX testing

Audience: Graduate

6. Communicate evaluation findings effectively and use data to improve systems design

Audience: Graduate

### **L I S/COMP SCI 614 – USER EXPERIENCE DESIGN CAPSTONE**

1 credit.

Applies a design studio critique approach to produce a learning environment of collaborative and interdisciplinary peer critique and learning, in addition to provide expert feedback and suggestions. Present and defend the latest iteration of the user experience design project developed in earlier courses while learning about the professions associated with digital user experience design.

**Requisites:** COMP SCI/L I S 613 and declared in Design + Innovation MS, or the Capstone Certificate in User Experience Design

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Knowledge of, and ability to apply, data collection and analysis methodologies for user experience research.

Audience: Graduate

2. Knowledge of, and ability to apply, design principles and user behavior theories to digital environments.

Audience: Graduate

3. Create, critique and revise design prototypes based on testing data and feedback

Audience: Graduate

4. Effectively plan, manage and communicate a user experience design project.

Audience: Graduate

### **L I S 615 – SYSTEMS ANALYSIS AND PROJECT MANAGEMENT FOR INFORMATION PROFESSIONALS**

3 credits.

Introduces established and evolving methodologies for the analysis, design, and development of information systems involving people, data/ information and technologies. Introduces students to basic concepts and tools of project management. Learn to apply systems analysis and project management methods to solve real world problems involving information flows and interactions.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Understand and apply contemporary techniques and methodologies for systems analysis

Audience: Graduate

2. Understand and apply contemporary techniques and methodologies for project management

Audience: Graduate

3. Solve real-world information flow and information interaction problems with applying systems analysis and project management methodologies

Audience: Graduate

4. Effectively present analysis and solutions in both oral and written communications

Audience: Graduate

### **L I S 616 – RECORDS MANAGEMENT**

1-3 credits.

An introduction to the role of records in society and to the principles and practices involved in managing records (both paper and electronic) in private and public sector organizations.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

### **L I S/MUSIC 619 – MUSIC RESEARCH METHODS AND MATERIALS**

3 credits.

Historical and contemporary bibliography resources for musical scholarship; general reference tools of scholarly work and specific musicological works.

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **L I S/CURRIC 620 – FIELD PROJECT IN LIBRARY AND INFORMATION AGENCIES**

3 credits.

Analysis of field experience through seminars, individual conferences, required reading and consultations with cooperating librarians and information specialists. Enrollment limited.

**Requisites:** L I S 601 and 602 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

### **L I S 622 – CHILDRENS LITERATURE**

3 credits.

Traditional sources to the present; criticism and evaluation; contemporary trends and issues. Techniques of reading guidance in school or public library in relationship to developmental interests, needs and skills of children.

**Requisites:** Junior standing

**Course Designation:** Breadth - Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **L I S 629 – MULTICULTURAL LITERATURE AND RESOURCES FOR CHILDREN AND YOUTH**

3 credits.

Focuses on issues of diversity in literature and other media for children and young adults. Considers representation of ethnicities, socioeconomic status, gender, sexual orientation and (dis)ability. Issues addressed include authenticity, representation, cultural correctness, reader response and intellectual freedom. Students will gain skills to advocate for, promote, and assess multicultural resources; develop a collection; and understand issues related to cultural competence and reader response.

**Requisites:** Junior standing

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **L I S 631 – LITERATURE AND RESOURCES FOR YOUTH**

3 credits.

A survey of media interests and needs of young adults including books, film, television, audio, and production technologies. Critically examines media trends, materials, selection criteria, recommendations, and censorship. Students will develop an ability to advocate for and promote materials according to intellectual, emotional, social and physical needs of young adults.

**Requisites:** Junior standing

**Course Designation:** Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **L I S 632 – METADATA STANDARDS AND XML**

3 credits.

An overview of the design and use of metadata for resource description and retrieval in digital environments. Learn to implement and evaluate standard schemes used in cultural heritage, commercial and other contexts including Dublin Core, MODS, VRA and others. Issues of information behavior, interoperability, quality control, vocabulary control and project management are covered.

**Requisites:** L I S 602

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

### **L I S 635 – REFERENCE AND INFORMATION SERVICE**

3 credits.

Theories, principles and practices of reference and information services.

**Requisites:** L I S 601 and 602 or concurrent enrollment

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **L I S 639 – PEDAGOGICAL THEORY AND PRACTICE FOR INFORMATION PROFESSIONALS**

3 credits.

Introduction to pedagogical theory, training tools, and teaching skills needed in a variety of informational instructional settings such as academic and public libraries, archival institutions, museums, and software training facilities. Applicable for students interested in information literacy instruction, online teaching, technology training, and group instruction..

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**L I S 640 – TOPICS IN LIBRARY AND INFORMATION STUDIES**

1-3 credits.

Current issues in library and information studies that are not addressed in sufficient depth in existing courses or that combine facets of several existing courses.

**Requisites:** Junior standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**L I S 642 – READING INTERESTS OF ADULTS**

3 credits.

An examination of the nature and societal functions of a variety of mass media-generated adult reading materials, the standards by which they are judged, and their relationship to contemporary library and information science fields.

**Requisites:** Junior standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2021

**L I S 644 – DIGITAL TOOLS, TRENDS AND DEBATES**

3 credits.

Overview of information and communications technologies, digital media, and standards in relationship to information agencies, within the context of current societal controversies. Promotes technical knowledge of ICT and critical analysis of controversies surrounding ICT development, use and modification.

**Requisites:** Junior standing

**Course Designation:** Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**L I S/LEGAL ST 645 – INTELLECTUAL FREEDOM**

3 credits.

An examination of intellectual freedom in the United States including censorship, minors' rights, the Internet, privacy, and copyright with focus on theoretical questions related to the First Amendment to the U.S. Constitution, and historical developments.

**Requisites:** Junior standing

**Course Designation:** Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**L I S 646 – INTRODUCTION TO INFO ARCHITECTURE AND INTERACTION DESIGN FOR THE WEB**

3 credits.

Basic concepts in information architecture, digital interaction design, usability testing, navigation, evaluation, and accessibility through planning, design and development of a web based information product or service. Also covers introductory web development technologies.

**Requisites:** Junior standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply the theoretical principles of information architecture and web usability.

Audience: Undergraduate

2. Organize information logically and strategically.

Audience: Undergraduate

3. Apply knowledge of web design by building an accessible interactive website using HTML and CSS.

Audience: Undergraduate

4. Communicate information architecture concepts clearly and persuasively in oral, written, and visual communication.

Audience: Undergraduate

5. Define theoretical principles of information architecture and web usability.

Audience: Graduate

6. Describe web standards, usability and accessibility, project planning, project management, web evaluation, and website design as an ongoing, iterative process.

Audience: Graduate

7. Use teamwork to balance the desires of all parties involved in launching an organization's website, with concern for usability and accessibility, responsive design, and other web design principles and standards to create an effective website.

Audience: Graduate

8. Create, organize, and design websites that use information architecture principles, adhere to usability and accessibility guidelines, and are consistent with web standards, regardless of the type of website.

Audience: Graduate

### **L I S/ART HIST/HISTORY/JOURN 650 – HISTORY OF BOOKS AND PRINT CULTURE IN EUROPE AND NORTH AMERICA**

3 credits.

History of books and print culture in the West from ancient times to the present. Focus on the influence of reading and writing on social, cultural, and intellectual life. Methodologies, theories, and sources for study of book and print culture history.

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **L I S 651 – CATALOGING AND CLASSIFICATION**

3 credits.

Basic cataloging and classification principles and suitable techniques. Includes descriptive cataloging, selected entry headings, Sears subject headings, Dewey Decimal Classification, book numbers, and cataloging with supplied copy including OCLC editing.

**Requisites:** L I S 602

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **L I S 654 – INFORMATION SERVICES MANAGEMENT**

3 credits.

Survey of concepts and skills necessary to perform in an information services organization. Service needs assessment, goal and objective setting, staffing, budgeting and evaluation.

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **L I S 655 – COLLECTION MANAGEMENT**

3 credits.

Collection development designed to teach professional skills in selection and control of collections. Examines large societal forces affecting the ways librarians have traditionally built collections and contemporary changes in access and ownership.

**Requisites:** L I S 601 and 602 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **L I S 661 – INFORMATION ETHICS AND POLICY**

3 credits.

Overview of modern ethical theories and how they inform information agency policies and practices; examines selected policy issues relating to information and communications; includes topics such as intellectual property, privacy, censorship, equity of access.

**Requisites:** Junior standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

### **L I S/LEGAL ST 663 – INTRODUCTION TO CYBERLAW**

3 credits.

The emphasis is on critical thinking about a broad variety of legal and policy problems that arise because of ever-changing information and communication technologies.

**Requisites:** Junior standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **L I S 665 – TOPICS IN RACE AND ETHNICITY IN THE INFORMATION SOCIETY**

3 credits.

Discusses issues in the provision of information services in a multiethnic and multilingual society. It also discusses the role of information institutions in promoting and preserving ethnic heritage.

**Requisites:** Sophomore standing

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2019

### **L I S 668 – DIGITAL CURATION AND COLLECTIONS**

3 credits.

Core concepts and new developments in digital curation, preservation and digital collections. Topics include: digitization of various media; digital preservation; media archeology; basics of research data management; digital collection technologies and workflows; intellectual-property issues; metadata as applied in digital collections; digital collections planning and evaluation; trusted digital repositories; funding of digital collection projects and sustainability.

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**L I S/JOURN 677 – CONCEPTS AND TOOLS FOR DATA ANALYSIS AND VISUALIZATION**

3 credits.

An introduction to information and data visualization: introduction to major concepts, instruction in specific tools for data analysis and visualization, and application of skills in a final project.

**Requisites:** None**Course Designation:** Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025**L I S 678 – PRESERVATION AND CONSERVATION OF LIBRARY AND ARCHIVES MATERIALS**

3 credits.

Basic concepts, principles, and approaches to protection and care of library and archives material, including nature and structure of paper- and plastic-based materials, deterioration, preservation management, disaster prevention, reformatting, and repair.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**L I S/COM ARTS 705 – INTRODUCTORY ANALYTICS FOR DECISION MAKING**

3 credits.

Introduces key stages in the processes of gathering and analyzing data for decision making, including tasks, methods, and tools used at each stage. Topics include developing the research question from organizational goals, choosing appropriate data collection methods, sampling, basics of measurement and question design, managing and visualizing data, descriptive statistics and basic inferential statistics such as correlations, regressions, and ANOVA.

**Requisites:** Graduate/professional standing or Declared in Analytics for Decision Making capstone certificate**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**L I S 706 – DATA MINING PLANNING AND MANAGEMENT**

3 credits.

Prepares students to plan, manage and assess a data mining project in light of organizational strategic goals. Introduces stages of a data mining project, data mining project evaluation frameworks, and principles of data ethics related to data mining. Learn and apply introductory data mining tools and techniques for data clustering, dividing data into classes, making predictions and identifying networks.

**Requisites:** L I S/COM ARTS 705**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2024

**Learning Outcomes:** 1. formulate questions related to existing organizational goals or challenges, identify sources of data to answer those questions, and design and implement a data analysis plan to answer the questions

Audience: Graduate

2. demonstrate competency with a range of data collection and analysis techniques and tools appropriate to organizational decision making and assessment including the basics of data mining

Audience: Graduate

3. effectively communicate the rationale for a data project and the results of their analysis across different types of media and using best practices of textual and visual communications.

Audience: Graduate

4. articulate the possible information value and the limitations of data and analytics projects including data mining projects based on understanding of data quality, data availability, metadata functionality and other data management issues.

Audience: Graduate

**L I S 707 – DATA VISUALIZATION AND COMMUNICATION FOR DECISION MAKING**

3 credits.

Introduces key concepts in data visualization and communication including how and why visualization can be an effective tool for summarizing, analyzing and communicating about data, and limitations and challenges of using visualization techniques. Students will use contemporary software to develop visualization dashboards and presentations as well as plan appropriate types of visualization(s) based on source data, audience, and goals, evaluate visualizations for effectiveness and bias.

**Requisites:** Graduate/professional standing or Declared in Analytics for Decision Making capstone certificate**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024

### **L I S 711 – DATA MANAGEMENT FOR INFORMATION PROFESSIONALS**

3 credits.

Preparation to effectively and ethically manage, organize and protect the data in organizational settings. Covers major topics of data management addressed by the Certified Data Management Professional certification. Assess, construct and implement workflows, organizational policies and data architecture to improve data quality and security. Learn to clean and organize data for effective retrieval and use. Learn tools and techniques to support data interoperability, and gain understanding of contemporary data management ethical and policy issues.

**Requisites:** Graduate Students Only

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify common organizational data governance objectives and describe strategies to meet them

Audience: Graduate

2. Apply practices for provenance, security, storage and metadata within different organizational settings

Audience: Graduate

3. Apply basic data manipulation and cleaning techniques and tools to various types of data

Audience: Graduate

4. Demonstrate understanding of legal, policy and ethical issues related to data management

Audience: Graduate

5. Demonstrate professional communications and teamwork capacities and the ability to use collaborative technologies to work collaboratively with others

Audience: Graduate

6. Integrate data, information technologies, and an understanding of human information behavior to solve organizational, community or social problems.

Audience: Graduate

### **L I S 712 – THE PUBLIC LIBRARY**

3 credits.

Library service based on knowledge of structure and government, personnel, resources, legislation, building, management and planning, public relations and marketing.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

### **L I S 722 – COLLEGE AND UNIVERSITY LIBRARIES**

3 credits.

Place of the library and librarian in the instructional program; special units of study devoted to administration of the library, budgets, buildings, departmental libraries and cooperative ventures.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **L I S 732 – STRATEGIC INFORMATION SERVICES**

3 credits.

Developing, managing and evaluating information services to corporate, government, research, small business, and community organizations. Overviews of knowledge management, business intelligence, industry analysis, information brokering. Gain skills in information service entrepreneurship and marketing information services. Overview of changes within the profession and networking within the professional community.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

### **L I S/HISTORY 734 – INTRODUCTION TO ARCHIVES AND RECORDS MANAGEMENT**

3 credits.

An introduction to the archives profession and basic theory and practice of archives and records administration, including the uses of primary sources in research, appraisal, access, and preservation.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**L I S 751 – DATABASE DESIGN FOR INFORMATION PROFESSIONALS**

3 credits.

Introduction to contemporary database management systems, the design process employed when implementing databases to solve data and information management problems, developing queries and scripts, and other issues in employing databases to solve organizational information and data challenges.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand conceptual design concepts of contemporary database systems

Audience: Graduate

2. Be able to implement design concepts to create and manage a database given a database system

Audience: Graduate

3. Use notation systems to develop and communicate a database design to others

Audience: Graduate

4. Understand basic principles of scripting languages and their use in making databases web accessible

Audience: Graduate

5. Use SQL or other tools to create and manage a database as well as to manipulate data and produce queries

Audience: Graduate

**L I S 755 – ELECTRONIC RESOURCE MANAGEMENT & LICENSING**

3 credits.

Management, policy and technology issues associated with licensed digital library resources such as e-journals, e-books, full text and citation databases, digital audio and video collections, and e-references resources. Includes a significant copyright and licensing component.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**L I S 768 – DIGITAL HUMANITIES ANALYTICS**

3 credits.

Learn and apply introductory technology-related concepts and skills to plan, implement and assess data-driven projects in the humanities, social sciences and other fields. Topics include identifying relevant existing digitized materials, web scraping, text encoding, topic modeling, mapping, social network analysis and other approaches for collecting, analyzing and visualizing data.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**L I S 772 – LIBRARY SERVICES TO CHILDREN AND YOUNG ADULTS**

3 credits.

The theory and structure of public library service to children and young people, its function in the community, and techniques of administration. Seminar and field work.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**L I S/CURRIC/ED PSYCH 803 – COMPUTATIONAL RESEARCH METHODS**

3 credits.

Provides a broad overview of ways of formulating and investigating novel questions with tools from educational data mining and learning analytics including social network analysis, natural language processing, Markov modeling, Bayesian inference, and agent-based modeling.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**L I S 818 – ARCHIVES ACCESSIONING AND APPRAISAL**

3 credits.

Theories and principles behind archival decisions to acquire records and designate them as worthy of long-term retention in an archive. Emphasis on understanding archival views about society, the role of the archivist, and the attribution of value to archival material.

**Requisites:** L I S/HISTORY 734 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **L I S 826 – FIELD PROJECT IN LIBRARY AND INFORMATION LITERACY INSTRUCTION**

3 credits.

Guided practice in the development and implementation of information literacy curriculum at the university level. Participants will assist campus teaching librarians with the Communication Requirement A courses and perform other teaching related tasks at assigned site.

**Requisites:** L I S 601 and 602 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2018

### **L I S 839 – SPECIAL COLLECTIONS**

1-3 credits.

A topical course focusing on a special subject (art, law, music, health sciences) or format (maps, microforms, rare books, iconographic materials). Issues related to collection development, acquisitions, reference, indexing and management.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2018

### **L I S 855 – TOPICS IN INFORMATION AGENCY MANAGEMENT**

1-3 credits.

Critical examination of selected management techniques in the areas of materials control, physical plant operations, personnel programs, budget preparation and statistical reporting. May also focus on a particular type of information agency; e.g., data analysis centers, research libraries, or public libraries.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **L I S 875 – TOPICS IN INFORMATION PROCESSING AND RETRIEVAL**

1-3 credits.

Current issues in technologies for information processing and retrieval in libraries and information agencies.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

### **L I S 910 – SMR-RESEARCH DESIGN & METHODOLOGY FOR LIBRARY & INFORMATION STUDIES**

3 credits.

Examines key issues in research design, including how to formulate research questions and shape scholarly research to make valid descriptive and causal inferences. Analysis and evaluation of research designed and conducted with different theoretical frameworks and methodologies; guided proposal preparation.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

### **L I S 925 – PROFESSIONAL WRITING AND READING (PWR) SEMINAR**

1 credit.

Provides professional development for doctoral-level researchers. Includes presentations by guest speakers and/or faculty members, writing workshops, reflection assignments and student presentations.

**Requisites:** Declared in Library and Information Studies PhD program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 6 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify major outlets and publishing norms for your research area

Audience: Graduate

2. Describe and employ writing and public presentation conventions specific to your research area

Audience: Graduate

3. Employ strategies to help you be productive and grow professionally now and in the future

Audience: Graduate

4. Articulate different career options and pursue those career options in your field of study

Audience: Graduate

5. Describe strategies to engage with materials presented by a range of scholars from different disciplines

Audience: Graduate

**L I S 931 – SEMINAR IN INFORMATION POLICY, MANAGEMENT AND INSTITUTIONS**

3 credits.

Survey of research and theorizing of: information policy and law, the management of information within and between organizations - including information technology and information labor, and investigation of traditional and new institutions in the information society.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**L I S 940 – SEMINAR IN INFORMATION USE AND USERS IN CONTEXT**

3 credits.

Exploration of information needs, information seeking behavior, and information use by people in various roles, situations, and contexts that go beyond libraries. It includes exploring factors that influence a user's information needs and behavior.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**L I S 950 – SEMINAR IN LIS FOUNDATIONS: HISTORIES, PHILOSOPHIES AND DEBATES**

3 credits.

An in-depth examination of some aspect(s) of the historical and philosophical foundations of LIS as it has been transformed through time and space, within the broader cultural context.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2021

**L I S 975 – SEMINAR IN INFORMATION ORGANIZATION AND ACCESS**

3 credits.

Critical examination of technical and non-technical aspects and cognitive/ socio-cultural processes and implications of systems and models of information organization, retrieval and transfer. Introduces different research approaches and topic areas, including relevance, search behavior, knowledge representation, and systems design and evaluation.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2023

**L I S 990 – RESEARCH AND THESIS**

1-9 credits.

Dissertation credits.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**L I S 999 – INDEPENDENT READING AND RESEARCH**

1-4 credits.

Concentrated work on a subject or problem of the student's need or interest; students must submit a written report, paper, or other product covering the work accomplished.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

# LIFE SCIENCES COMMUNICATION (LSC)

## LSC 100 – SCIENCE AND STORYTELLING

3 credits.

Fundamentals of effective written and spoken communication. Develops skills in gathering and evaluating information, writing research papers and other documents, and preparing and delivering oral presentations.

**Requisites:** Students required to take the MSN ESLAT cannot enroll until the ESL 118 requirement is satisfied

**Course Designation:** Gen Ed - Communication Part A

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explore the many ways of knowing, such as the power of storytelling and its impact on science, empathy and communication skills

Audience: Undergraduate

2. Think critically about quality evidence: distinguishing opinions from facts; good arguments from logical fallacies; develop humility in advancing one's point of view in a multicultural society

Audience: Undergraduate

3. Craft college-level essays attending to paragraph and sentence structures, effective transitions

Audience: Undergraduate

4. Give appropriate feedback to classmates for oral presentations and peer review of writing; learning thoughtful feedback and how to appreciate others' points of view as intellectual curiosity grows

Audience: Undergraduate

5. Develop intellectual confidence by recognizing academic best practices ranging from introducing evidence to documenting sources and avoiding plagiarism

Audience: Undergraduate

## LSC 155 – FIRST-YEAR SEMINAR IN SCIENCE COMMUNICATION

1 credit.

Introduces students to the field of science communication and the importance of effectively communicating about controversial and complex science and technology topics. Engage with science communication faculty and staff, campus resources, and opportunities to explore academic and career goals. Appropriate for students across a wide variety of disciplines. Examples of topics that may be discussed in the course include climate change, artificial intelligence, gene editing, and public health.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. Draw connections between course topics in science communication and the world around you.

Audience: Undergraduate

2. Discuss the importance of diversity and inclusion on our campus and in the field of science communication.

Audience: Undergraduate

3. Describe the importance of strong communication skills in academic and professional careers in science, technology, engineering and math.

Audience: Undergraduate

4. Develop a plan to graduation using knowledge gained about majors of interest, pre-professional and graduate school paths, and your career goals.

Audience: Undergraduate

5. Identify resources at the university that will help you succeed at UW-Madison.

Audience: Undergraduate

### **LSC 212 – INTRODUCTION TO SCIENTIFIC COMMUNICATION**

3 credits.

Writing effective science digests, proposals, newsletters, and trade magazine articles for agriculture, natural resources, health and science-related topics.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Gen Ed - Communication Part B

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain the relationship between listening, conversation and writing well

Audience: Undergraduate

2. Contextualize your own views within current conversations surrounding science topics and communicate your ideas to readers

Audience: Undergraduate

3. Evaluate the credibility and usefulness of different science-based information sources

Audience: Undergraduate

4. Deliver constructive feedback on written products to peers and implement peer recommendations within your own work

Audience: Undergraduate

5. Translate scientific arguments for non-scientist audiences

Audience: Undergraduate

6. Describe the common barriers to effective communication

Audience: Undergraduate

### **LSC 250 – RESEARCH METHODS IN THE COMMUNICATION INDUSTRY**

3 credits.

Introduction to research methods in the communication industry. Overview of all stages of the research process and of translating data into reports for strategic communication recommendations for clients, ranging from industry to policymakers.

**Requisites:** Satisfied Quantitative Reasoning (QR) A requirement

**Course Designation:** Breadth - Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Select an appropriate research technique

Audience: Undergraduate

2. Develop survey measures based on sound conceptual foundations

Audience: Undergraduate

3. Design and conduct surveys, experiments, and other forms of data collection

Audience: Undergraduate

4. Analyze and interpret both quantitative and qualitative data

Audience: Undergraduate

5. Clearly communicate findings and strategies to relevant audiences

Audience: Undergraduate

**LSC 251 – SCIENCE, MEDIA AND SOCIETY**

3 credits.

Introduction to communication at the intersection of science, politics and society; overview of the theoretical foundations of science communication and their relevance for societal debates about science and emerging technologies across different parts of the world.

**Requisites:** None

**Course Designation:** Breadth – Either Humanities or Social Science Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify the key elements of (in)effective science communication in popular media across different countries and cultures  
Audience: Undergraduate

2. Evaluate how the communication processes work among different stakeholders. Stakeholders include players in the policy arena, scientists, journalists, and lay publics  
Audience: Undergraduate

3. Critically assess the cultural, political, and economic impacts on how science and technology are debated across the globe  
Audience: Undergraduate

4. Understand origins of cross-country differences in consumer reactions and policy responses to emerging science  
Audience: Undergraduate

5. Analyze and compare the ethical, legal, and social implications (ELSI) of science across different countries and cultures  
Audience: Undergraduate

6. Critically evaluate country-specific or culture-specific social factors that shape the science-public interface  
Audience: Undergraduate

7. Explain the practical implications for different aspects of science and technology, like science journalism, new (information) technology, political aspects of emerging technologies, science literacy, etc.  
Audience: Undergraduate

**LSC 270 – MARKETING COMMUNICATION FOR THE SCIENCES**

3 credits.

Explores marketing, promotion, and strategic communication specific to the consumer marketplace. Analyze communication strategies for science products and industries synthesized from business goals and objectives to specific audiences. Coursework includes a variety of readings from a class textbook as well as peer-reviewed papers published in life science, marketing, communication, and general business journals.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify the unique challenges faced when marketing and communicating life science products, services and initiatives to the general public, business community, and academic peer audiences.  
Audience: Undergraduate

2. Identify some of the opportunities and challenges presented when marketing life science to specific American sub-cultures.  
Audience: Undergraduate

3. Understand basic communication strategies appropriate to life science firms such as effective press releases and presentations.  
Audience: Undergraduate

4. Synthesize data from government sources in combination with proprietary market research to create target audience profiles and life-science marketing strategy for consumer, business and institutional audiences.  
Audience: Undergraduate

### LSC 289 – HONORS INDEPENDENT STUDY

1-2 credits.

Research work for Honors students under direct guidance of a faculty member in an area encompassing Life Sciences Communication. Students are responsible for arranging the work and credits with the supervising instructor.

**Requisites:** Consent of instructor

**Course Designation:** Honors - Honors Only Courses (H)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop critical, analytical, and independent thinking skills

Audience: Undergraduate

2. Apply the scientific method and engage in constructive problem solving  
##

Audience: Undergraduate

3. Demonstrate application of research skills and methodologies##

Audience: Undergraduate

4. Effectively communicate findings

Audience: Undergraduate

### LSC 299 – INDEPENDENT STUDY

1-3 credits.

Research work for students under direct guidance of a faculty member in an area encompassing Life Sciences Communication. Students are responsible for arranging the work and credits with the supervising instructor.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop critical, analytical, and independent thinking skills#

Audience: Undergraduate

2. Apply the scientific method and engage in constructive problem solving  
##

Audience: Undergraduate

3. Demonstrate application of research skills and methodologies#

Audience: Undergraduate

4. Effectively communicate findings

Audience: Undergraduate

### LSC 314 – INTRODUCTION TO DIGITAL VIDEO PRODUCTION

3 credits.

Principles and techniques of digital documentary and informational video production. Video styles and subject matter treatment analyzed. Information gathering, videography, scripting, producing, and editing techniques.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply concepts and theories to use and present images and information for multiple platforms

Audience: Undergraduate

2. Apply current tools and technologies to develop media for digital video  
Audience: Undergraduate

3. Operate video and audio equipment in the studio and field

Audience: Undergraduate

4. Collaborate with team members to reach shared goals

Audience: Undergraduate

### LSC 332 – DIGITAL AND PRINT MEDIA DESIGN

3 credits.

Principles and techniques of effective visual communication with industry-standard digital design software for use in digital and print publications.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Discuss the theoretical principles of design

Audience: Undergraduate

2. Present work applying digital and print media design principles to groups of peers and professionals

Audience: Undergraduate

3. Articulate effective and tactful critiques of peer work and examples of design encountered outside of the classroom

Audience: Undergraduate

4. Deploy current industry-standard software tools in digital and print media design

Audience: Undergraduate

5. Explain the ways digital and print design are integrated into professional strategic communications

Audience: Undergraduate

### LSC 340 – MISINFORMATION, FAKE NEWS, AND CORRECTING FALSE BELIEFS ABOUT SCIENCE

3 credits.

Explores the spread of misinformation and its effects on scientific topics. Covers why people believe fake news, the role of social media in propagating fake news, and the societal impacts. Practice applying theoretical ideas and making evidence-based recommendations for correcting examples of misinformation in science, media, and industry.

**Requisites:** Satisfied Communications A requirement or graduate/professional standing

**Course Designation:** Breadth - Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Define and identify examples of misinformation and disinformation relating to scientific topics.

Audience: Both Grad & Undergrad

2. Explain psychological and contextual factors that lead people to believe false information.

Audience: Both Grad & Undergrad

3. Explain how traditional and online media contribute to the spread of misinformation.

Audience: Both Grad & Undergrad

4. Analyze examples of science misinformation and make arguments about the motivations of the creators/sharers and intended audience.

Audience: Both Grad & Undergrad

5. Build arguments about what effects misinformation is likely to have on science attitudes, trust in science, and democratic society supported by social science research.

Audience: Both Grad & Undergrad

6. Evaluate different strategies for correcting misperceptions and preventing the spread of misinformation.

Audience: Both Grad & Undergrad

7. Analyze and synthesize relevant scholarly literature related to misinformation and misperceptions.

Audience: Graduate

8. Formulate a research proposal articulating an original research project related to the study of scientific misinformation.

Audience: Graduate

### LSC 350 – VISUALIZING SCIENCE AND TECHNOLOGY

3 credits.

Introduction to the basic principles in the visual communication of science information. Principles of design, perception, cognition as well as the use of technologies in the representation of science in the mass media will be explored through illustrated lectures and written critique.

**Requisites:** Satisfied Communications A requirement or graduate/professional standing

**Course Designation:** Breadth - Either Humanities or Social Science Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Describe the fundamental theoretical, practical, and ethical principles of visual communication of science

Audience: Both Grad & Undergrad

2. Critique the design, content, and integrity of science visualizations

Audience: Both Grad & Undergrad

3. Assess the effects of science visualizations on individual attitudes, emotions, and behaviors

Audience: Both Grad & Undergrad

4. Propose effective visual strategies for communicating scientific and sustainability issues

Audience: Both Grad & Undergrad

5. Apply the acquired strategies to designing information visualization

Audience: Both Grad & Undergrad

6. Critically evaluate scientific visualizations through independent research and written analysis

Audience: Graduate

### LSC 360 – SCIENCE PODCASTING & RADIO

3 credits.

Radio and podcast writing, editing, information gathering, planning, voicing, and evaluation using digital recording and editing equipment. Write, produce and voice newscasts, advertisements, public service announcements, interviews, and features.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Gen Ed – Communication Part B

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Articulate ideas clearly and persuasively for broadcast, podcast, and social media platforms, refining speaking and writing skills to engage audiences

Audience: Undergraduate

2. Proficiently use digital audio broadcast equipment, operating recording tools, editing software, and other technologies for high-quality audio content creation

Audience: Undergraduate

3. Conceptualize, plan, and produce information-oriented radio programs and podcasts, developing expertise in content curation, scripting, recording, and editing for engaging broadcasts

Audience: Undergraduate

4. Critically evaluate peers' work in information-rich radio programs and podcasts, analyzing content quality, presentation, and effectiveness in conveying information

Audience: Undergraduate

5. Describe radio station functioning, including programming, scheduling, advertising, and management aspects

Audience: Undergraduate

### LSC 375 – SPECIAL TOPICS

1-4 credits.

Specialized subject matter of current interest to undergraduate students.

**Requisites:** None

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

### LSC 399 – COORDINATIVE INTERNSHIP/COOPERATIVE EDUCATION

1-8 credits.

An internship under guidance of a faculty or instructional academic staff member in LSC and internship site supervisor. Students are responsible for arranging the work and credits with the faculty or instructional academic staff member and the internship site supervisor.

**Requisites:** Consent of instructor

**Course Designation:** Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Workplace – Workplace Experience Course

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply knowledge and skills learned in the classroom to the workplace

Audience: Undergraduate

2. Demonstrate a greater understanding of career options and personal career goals

Audience: Undergraduate

3. Identify areas for future knowledge and skill development#

Audience: Undergraduate

### LSC 400 – STUDY ABROAD IN LIFE SCIENCES COMMUNICATION

1-6 credits.

Provides an area equivalency for courses taken on UW-Madison Study Abroad Programs that do not equate to existing UW courses.

**Requisites:** None

**Repeatable for Credit:** Yes, unlimited number of completions

**Learning Outcomes:** 1. Think critically and creatively to integrate ideas for problem solving.

Audience: Undergraduate

2. Connect issues related to science and society from a global perspective.

Audience: Undergraduate

3. Communicate effectively across media and targeted audiences.

Audience: Undergraduate

**LSC 430 – COMMUNICATING SCIENCE WITH NARRATIVE**

3 credits.

Understand how narrative theory influences audiences in presenting science; analyze the role of metaphor in communicating science; integrate effective writing structures for explaining complex science; learn writing and editing skills for best practices in science communication.

**Requisites:** Satisfied Communications A requirement or graduate/professional standing

**Course Designation:** Gen Ed - Communication Part B

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Explain how narrative theory influences audiences in communicating science

Audience: Undergraduate

2. Analyze the role of narrative and storytelling in scientific understanding

Audience: Undergraduate

3. Integrate effective writing structures for explaining science topics

Audience: Undergraduate

4. Apply best practices for writing and editing in science communication

Audience: Undergraduate

5. Analyze narrative theory in science communication and apply advanced writing techniques to craft effective science narratives

Audience: Graduate

**LSC 432 – SOCIAL MEDIA FOR THE SCIENCES**

3 credits.

Explore social media communication and tools specific to scientific fields, and learn how to build a social media presence. Examine readings from peer-reviewed papers, marketing, business and communication journals.

**Requisites:** Satisfied Communications A requirement or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify core messages and determine core audiences for targeted outreach

Audience: Both Grad & Undergrad

2. Build strategies to conduct basic market research

Audience: Both Grad & Undergrad

3. Efficiently communicate with thought leaders and stakeholders

Audience: Both Grad & Undergrad

4. Design a production schedule and inbound marketing plan

Audience: Both Grad & Undergrad

5. Describe the uses and value of the different social media tools

Audience: Both Grad & Undergrad

6. Analyze impacts of social media campaigns

Audience: Both Grad & Undergrad

7. Systematically evaluate digital communication impacts through case studies and data analysis

Audience: Graduate

**LSC 435 – BRAND STRATEGY FOR THE SCIENCES**

3 credits.

Explores strategic marketing, branding, and communication planning specific to science, technology, and environmental industries. Examines the sociological and psychological processes shaping audiences' perceptions of various brands, and discusses how to apply various strategies and frameworks to reinforce these perceptions and guide marketing and communication efforts. Combines portfolio-building writing as well as in-class presentations and discussion on contemporary marketing, branding issues, including strategic marketing plans.

**Requisites:** LSC 270, GEN BUS 311, MARKETNG 300, CNSR SCI 477, or graduate/professional standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate an understanding of the psychology and sociology behind successful branding and marketing efforts.

Audience: Both Grad & Undergrad

2. Analyze data and information from appropriate sources to build a foundation for a strategic marketing plan.

Audience: Both Grad & Undergrad

3. Define and recognize audience segments and target appropriate marketing tactics to those segments to achieve marketing goals.

Audience: Both Grad & Undergrad

4. Demonstrate professional skills, including writing and presentation appropriate for the workplace.

Audience: Both Grad & Undergrad

5. Analyze and synthesize relevant scholarly literature related to brand strategy and management.

Audience: Graduate

6. Formulate a research proposal articulating a primary research project in strategic science communication in an industry setting.

Audience: Graduate

**LSC 440 – DIGITAL MEDIA AND SCIENCE COMMUNICATION**

3 credits.

Explores how to navigate the complex world of digital and networked communication tools with an eye toward a wide variety of careers in communication. Understand and evaluate social implications of digital media, informed by the most recent scholarship and classical theories. Attention is given to implications for public engagement with controversial scientific issues.

**Requisites:** Satisfied Communications A requirement or graduate/professional standing

**Course Designation:** Breadth - Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate understanding of the most influential theories and perspectives regarding the social and political implications and effects of digital communication technologies.

Audience: Both Grad & Undergrad

2. Evaluate contemporary claims about the social effects of communication technologies based on the extent to which they are supported by sound social scientific research.

Audience: Both Grad & Undergrad

3. Apply scientific knowledge about the societal implications of digital communication technologies to popular discussions about scientific topics and their social effects.

Audience: Both Grad & Undergrad

4. Demonstrate effective communication skills through the articulation of critical thinking about digital media and political communication through writing and informal oral presentation.

Audience: Both Grad & Undergrad

5. Analyze and synthesize relevant scholarly literature related to digital media and its relation to contemporary science communication surrounding emerging technologies and/or controversial issues involving science.

Audience: Graduate

6. Formulate a research proposal articulating an original empirical research project exploring the role of digital media in contemporary science communication.

Audience: Graduate

**LSC 450 – DOCUMENTARY PHOTOGRAPHY FOR THE SCIENCES**

3 credits.

Trains students in visual storytelling and how to think photographically for communicating science, health and the environment. Students study the contributions of social documentary photography while assignments create a portfolio of documentary photography, and final team projects create effective still-image video stories that employ intellectual property rights.

**Requisites:** Satisfied Communications A requirement or graduate/professional standing

**Course Designation:** Breadth - Either Humanities or Social Science Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Explain and apply photographic thinking

Audience: Both Grad & Undergrad

2. Edit and curate visuals to engage diverse audiences across various media platforms

Audience: Both Grad & Undergrad

3. Create compelling narratives that effectively communicate complex ideas and concepts

Audience: Both Grad & Undergrad

4. Apply the highest ethical standards in visual storytelling, considering cultural differences and societal implications

Audience: Both Grad & Undergrad

5. Craft effective communication media, bridging the gap between science and broader audiences

Audience: Both Grad & Undergrad

6. Produce photo essays within research field of choice

Audience: Graduate

7. Visually represent critical scientific topics through images and accompanying captions

Audience: Graduate

**LSC 460 – SOCIAL MEDIA ANALYTICS**

3 credits.

Provides an introduction and practical guide to understanding, collecting, and analyzing data from social media to evaluate their impact on consumer choices, human interaction, and public opinion of scientific issues and industries. Prepares students to apply metrics from current social media platforms (e.g. Instagram, Youtube, Twitter, etc.) to develop strategic communication recommendations for clients, ranging from industry to policymakers.

**Requisites:** Satisfied Quantitative Reasoning A requirement or graduate/professional standing

**Course Designation:** Breadth - Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe key concepts related to humans/groups/institutions' activities on social media and ethical considerations for social media researchers

Audience: Both Grad & Undergrad

2. Select an appropriate social science qualitative or quantitative research method technique for collecting and analyzing social media data

Audience: Both Grad & Undergrad

3. Analyze and clearly communicate about the relationship between social media content and user click data

Audience: Both Grad & Undergrad

4. Demonstrate basic knowledge of the R data science software

Audience: Both Grad & Undergrad

5. Evaluate social media data's impact on consumer choices, human interaction, and public opinion of scientific issues and industries

Audience: Both Grad & Undergrad

6. Apply metrics from social media platforms to develop strategic communication recommendations for clients, ranging from industry to policymakers

Audience: Both Grad & Undergrad

7. Analyze and synthesize relevant scholarly literature related to social media, internet studies, and computer-mediated communication

Audience: Graduate

8. Formulate a research proposal articulating a primary research project studying consumer choices, human interaction, public opinion, and/or discourse on social media

Audience: Graduate

**LSC 477 – NAMA PROJECT: AGRI-MARKETING STRATEGY AND IMPLEMENTATION**

2 credits.

A full-scale marketing campaign culminating in a national student competition for National Agricultural Marketing Association during their annual convention held every spring. Development of campaign plan includes brand identity, associated visuals, market research, strategic communication, competitive analysis, presentation skills, and learning how to work as a team toward a common goal.

**Requisites:** None**Repeatable for Credit:** Yes, for 8 number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Identify marketing problems and opportunities#

Audience: Undergraduate

2. Identify critical needs and researching solutions

Audience: Undergraduate

3. Conduct market- and competitive research and analyses#

Audience: Undergraduate

4. Apply analytical tools appropriate for marketing analysis#

Audience: Undergraduate

5. Formulate alternative solutions based on a combination of theory, case study and experience

Audience: Undergraduate

6. Develop the written components of a marketing plan and executive summary and#articulate it accurately per prevailing Associated Press Style

Audience: Undergraduate

7. Orally and visually present a marketing plan

Audience: Undergraduate

**LSC 480 – CULTURALLY RESPONSIVE SCIENCE COMMUNICATION**

3 credits.

Analyzes inequities in science communication and explores approaches to increase equity and cultural competence in an evolving social landscape. Covers participatory research methods and critiques of approaches that do not center the community as co-creators of science communication designed to serve community priorities. Opportunities to engage with professionals and communities working to achieve culturally responsive science communication in contexts such as health, agriculture, and the environment.

**Requisites:** Satisfied Communications A requirement or graduate/professional standing**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Social Science

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Identify historic societal injustices related to science and science communication

Audience: Both Grad &amp; Undergrad

2. Apply co-creation and participatory approaches to engage diverse communities in science-related topics

Audience: Both Grad &amp; Undergrad

3. Consider civic and social responsibilities to engage diverse groups in science

Audience: Both Grad &amp; Undergrad

4. Evaluate different approaches for communicating science more effectively to underrepresented, marginalized and other communities

Audience: Both Grad &amp; Undergrad

5. Evaluate the cultural responsiveness of science communication and offer recommendations for how to create science communication that is more culturally responsive and culturally sustaining

Audience: Both Grad &amp; Undergrad

6. Work as part of a team to create culturally responsive science communication for real-world project

Audience: Both Grad &amp; Undergrad

7. Create culturally responsive science communication as part of group project

Audience: Both Grad &amp; Undergrad

8. Independently design a graduate-level research prospectus related to examining a culturally responsive science communication context for a marginalized group in the U.S. related to your interests and research program

Audience: Graduate

### **LSC 515 – SOCIAL MARKETING CAMPAIGNS IN SCIENCE, HEALTH AND THE ENVIRONMENT**

3 credits.

Design, production and evaluation of communication programs aimed at informing and educating the public about agricultural, environmental, science, health and human ecology issues.

**Requisites:** Senior standing, declared in Life Sciences Communication, LSC 250 and 251

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand principles and tactics of social marketing communication

Audience: Undergraduate

2. Plan a social marketing campaign

Audience: Undergraduate

3. Use communication, persuasion, and behavioral principles that inform campaign planning

Audience: Undergraduate

4. Conduct qualitative and quantitative research

Audience: Undergraduate

5. Engage in strategic and creative thinking, writing, and message production

Audience: Undergraduate

6. Collaborate effectively as part of a team

Audience: Undergraduate

### **LSC 532 – WEB DESIGN FOR THE SCIENCES**

3 credits.

Provides an opportunity to design websites that focus on agricultural, life and social sciences. It covers characteristics of web users, science information goals for websites, needs assessment, search strategies, formative evaluations, legal issues.

**Requisites:** Satisfied Communications A requirement or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the fundamental concepts of how the web works and how humans interact with the web

Audience: Both Grad & Undergrad

2. Analyze website interfaces and content#

Audience: Both Grad & Undergrad

3. Design effective interfaces using usability and information architecture concepts

Audience: Both Grad & Undergrad

4. Explain the differences between select web programming languages

Audience: Both Grad & Undergrad

5. Create basic webpages and websites

Audience: Both Grad & Undergrad

6. Produce a complete website and website promotional strategy.

Audience: Both Grad & Undergrad

7. Analyze and synthesize relevant scholarly literature related to web design

Audience: Graduate

8. Independently research and assess website scholar contributions to the field of web design

Audience: Graduate

## LSC 560 – SCIENTIFIC WRITING

3 credits.

Focuses on scientific writing techniques that can be applied to academic papers, scientific journals, grant proposals, and other written and oral professional work in science and technology related fields.

**Requisites:** LSC 212 or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply the practices and principles that produce both strong scientific arguments and writing that is clear, easy to interpret, and enjoyable to read.

Audience: Both Grad & Undergrad

2. Use the elements of story to engage scientific audiences and to structure both written and oral communications.

Audience: Both Grad & Undergrad

3. Identify the purpose and structure of various genres of scientific writing, such as grant proposals and journal articles, and what readers expect from each.

Audience: Both Grad & Undergrad

4. Describe the common barriers to effective science communication and apply practices for overcoming them.

Audience: Both Grad & Undergrad

5. Critically evaluate their writing and the writing of others, and use best practices for giving constructive, respectful feedback during peer review.

Audience: Both Grad & Undergrad

6. Integrate knowledge of the principles of effective communication with new technical skills to write and speak about aspects of their own research.

Audience: Graduate

## LSC 561 – WRITING SCIENCE FOR THE PUBLIC

3 credits.

Focuses on science writing concepts and techniques that can be used to communicate purposefully and effectively with public audiences about science, research, and technology.

**Requisites:** Junior standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Harness the elements of story to more deeply engage public audiences in science and to organize both written and oral communications.

Audience: Both Grad & Undergrad

2. Apply more concise, clear, and powerful language when writing and speaking about science and research.

Audience: Both Grad & Undergrad

3. Appreciate the need to understand others' perspectives when communicating about science and apply strategies for responding empathetically to audience concerns.

Audience: Both Grad & Undergrad

4. Foster dialogue and community by participating thoughtfully and respectfully in discussions, including peer reviews of each other's work.

Audience: Both Grad & Undergrad

5. Integrate the concepts and skills learned in the course to write a personal essay or opinion piece about a timely and relevant science topic or controversy.

Audience: Both Grad & Undergrad

6. Combine knowledge of the principle of effective science communication with new technical skills to write and speak about aspects of their own research.

Audience: Graduate

**LSC 614 – ADVANCED VIDEO PRODUCTION**

3 credits.

An advanced digital video production course. Students will receive advanced instruction in producing, videography, scripting, and editing digital video.

**Requisites:** LSC 314 or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Apply appropriate theories in the use and presentation of images and information

Audience: Both Grad & Undergrad

2. Apply current tools and technologies appropriate for communication professionals, and understand the digital world

Audience: Both Grad & Undergrad

3. Demonstrate professional competency with the operation of video and audio equipment in the studio and field

Audience: Both Grad & Undergrad

4. Demonstrate professional behavior while collaborating with other team members to reach project goals

Audience: Both Grad & Undergrad

5. Select and competently use the most appropriate industry practices for your projects

Audience: Graduate

**LSC/COM ARTS/JOURN 617 – HEALTH COMMUNICATION IN THE INFORMATION AGE**

3 credits.

Examines the role of communication in health, how the revolution in information technology has affected health communication, and the assumptions about health information and communication that drive current efforts to use technologies.

**Requisites:** Junior standing

**Course Designation:** Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate their understanding of major theories, approaches, concepts, and current research findings in the area of health communication

Audience: Both Grad & Undergrad

2. Gain a sense of the methodological issues involved in the construction and evaluation of health communication

Audience: Both Grad & Undergrad

3. Demonstrate their understanding of the connections between the environment (e.g., physical, social, media), cognition, and behavior

Audience: Both Grad & Undergrad

4. Communicate effectively through written reports, oral presentations and discussion

Audience: Both Grad & Undergrad

5. Evaluate ideas from different sources critically

Audience: Graduate

6. Derive new testable hypotheses by integrating or contrasting different theories

Audience: Graduate

7. Develop variations on theoretical models or ideas such as contingent conditions or mediating factors

Audience: Graduate

## LSC 625 – RISK COMMUNICATION

3 credits.

Examines risk as a central concept in the communication process. Since risk is intrinsically an interdisciplinary concept, the examination will rely on literature from a wide range of disciplines and perspectives, such as communication, psychology, sociology and formal risk analysis. Case studies will be drawn from a wide range of global issues and cultural contexts, including environmental, technological or health risks; food safety risks; international military crisis or threats of terrorism; and natural disasters.

**Requisites:** Junior standing and (LSC 250 or 251); or graduate/professional standing

**Course Designation:** Breadth – Social Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the psychological processes by which risk perceptions are formed across the world and explain these in lay terms to different audiences

Audience: Both Grad & Undergrad

2. Analyze media portrayals of risk and their effect on public perceptions in different cultural settings

Audience: Both Grad & Undergrad

3. Describe the importance of social, political and cultural contexts for risk related issues at the global scale

Audience: Both Grad & Undergrad

4. Critically assess campaigns aiming at persuading individuals to make specific decisions in high-risk situations around the world

Audience: Both Grad & Undergrad

5. Analyze and synthesize relevant scholarly literature related to risk communication

Audience: Graduate

6. Formulate a research proposal articulating a primary research project in riskcommunication

Audience: Graduate

## LSC 640 – CASE STUDIES IN THE COMMUNICATION OF SCIENCE AND TECHNOLOGY

3 credits.

Examination of social scientific research addressing characteristics of science, public understanding of science, science news, and relationships between scientists and journalists. Application of this knowledge to several case studies examining the function of communication in specific scientific or technical contexts.

**Requisites:** Senior standing, declared in Life Sciences Communication, LSC 250 and 251

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Integrate theoretical concepts, data and research, and science communication practice toward solving societal and scientific problems

Audience: Undergraduate

2. Apply knowledge from prior coursework in science communication to a societal or organizational problem

Audience: Undergraduate

**LSC 660 – DATA ANALYSIS IN COMMUNICATIONS RESEARCH**

3 credits.

How to use chi-square, analysis of variance, simple and multiple correlation and regression analysis, and various nonparametric tests in communication research.

**Requisites:** LSC 250 and senior standing or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. Explain the processes of social science research

Audience: Both Grad & Undergrad

2. Connect research theory and logic to methods & analyses

Audience: Both Grad & Undergrad

3. Clean, examine, and analyze experimental, survey, and human language and interaction data using a scientific programming language

Audience: Both Grad & Undergrad

4. Explain social science research methods, research analyses, and results clearly to lay audiences

Audience: Both Grad & Undergrad

5. Create real-world problem sets to apply research methods

Audience: Both Grad & Undergrad

6. Explain how to implement research methods in an integrated development environment such as RStudio

Audience: Both Grad & Undergrad

7. Present social science research analyses and results

Audience: Both Grad & Undergrad

8. Produce manuscripts for publication in academic journals

Audience: Graduate

**LSC 681 – SENIOR HONORS THESIS**

2-4 credits.

Individual study for majors completing theses for Honors degrees as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Review and analyze scientific literature

Audience: Undergraduate

2. Identify and use appropriate research methodologies to address a research question#

Audience: Undergraduate

3. Begin structuring and writing a thesis based on original research#

Audience: Undergraduate

**LSC 682 – SENIOR HONORS THESIS**

2-4 credits.

Second semester of individual study for majors completing theses for Honors degrees as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Review and analyze scientific literature##

Audience: Undergraduate

2. Identify and use appropriate research methodologies to address a research question##

Audience: Undergraduate

3. Write a thesis based on original research#

Audience: Undergraduate

**LSC 691 – SENIOR THESIS**

1-3 credits.

Individual study for undergraduate students completing a thesis in the area of science communication, as arranged with a research faculty member.

**Requisites:** Consent of instructor

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Apply classroom knowledge to develop research proposal

Audience: Undergraduate

2. Assess state of research in a field of study and develop research questions or hypotheses

Audience: Undergraduate

3. Translate research question into research design and instruments

Audience: Undergraduate

### LSC 692 – SENIOR THESIS

1-3 credits.

Second semester of individual study for undergraduate students completing a thesis in the area of science communication, as arranged with a research faculty member.

**Requisites:** Consent of instructor

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Analyze data to answer research questions or hypotheses

Audience: Undergraduate

2. Extract broader implications of research findings for field of research or society

Audience: Undergraduate

3. Write senior thesis based on original research project

Audience: Undergraduate

### LSC 699 – SPECIAL PROBLEMS

1-4 credits.

Individual advanced work in an area of Life Sciences Communication under the direct guidance of a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Develop critical, analytical, and independent thinking skills

Audience: Undergraduate

2. Apply the scientific method and engage in constructive problem solving

Audience: Undergraduate

3. Demonstrate application of research skills and methodologies

Audience: Undergraduate

4. Effectively communicate findings

Audience: Undergraduate

### LSC 700 – COLLOQUIUM IN LIFE SCIENCES COMMUNICATION

1 credit.

Gives graduate students exposure to the many faculty across the UW campus who work on communication issues within their own fields. Weekly speakers represent diverse departments and other units; many will focus on science, health technology and related issues.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### LSC 720 – INTRODUCTION TO COMMUNICATION THEORY AND RESEARCH

3 credits.

Introduction of concepts fundamental to conduct of social scientific research, overview of history and structure of field of communication, survey of major theoretical perspectives on mass communication at both micro and macro levels, with treatment of micro-macro and mass-interpersonal integration.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain principles fundamental to the conduct of social science research

Audience: Graduate

2. Describe theoretical perspectives on communication and media effects, including a broad history of milestones and a sampling of current theoretical models

Audience: Graduate

3. Apply concepts learned in the course to critically engage with real-world phenomena

Audience: Graduate

4. Present communication theory research to an academic audience

Audience: Graduate

### **LSC/JOURN 811 – CONCEPTUALIZATION AND DESIGN OF MASS COMMUNICATION RESEARCH**

2-3 credits.

Assists students in turning research questions into substantive research designs with understanding of the concepts involved. For most students, the final product will be a well-developed thesis or dissertation proposal.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Explain key principles of social science research, with a focus on how empirical studies relate to, and contribute to social scientific theory creation and development

Audience: Graduate

2. Identify and explain common modes of empirical research in mass communication and science communication scholarship, including their strengths and weaknesses

Audience: Graduate

3. Assess different kinds of social scientific research for strengths/weaknesses related to increasing understanding of mass communication and/or science communication

Audience: Graduate

4. Articulate and/or evaluate research proposals in mass communication and/or science communication

Audience: Graduate

### **LSC/ENVIR ST/JOURN 823 – SCIENCE AND ENVIRONMENT COMMUNICATION**

3 credits.

Tracks the evolution of mass media coverage of science and the environment. Emphasis on how journalists utilize evidence, the influence of scientific and journalistic norms on stories, and the effects of mass media on science and environment messages to the public.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Describe theoretical perspectives relating to science and environmental communication, including a sampling of recent findings and current theoretical model

Audience: Graduate

2. Combine theory and methods to develop and evaluation science and environmental communication efforts

Audience: Graduate

3. Apply research theories and findings to contemporary problems in environmental and science communication

Audience: Graduate

4. Communicate complex environmental and science concepts with scientific and general audiences in oral and written forms

Audience: Graduate

### **LSC/JOURN 825 – LAW AND ETHICS OF COMMUNICATION AND MEDIA**

3 credits.

Explores critical questions of media law and ethics within the United States.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2021

**Learning Outcomes:** 1. Understand the dimensions of legal and ethical philosophies and frameworks as applied to media work.

Audience: Graduate

2. Interpret and critique common elements of media ethics codes and practices.

Audience: Graduate

3. Interpret and critique legal precedents and doctrines

Audience: Graduate

4. Apply philosophy and frameworks to current media concerns and controversies.

Audience: Graduate

5. Rationally defend or critique choices in specific media contexts.

Audience: Graduate

6. Research and write about law and ethics in scholarly or professional publications.

Audience: Graduate

### **LSC/JOURN 826 – JOURNALISM THEORY**

3 credits.

Focus on the content and purposes of journalism, explores cultural values associated with journalism, relationships between journalism and other institutions, and current issues facing journalists at a time when the profession faces many challenges.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **LSC/JOURN 833 – TECHNOLOGY AND SOCIETY**

3 credits.

Considers the effects of new communication technologies on everyday life and political mobilization.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

### **LSC 835 – STRATEGIC SCIENCE COMMUNICATION**

3 credits.

Examines science communication through the framework of strategic communication. Examines frameworks and concepts from marketing, branding, advertising, public relations, organizational communication, and related fields to help inform organizational and individual-level science communication and engagement strategies. Explores topics such as messaging tactics, persuasion, audience segmentation and DEI (diversity, equity, and inclusion), and behavior change.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Identify theoretical approaches and methodologies behind strategic communication and how they apply to science communication and engagement.

Audience: Graduate

2. Critically evaluate the effectiveness of strategic science communication efforts in contemporary society, and their impact on diverse audiences.

Audience: Graduate

3. Define and recognize audience segments and how to apply appropriate strategic communication initiatives to achieve audience-specific communication and engagement goals.

Audience: Graduate

4. Formulate a research proposal articulating an original research project in strategic science communication.

Audience: Graduate

**LSC 850 – VISUAL SCIENCE COMMUNICATION**

3 credits.

Introduces the theoretical, practical, and ethical principles of visual communication, with a focus on how such principles can be applied to communicating scientific phenomena, evidence, and reasoning to both expert and non-expert audiences. Covers the effectiveness of visuals as a tool for science communication, their effects at the individual level as well as the potential long-term impact on society.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Describe the unique benefits of visuals for communicating sciences.

Audience: Graduate

2. Identify the theoretical, practical, and ethical principles of visual communication.

Audience: Graduate

3. Explain how theoretical, practical, and ethical principles can be applied to the visual communication of sciences.

Audience: Graduate

4. Assess the effects of science visualizations on attitudes, emotions, and behaviors with a multidisciplinary reflection on theories and empirical evidence.

Audience: Graduate

5. Develop research proposals and/or original arguments pertaining to the effectiveness of science visualizations.

Audience: Graduate

6. Critique the design, content, and integrity of science visualizations.

Audience: Graduate

7. Incorporate visuals effectively in scholarly writing and public speaking.

Audience: Graduate

**LSC 875 – SPECIAL TOPICS**

1-4 credits.

Specialized subject matter of current interest to graduate students.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2022

**LSC 902 – PUBLIC OPINION OF LIFE SCIENCE ISSUES**

3 credits.

Advanced seminar on public opinion surrounding the science issues and science policy. Examines the intersection of public opinion, science, and politics; issues related to public opinion measurement; and the importance of public opinion for different aspects of life science communication.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Explain how all citizens form opinions and how societies reach consensus (or not) about the policy implications of about emerging (scientific) issues

Audience: Graduate

2. Identify key theoretical models of opinion formation and the role that legacy media and online information ecologies play in each model

Audience: Graduate

3. Evaluate how communication and opinion formation processes work among different stakeholders, including players in the policy arena, scientists, journalists, and non-expert publics, with a particular focus on audiences that are not part of the proverbial choir

Audience: Graduate

4. Assess the cultural, political, and economic impacts on (and of) societal debates surrounding science and technology

Audience: Graduate

5. Make informed predictions about how opinion formation and expressions are likely to be reshaped by emerging communication environments

Audience: Graduate

6. Explain the practical implications for communicating science in an increasingly polarized world

Audience: Graduate

**LSC 912 – PUBLIC UNDERSTANDING OF POLITICIZED SCIENCE**

3 credits.

Focuses on the intersections of science, politics, and communication, and their implications for public opinion and public understanding of science, particularly in the context of controversial science and technology issues. A solid understanding of public opinion and communication dynamics surrounding today's controversial science issues requires deep knowledge of core concepts and theories of political polarization, attitudes, and information processing, especially in the context of contemporary digital media environments. Focus on how these concepts and theories are applied in contemporary research on public opinion about science and science-related issues. Consider how such applications may potentially offer new and unique opportunities for deeper understanding of broader dynamics of contemporary communication.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Learning Outcomes:** 1. Describe key theoretical and conceptual models for understanding and explaining public understanding of science issues that intersect with politics and political communication.

Audience: Graduate

2. Assess how social scientific research addresses the relationship between communication and the public's understanding of controversial science issues.

Audience: Graduate

3. Identify opportunities for original scholarly work related to improving understanding about, or interventions to improve, public understanding of science.

Audience: Graduate

**LSC 990 – RESEARCH**

1-12 credits.

Independent research in preparation of a graduate thesis under supervision of a faculty member.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**Learning Outcomes:** 1. Conduct and report on science communication research under the guidance of a qualified instructor

Audience: Graduate

2. Develop novel research questions and propose methods to answer the questions using tools from science communication

Audience: Graduate

3. Connect their research clearly to other research in their field of study

Audience: Graduate

**LSC 999 – INDEPENDENT RESEARCH**

1-3 credits.

Independent research.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**Learning Outcomes:** 1. Conduct and report on science communication research under the guidance of a qualified instructor

Audience: Graduate

2. Develop novel research questions and propose methods to answer the questions using tools from science communication

Audience: Graduate

3. Connect their research clearly to other research in their field of study

Audience: Graduate

## LINGUISTICS (LINGUIS)

**LINGUIS 101 – HUMAN LANGUAGE**

3 credits.

Elementary theory and practical work in phonetics, phonology, morphology, and syntax, with attention to formal grammar.

**Requisites:** Not open to students with credit for LINGUIS/ANTHRO 301.**Course Designation:** Breadth - Humanities

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Read and write phonetic transcriptions of speech using the International Phonetic Alphabet. Describe the mechanisms at work during the production of human speech sounds.

Audience: Undergraduate

2. Identify the distinctive features of the sounds of English, and be familiar with the phonetic features of many non-English sounds.

Audience: Undergraduate

3. Analyze and represent the structure of English words and sentences.

Audience: Undergraduate

4. Apply knowledge of phonetics, phonology, morphology, and syntax in analyzing linguistic datasets from a wide variety of unfamiliar languages.

Audience: Undergraduate

## LINGUIS/ANTHRO/FOLKLORE/INTL ST 211 – GLOBAL LANGUAGE ISSUES

3 credits.

Focuses on language and its culture, example topics include: extinction and revival, language and nationhood, how widely and deeply languages differ, language and worldview, writing systems and literacy, language discrimination and inequality.

**Requisites:** None

**Course Designation:** Breadth – Either Humanities or Social Science Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Identify ways that geographic, social, and political events, movements, and trends shape the sociolinguistic context of the world's languages

Audience: Undergraduate

2. Demonstrate an understanding of subfields of global sociolinguistic inquiry, including language contact, variation, change, and death; language revitalization; the intersections of language, race, and ethnicity; the intersections of language and gender, and sexuality

Audience: Undergraduate

3. Critically evaluate specific examples of language use in a variety of linguistic and cultural contexts

Audience: Undergraduate

4. Design and conduct a sociocultural linguistic research project, including: identify a research question; collect appropriate resources and data; conduct data analysis and interpretation; draw conclusions, and summarize results

Audience: Undergraduate

## LINGUIS 213 – TOPICS IN SOCIOLINGUISTICS

3 credits.

Introduction to sociolinguistics through study of a particular topic. Focuses on how language is shaped by social factors such as gender, ethnicity, education, social status, and geographic location.

**Requisites:** None

**Course Designation:** Breadth – Either Humanities or Social Science Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Read and critically evaluate published research in academic journals.

Audience: Undergraduate

2. Summarize key research questions surrounding a specific topic in sociolinguistics.

Audience: Undergraduate

3. Identify, compare, and contrast major theoretical frameworks on a specific topic in sociolinguistics.

Audience: Undergraduate

4. Interpret results of various data collection methods relevant to topics in sociolinguistics (quantitative, qualitative, experimental, etc.).

Audience: Undergraduate

5. Describe and critically evaluate the benefits and drawbacks of different methodological and analytical approaches in sociolinguistics.

Audience: Undergraduate

6. Identify and discuss the relationship between features of human society and some aspect of language.

Audience: Undergraduate

7. Examine and discuss your own beliefs about languages and language users and how these beliefs inform our use of language in interaction.

Audience: Undergraduate

**LINGUIS 237 – LANGUAGE IN WISCONSIN**

3 credits.

For millennia, the place we now call Wisconsin has been home to countless languages and dialects: Indigenous languages, immigrant/refugee languages and English. How and when did people learn English and when and why did they begin to speak only English? How has English developed in distinctive ways here? Do hands-on, original research to answer these and related questions about English and other languages past and present in Wisconsin. Examine social and historical issues and issues of linguistic structure, drawing on local histories, archival data, Census records and audio recordings, with opportunities to do fieldwork in communities across the state and the region.

**Requisites:** None**Course Designation:** Breadth – Either Humanities or Social Science Level – Elementary

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Gather and analyze data from various sources (fieldwork, surveys, census records, local histories, archives, recordings)  
Audience: Undergraduate

2. Develop hypotheses about language in Wisconsin, e.g. why particular linguistic features have appeared or disappeared, or how people understand language issues including bilingualism  
Audience: Undergraduate

3. Apply tools from linguistics, historical linguistics, sociolinguistics and other fields to test hypotheses  
Audience: Undergraduate

4. Do original research on a historical or sociolinguistic topic.  
Audience: Undergraduate

5. Write up findings in formats appropriate for audiences of linguists and the general public, including substantial revision and rewriting of at least two papers over the course of the semester.  
Audience: Undergraduate

**LINGUIS 299 – DIRECTED STUDY**

1-4 credits.

Directed study projects as arranged with a faculty member.

**Requisites:** Consent of instructor**Course Designation:** Level – Intermediate

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2022**LINGUIS/ANTHRO 301 – INTRODUCTION TO LINGUISTICS: DESCRIPTIVE AND THEORETICAL**

3 credits.

Elementary theory and practical work in phonetics, phonology, morphology, and syntax, with attention to formal grammar.

**Requisites:** Graduate/professional standing. Not open to students with credit for LINGUIS 101.**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Read and write phonetic transcriptions of speech using the International Phonetic Alphabet  
Audience: Undergraduate

2. Describe the mechanisms at work during the production of human speech sounds  
Audience: Undergraduate

3. List from memory the distinctive features of the sounds of English, and be familiar with the phonetic features of many non-English sounds  
Audience: Undergraduate

4. Use appropriate tests to determine the morphological and syntactic structure of English words and sentences.  
Audience: Undergraduate

5. Apply knowledge of phonetics, phonology, morphology, and syntax in analyzing linguistic datasets from a wide variety of unfamiliar languages  
Audience: Undergraduate

6. Use basic linguistic terms and concepts to read and summarize academic research in linguistics  
Audience: Undergraduate

**LINGUIS 303 – HISTORICAL LINGUISTICS**

3 credits.

Understanding language change; relation of variation and change to formal properties of human language; consideration of linguistic typology, basic concepts and methods of diachronic analysis. Topics include: language classification and reconstruction; language and social identity, geography, and power; language contact; registers; writing systems.

**Requisites:** (LINGUIS 101 or 301), ENGL 417, ASIAN 631, GERMAN 650, PORTUG/FRENCH/ITALIAN/SPANISH 429, or SCAND ST 415

**Course Designation:** Breadth – Humanities

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify patterns of change in human language  
Audience: Both Grad & Undergrad

2. Organize and analyze data on language change

Audience: Both Grad & Undergrad

3. Apply theories of change to analyze data from familiar and unfamiliar languages

Audience: Both Grad & Undergrad

4. Describe patterns of language change, common accounts for those patterns and how they are grounded in understanding language generally  
Audience: Both Grad & Undergrad

5. Apply the Comparative Method to evaluate linguistic reconstruction  
Audience: Both Grad & Undergrad

6. Understand and critically evaluate research on language change  
Audience: Both Grad & Undergrad

7. Critically evaluate theoretical and empirical arguments for competing linguistic analyses of changes  
Audience: Graduate

8. Integrate structural and social accounts of language change into a holistic analysis  
Audience: Graduate

9. Formulate and develop support for new hypotheses for the analysis of language change  
Audience: Graduate

**LINGUIS 309 – GRAMMATICAL VARIABILITY OF LANGUAGE**

3 credits.

Introduction to theories of variation among world languages, focusing on syntactic phenomena.

**Requisites:** LINGUIS 101 or 301

**Course Designation:** Breadth – Humanities

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Describe cross-linguistic differences in syntax and morphosyntax of the world's languages.

Audience: Undergraduate

2. Summarize various theoretical approaches to this variation.

Audience: Undergraduate

3. Discuss and evaluate competing hypotheses about language variation in light of empirical evidence.

Audience: Undergraduate

4. Articulate a coherent linguistic analysis of particular language data on a selected topic.

Audience: Undergraduate

**LINGUIS 310 – PHONOLOGY**

3 credits.

Analysis and formal statement of phonological systems; problems and methods of phonological theory.

**Requisites:** LINGUIS 101 or 301

**Course Designation:** Breadth – Humanities

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**LINGUIS 322 – MORPHOLOGY**

3 credits.

Morphological characteristics of the world's languages. Introduction to theoretical approaches to morphology. Interaction between morphology and syntax; morphology and phonology.

**Requisites:** LINGUIS 101 or 301

**Course Designation:** Breadth – Humanities

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### LINGUIS 330 – SYNTAX

3 credits.

Grammatical theory; types of elements and processes usable in syntactic description of various sorts.

**Requisites:** LINGUIS 101 or 301

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### LINGUIS 340 – SEMANTICS

3 credits.

Meaning in natural languages, relationship between syntax and semantics, compositional semantics.

**Requisites:** LINGUIS 330

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

### LINGUIS 351 – AMERICAN SIGN LANGUAGE 1

4 credits.

An introduction to elementary skills in production and comprehension of American Sign Language (ASL), with a communicative focus. Basics of ASL vocabulary, structure, and grammar, and the North American manual alphabet. Develop basic conversational abilities, culturally appropriate behaviors, and learn about the culture and history of Deaf communities.

**Requisites:** None

**Course Designation:** Frgn Lang - 1st semester language course

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recognize and produce elementary ASL vocabulary items.

Audience: Undergraduate

2. Recognize and produce elementary grammatical structures in ASL, including the use of manual and non-manual parameters.

Audience: Undergraduate

3. Identify grammatical features within short dialogues and narratives in ASL.

Audience: Undergraduate

4. Comprehend short dialogues and narratives in ASL.

Audience: Undergraduate

5. Demonstrate behaviors that facilitate and regulate signed conversation, such as attention-getting techniques and turn-taking signals.

Audience: Undergraduate

6. Demonstrate the ability to create, conduct and terminate a short content-specific conversation in ASL.

Audience: Undergraduate

7. Demonstrate an elementary knowledge of Deaf Culture, including being able to identify markers of Deaf Culture in artifacts and behaviors.

Audience: Undergraduate

8. Demonstrate knowledge of historical topics as they relate to the Deaf community, such as important figures and institutions in Deaf Culture.

Audience: Undergraduate

**LINGUIS 352 – AMERICAN SIGN LANGUAGE 2**

4 credits.

Develop comprehension and production abilities in American Sign Language (ASL). Recognition and demonstration of more sophisticated grammatical features of ASL, focusing on increasing fluency and accuracy. Develop cultural awareness of the Deaf communities of the world.

**Requisites:** LINGUIS 351**Course Designation:** Frgn Lang - 2nd semester language course  
Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Recognize and produce vocabulary items.

Audience: Undergraduate

2. Express daily function dialogues and signed ASL stories utilizing ASL techniques while incorporating vocabulary, grammatical principles, and cultural awareness.

Audience: Undergraduate

3. Recognize and produce basic grammatical structures in ASL, including the use of manual and non-manual parameters.

Audience: Undergraduate

4. Apply critical thinking skills in understanding ASL literature as it relates to Deaf Culture.

Audience: Undergraduate

5. Use behaviors that facilitate and regulate signed conversation, such as attention-getting techniques and turn-taking signals.

Audience: Undergraduate

6. Create, conduct, and terminate a conversation in ASL in a range of common contexts.

Audience: Undergraduate

7. Identify markers of Deaf Culture in artifacts and behaviors.

Audience: Undergraduate

8. Discuss historical topics as they relate to the Deaf community, such as important figures and institutions in Deaf Culture.

Audience: Undergraduate

**LINGUIS 353 – AMERICAN SIGN LANGUAGE 3**

4 credits.

Intermediate-level communication skills in American Sign Language (ASL). Increase proficiency in production and comprehension of ASL vocabulary, grammar, and classifiers. Develop conversational abilities and continue to learn about the culture and history of Deaf communities.

**Requisites:** LINGUIS 352**Course Designation:** Frgn Lang - 3rd semester language course  
Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Learning Outcomes:** 1. Recognize and produce vocabulary items in each content unit.

Audience: Undergraduate

2. Comprehend content-specific commands, questions, and statements in ASL.

Audience: Undergraduate

3. Identify grammatical features within short dialogues in ASL.

Audience: Undergraduate

4. Demonstrate comprehension and production of regulating behaviors in ASL (i.e. attention-getting techniques, turn-taking signals, and others).

Audience: Undergraduate

5. Comprehend short narratives and stories in ASL.

Audience: Undergraduate

6. Initiate, conduct, and terminate a short content-specific conversation.

Audience: Undergraduate

7. Analyze and critique competing perspectives of diverse Deaf communities in the United States and Canada, ideas, aesthetic traditions, and cultural practices, and their history.

Audience: Undergraduate

8. Compare, contrast, and interpret differences and commonalities among Deaf and hearing cultures.

Audience: Undergraduate

**LINGUIS/AMER IND 371 – SURVEY OF NORTH AMERICAN INDIAN LANGUAGES**

3 credits.

Overview of native languages of North America, including topics such as history, distribution, diversity, government policy, language endangerment, elaboration of cultural domains, language and worldview, speech styles, language structure (phonology, morphology, grammatical categories), performance (narrative, song), writing systems.

**Requisites:** Sophomore standing**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Humanities

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Summer 2025**LINGUIS 373 – TOPICS IN LINGUISTICS**

3 credits.

Study of a particular topic in linguistics.

**Requisites:** LINGUIS 101 or 301**Course Designation:** Breadth - Humanities

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**LINGUIS 375 – SIGN LANGUAGE LINGUISTICS**

3 credits.

Introduction and overview of the linguistics of sign languages, signing communities, and perceptions of deaf people and sign languages. Topics include: the grammar of sign languages, their use in signing communities, patterns in the transmission and acquisition of sign languages, and the emergence of new sign languages.

**Requisites:** LINGUIS 101 or ANTHRO/LINGUIS 301**Course Designation:** Breadth - Either Humanities or Social Science Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Recognize false assumptions and claims about sign languages and challenge them

Audience: Both Grad &amp; Undergrad

2. Discuss key concepts, terms, and debates in the study of sign languages and their linguistic structure

Audience: Both Grad &amp; Undergrad

3. Compare different theoretical approaches to sign language linguistics

Audience: Both Grad &amp; Undergrad

4. Discuss the ways that the study of sign languages expands and enhances our understanding of human languages

Audience: Both Grad &amp; Undergrad

5. Demonstrate understanding that deafness and sign languages are valuable parts of cultural and linguistic diversity

Audience: Both Grad &amp; Undergrad

6. Describe ways to increase and advocate for accessibility and inclusivity for minoritized languages and communities

Audience: Both Grad &amp; Undergrad

7. Evaluate and critique different theoretical approaches to sign language linguistics

Audience: Graduate

8. Compare models of sign languages and spoken languages at all levels of linguistic analysis: phonology, morphology, syntax and discourse

Audience: Graduate

**LINGUIS 426 – FIELD METHODS I**

3 credits.

Collection and analysis of phonetic, phonological, and morphological data from a particular language, using one or more speakers as consultants.

**Requisites:** LINGUIS 310**Course Designation:** Breadth - Humanities

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2019

**LINGUIS 427 – FIELD METHODS II**

3 credits.

Collection and analysis of morphological, syntactic, and semantic data from a particular language, using one or more speakers as consultants.

**Requisites:** LINGUIS 310 and (LINGUIS 322 or 330)

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2022

**LINGUIS/ANTHRO 430 – LANGUAGE AND CULTURE**

3-4 credits.

The relationship of language as a communication system to the culture transmitted by it. Principle problems in the interrelations of language and nonlinguistic human behavior.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**LINGUIS 481 – JUNIOR HONORS TUTORIAL**

1 credit.

Mentored individual research for those pursuing Honors in the Major.

**Requisites:** Consent of instructor

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**LINGUIS 482 – JUNIOR HONORS TUTORIAL**

1 credit.

Mentored individual research for those pursuing Honors in the Major.

**Requisites:** Consent of instructor

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**LINGUIS 510 – PHONOLOGICAL THEORIES**

3 credits.

Theories of phonology, and advanced phonological description.

**Requisites:** LINGUIS 310

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**LINGUIS 522 – ADVANCED MORPHOLOGY**

3 credits.

Advanced morphological theory.

**Requisites:** LINGUIS 322

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**LINGUIS 530 – SYNTACTIC THEORIES**

3 credits.

Theories of syntax, and syntactic description. The relation of syntax to semantics, and other aspects of linguistic theory.

**Requisites:** LINGUIS 330

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**LINGUIS 571 – STRUCTURE OF A LANGUAGE**

3 credits.

In-depth study of all components of the grammar of a language.

**Requisites:** LINGUIS 310 and 330

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**LINGUIS 583 – SENIOR HONORS TUTORIAL**

1 credit.

Mentored individual research for those pursuing Honors in the Major.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2018

**LINGUIS 681 – HONORS SEMINAR-SENIOR THESIS**

3 credits.

Mentored individual research and study for students completing a thesis in an Honors program.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### LINGUIS 682 – HONORS SEMINAR-SENIOR THESIS

3 credits.

Mentored individual research and study for students completing a thesis in an Honors program.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### LINGUIS 690 – CAPSTONE IN LINGUISTICS

3 credits.

In-depth exploration of a particular topic in linguistics. Training in data collection methodologies. Experience gathering, organizing, and analyzing linguistic data as part of a supervised research project.

**Requisites:** LINGUIS 310, 322, and 330

**Course Designation:** Breadth - Either Humanities or Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Organize and analyze linguistic data

Audience: Undergraduate

2. Develop an original research question

Audience: Undergraduate

3. Design and carry out an independent research project

Audience: Undergraduate

4. Write a paper situating the analysis in an understanding of linguistic theory and tradition

Audience: Undergraduate

### LINGUIS 699 – INDEPENDENT READING

1-6 credits.

Advanced directed study projects as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

### LINGUIS 800 – RESEARCH METHODS AND MATERIALS

3 credits.

Professionalization activities for linguists, including writing and publishing, submitting abstracts to conferences, and creating CVs.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate

coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### LINGUIS 977 – SEMINAR

2-3 credits.

Critical examination of selected issues in linguistics.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### LINGUIS 990 – THESIS

1-12 credits.

Research in connection with the doctoral thesis.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

### LINGUIS 999 – INDEPENDENT READING

1-12 credits.

Mentored reading and research for students with dissertator status.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

# LITERATURE IN TRANSLATION (LITTRANS)

## LITTRANS 200 – FOOD CULTURES IN ITALIAN LITERATURE

3 credits.

Investigate the representation of food in Italian literature from the 19th Century to the present and the connection between food and identity in Italy and Italophone culture. Covers novels, short stories and poems and work on methods of literary analysis by focusing on questions of genre, narrative structure, characters, metaphorical and allegorical interpretation, etc. The theme of food (in relation to hunger, class, gender, identity, diaspora, sustainability, etc.) is central in the literary material included.

**Requisites:** None

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Understand Italian literature in historical, social, political, and gender context (1850-present).

Audience: Undergraduate

2. Recognize, define, and critique major literary genres and sub-genres of the novel (such as the historical novel, social novel, crime novel).

Audience: Undergraduate

3. Discuss history and characteristics of food cultures of Italy in relation to issues of identity.

Audience: Undergraduate

4. Compare past history of Italy to contemporary Italian and Italophone cultures.

Audience: Undergraduate

5. Discuss literary texts from a variety of disciplinary approaches.

Audience: Undergraduate

6. Develop analytical skills and critical thinking skills.

Audience: Undergraduate

7. Improve academic writing, literary analysis, library and field research skills.

Audience: Undergraduate

## LITTRANS 201 – SURVEY OF 19TH AND 20TH CENTURY RUSSIAN LITERATURE IN TRANSLATION I

3 credits.

Examines the era of 19th-century Russian prose fiction, roughly 1830-1900, from Aleksandr Pushkin to Anton Chekhov.

**Requisites:** Not open to students with credit for LITTRANS 203

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

## LITTRANS 202 – SURVEY OF 19TH AND 20TH CENTURY RUSSIAN LITERATURE IN TRANSLATION II

3 credits.

Examines Russian prose fiction, Anton Chekhov to the end of the 20th century.

**Requisites:** Not open to students with credit for LITTRANS 204

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

## LITTRANS 203 – SURVEY OF 19TH AND 20TH CENTURY RUSSIAN LITERATURE IN TRANSLATION I

4 credits.

Examines the era of 19th-century Russian prose fiction, roughly 1830-1900, from Aleksandr Pushkin to Anton Chekhov. More writing intensive than LITTRANS 201.

**Requisites:** Not open to students with credit for LITTRANS 201

**Course Designation:** Gen Ed – Communication Part B

Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

## LITTRANS 204 – SURVEY OF 19TH AND 20TH CENTURY RUSSIAN LITERATURE IN TRANSLATION II

4 credits.

Examines Russian prose fiction, Anton Chekhov to the end of the 20th century. More writing intensive than LITTRANS 202.

**Requisites:** Not open to students with credit for LITTRANS 202

**Course Designation:** Gen Ed – Communication Part B

Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### LITTRANS/GEN&WS 205 – WOMEN IN RUSSIAN LITERATURE IN TRANSLATION

3-4 credits.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

### LITTRANS 207 – SLAVIC SCIENCE FICTION THROUGH LITERATURE AND FILM

3 credits.

Explore the rich tradition of Slavic contributions to Science Fiction (SF). Survey early and contemporary works in the Czech, Polish, and Russian contexts, most of which are little known in the US but are nonetheless fundamental to SF as a world genre. Alongside reading these works, discuss and analyze film adaptations that have, in some cases, become more famous than written texts themselves.

**Requisites:** None

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### LITTRANS 208 – THE WRITINGS OF VACLAV HAVEL: CRITIQUE OF MODERN SOCIETY

3 credits.

Survey and critical analysis of the writings of Vaclav Havel from the 1960's through the 1990's: plays, philosophical and dissident essays, selected speeches as president.

**Requisites:** None

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### LITTRANS 209 – MASTERPIECES OF FRENCH LITERATURE AND CULTURE

3-4 credits.

A study of representative masterpieces of French and Francophone literature drawn from at least four different centuries. Emphasis on the interpretation of texts, important themes, and the ways literature expresses psychological and sociocultural realities. May cover topics such as: tragedies by Jean Racine, comedies by Moliere, novels by Pierre Choderlos de Laclos, Honore de Balzac, Guy de Maupassant and Maryse Conde, and stories by Gustave Flaubert and Albert Camus.

**Requisites:** None

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Become familiar with some of the finest works of literature written in French

Audience: Undergraduate

2. Perfect skills in presenting a literary interpretation in a clear and compelling way.

Audience: Undergraduate

3. Identify recurrent and meaningful themes in readings and learn to recognize and articulate why they are important to an understanding of life in society.

Audience: Undergraduate

4. Explore the various ways literature expresses psychological and sociocultural realities and allows readers to know both themselves and other people with greater depth, understanding, and compassion.

Audience: Undergraduate

**LITTRANS/ASIAN 212 – CLASSICAL SOUTH ASIAN LITERATURES**

3 credits.

Surveys the classical literatures of South Asia, from ancient origins to adaptations in the modern world. Includes poetry, prose, and drama translated into English from Persian, Prakrit, Sanskrit, Tamil, Telugu, Hindi/Urdu, and other languages. Examines the relationship between literature in theory, in practice, and politics.

**Requisites:** None**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Learning Outcomes:** 1. Identify major and minor works of classical South Asian literature

Audience: Undergraduate

2. Analyze works of classical South Asian literature in their historical contexts

Audience: Undergraduate

3. Interpret works of classical South Asian literature using classical and contemporary aesthetic theories

Audience: Undergraduate

4. Articulate the significance of classical literatures to contemporary literary cultures

Audience: Undergraduate

5. Conduct and present original writing and research on classical South Asian literature

Audience: Undergraduate

**LITTRANS 213 – LOVE AND SEX IN ITALIAN COMEDY**

3–4 credits.

Explore Italian comedy and dramatic literature across the centuries through close reading and discussion of selected plays, from its Roman origins to contemporary examples. Read and discuss texts representative of the major comedic modes (e.g. erudite, improvised, etc.), paying close attention to language and structure, genre debates, character typologies, performance history, and the cultural-historical contexts that informed playwrights. Aims are cultivating a deeper understanding of Italian sensibilities and cultural attitudes regarding humor and satire, love and sex, tragedy within comedy, history, gender politics, public/private space, social customs, class, and other issues.

**Requisites:** None**Course Designation:** Gen Ed – Communication Part B Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2022**LITTRANS/SLAVIC 215 – LOVE AND DEATH: INTRODUCTION TO POLISH LITERATURE & CULTURE**

3 credits.

Examines major traditions, narratives, and ideas that have shaped Polish literature and culture from their beginnings to World War II. Gain broad and contextualized knowledge of Polish civilization by closely reading and analyzing literary and cultural texts in their historical context. Course contents are organized into four major paradigms: Christianity, Sarmatism, Romanticism, and Modernity.

**Requisites:** None**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2023**Learning Outcomes:** 1. identify and describe the main characteristics of various literary and cultural texts in Polish (and European) culture;

Audience: Undergraduate

2. define major themes, concepts, events, and ideas that shape Poland's literary and cultural history;

Audience: Undergraduate

3. analyze literary texts in their historical context using basic tools of literary analysis (genres, critical concepts, etc.)

Audience: Undergraduate

4. develop, compare, and effectively express ideas about literary texts and their underlying semantic structures;

Audience: Undergraduate

**LITTRANS 218 – POLISH LITERATURE IN TRANSLATION: LATE 19TH AND 20TH CENTURIES**

3 credits.

A survey of the main currents in Polish literature since 1863.

**Requisites:** None**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2019

**LITTRANS 220 – CHEKHOV: THE DRAMA OF MODERN LIFE**

3 credits.

Russian culture is one where literature has always played a central role in the nation's self-definitions, but Chekhov's enduring popularity around the globe is evidence of his universal appeal and relevance.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Become familiar with the major works of Anton Chekhov, one of the most influential writers in world literature.

Audience: Undergraduate

2. Demonstrate knowledge with the history, culture, and politics of pre-1917 Russia, and show the relevance of Chekhov's works to our time.

Audience: Undergraduate

3. Cultivate various critical approaches to the study of literature and read, analyze, and write about complex literary works.

Audience: Undergraduate

**LITTRANS 221 – RUSSIA'S GREATEST ENIGMA: NIKOLAI GOGOL**

3 credits.

Despite the comparisons to Poe and Kafka or Gogol's undeniable influence on Dostoevsky and Bulgakov, one thing is certain - his world of laughter and tears is unlike that of any other writer.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Analyze and interpret most of Gogol's masterpieces to gain a better sense of what literature is and why it is important to read literary texts.

Audience: Undergraduate

2. Distinguish features of the major literary movements of the 19th century, Romanticism and Realism, through some of its most fascinating and problematic texts.

Audience: Undergraduate

3. Examine the literariness of literary works and the complex relationships between author, the literary work, and society.

Audience: Undergraduate

4. Develop skills in critical thinking and writing in order to better analyze difficult literary texts.

Audience: Undergraduate

**LITTRANS 222 – DOSTOEVSKY IN TRANSLATION**

3-4 credits.

Dostoevsky's works are direct encounters with the "accursed questions" of life, love, evil, violence, sex, death and the other usual suspects; main focus will be on the individual reader's close encounter with the aesthetics and ethics of these works.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**LITTRANS/ENGL 223 – VLADIMIR NABOKOV: RUSSIAN AND AMERICAN WRITINGS**

3 credits.

The major novels of Vladimir Nabokov studied in the context of Russian and American literatures. Nabokov as a quintessential artist in exile, whose work explores loss of language, country and home.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**LITTRANS 224 – TOLSTOY IN TRANSLATION**

3-4 credits.

What were Tolstoy's objections to sexuality and political reform? What is moral and beautiful? How does civilization and education relate to nature? What does death say about life? Discussion of Tolstoy's masterpieces alongside some of his nonfictional manifestoes.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**LITTRANS 226 – INTRODUCTION TO LUSO-AFRO-BRAZILIAN LITERATURE**

3 credits.

Introduction to the cultural and literary practices of the Portuguese-speaking world. Readings include novels, short stories, and poetry from Portugal, Brazil, and Lusophone Africa.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Gen Ed - Communication Part B

Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### LITTRANS/CLASSICS/JEWISH/RELIG ST 227 – INTRODUCTION TO BIBLICAL LITERATURE (IN ENGLISH)

4 credits.

Introduction to the text, development, history, and social context of the Hebrew Bible/Old Testament. Covers the Torah (Pentateuch), Neviim (Former and Latter Prophets), and Ketuvim (Writings), and provides a brief introduction to early Jewish literature (Pseudepigrapha/Apocrypha). Discusses various methods of analysis and theories of composition. Addresses major theological claims made of the text by Jewish and Christian communities. Explores contextualized interpretations in the ancient and modern day.

**Requisites:** None

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate knowledge of ancient Near Eastern societies and cultures.

Audience: Undergraduate

2. Examine, analyze, and interpret ancient texts in translation.

Audience: Undergraduate

3. Critique ancient Greek, Roman, and/or Near Eastern societies and cultures and compare them to other societies and cultures.

Audience: Undergraduate

4. Articulate a self-critical understanding of one's own approach to the biblical text.

Audience: Undergraduate

### LITTRANS 229 – REPRESENTATION OF THE JEW IN EASTERN EUROPEAN CULTURES

3 credits.

The image and representation of the "Jew" and Jews in the literatures and cultures of the Slavic countries of Eastern Europe, including Russia, Poland, Serbia, Croatia, and Bosnia. Both pre- and post-Holocaust texts will be read and critically examined.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2017

### LITTRANS 231 – MANGA

3 credits.

Surveys the manga (Japanese comicbook) from precursors in premodern woodblock-printed booklets to contemporary manifestations in subgenres like gekiga, mecha, shonen, and shojo. Draws on critical writings on literature, popular culture, and visual culture.

**Requisites:** None

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

### LITTRANS 232 – ANIME

3 credits.

Surveys anime (Japanese animation) from 1930s shorts through contemporary feature-length, experimental, and televised serial-form productions. Draws on critical writings on postmodernism, digital cinema, and visual culture.

**Requisites:** None

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**LITTRANS 233 – RUSSIAN LIFE AND CULTURE THROUGH LITERATURE AND ART (TO 1917)**

3-4 credits.

Prerevolutionary Russian visual arts, architecture, music and cinema; provides an inside view of life in prerevolutionary Russia with the help of selected readings in Russian literature.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify and summarize important features of Russian cultural history from its origins to 1917, with an emphasis on the interaction between culture and the development of Russian politics and society.

Audience: Undergraduate

2. Identify and summarize significant works of Russian “high art” (e.g., painting, literature) as well as mass culture or popular culture (folklore and the culture of the everyday) and to think about the connections between them.

Audience: Undergraduate

3. Demonstrate knowledge about Russian culture in writing and discussion.

Audience: Undergraduate

4. Think critically about the “functions” (artistic, social, and political) of Russian culture through discussions and writing assignments.

Audience: Undergraduate

5. Develop skills in critical reading, logical thinking, and the use of evidence (4 credit)

Audience: Undergraduate

6. Develop skills in the use of style and disciplinary conventions in writing and speaking (4 credit)

Audience: Undergraduate

7. Develop skills in the productive use of core library resources specific to the discipline (4 credit)

Audience: Undergraduate

**LITTRANS 234 – SOVIET LIFE AND CULTURE THROUGH LITERATURE AND ART (FROM 1917)**

3-4 credits.

Postrevolutionary Russian and Soviet visual arts, architecture, music and cinema; provides an inside view of life under socialism with the help of selected readings in Soviet literature.

**Requisites:** Sophomore standing

**Course Designation:** Gen Ed – Communication Part B Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Identify and summarize important features of Russian cultural history of the Soviet period, with an emphasis on the interaction between politics and culture between 1917 and 1991.

Audience: Undergraduate

2. Identify and summarize significant works of Russian “high art” (e.g., painting, literature, film) as well as mass culture or popular culture (the culture of the everyday) and to think about the connections between them.

Audience: Undergraduate

3. Demonstrate knowledge about Russian Soviet culture in writing and discussion.

Audience: Undergraduate

4. Students will be able to think more critically about the “functions” (artistic, social, and political) of Russian Soviet culture through discussions and writing assignments.

Audience: Undergraduate

5. Develop skills in critical reading, logical thinking, and the use of evidence (4 credit)

Audience: Undergraduate

6. Develop skills in the use of style and disciplinary conventions in writing and speaking (4 credit)

Audience: Undergraduate

7. Develop skills in the productive use of core library resources specific to the discipline (4 credit)

Audience: Undergraduate

**LITTRANS 236 – BASCOM COURSE-IN TRANSLATION**

3 credits.

Develop skills in critical reading, logical thinking, use of evidence, and use of library resources. Emphasis on writing in the conventions of specific fields.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Gen Ed - Communication Part B  
Breadth - Literature. Counts toward the Humanities req  
Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**LITTRANS/SLAVIC 238 – LITERATURE AND REVOLUTION**

3 credits.

Take a literary journey from St. Petersburg to Moscow, following the shifting cultural and political currents in Russia from the years preceding the 1917 Revolution to the rise of Stalinism in the 1930s. Topics in translation will include: revolutionary violence and terror, civil war and emigration, Futurism and the birth of Russian avant-garde art, Soviet feminism and the engineering of the "New Man," technological utopias and totalitarian dystopias, literature and early Soviet economic policy.

**Requisites:** None

**Course Designation:** Breadth - Literature. Counts toward the Humanities req  
Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Conduct close readings of literary texts that take into consideration both form and content.

Audience: Undergraduate

2. Acquire a greater awareness of another culture and become more adept at engaging with perspectives and ways of thinking that are different from the student's own.

Audience: Undergraduate

3. Develop a sensitivity to the way texts and ideas are rooted in their unique historical and political contexts, while having a life span that stretches far beyond them.

Audience: Undergraduate

**LITTRANS 241 – LITERATURES AND CULTURES OF EASTERN EUROPE**

3 credits.

Introduction to the literature, culture, and art of Eastern Europe.

**Requisites:** None

**Course Designation:** Breadth - Literature. Counts toward the Humanities req  
Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

**LITTRANS 245 – TOPICS IN SPANISH AMERICAN LITERATURE IN TRANSLATION**

3 credits.

Beginning with the arrival of Spanish colonists in the fifteenth century, Spanish American literature has a rich history of over five centuries, and Spanish American authors were awarded six Nobel prizes between 1945 and 2010. An introduction to key problems, topics, authors, genres, and periods in the history of Spanish American literary practice providing insight into the vast diversity of Spanish American cultures and societies through readings offered in English translation, as well as familiarity with the current critical and theoretical debates on Spanish American literature.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Gen Ed - Communication Part B  
Breadth - Literature. Counts toward the Humanities req  
Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Improve general skills in written and oral communication, including the abilities to summarize, analyze, interpret and argue with efficiency and clarity.

Audience: Undergraduate

2. Read critically by applying logical analysis and argumentation to the interpretation of literary texts and by marshalling textual evidence in support of their arguments.

Audience: Undergraduate

3. Converse, read and write critically about contemporary Spanish American literary texts using specialized narratological vocabulary and complying with the Modern Language Association's standards for citation and style.

Audience: Undergraduate

4. Identify and assess the cultural, economic and political factors that differentiate Spanish American literary production from that of other regions.

Audience: Undergraduate

5. Recognize, define and critique major genres of contemporary narrative fiction, both international (e.g. autofiction) and locally Spanish American (e.g. the narco-novel).

Audience: Undergraduate

6. Understand and reflect on the advantages and limitations of literary expression in the context of postmodern cultural economies dominated by audiovisual electronic media, and on specific literary responses to the contemporary media ecology.

Audience: Undergraduate

**LITTRANS 247 – TOPICS IN SLAVIC LITERATURES IN TRANSLATION**

3 credits.

Exploration of periods, genres, individual writers, themes, problems, ect. in Russian and Eastern European literature.

**Requisites:** None

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**LITTRANS 248 – NATIONAL IDENTITY IN THE GLOBAL WORLD: THE ITALIAN CASE**

3 credits.

What is a national identity in the context of the fluid globalized world in which we live? How are identities affected by big migratory waves within the same country and, more importantly, from one country or continent to another? The Italian case is one of the many in the so-called Western world that can help us to monitor the possible answers to these questions. Through readings and discussions of novels, avant-garde manifestoes, poems, two main tasks will be accomplished. The first task of analyzing literary texts in a variety of genres (epistolary novel, historical novel, avant-garde rhetoric, poetry) to familiarize ourselves with textual analysis and some theoretical tools supporting the interpretative tasks of literary criticism. And the second task of appreciating the rhetorical devices that those texts adopt at different times of Italian modern and contemporary history.

**Requisites:** None

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recognize and identify different literary genres (novel and different subgenres within that genre; poetry and different forms, from closed forms such as a sonnet to free verse; avant-garde manifestoes and their innovative rhetoric).

Audience: Undergraduate

2. Recognize and identify literature of the different periods considered in the course, from Romanticism to modernism, from avant-garde to post-modernism, while reading Italian literature written in a variety of literary genres (especially novels, but also poems and short stories).

Audience: Undergraduate

3. Reflect on major themes and issues related to national identity through literary forms, while focusing on the Italian situation since Risorgimento and until today, with a necessary observation of what historically happens in those two centuries.

Audience: Undergraduate

4. Reflect on the necessary intersections of several disciplines in the humanities such as history, political science, international studies, while the focus remains on the Italian context and the situations in that country are inserted in a larger and global perspective.

Audience: Undergraduate

5. Understand the exchange among several disciplines (arts, history, philosophy, political science) and the relevance they have in their autonomy and in relation to one another in the several historical and literary contexts that Italy lived through in the context of Europe and even in the global context, as we approach World War II and our contemporary times.

Audience: Undergraduate

**LITTRANS 249 – LITERATURE IN TRANSLATION: NINETEENTH-CENTURY FRENCH MASTERPIECES**

3 credits.

Read a series of extraordinary narrative texts from nineteenth-and early twentieth-century France.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**LITTRANS 252 – SPANISH LITERARY MASTERPIECES IN TRANSLATION**

3 credits.

Major works of Spanish Peninsular literature in prose, drama and poetry.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2021

**LITTRANS/MEDIEVAL/RELIG ST 253 – OF DEMONS AND ANGELS. DANTE'S DIVINE COMEDY**

3 credits.

Have you ever wondered about human nature? What is our place in this world? Through readings, videos, and original images, explore and discuss Dante's answers from one of the greatest world literary classics, his Divine Comedy. From Hell, through Purgatory to Paradise, we will travel together with Dante in a universal tale of the journey of the human soul. Along the way, learn about Dante, his life and his works, development of literary history, historical and socio-political context of medieval Europe, the Mediterranean and the Middle East. Make connections that cross today's geographic and cultural lines in an exploration of literary topics, the history of ideas, and shared history, pondering universal concepts and patterns in the development of civilization that can still be observed today.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

Audience: Undergraduate

2. Understand medieval civilization and its human culture(s)  
Audience: Undergraduate

3. Describe literary, historical, cultural concepts and phenomena  
Audience: Undergraduate

4. Analyze from multiple perspectives a text, a situation, a context  
Audience: Undergraduate

5. Synthesize information acquired from primary and secondary sources  
Audience: Undergraduate

6. Learn the dangers of anachronism  
Audience: Undergraduate

**LITTRANS 254 – IN TRANSLATION: LIT OF MODERN ITALY-EXISTENTIALISM, FASCISM, RESISTANCE**

3 credits.

Covers Italian history and culture from the Unification (1860) to the 21st century.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**LITTRANS/MEDIEVAL 255 – BLACK DEATH AND MEDIEVAL LIFE THROUGH BOCCACCIO'S DECAMERON**

3 credits.

Have you ever wondered what it was like to live during the Black Death? Were our medieval and early-modern ancestors different from us, or are we challenged with similar problems? What can we learn from their lives? And, if we could, what could we teach each other? Discuss these topics while reading one of the world's greatest literary classics, Giovanni Boccaccio's Decameron, a text that will make us both laugh and cry. Through reading the Decameron, investigate medicine, art, culture, music, politics, religion, interpersonal and transcultural relations, warfare, fashion, gender and gender roles, as well as everyday life in the Middle Ages and early modernity. Also examines medieval written documents, twentieth-century feminist responses to the Decameron and filmic renditions of it, medieval frescoes, historical descriptions of the plague, and modern descriptions of, and reactions to, the COVID-19 pandemic.

**Requisites:** Sophomore standing**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Learn about Giovanni Boccaccio and his Decameron, medieval civilization and its human culture(s)

Audience: Undergraduate

2. Acquire intercultural knowledge and competence and apply them to past and current issues

Audience: Undergraduate

3. Analyze a text, a situation, a context

Audience: Undergraduate

4. Synthesize information acquired from primary and secondary sources

Audience: Undergraduate

5. Learn the dangers of anachronism

Audience: Undergraduate

6. Engage in problem solving

Audience: Undergraduate

7. Develop critical and creative thinking skills

Audience: Undergraduate

8. Engage in effective teamwork

Audience: Undergraduate

9. Design and construct new content based on skills acquired throughout the semester

Audience: Undergraduate

**LITTRANS/SLAVIC 259 – ADVENTURE IN LITERATURE AND FILM**

3 credits.

How do we define adventure? Who gets to experience it and on what terms? What role has it played in ancient and modern cultures? What do its ever-changing definitions, heroes, and genres tell us about our evolving values? Address these and similar questions on our intellectual journey through some of the most iconic adventures in Western cultural tradition, from Homer's The Odyssey to Spielberg's Raiders of the Lost Ark, and beyond.

**Requisites:** None**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Learning Outcomes:** 1. identify the conventions of adventure narratives across different periods, traditions, and genres

Audience: Undergraduate

2. apply basic methods of literary, cinematic, and cultural analysis to close readings of cultural texts, be they epics, romances, novels, or films

Audience: Undergraduate

3. develop, compare, and effectively express ideas about cultural texts and their underlying semantic structures

Audience: Undergraduate

4. discuss how adventure tropes evolve to reflect and often mediate social and cultural changes

Audience: Undergraduate

5. explain the function of adventure as a social construct, both historically and in the context of today's globalized world.

Audience: Undergraduate

**LITTRANS 260 – ITALY AND THE INVENTION OF AMERICA: FROM COLUMBUS TO WORLD WAR II**

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2019

**LITTRANS 274 – IN TRANSLATION: MASTERPIECES OF SCANDINAVIAN LITERATURE-THE 20TH CENTURY**

3-4 credits.

An introduction to Scandinavian literary and intellectual history, placed in a European context, from 1900 to present day.

**Requisites:** None

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**LITTRANS 275 – IN TRANSLATION: THE TALES OF HANS CHRISTIAN ANDERSEN**

3-4 credits.

The works of Hans Christian Andersen, with an emphasis on his best-known fairytales, but also texts from some of the other genres he mastered, focusing on the biographical traits of his stories and his mastery of the genre and complex narrative method.

**Requisites:** None

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**LITTRANS/GERMAN 276 – SPECIAL TOPICS IN GERMAN AND WORLD LITERATURE/S**

3 credits.

Exploration of diverse world literary traditions with an emphasis on German and German speaking cultures.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Engage with world literature as a lens for the human experience

Audience: Undergraduate

2. Read and discuss literature of German speaking countries and the world in translation

Audience: Undergraduate

3. Recognize and explain general themes common to different cultures

Audience: Undergraduate

4. Write about the topics and texts covered in the course

Audience: Undergraduate

**LITTRANS 277 – TOPICS IN TWENTIETH-CENTURY GERMAN LITERATURE (IN TRANSLATION)**

3 credits.

Discussion of major twentieth-century literary texts from Germany, Switzerland, and Austria by such authors as Franz Kafka, Bertolt Brecht, Anna Seghers, Friedrich Durrenmatt, Gunter Grass, Christa Wolf. Possible areas of emphasis: identity formation; technology and culture; literary representations of fascism.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

### LITTRANS/GERMAN/JEWISH 279 – YIDDISH LITERATURE AND CULTURE IN AMERICA

3 credits.

Exploration of American Yiddish poetry, fiction, theater, and cinema created by European Jews in the United States.

**Requisites:** None

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Literature. Counts toward the Humanities req

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Prepare students for life and careers in an increasingly multicultural and multilingual US environment  
Audience: Undergraduate

2. Develop critical thinking skills through sustained discussion with one's peers and foster a constructive climate in which to engage with questions concerning cultural, racial, religious, and linguistic difference  
Audience: Undergraduate

3. Acquire a critical vocabulary to speak about historical and present-day issues concerning migration, ethnic identity, and religious difference  
Audience: Undergraduate

4. Engage in reflective writing practices, respond critically to feedback, and assess one's own communicative strengths  
Audience: Undergraduate

5. Identify the major themes of American Yiddish literature and culture from the early-twentieth century until today. These themes include: the politics of language use; the negotiation of a minoritized status; regional vs. national American Jewish identity; inter-generational conflict; Jews and the question of race  
Audience: Undergraduate

### LITTRANS/GERMAN 280 – FROM GRIMM TO GRYFFINDOR: GERMAN FAIRYTALES (RE)IMAGINED

3 credits.

From Rumpelstiltskin to Rapunzel, the rich fairy-tale tradition of the German-speaking world is filled with familiar themes and subversive morals. With an eye to depictions of gender, gender roles, sexuality, and race, we critically engage with these tales and contextualize them within the social and political landscapes that shaped them.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Critically engage with German fairytales from different time periods and contextualize them within the social and political landscapes that shaped them  
Audience: Undergraduate

2. Explore fairytales through a variety of analytical lenses, including feminist and queer theories, ecocriticism, and psychoanalytic perspectives

Audience: Undergraduate

3. Recognize and analyze the fairytale's transcultural influences in literature, art, music, poetry, and pop culture  
Audience: Undergraduate

**LITTRANS 302 – WHAT IS LIFE? BIOLOGICAL LIFE IN LITERATURE AND CULTURE**

3-4 credits.

Explores representations of biological life in literature, scientific discourse, film, and art. The symbolic representations (metaphors and similes used by scientists, fictions narrated by writers, and pictorial forms imagined by artists) allow students to analyze diverse conceptualizations of biological life: life as mechanism, rhythmic movement, balance of energy, inherent force, resistance to death, death's complementary cycle. The exploration of biological life's attributes, such as plasticity, limitedness, and self-consciousness, fosters interdisciplinary thinking bridging the humanities and life sciences. The symbolic representations of life are studied through different genres of texts and different media, and at different moments of cultural history. The texts and media will be from around the world (with a particular emphasis on French, francophone and Italian sources), but studied in English translation.

**Requisites:** Sophomore standing**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2022**Learning Outcomes:** 1. Identify problems that transcend disciplinary divides and learn how to think across disciplines of learning, namely life sciences, humanities and literature.

Audience: Undergraduate

2. Identify key thinkers and artists associated with the course topic.

Audience: Undergraduate

3. Recall facts and concepts pertaining to the cultural representations of biological.

Audience: Undergraduate

4. Compare literary and artistic representations with scientific illustrations of concepts pertaining to biological life.

Audience: Undergraduate

5. Interpret literary texts, films and artistic works in relation to the problem of organic life, through close reading and conceptual analysis.

Audience: Undergraduate

6. Develop argumentation skills by discussing fundamental questions pertaining to organic life, based on an informed dialogue with thinkers and writers of the past and present.

Audience: Undergraduate

7. Distinguish cultural premises of scientific problems through the critique of their literary, artistic and rhetorical formulations.

Audience: Undergraduate

8. Demonstrate knowledge of fundamental conceptions of biological life in Western cultural tradition by writing a research paper (for Comm-B students: two research papers and three response papers).

Audience: Undergraduate

9. Comm-B students: Create oral presentations and a creative project synthesizing knowledge about the course topic.

Audience: Undergraduate

**LITTRANS 303 – TOPICS IN FRENCH LITERATURE AND CULTURE**

3-4 credits.

Explores topics in French and Francophone cultures by examining their conceptualizations throughout history as well as their representations in literature and different media such as film and graphic novels. Understand the specificity of French and Francophone cultures and literatures, their contributions to the world's multicultural heritage, and ponder the cultural traditions they claim their own. Possible topics: gender relations, race and ethnicity, social justice, institutional forms of power, human emotions, immigration, colonization and its literary heritage, aesthetic ideals, everyday forms of human interaction, historical memory and its repression, education and acculturation, social rituals, the cultural and political role of language, etc.

**Requisites:** Sophomore standing**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Conceptualize historical, literary, and cultural aspects of a specific topic in French and Francophone cultures.

Audience: Undergraduate

2. Understand how artistic imagination and philosophical reasoning creatively intersect.

Audience: Undergraduate

3. Know how to discuss fundamental questions pertaining to cultural phenomena, based on an informed dialogue with thinkers and writers of the past and present.

Audience: Undergraduate

4. Understand cultural differences and apply this knowledge to the French and Francophone cultures.

Audience: Undergraduate

5. Know how to close read and critically analyze literary texts, films, and artistic works in relation to a cultural topic.

Audience: Undergraduate

6. Know how to write interpretative analyses of a foreign culture.

Audience: Undergraduate

7. Identify key thinkers and artists associated with the topic of the course.

Audience: Undergraduate

**LITTRANS/JEWISH 318 – MODERN JEWISH LITERATURE**

3-4 credits.

Pre-modern Jewish society's breakdown, immigration, the challenges of integration and exclusion, and the establishment of new communities will serve as a backdrop for the analysis and comparison of Jewish literary texts written in Hebrew, Yiddish, German, Russian, and English.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**LITTRANS/SCAND ST 320 – THE NORDIC CHILD**

3 credits.

Astrid Lindgren's Pippi Longstocking is an icon of childhood in the Nordic countries and beyond. Pippi has come to symbolize the Nordic "autonomous" child par excellence. Takes up a diverse selection of books and films that represent both the common ideas of the Nordic Child, as well as various elaborations of and exceptions to the idealized norm. Examines a number of the prevalent forms and themes in Nordic children's culture, such as nature, play, school, sexuality, death, loss, and storytelling.

**Requisites:** Satisfied Communications A requirement or graduate/professional standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate an informed understanding of diverse Nordic childhoods and how these are represented in a variety of texts.

Audience: Both Grad & Undergrad

2. Build and show skills of creative and critical thinking, historical thinking, and literary and media analysis through class discussion, short writing assignments, and formal papers.

Audience: Both Grad & Undergrad

3. Develop and demonstrate skills of literary analysis by interpreting texts in multiple genres--including novels, tales, and short stories--in class discussion and especially in writing.

Audience: Both Grad & Undergrad

4. Demonstrate and apply knowledge of current scholarship in the fields of children's literature, childhood studies, and Nordic literary studies in class discussion and formal papers.

Audience: Graduate

**LITTRANS 324 – TOPICS IN SCANDINAVIAN LITERATURE**

3-4 credits.

An examination of selected topics in Scandinavian literature.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**LITTRANS 326 – TOPICS IN DUTCH LITERATURE IN TRANSLATION**

3 credits.

Study of an author or theme in modern Dutch/Flemish literature, presented by the current Dutch/Flemish writer in residence.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**LITTRANS/FOLKLORE 327 – VAMPIRES**

3 credits.

Explores the development of the vampire legend in folklore, rumor, literature, cinema, television, and popular culture and in relation to topics such as colonization, race, gender, sexuality, and class.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Describe the evolving characteristics of vampire traditions from early nineteenth-century European folklore through European and American literature, film, and other media.

Audience: Undergraduate

2. Describe the interplay between folklore and authored cultural works over time, with examples drawn from the circulation of vampire concepts between informal and authored products.

Audience: Undergraduate

3. Interpret representations of the vampire in relation to historical and cultural situations, with particular reference to colonization, race, gender, sexuality, and class.

Audience: Undergraduate

**LITTRANS/JEWISH/RELIG ST 328 – CLASSICAL RABBINIC LITERATURE IN TRANSLATION**

3-4 credits.

Introduction to the literature of the Classical Rabbinic or Talmudic period of Judaism (2nd to 7th centuries CE). Historical and intellectual background; the interrelation of liturgy, legal and non-legal literature.

**Requisites:** Sophomore standing**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2019**LITTRANS/CLASSICS/HEBR-BIB/JEWISH/RELIG ST 332 – PROPHETS OF THE BIBLE**

4 credits.

An introduction to the thought, literature, and history of the prophets of ancient Israel (in English).

**Requisites:** RELIG ST/CLASSICS/JEWISH/LITTRANS 227 or Sophomore standing**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2019**Learning Outcomes:** 1. Demonstrate knowledge of ancient Near Eastern societies and cultures.

Audience: Undergraduate

2. Examine, analyze, and interpret ancient texts in translation.

Audience: Undergraduate

3. Critique ancient Greek, Roman, and/or Near Eastern societies and cultures and compare them to other societies and cultures.

Audience: Undergraduate

4. Compare ancient Near Eastern prophetic voices to modern prophetic voices.

Audience: Undergraduate

**LITTRANS 334 – IN TRANSLATION: THE ART OF ISAK DINESEN/ KAREN BLIXEN**

3-4 credits.

Blixen's tales and biographical fiction.

**Requisites:** Junior standing**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2023**LITTRANS/THEATRE 335 – IN TRANSLATION: THE DRAMA OF HENRIK IBSEN**

3-4 credits.

Often considered "the father of modern drama," the Norwegian playwright Henrik Ibsen (1828-1906) is a major figure of world literature whose dramatic works remain fascinating and globally influential, both as texts and through performance and adaptation. Read and discuss Ibsen in English translation, with a focus on Ibsen's historical contexts, dramatic techniques, social and political thought, and the reception and adaptation of his work in modern culture.

**Requisites:** Junior standing**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2022**LITTRANS/THEATRE 336 – IN TRANSLATION: THE DRAMA OF AUGUST STRINDBERG**

3-4 credits.

Provides in-depth knowledge of the artistic career of the influential Swedish playwright, August Strindberg (1849-1912), and a general knowledge of the literary, artistic, and intellectual history that shaped his artistic production.

**Requisites:** Junior standing**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2018**LITTRANS 337 – IN TRANSLATION: 19TH CENTURY SCANDINAVIAN FICTION**

3-4 credits.

Begins with Romanticism and looks at Norwegian folktales and Hans Christian Andersen's world-famous stories, moving to the Modern Breakthrough, perhaps the most important period in Scandinavian literary history.

**Requisites:** Junior standing**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024

### LITTRANS/FOLKLORE/MEDIEVAL/SCAND ST 345 – THE NORDIC STORYTELLER

3 credits.

Exploring the oral nature and performance traditions of folklore, ethnography, tales and ballads, literature and culture from Nordic areas and Scandinavia.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize, describe and analyze cultural phenomena, specifically Nordic Narrative, and put it into context.

Audience: Undergraduate

2. Demonstrate an understanding of the major theories, approaches, concepts and current research findings concerning Nordic Narrative and folklore studies.

Audience: Undergraduate

3. Synthesize the written and material information and use insight and creativity to demonstrate an understanding of the knowledge base from the field.

Audience: Undergraduate

4. Communicate effectively through written essays, oral presentations and discussion.

Audience: Undergraduate

5. Retrieve, analyze, and interpret the professional and lay literature providing information to both professionals and public.

Audience: Undergraduate

6. Work in multi-disciplinary teams to analyze the cultural material from various disciplinary points of view.

Audience: Undergraduate

### LITTRANS/FOLKLORE 347 – IN TRANSLATION: KALEVALA AND FINNISH FOLK-LORE

3-4 credits.

A look at the Kalevala, the Finnish creation myth and national epic of Finland, and how it affected Finnish national identity and the eventual Finnish independence from Russia.

**Requisites:** Junior standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

### LITTRANS 350 – SCANDINAVIAN DECADENCE IN ITS EUROPEAN CONTEXT

3-4 credits.

Examines the European context of literary decadence (Baudelaire, Huysmans, Wilde) and how it inspired some of Scandinavia's most important writers (Strindberg, Hamsun, Jacobsen).

**Requisites:** Junior standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### LITTRANS/SLAVIC 357 – INTERMEDIATE SPECIAL TOPICS IN SLAVIC LANGUAGES AND LITERATURES

3 credits.

Special topics in Slavic and Central and Eastern European Languages and Literatures.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Define, explain, and contextualize literary periods, genres, individual writers, themes, and problems in Polish, Central European, Slavic, and East-Central European literatures and cultures

Audience: Undergraduate

2. Apply learned knowledge to contemporary issues in cultures and societies of East-Central Europe in their literary and cultural contexts

Audience: Undergraduate

3. Communicate effectively through written reports and essays, oral presentations, classroom discussions, and other

Audience: Undergraduate

4. Demonstrate understanding of the methods, theories, and sources used by scholars of literature and culture

Audience: Undergraduate

5. Develop and learn to utilize techniques, skills, and concepts of literary and cultural criticism in a variety of contexts

Audience: Undergraduate

**LITTRANS 360 – FRENCH AND ITALIAN RENAISSANCE LITERATURE ONLINE**

3-4 credits.

A virtual journey through Renaissance Italian and French cities; study main literary texts and cultural documents associated with the city or region.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**LITTRANS/SLAVIC 361 – LIVING AT THE END OF TIMES: CONTEMPORARY POLISH LITERATURE AND CULTURE**

3 credits.

The collapse of communism and the posthumous triumph of the Solidarity movement started a new era in Polish culture. However, living in "posthistory" comes with its own set of problems. Examine contemporary Polish literature, film, and other cultural forms as they struggle with the country's turbulent past while trying to forge new collective identities for the future. How does culture mediate our relationship with the past? How does it help us understand the present and prepare for the future?

**Requisites:** SLAVIC/LITTRANS 215 or SLAVIC 111

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. identify and define major themes, concepts, events, and ideas that shape Poland's cultural history since 1989  
Audience: Undergraduate

2. develop, compare, and effectively express ideas about various cultural texts and their underlying semantic structures  
Audience: Undergraduate

3. demonstrate an understanding of contemporary cultural, social, and political issues that shape collective identities in Poland and, more broadly, East-Central Europe  
Audience: Undergraduate

4. apply the concepts learned in classroom to select contemporary debates in Polish culture and society  
Audience: Undergraduate

**LITTRANS/ILS/ITALIAN/POLI SCI 365 – MACHIAVELLI AND HIS WORLD**

3 credits.

Introduces students to the major works of Machiavelli through the close reading of his writings in cultural and historical contexts. Discussion and targeted writing assignments will aim at cultivating in students 1) a broad understanding of Machiavelli's principal intellectual attitudes, 2) a deeper understanding of his literary sensibility, and 3) the ability to articulate controversies and complexities surrounding his thought.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Develop a broad understanding of Machiavelli's principal intellectual attitudes.

Audience: Undergraduate

2. Cultivate a deep understanding of Machiavelli's literary sensibility.  
Audience: Undergraduate

3. Articulate controversies and complexities surrounding Machiavelli's political thought.  
Audience: Undergraduate

**LITTRANS/SLAVIC 366 – INTERMEDIATE SPECIAL TOPICS IN RUSSIAN LITERATURE & CULTURE**

3 credits.

Exploration of various topics – periods, genres, individual writers, themes, problems, etc. in Russian and Eastern European literature at the intermediate level.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Gain a greater awareness of another culture and become more adept at engaging with perspectives and ways of thinking that are different from your own.

Audience: Undergraduate

2. Develop a sensitivity to the way texts and ideas are rooted in their unique historical and political contexts, while having a life span that stretches far beyond them.  
Audience: Undergraduate

3. Be able to conduct a close reading of a literary text that takes into consideration both its form and content.  
Audience: Undergraduate

**LITTRANS 373 – TOPICS IN JAPANESE LITERATURE**

3 credits.

Focuses on a specific theme in Japanese literary history for in-depth study, such as Contemporary Japanese Novels or Japanese Women Writers.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2023

**LITTRANS 410 – IN TRANSLATION: SPECIAL TOPICS IN ITALIAN LITERATURE**

3 credits.

Treatment of a specific period, genre, theme or movement in Italian literature.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**LITTRANS/THEATRE 423 – IN TRANSLATION: SLAVIC DRAMA IN CONTEXT**

3 credits.

Slavic playwrights and the European tradition of theatre and drama.

**Requisites:** Junior standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**LITTRANS/SCAND ST 428 – MEMORY AND LITERATURE FROM PROUST TO KNAUSGARD**

3 credits.

Investigates the relations between theories of memory, both individual and collective, and modern literary representations of remembering. Survey seminal conceptions of memory in the interdisciplinary field of memory studies, investigating topics such as nostalgia, trauma, personal and cultural identity, war and Holocaust, sites of memory, and autobiographical narrative. Through the avenues opened up by these theoretical frameworks, consider the narrative forms as well as the ethical and political dimensions of remembering in major novels by Marcel Proust, W. G. Sebald, and Karl Ove Knausgard.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

**LITTRANS/SCAND ST 435 – THE SAGAS OF ICELANDERS IN ENGLISH TRANSLATION**

3 credits.

The prose narratives of medieval Iceland. Gain an understanding of saga literature as a genre and of the cultural history of Iceland in the Viking Era and the Middle Ages, based on the interplay between pagan codes of honor and Christian ethics. In addition, gain an understanding of the methodological problems involved in studying sagas as historical documents.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Demonstrate understanding of approaches, concepts, and current and classical findings in the area of concentration.

Audience: Undergraduate

2. Appropriately apply major theories in terms of analyzing Old Norse-Icelandic texts.

Audience: Undergraduate

3. Analyze Old Norse-Icelandic texts, especially with a view to historical knowledge and jurisprudence.

Audience: Undergraduate

**LITTRANS/GEN&WS/SCAND ST 438 – SEXUAL POLITICS IN SCANDINAVIA**

3 credits.

Read and discuss works by Scandinavian writers of the nineteenth and twentieth century reflecting sexual politics and the roles of women in literature. Course taught in English.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Identify and understand the categories depicting sexual politics and the position of women in Scandinavia as portrayed through various works of literature

Audience: Undergraduate

2. Analyze and discuss the important features characterizing sexual politics and the position of women in Scandinavia as portrayed through various works of literature

Audience: Undergraduate

3. Compose and produce writing that applies the concepts introduced to describe, analyze, and differentiate sexual politics and the position of women as portrayed through various works of literature about Scandinavian women.

Audience: Undergraduate

### LITTRANS 454 – HISTORY OF SERBIAN AND CROATIAN LITERATURE

3 credits.

Major literary movements of Serbian and Croatian literature from the medieval period until the formation of the Yugoslav state in 1919.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2018

### LITTRANS/SLAVIC 467 – ADVANCED SPECIAL TOPICS IN SLAVIC LANGUAGES AND LITERATURES

3 credits.

Special topics in Slavic and Central and Eastern European Languages and Literatures.

**Requisites:** Junior standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. list, define, and discuss the main figures, theories, and concepts related to the course's advanced topic

Audience: Undergraduate

2. apply methods of literary, cinematic, and cultural analysis in interpreting a wide range of cultural texts

Audience: Undergraduate

3. develop, compare, and effectively express ideas about cultural texts and their underlying semantic structures, informed by contextual knowledge and literary critical techniques

Audience: Undergraduate

4. hone critical and analytical skills through a close reading of fictional, philosophical, political, and theological texts in connection to social, political, and ethical issues

Audience: Undergraduate

### LITTRANS 471 – POLISH LITERATURE (IN TRANSLATION), MIDDLE AGES TO 1863

3 credits.

Intensive study of major writers such as Kochanowski, Krasicki, and Mickiewicz.

**Requisites:** Junior standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

### LITTRANS 473 – POLISH LITERATURE (IN TRANSLATION) SINCE 1863

3 credits.

A comprehensive survey of Polish literature and its historical background from 1863 to the present.

**Requisites:** Junior standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

## MANAGEMENT AND HUMAN RESOURCES (M H R)

### M H R 300 – MANAGING ORGANIZATIONS

3 credits.

The management of people and organizations: diversity, attitude and job satisfaction, emotions, personality and value, individual and group decision making, motivation, teams, leadership, influence, strategy, organizational structure and culture, and change management.

**Requisites:** Open to undergraduates or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Summarize how employee behavior affects organizational performance.

Audience: Undergraduate

2. Explain strategies that improve individual, group, and team performance.

Audience: Undergraduate

3. Develop leadership and management potential through feedback, self-reflection, and implementable action plans to achieve personal and career goals.

Audience: Undergraduate

4. Explain how organizational inputs and processes relate to critical outcomes such as productivity and survival.

Audience: Undergraduate

5. Recommend organizational behavior-related solutions to address problems faced by organizations.

Audience: Undergraduate

**M H R 305 – HUMAN RESOURCE MANAGEMENT**

3 credits.

Policies and practices; principles and techniques applicable to problems such as employee staffing, training, labor relations, wages, communications, etc.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Explain strategy-driven human resource management, including how activities must be aligned with processes, structure, culture, and each other.

Audience: Undergraduate

2. Measure and diagnose human resource-related conditions based on assessment of vertical and horizontal alignment and performance-relevant metrics.

Audience: Undergraduate

3. Develop and evaluate human resource policies and actions designed to effectively address common human resource challenges.

Audience: Undergraduate

4. Recognize rights of both employers and employees, ethically and according to major employment laws.

Audience: Undergraduate

**M H R 310 – CHALLENGES & SOLUTIONS IN BUSINESS SUSTAINABILITY**

3 credits.

Provides central knowledge and skills to tackle challenges at the intersection of business and sustainability. Analysis of the causes of sustainability challenges as relating to business and study of frameworks and measurement systems for incorporating sustainability into corporate decision-making and business analysis.

**Requisites:** Junior standing or declared in undergraduate Business Exchange program. Not open to graduate/professional students

**Course Designation:** Breadth - Social Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain the social, economic, and environmental dimensions of the sustainability challenges of business activity and identify potential trade-offs and interrelationships among these dimensions at a level appropriate to the course.

Audience: Undergraduate

2. Analyze the causes of and solutions for the sustainability challenges resulting from business activity.

Audience: Undergraduate

3. Apply sustainability principles and/or frameworks to addressing the challenge of incorporating sustainability into corporate decision-making.

Audience: Undergraduate

**M H R 320 – NEW VENTURES IN BUSINESS, THE ARTS AND SOCIAL ENTREPRENEURSHIP**

3 credits.

Develop capabilities to conceive of new ventures that create value and critically analyze the role of entrepreneurship in society. Activities include: Imagine/design new ventures, identify markets and funding sources, develop founding teams, do scholarly research on impact of entrepreneurship.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain the entrepreneurial mindset and methods used in starting new ventures and what differs for social purpose ventures

Audience: Undergraduate

2. Generate new venture concepts using idea generation techniques and articulate their value proposition

Audience: Undergraduate

3. Evaluate opportunities using rigorous feasibility and experimentation processes

Audience: Undergraduate

4. Develop, define, and clearly communicate a business concept

Audience: Undergraduate

5. Apply introductory concepts in accounting, finance, marketing, intellectual property strategy and entity selection

Audience: Undergraduate

**M H R 321 – SOCIAL ENTREPRENEURSHIP**

1 credit.

Learn how to create a socially-engaged businesses and how to use entrepreneurial approaches to non-profit ventures. Activities include developing mission statements, assessing social impact, seeking funding from varied sources. Guest lecturers, cases, role playing. Grounded in management theory.

**Requisites:** None**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Define social entrepreneurship

Audience: Undergraduate

2. Articulate elements of effective mission statements

Audience: Undergraduate

3. Explain the social, economic, and/or environmental dimensions of the sustainability challenge(s) of businesses and nonprofit organizations

Audience: Undergraduate

4. Apply sustainability principles and/or frameworks to addressing the challenge of assessing social impact

Audience: Undergraduate

5. Identify basic forms of financing available to social-purpose organizations

Audience: Undergraduate

**M H R 322 – INTRODUCTION TO ENTREPRENEURSHIP**

3 credits.

Gain and apply knowledge about foundations of entrepreneurship, and key topics such as founding teams, customer/market discovery, starting and growing a business.

**Requisites:** Not open to graduate/professional students**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Apply basic market discovery techniques.

Audience: Undergraduate

2. Define the basic steps taken to start a new venture.

Audience: Undergraduate

3. Identify career paths in entrepreneurship.

Audience: Undergraduate

4. Exercise appropriate leadership, value diverse perspectives, and work collaboratively to accomplish organizational objectives in an entrepreneurial context.

Audience: Undergraduate

**M H R 365 – CONTEMPORARY TOPICS**

1-3 credits.

Exploration of subject areas possibly to be introduced into the business curriculum.

**Requisites:** Sophomore standing. Not open to graduate/professional students**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**M H R 399 – READING AND RESEARCH-MANAGEMENT**

1-6 credits.

Individual work suited to the needs of undergraduate students may be arranged with a faculty member.

**Requisites:** Consent of instructor**Course Designation:** Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**M H R 401 – LEADING TEAMS**

3 credits.

Examines components that comprise teams, highlights key factors that influence team effectiveness, develops skills in diagnosing opportunities and threats that face teams, and enhances teamwork expertise.

**Requisites:** Not open to graduate/professional students**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Explain the challenges and opportunities of working in teams as well as developing and leading them.

Audience: Undergraduate

2. Identify common pitfalls in team dynamics and decision-making, and how to avoid them.

Audience: Undergraduate

3. Describe different types of conflicts that teams experience and how to resolve them.

Audience: Undergraduate

4. Practice different techniques to promote team communication, cohesion, and creativity.

Audience: Undergraduate

5. Reflect on how personality and emotional intelligence influences interactions with others.

Audience: Undergraduate

**M H R/INTL BUS 403 – GLOBAL ISSUES IN MANAGEMENT**

3 credits.

Focuses on the strategic management required in global business. Topics include environmental analysis, global strategy, and subsidiary control. The aim of the course is to develop special skills that are required to manage international firms.

**Requisites:** Sophomore standing. Not open to graduate/professional students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze the key drivers of globalization and their impact on organizational strategy, structure, and culture in global settings.  
Audience: Undergraduate

2. Evaluate the role of cultural differences in facilitating or hindering organizational success and recommend strategies for effective leadership across cultures.  
Audience: Undergraduate

3. Apply global human resource and corporate social responsibility practices to improve organizational productivity and sustainability in a global economy.  
Audience: Undergraduate

4. Assess country, competitor, market, and consumer data to develop and refine management and marketing plans that allows a company to gain a sizeable market share and achieve strong financial performance for its operations in another country.  
Audience: Undergraduate

**M H R 412 – MANAGEMENT CONSULTING**

3 credits.

Offers an understanding of fundamental principles, methods, and tools used in management consulting and develop skills to diagnose the functioning of an organization, problem solving, and to design and implement interventions to enhance individual, group, and organizational effectiveness.

**Requisites:** Sophomore standing. Not open to graduate/professional students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Articulate fundamental principles, methods and tools used in management consulting.  
Audience: Undergraduate

2. Apply management consulting tools and methods to diagnose the functioning of an organization and develop recommendations for solving problems.  
Audience: Undergraduate

3. Design and implement interventions to enhance individual, group, and organizational effectiveness.  
Audience: Undergraduate

4. Compose, communicate and deliver recommendations based of investigation and analysis.  
Audience: Undergraduate

**M H R 415 – STRATEGIC MANAGEMENT OF INNOVATION AND CORPORATE ENTREPRENEURSHIP**

3 credits.

Covers innovation and entrepreneurship in an existing corporate environment. Adopt the perspective of decision-makers who must evaluate the potential of new technologies, decide on their adoption, and establish their implementation in the current firm's activities and products. Discuss how established firms can build an internal environment such that all employees adopt entrepreneurial behaviors and generate their own technological or business model innovations.

**Requisites:** M H R 322, 423, or 434

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze the unique characteristics of technology markets and industries. This includes a focus on platforms, technology standards, and ecosystems.

Audience: Undergraduate

2. Evaluate whether a technological solution is a business opportunity within an established organization.

Audience: Undergraduate

3. Identify the process of commercializing technology in existing organizations and the appropriate mode of commercialization (i.e., license, internal commercialization, sale, or startup).

Audience: Undergraduate

4. Offer recommendations regarding the work environment and practices that support entrepreneurial initiatives within an established organization.

Audience: Undergraduate

**M H R 420 – LEADING CHANGE IN ORGANIZATIONS**

3 credits.

To be effective, leaders must be able to adapt their organization and the people within it to address the challenges they face. Those who are able to adapt quickly can create a competitive advantage. Explore how leaders can enact, foster, and implement change in organizations and individuals. Topics will include managing organizational transformations, responding to crises, and performance improvement.

**Requisites:** Not open to graduate/professional students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize the nature of complex organizations, the dynamic environments in which they exist, and key issues involved in the successful management of evolving organizations.

Audience: Undergraduate

2. Become effective leaders of the change management process from initiation to execution.

Audience: Undergraduate

3. Facilitate inclusive change in organizations and organizations characterized by diverse views and populations.

Audience: Undergraduate

4. Develop the capability to effectively respond to organizational crises considering the short- and long-term needs of all stakeholders.

Audience: Undergraduate

5. Identify and facilitate opportunities for performance improvement in individuals and teams.

Audience: Undergraduate

**M H R 422 – ADVANCED ENTREPRENEURSHIP**

3 credits.

Focuses on the process of starting and growing a new venture. Develop and utilize a set of qualitative and quantitative skills that can be applied in this context. Topics include how to assess and quantify growth potential of an entrepreneurial opportunity, how investors value startups, and how startups are effectively managed. Acquire a set of cross-functional concepts in finance, law, marketing, and strategy.

**Requisites:** M H R 322 and (ACCT I S 100 or GEN BUS 310) or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Evaluate whether an idea is an entrepreneurial opportunity using both quantitative and qualitative tools.

Audience: Undergraduate

2. Explain the process of building and growing a startup and the challenges associated with each phase of that process for both high-growth and traditional startups.

Audience: Undergraduate

3. Apply select quantitative and qualitative skills and resources required for successfully managing and growing a startup.

Audience: Undergraduate

4. Explain how to start and finance a new business venture.

Audience: Undergraduate

5. Create and present a report analyzing commercial potential of an entrepreneurial opportunity including evaluating potential for sustained growth.

Audience: Undergraduate

**M H R 423 – STRATEGIC MANAGEMENT**

3 credits.

Synthesis of material from accounting, economics, finance, operations management, human resources, law, marketing, and technology to consider problems in corporate and business-level strategy; top management problems; discussion of actual business cases.

**Requisites:** Sophomore standing. Not open to graduate/professional students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Conduct an external analysis of the firm, focusing on the industry, competitors, and the general environment.

Audience: Undergraduate

2. Analyze alternative strategic positions within an industry, differentiating between cost and differentiation strategies, and their implications for competitive advantage.

Audience: Undergraduate

3. Assess firm diversification and internationalization, considering mergers, acquisitions, and alliances as potential means.

Audience: Undergraduate

4. Develop and communicate strategic analyses and recommendations both individually and as part of a team.

Audience: Undergraduate

**M H R 427 – ENTREPRENEURIAL GROWTH STRATEGIES**

3 credits.

General management course that analyzes and integrates growth patterns and business disciplines in context of nascent and high growth firms.

**Requisites:** Sophomore standing, M H R 422, and ACCT I S 211; or declared in undergraduate Business Exchange program. Not open to graduate/professional students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify specific challenges, such as scaling, resource management, and market competition, affecting high-growth ventures.

Audience: Undergraduate

2. Analyze the implications of industry trends, competitive positioning, financial sustainability, and operational capacity on growth strategies.

Audience: Undergraduate

3. Explain how search funds identify, evaluate, and acquire existing small to medium-sized businesses.

Audience: Undergraduate

### **M H R 434 – VENTURE CREATION**

3 credits.

Intended for students who seek to transform their own ideas into new ventures. Students will learn the process of evaluating, formalizing, and communicating a new venture idea. Student originated product/service/venture concept required for course.

**Requisites:** Sophomore standing. Not open to graduate/professional students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify market opportunities for new venture concepts.

Audience: Undergraduate

2. Explain the process involved in forming a company.

Audience: Undergraduate

3. Develop and validate aspects of a business model for a proposed product or service.

Audience: Undergraduate

4. Develop knowledge and skills to create materials required to finance a new venture.

Audience: Undergraduate

### **M H R 438 – WISCONSIN APPLIED VENTURES IN ENTREPRENEURSHIP (WAVE)**

3 credits.

Develop, refine, and present business models following the Lean Start-Up approach for customer/market discovery. Presentations are made to the WAVE Board for feedback and investment potential.

**Requisites:** M H R 322, 415, 422, 434 or 441

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Apply market discovery techniques to identify and assess customer needs, preferences, and potential product-market fit.

Audience: Undergraduate

2. Design and conduct entrepreneurial experiments to validate key assumptions and test early-stage business models.

Audience: Undergraduate

3. Evaluate and refine venture concepts by providing and incorporating constructive feedback from peers, instructors, and industry experts.

Audience: Undergraduate

### **M H R 441 – TECHNOLOGY ENTREPRENEURSHIP**

3 credits.

Designed for undergraduate students interested in learning about the fundamental issues related to starting and managing technology-based new ventures. Encourages students to consider how technology-based solutions can solve economic and socially oriented problems.

**Requisites:** Sophomore standing. Not open to graduate/professional students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe entrepreneurship and the nature of opportunities including the aspects of technology entrepreneurship that are distinct from other types of entrepreneurship.

Audience: Undergraduate

2. Identify the appropriate legal form and potential intellectual property protections for a technology venture.

Audience: Undergraduate

3. Design, evaluate, and select appropriate business models and business strategies for technology ventures.

Audience: Undergraduate

4. Describe and plan appropriate product development and sales and marketing activities for a technology venture.

Audience: Undergraduate

5. Explain basic concepts associated with financial reports in the context of technology venturing.

Audience: Undergraduate

6. Identify, evaluate, and propose specific financing options for technology ventures.

Audience: Undergraduate

### **M H R/A A E 540 – INTELLECTUAL PROPERTY RIGHTS, INNOVATION AND TECHNOLOGY**

3 credits.

Uses economic concepts to illustrate the nature of technological innovation, competition, and economic growth. Topics: economics of the intellectual property protection (IPP); market structure and innovation; interaction between public and private sectors; IPP and anticompetitive policies; globalization.

**Requisites:** Graduate/professional standing and (ECON 301 or 311)

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Describe major issues in economics of intellectual property protection (IPP), technology and innovation.

Audience: Both Grad & Undergrad

2. Employ basic economic analysis of IPP, technology and innovation related policy issues.

Audience: Both Grad & Undergrad

3. Articulate and critique theories and firms' commercial strategies related to IPP, technology and innovation.

Audience: Graduate

4. Communicate clearly economic and policy issues related to IPP, technology and innovation.

Audience: Both Grad & Undergrad

### **M H R 604 – LEADERSHIP THEORY AND PRACTICE**

2-3 credits.

Presents leadership theories grounded in research in Industrial and Organizational Psychology and Organizational Behavior and the implications of those theories for practice in organizations.

**Requisites:** Not open to students with credit for M H R 704.

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Articulate the differences between effective management and leadership principles.

Audience: Undergraduate

2. Identify leadership research that supports or rebuts leadership myths and popular half-truths.

Audience: Undergraduate

3. Explain foundational theories and approaches to leadership using research and professional literature.

Audience: Undergraduate

4. Explain the implications of leadership theories for leadership practice in organizations.

Audience: Undergraduate

5. Reconcile the results of leadership psychometric self-assessments with leadership theories and personal experiences with effective leadership.

Audience: Undergraduate

6. Apply leadership theories to guide leadership practice in order to enhance real-world effectiveness in organizations.

Audience: Undergraduate

### **M H R 610 – COMPENSATION: THEORY AND ADMINISTRATION**

3 credits.

Determinants of wage levels, wage structures and individual wages; analysis of the impact of wages on individual attitudes and decisions to participate and perform in organizations.

**Requisites:** Sophomore standing and (M H R 305 or 705), or declared in the Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Articulate the principles of effective compensation systems and their role in supporting organizational strategy, internal alignment, external competitiveness, pay for performance, and cost control.

Audience: Both Grad & Undergrad

2. Explain the impact of global, legal, organized labor, and regulatory contexts on an organization's compensation practices.

Audience: Both Grad & Undergrad

3. Apply course concepts to support careers in compensation strategy, managing people, and recognizing how one's own pay and career progression is determined.

Audience: Both Grad & Undergrad

4. Analyze compensation strategies to identify problems and develop solutions that support an organization's strategy.

Audience: Graduate

### **M H R 611 – STRATEGIC TALENT MANAGEMENT**

2-3 credits.

Explores the strategies and range of processes, methods, and resources that organizations use in talent (human capital) management initiatives to support achievement of business strategy and short and long-term objectives. The focus is on understanding the fundamentals of effective talent management including talent attraction, talent acquisition, talent (career) development, motivation and engagement, and talent retention.

**Requisites:** M H R 300, 305, graduate/professional standing, or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop a talent attraction and acquisition strategy, using data-based decisions, that aligns with business strategy  
Audience: Undergraduate

2. Recommend methods to develop the skills and abilities of talent  
Audience: Undergraduate

3. Propose strategies that motivate talent in a manner that supports achievement business objectives  
Audience: Undergraduate

4. Design a talent retention strategy that aligns with and reinforces business strategy  
Audience: Undergraduate

**M H R 612 – LABOR-MANAGEMENT RELATIONS**

3 credits.

Labor-management relations at the firm level including its evolution, characteristics and contemporary issues. Emphasis on analysis of the labor-management relationship through reference to theory and research on collective action, bargaining behavior and conflict resolution.

**Requisites:** Sophomore standing and (M H R 305 or 705), or declared in the Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze the role of the state in regulating labor relations, including conflict resolution and the enforcement of individual and collective workplace rights.

Audience: Both Grad & Undergrad

2. Evaluate the process of union organization and collective bargaining, identifying key strategies and challenges faced by both workers and management.

Audience: Both Grad & Undergrad

3. Develop a thorough understanding of contract administration, including grievance handling, arbitration, and contract interpretation in labor disputes.

Audience: Both Grad & Undergrad

4. Assess current and emerging challenges in labor-management relations and propose strategies for human resource professionals to respond.

Audience: Graduate

**M H R 614 – PEOPLE ANALYTICS**

2-3 credits.

Technological advances have led many organizations to adopt a more "data-driven" approach to managing their employees. It is therefore critical for managers to understand how to integrate data analytics into their organization's human resource management or risk being at a competitive disadvantage. Build hands-on skills to analyze data in ways that facilitate the development and evaluation of human capital policies, practices, programs, and strategies. Learn to take advantage of data and analytics in decision-making processes. Emphasis on experiential learning using data from various organizational contexts.

**Requisites:** None

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Design an analytic plan that can inform managers' decision-making processes

Audience: Both Grad & Undergrad

2. Apply statistical tools to answer applied questions of interest

Audience: Both Grad & Undergrad

3. Use results of statistical analyses to inform HR practices, policies, and strategies

Audience: Both Grad & Undergrad

4. Communicate analytic plans and findings to non-expert audiences

Audience: Both Grad & Undergrad

5. Apply advanced statistical tools to answer applied questions of interest

Audience: Graduate

6. Communicate analytic plans and findings to statistically advanced audiences

Audience: Graduate

**M H R 617 – DIVERSITY IN ORGANIZATIONS**

2–3 credits.

Provides a thorough understanding of the advantages and challenges presented by workplace diversity, suggesting techniques to manage effectively and maximize the benefits of diversity. Includes a comprehensive survey of demographic groups and an analysis of their history to foster a thorough understanding of the dimensions of diversity. Discussions will include effectively managing diversity on the basis of race, sex, LGBTQIA, religion, age, ability, national origin, and intersectionality in organizations and about issues various groups face, including discrimination. Provides practical insight into subconscious/implicit bias, team diversity, and diversity management in the United States and abroad. Goal is to learn to work with diverse groups to create a productive organization in which everyone feels included.

**Requisites:** Junior standing**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Define key terminology associated with diversity in organizations

Audience: Both Grad &amp; Undergrad

2. Explain the major theories used in diversity research to understand diversity in organizations

Audience: Both Grad &amp; Undergrad

3. Apply these theories to replicate diversity successes, diagnose diversity challenges, and make informed decisions to manage diversity well

Audience: Both Grad &amp; Undergrad

4. Connect historical context to current impact for various demographics

Audience: Both Grad &amp; Undergrad

5. Reflect upon the topics discussed in the class and determine applications for future work settings

Audience: Graduate

**M H R 628 – NEGOTIATIONS**

2–3 credits.

Theory and practice of negotiations.

**Requisites:** Sophomore standing or declared in the Business Exchange program**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Explain the game theory approach to the negotiator's dilemma, and thus the issues of distributive and integrative bargaining (i.e., to compete or cooperate; to claim value or create value).

Audience: Both Grad &amp; Undergrad

2. Recognize the contingent nature of appropriate tactics for negotiation preparation, opening, concession-making, and closing.

Audience: Both Grad &amp; Undergrad

3. Explain the foundational impacts of bargaining style, goals, relationships, standards, interests, leverage, ethical concerns, cultural differences, and departures from economic interests.

Audience: Both Grad &amp; Undergrad

4. Understand how some issues can be exploited to create value, enabling win-win outcomes.

Audience: Both Grad &amp; Undergrad

5. Apply appropriate tactics in cooperative and competitive negotiations, both alone and as part of a negotiating team.

Audience: Both Grad &amp; Undergrad

6. Analyze the negotiations process and settlements in order to identify strengths, weaknesses, and opportunities for improvement.

Audience: Both Grad &amp; Undergrad

7. Evaluate recent negotiations research in relation to course principles.

Audience: Graduate

### **M H R/INTEGART 632 – INTRODUCTION TO ARTS ENTREPRENEURSHIP**

3 credits.

An overview and foundation in preparation for developing, launching, or advancing innovative projects in arts, culture, design, and humanities.

Learn the unique contexts and challenges of creative careers. Develop creative project goals while gaining an understanding of the nature and structure of arts entrepreneurship in a variety of sectors – for-profit, nonprofit, government, and hybrid.

**Requisites:** Sophomore standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recognize and equitable entrepreneurship opportunities in arts and cultural expression through projects, partnerships, initiatives, and organizations.

Audience: Both Grad & Undergrad

2. Assess challenges and opportunities in the arts and cultural sector and develop them into project business plans.

Audience: Both Grad & Undergrad

3. Analyze case studies that lead to the discovery, acquisition, and alignment of key resources necessary for a concept's success (time, money, space, equipment, talent.)

Audience: Graduate

4. Communicate and present a clear and compelling project plan which includes narrative, budget, marketing plan, fund development plan, and the accompanying strategies in written and spoken form.

Audience: Both Grad & Undergrad

5. Evaluate a project's outcomes in ways that consider equity, inclusivity, and diversity as a measure of current and future success.

Audience: Both Grad & Undergrad

6. Illustrate acquired skills and learning by creating a web-based professional portfolio with work samples.

Audience: Both Grad & Undergrad

### **M H R/INTEGART 636 – ENTREPRENEURSHIP IN ARTS & CULTURAL ORGANIZATIONS**

3 credits.

Become familiar with basic entrepreneurship principles and value proposition design techniques in social entrepreneurship settings with attention to the perspective of arts and cultural organizations. Content includes business model development, customer-driven innovation, lean startup practices, organizational capacity for entrepreneurial action, team performance, the structure of alliances and partnerships and funding mechanisms in the sector.

**Requisites:** Junior standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify and describe the key elements of a value proposition canvas

Audience: Both Grad & Undergrad

2. Articulate the role of mission statements in social-purpose organizations, implications of entity choices, and sources of funding for nonprofit and related organizations in the arts and cultural space

Audience: Both Grad & Undergrad

3. Identify and analyze business models used in the creative economy across nonprofit and social-purpose organizations

Audience: Both Grad & Undergrad

4. Define the design thinking problem-solving approach and outline key elements of the process

Audience: Both Grad & Undergrad

5. Apply appropriate research methods (ethnographic versus market research) and invoke related tools (literature reviews, observational note-taking, etc.) to help test hypothesis in the development of new products/services for arts and cultural organizations

Audience: Both Grad & Undergrad

6. Analyze arguments about the role of entrepreneurial action and funding for arts and cultural organizations in the context of other disciplinary approaches in the visual and performing arts, design, and related fields

Audience: Graduate

7. Design a value proposition canvas for an entrepreneurial cultural/creative organization in the Madison community that will inform product/service development for a distinct customer segment.

Audience: Both Grad & Undergrad

8. Rapidly test emergent ideas in the field with (potential) customers using a design thinking approach that includes creation of "prototypes" (storyboards, role play, 3D printed objects, etc.) and interpretation of results

Audience: Both Grad & Undergrad

9. Make connections between the world of ideas and concepts with day-to-day issues and concerns in cultural/creative organizations. Where possible, encourage/highlight/expose new connection points (e.g., "I never thought of it that way...")

Audience: Both Grad & Undergrad

10. Develop teamwork, written and oral communication skills

Audience: Both Grad & Undergrad

### M H R 640 – CREATIVE DESTRUCTION LAB I

1 credit.

Introduces key topics and concepts associated with technology entrepreneurship, venture formation, and project-based organizational consulting. Allows for practice of key analytical approaches to understanding technology venturing processes. Application required.

**Requisites:** Consent of instructor

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Assess entrepreneurial challenges and startup viability in a disciplined and objective manner.

Audience: Undergraduate

2. Recognize opportunity spaces in knowledge-intensive industries and assess whether a specific technological innovation may generate new value for stakeholders.

Audience: Undergraduate

3. Utilize a set of tools and frameworks to evaluate tech startup capabilities, processes, and opportunities.

Audience: Undergraduate

### M H R 641 – CREATIVE DESTRUCTION LAB II

2 credits.

Action learning through engaging with a real-world technology venture in the context of a knowledge-intensive industry. In teams, negotiate a project to support venture development, plan and implement the project, and present the results to the venture and the instructor. Provides direct insight into technology venture processes, observation of pitching and mentoring activities, and the real-world challenges associated with early stage venturing.

**Requisites:** M H R 640

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Effectively collaborate with peers on a long-term project with multiple milestones and outputs.

Audience: Undergraduate

2. Summarize desk and action research to address timely, important, and relevant challenges identified by the venture.

Audience: Undergraduate

3. Reflect on one's contributions to a self-managed consultation project to support the development of a real-world technology venture.

Audience: Undergraduate

### M H R 700 – LEADING PEOPLE AND ORGANIZATIONS

1-3 credits.

Management of people and organizations, exploring concepts that will be valuable as a current employee or a future employee, manager, or leader. Concepts will be discussed at the individual, group or team, and the organizational level. Key organizational behavior topics include: diversity, attitude and job satisfaction, emotions, personality and value, individual and group decision making, motivation, teams, leadership, influence, strategy, organizational structure and culture, and change management.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Summarize how employee behavior affects organizational performance.

Audience: Graduate

2. Explain strategies that improve individual, group, and team performance.

Audience: Graduate

3. Develop leadership and management potential through feedback, self-reflection, and implementable action plans to achieve personal and career goals.

Audience: Graduate

4. Explain how organizational level inputs and processes relate to critical outcomes such as productivity and survival.

Audience: Graduate

5. Recommend organizational behavior-related solutions to address current problems faced by organizations.

Audience: Graduate

**M H R 704 – MANAGING BEHAVIOR IN ORGANIZATIONS**

2-3 credits.

Examines the effective management of behavior in organizations. Focuses on the application of theories of leadership and work motivation. Includes critical conceptual and analytical assessment of these theories. Emphasizes the management of work performance, managerial skill building, and enabling followers.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program. Not open to students with credit for M H R 604.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply the scientific method as an epistemological guide to first understand, then be able to predict, and consequently lead organizational behavior.

Audience: Graduate

2. Evaluate research behind some of the foundational theories of motivation and leadership: operant conditioning, goal-setting, social cognitive, contingency model of leadership effectiveness, and transactional vs. transformational leadership paradigm.

Audience: Graduate

3. Practice differentiating research-derived, cumulatively-built evidence from leadership myths, popular half-truths, idiosyncratic anecdotes, and complete nonsense.

Audience: Graduate

4. Articulate deductive and inductive reasoning, understanding of chance and associated errors of inference, and characterizing of applied recommendations through the lens of their inferential probabilities, or the lack of thereof.

Audience: Graduate

**M H R 705 – HUMAN RESOURCE MANAGEMENT**

3 credits.

Two broad substantive areas are covered. (1) Evidence (theoretical and empirical) reviewed on the determinants of employee job attitudes and behavior. For example, the impact of compensation on employee satisfaction and performance. (2) Functional activities of personnel management and their impact on employee behavior evaluated. Sample topics: Selection, development, evaluation and compensation. Knowledge of Statistics strongly encouraged such as STAT 301.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Evaluate the expected effectiveness – based on theory, empirical research, and experience – of alternative human resources strategies to align with and achieve organizational goals.

Audience: Graduate

2. Formulate and execute human resources strategies to achieve organizational goals, considering internal (people-related resources and capabilities) and external influences/constraints (product/labor markets, legal framework, ethics, and labor unions).

Audience: Graduate

3. Utilize data analytics to inform/improve decision-making, diagnose human resources/organizational challenges, and evaluate the effectiveness of human resources strategies in achieving human resources/organizational goals.

Audience: Graduate

**M H R 706 – LEADING AND WORKING IN TEAMS**

1 credit.

Examines team dynamics, highlights key factors that influence team effectiveness, develops skills in diagnosing opportunities and threats that face teams, and enhances teamwork expertise. The content is applicable to projects across specializations. For instance, teamwork skills are essential to project teams developing new products/services, working on business strategy, implementing process improvements, designing new financial investment instruments, and developing real estate. In any of these projects, employees would work as a team to accomplish their goals. The team's success or failure will depend, to a large extent, on how the team members work together.

**Requisites:** Declared in a Master of Business Administration degree program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze team dynamics to identify barriers and facilitators of effective team functioning and performance.

Audience: Graduate

2. Explain the effectiveness of various leadership strategies and styles in shaping team outcomes.

Audience: Graduate

3. Apply creativity and communication techniques to enhance team collaboration and problem-solving in real-world scenarios.

Audience: Graduate

**M H R 710 – CHALLENGES & SOLUTIONS IN BUSINESS SUSTAINABILITY**

2-3 credits.

Provides central knowledge and skills to tackle challenges at the intersection of business and sustainability. Analysis of the causes of sustainability challenges as relating to business and study of frameworks and measurement systems for incorporating sustainability into corporate decision-making and business analysis.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Explain the social, economic, and environmental dimensions of the sustainability challenges of business activity and identify potential trade-offs and interrelationships among these dimensions at a level appropriate to the course.

Audience: Graduate

2. Analyze the causes of and solutions for the sustainability challenges resulting from business activity.

Audience: Graduate

3. Apply sustainability principles and/or frameworks to addressing the challenge of incorporating sustainability into corporate decision-making.

Audience: Graduate

4. Use knowledge and skills in business sustainability for developing professional values and pathways.

Audience: Graduate

**M H R 715 – STRATEGIC MANAGEMENT OF INNOVATION**

2-3 credits.

Helps student gain tools, concepts and information about how to generate value from Innovation and technology in existing organizations.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Evaluate whether a technological solution is a business opportunity.

Audience: Graduate

2. Explain the process of commercializing technology and the challenges associated with each phase of that process.

Audience: Graduate

3. Articulate the skills and resources required for successfully managing technologies and innovative processes.

Audience: Graduate

4. Produce an analysis of the commercial potential of a technological solution.

Audience: Graduate

**M H R 716 – ACCELERATING INNOVATION**

2-3 credits.

How startups and business accelerators create and diffuse innovation. Topics covered include the basic economics of startups and business accelerators, the development of acceleration platforms, the accelerator model of innovation sourcing and selection, and fostering mindsets of innovation.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Articulate the startup model and business accelerator model of innovation that is driving the entrepreneurial economy.

Audience: Graduate

2. Explain how external innovation is financed.

Audience: Graduate

3. Utilize analytic skills and effective communication to present an investment decision and logic to decision-makers.

Audience: Graduate

**M H R 720 – LEADING CHANGE IN ORGANIZATIONS**

2-3 credits.

To be effective, leaders must be able to adapt their organization and the people within it to address the challenges they face. Explore how leaders can enact, foster, and implement change in organizations and individuals. Topics will include managing organizational transformations, responding to crises, and performance improvement.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize the nature of complex organizations, the dynamic environments in which they exist, and key issues involved in the successful management of evolving organizations.

Audience: Graduate

2. Demonstrate effective leadership of the change management process from initiation to execution.

Audience: Graduate

3. Develop the capability to effectively respond to organizational crises considering the short- and long-term needs of all stakeholders.

Audience: Graduate

4. Identify opportunities for performance improvement in individuals and teams.

Audience: Graduate

## M H R 722 – ENTREPRENEURIAL MANAGEMENT

2-3 credits.

Describes activities and skills necessary to start and manage an enterprise. Includes decisions about domain, purchase versus start-up, preferred market, financing, legal form, staffing, organization structure, location, and legal requirements. Describes the entrepreneurial role in business initiation.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain what it takes to be a successful entrepreneur.

Audience: Graduate

2. Understand how to manage an entrepreneurial firm.

Audience: Graduate

3. Recognize and evaluate entrepreneurial opportunities.

Audience: Graduate

4. Demonstrate effective oral and written communication skills associated with entrepreneurial management.

Audience: Graduate

5. Explain the importance of entrepreneurial organizations in society.

Audience: Graduate

6. Demonstrate positive and productive interactions with professionals and fellow students across the entrepreneurial spectrum.

Audience: Graduate

## M H R 723 – BUSINESS STRATEGY

2-3 credits.

Integrative approach to strategic management, including strategy formulation/implementation at business unit, corporate levels. Cases, discussion, lecture, simulation are used to communicate concepts. Emphasizes development of unique tools for analysis of companies and industries, application of knowledge to business problems.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform an external analysis of the firm's environment (industry, competitors, and the broader environment), and an internal analysis of the firm's resources (capabilities, tangible and intangible assets, etc.).

Audience: Graduate

2. Perform an analysis of alternative strategic positions within an industry, distinguishing between cost and differentiation strategies, with implications for building competitive advantage.

Audience: Graduate

3. Analyze a firm's resources (capabilities, tangible and intangible assets etc.) as a basis of assessing the merits of firm growth into new industries and geographies.

Audience: Graduate

4. Assess and respond to different types of change in the industry environment (technological change, industry evolution, competitive threats, disruption) that may alter industry structure and the firm's competitive advantage.

Audience: Graduate

5. Analyze the benefits and challenges of alternative modes of achieving growth including: de novo growth, mergers, acquisitions, and alliances.

Audience: Graduate

### **M H R 724 – GROWTH STRATEGIES: MULTI BUSINESS AND GLOBAL ARENAS**

2-3 credits.

Examines growth strategies that extend the firm's scope into new businesses and geographies. Most firms operate in multiple products, markets, and geographic arenas. Explore complementarities (and costs) of operating in a portfolio of strategic arenas defined by products, customers, and global markets. This includes the analysis of strategic choices to vertically integrate (e.g., internal suppliers) as well as maintaining external alliance partners.

**Requisites:** (M H R 723 or concurrent enrollment) or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Analyze a firm's resources (capabilities, tangible, and intangible assets, etc.) as a basis to assess the merits of firm growth into new industries and geographies.

Audience: Graduate

2. Evaluate the costs and potential gains (synergies) associated with operating in multiple product or geographic markets.

Audience: Graduate

3. Balance the tradeoffs associated with different market entry strategies such as de-novo growth, strategic alliances, and mergers and acquisitions.

Audience: Graduate

4. Assess a firm's need to vertically integrate business units.

Audience: Graduate

### **M H R 728 – BARGAINING, NEGOTIATING AND DISPUTE SETTLEMENT FOR MANAGERS**

3 credits.

Designed to improve student knowledge of the bargaining process and their negotiating skills. Students will learn about different bargaining theories and have the opportunity to apply these theories in exercises and role-playing cases.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze negotiation frameworks and bargaining contexts.

Audience: Graduate

2. Demonstrate context-appropriate negotiation tactics used in preparation, opening, offering of concessions, and closing.

Audience: Graduate

3. Utilize quantitative analysis to assess potential negotiation outcomes.

Audience: Graduate

4. Reflect on ethical, relational, competitive, and cooperative dimensions in negotiation.

Audience: Graduate

### **M H R/I SY E 729 – BEHAVIORAL ANALYSIS OF MANAGEMENT DECISION MAKING**

3 credits.

Examination of behavioral science literature dealing with the processes by which individuals, small groups and organizations make decisions. Understanding decision-making behavior in order to improve managerial performance; modeling decision-making processes for systems design and theory building purposes. Knowledge of statistics strongly encouraged such as STAT 301.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**M H R 734 – VENTURE CREATION**

2–3 credits.

Transform ideas into new ventures. Learn the process of evaluating, formalizing, and communicating a new venture idea. Develop an original product/service/venture concept.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify and prioritize market opportunities for new venture concepts based on scalability and feasibility.

Audience: Graduate

2. Evaluate founder roles, responsibilities, agreements, and potential outcomes.

Audience: Graduate

3. Develop and validate a business model that aligns a venture's value proposition, resources, and financial goals.

Audience: Graduate

4. Design a comprehensive plan for a new venture, addressing key legal and operational considerations.

Audience: Graduate

5. Develop a credible investment-ready business plan.

Audience: Graduate

**M H R 738 – WISCONSIN APPLIED VENTURES IN ENTREPRENEURSHIP (WAVE)**

3 credits.

Develop, refine, and present business models following the Lean Start-Up approach for customer/market discovery. Presentations are made to the WAVE Board for feedback and investment potential.

**Requisites:** M H R 715, 722, 734, or 741

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply market discovery techniques to identify and assess customer needs, preferences, and potential product-market fit.

Audience: Graduate

2. Design and conduct entrepreneurial experiments to validate key assumptions and test early-stage business models.

Audience: Graduate

3. Evaluate and refine venture concepts by providing and incorporating constructive feedback from peers, instructors, and industry experts.

Audience: Graduate

4. Communicate venture ideas and findings clearly and persuasively through written and oral presentations tailored to potential investors and stakeholders.

Audience: Graduate

**M H R 739 – WISCONSIN ENTERPRISE DEVELOPMENT FELLOWSHIP SEMINAR**

1 credit.

An applied early stage startup practicum and professional socialization seminar in Entrepreneurship and Enterprise Development for students admitted into the Wisconsin Fellowship in Enterprise Development Program. Meets weekly on the topic of entrepreneurship and enterprise development. Learn to apply business and entrepreneurship frameworks and skills in a class project focused on early-stage ideas. Requires admission to the Wisconsin Enterprise Development Fellowship program

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Practice applying business frameworks/skills to early stage ideas

Audience: Graduate

2. Demonstrate ability to provide and accept constructive business feedback on ideas

Audience: Graduate

3. Improve ability to communicate your business idea via a short pitch

Audience: Graduate

**M H R 741 – TECHNOLOGY ENTREPRENEURSHIP**

3 credits.

Designed for graduate students interested in learning about the fundamental issues related to starting and managing technology-based new ventures. Encourages students to consider how technology-based solutions can solve economic and socially oriented problems.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe entrepreneurship and the nature of opportunities, including the aspects of technology entrepreneurship that are distinct from other types of entrepreneurship.

Audience: Graduate

2. Identify the appropriate legal form and potential intellectual property protections for a technology venture.

Audience: Graduate

3. Evaluate and select appropriate business models and business strategies for technology ventures.

Audience: Graduate

4. Create and plan appropriate product development, sales, and marketing activities for a technology venture.

Audience: Graduate

5. Interpret financial reports in the context of technology venturing in order to evaluate and propose specific financing options.

Audience: Graduate

**M H R 744 – NONPROFIT GOVERNANCE & BOARD MEMBERSHIP**

2 credits.

Learn about nonprofit board structure and governance, develop a commitment to community and civic engagement, and network with representatives from nonprofit organizations.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Articulate different organizational structures and board governance models in the nonprofit and not-for-profit sectors.

Audience: Graduate

2. Demonstrate and articulate the responsibilities of a nonprofit governance board including the duties of the board chair and board members.

Audience: Graduate

3. Recognize the processes and protocols used by nonprofit and advisory boards to shepherd key issues through decision-making and into action by the organization.

Audience: Graduate

4. Demonstrate connections between the world of ideas and concepts with day-to-day issues and concerns in cultural and creative organizations.

Audience: Graduate

**M H R 747 – IMPACT CONSULTING FOR ARTS-BASED ORGANIZATIONS AND COMMUNITIES**

2 credits.

With the Wisconsin Idea as our guidepost, emphasis placed on learning and practicing the conceptual frameworks and skills related to creating lasting and sustainable impact in Wisconsin communities. Through classroom discussions, guest speakers, site visits, and field-consulting project(s), acquire and practice skills needed in designing, facilitating and developing key relationships and strategies that promote community vibrancy, revitalization, and create (or keep) the essence of what makes our Wisconsin towns and organizations special. Examples of the types of projects that will be conducted include the development of cultural plans, strategic/comprehensive community planning, program evaluations, change management, bench-marking, data collection and analysis, hosting public convenings (focus groups, town halls and forums), and business modeling.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Apply knowledge of management consulting practices.

Audience: Graduate

2. Demonstrate use of consulting practices in active learning with community clients through interviews, focus group/survey design and delivery for discovery, data acquisition, analysis and reporting, which lead to strategic planning and change management.

Audience: Graduate

3. Practice in a variety of processes and interventions inherent in the management consulting field, specifically those techniques used in service to create equity, building diverse stakeholder groups, and being inclusive of all members of a community.

Audience: Graduate

4. Recognize individual strengths, non-strengths, likes, dislikes, personality and goals with consulting opportunities, demands and behaviors so as to help enhance their placement and career opportunities in the future.

Audience: Graduate

**M H R 750 – PROFESSIONAL DEVELOPMENT FOR ARTS LEADERSHIP**

1 credit.

Experience networking, engagement, and access to research and industry leaders. Practice active reflection through application of course concepts in non-classroom settings. Includes professional development through career services support and mock interview panels.

**Requisites:** Declared in Business: Arts and Creative Enterprise Leadership MA**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, for 2 number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Demonstrate connections between the world of ideas and concepts with day-to-day issues and concerns in cultural and creative organizations.

Audience: Graduate

2. Demonstrate integrative learning through the application of knowledge, skills, and responsibilities to complex issues facing the sector.

Audience: Graduate

3. Build cross-sector professional networks through conversations with professionals within and across arts/ creative enterprises and/or relevant communities.

Audience: Graduate

**M H R 765 – CONTEMPORARY TOPICS**

1-4 credits.

Exploration of advanced subject areas possibly to be introduced into the business curriculum.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025

**M H R 773 – SEMINAR-ARTS ADMINISTRATION**

3 credits.

Examination and applied analysis of selected topics in administration of both visual and performing arts organizations; marketing and audience development, contracts and legal problems, fund development, program planning and evaluation, facilities management, business and government relations.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze business models, mission statements, and strategic frameworks used in arts and cultural organizations.

Audience: Graduate

2. Develop leadership and management skills through applied learning projects.

Audience: Graduate

3. Evaluate marketing and communications strategies using professional tools or audit techniques.

Audience: Graduate

4. Synthesize theories and best practices in arts management through writing, presentation, performance, or discussion.

Audience: Graduate

**M H R 774 – SEMINAR-ARTS ADMINISTRATION**

3 credits.

Continuation of M H R 773.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Assess financial management strategies and program evaluation methods relevant to arts and cultural organizations.

Audience: Graduate

2. Develop data-informed solutions to complex fundraising and management challenges.

Audience: Graduate

3. Create compelling grant proposals or development audits aligned with organizational goals and donor expectations.

Audience: Graduate

4. Connect with arts industry professionals to enhance career readiness and expand professional networks.

Audience: Graduate

5. Synthesize theories and best practices in arts management through writing, presentation, performance, or discussion.

Audience: Graduate

### **M H R 775 – APPLIED LEARNING IN HUMAN RESOURCE MANAGEMENT**

1 credit.

Explore emerging and current human resources topics through applied learning experiences such as personal assessments, case studies, industry meetings, and exercises or workshops. Interact with leading human resources and business professionals to gain exposure to various leadership and communication styles. Focus on enhancing leadership and communication effectiveness.

**Requisites:** M H R 705 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 4 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Examine industry standard human resource technical competencies (reflecting what knowledge HR professionals apply on the job) and behavioral competencies (reflecting how knowledge is applied).

Audience: Graduate

2. Articulate current career aspirations

Audience: Graduate

3. Prepare a strategic human resources-related business recommendation to address a current opportunity or challenge

Audience: Graduate

4. Create a comprehensive dynamic (evergreen) networking plan

Audience: Graduate

### **M H R 776 – STRATEGIC HUMAN RESOURCE MANAGEMENT CAPSTONE**

2 credits.

Conduct research, apply strategic human resources knowledge, and complete a capstone project for a local client organization, addressing a human resources business challenge or need.

**Requisites:** M H R 705 and GEN BUS 725

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze a specific real-world human resources-related organizational challenge or need

Audience: Graduate

2. Demonstrate the value and the impact of a specific human resources-related initiative utilizing appropriate business metrics

Audience: Graduate

3. Create an action plan with necessary associated deliverables that meets the client challenge or need in a manner that aligns with the client's business strategy

Audience: Graduate

4. Demonstrate effective, ethical team and client communication and relationship-building

Audience: Graduate

**M H R/E P D/GEN BUS 783 – LEADING TEAMS**

1 credit.

Students will gain the knowledge and skills to continuously enhance their own team performance and productivity as well as the teams they are involved with. They will also be in a much better position to lead teams effectively.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Describe team dynamics, roles, and expectations that influence a STEM team's performance

Audience: Graduate

2. Identify and effectively deploy specific team member strengths relevant for technical projects

Audience: Graduate

3. Plan, lead, and facilitate productive team meetings

Audience: Graduate

4. Identify and manage team conflict more effectively and constructively

Audience: Graduate

5. Assess and improve their current STEM team leadership methods and practices

Audience: Graduate

**M H R/E P D/GEN BUS 785 – EFFECTIVE NEGOTIATION STRATEGIES**

1 credit.

Improves students' negotiating skills, doing so by providing a theoretical underpinning that will help them to understand the sources of effective and ineffective approaches to negotiations.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Describe game theory and distinguish between distributive and integrative bargaining, recognizing appropriate tactics

Audience: Graduate

2. Identify bargaining styles, set goals, improve relationships, and leverage interests effectively

Audience: Graduate

3. Analyze ethical issues in negotiations and create mutual gain through value creation

Audience: Graduate

4. Demonstrate thorough preparation for negotiations, use individual and team techniques, and evaluate post-negotiation strengths and areas for improvement

Audience: Graduate

**M H R 799 – READING AND RESEARCH-MANAGEMENT**

1-6 credits.

Individual work suited to the needs of graduate students.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **M H R 871 – SEMINAR-PERSONNEL MANAGEMENT**

3 credits.

Study and evaluation of merging issues in the field of personnel management. Extensive reading of appropriate literature together with analysis, reports and discussions.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Articulate the concepts, theory, and research in human resources/human capital.

Audience: Graduate

2. Summarize, integrate, and evaluate research in human resources/human capital.

Audience: Graduate

3. Develop new ideas and/or approaches that advance this research literature and that might serve as starting points for publishable research papers.

Audience: Graduate

4. Evaluate, frame, develop, and conduct research and communicate findings.

Audience: Graduate

### **M H R 872 – SEMINAR IN ORGANIZATIONAL BEHAVIOR AND DESIGN**

3 credits.

Analysis and discussion of selected topics in organizational behavior and design.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Recognize core areas of organizational behavior and become familiar with the literature in these fields.

Audience: Graduate

2. Describe central concepts and debates in the field of organizational behavior.

Audience: Graduate

3. Identify and describe where and how to potentially make contributions to research in organizational behavior.

Audience: Graduate

### **M H R 973 – DOCTORAL RESEARCH SEMINAR IN BUSINESS STRATEGY**

3 credits.

This doctoral level strategy research seminar invites students to explore drivers of performance heterogeneity among firms. Why do some firms out-perform others? The topic is integrative in that the answer draws on theory and empirical evidence from economics, sociology, and psychology, as well as management and organizational theory that is more interdisciplinary in nature. In studying this topic, we also focus on the research process: what is the anatomy of a scholarly contribution in strategy and how does one conduct strategy research?

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explore foundational concepts and theories in strategic management to build a strong knowledge of seminal research.

Audience: Graduate

2. Develop expertise in emerging phenomena and streams in strategic management research to link and extend seminal theories to contemporary phenomena.

Audience: Graduate

3. Evaluate and creatively integrate research in strategic management to identify connections between ideas, gaps, and future directions for scholarship.

Audience: Graduate

4. Formulate new research questions, conceptual frameworks, or empirical designs that might serve as starting points for publishable research papers.

Audience: Graduate

5. Utilize various methodological approaches in strategic management research to enable the comprehension, design, and execution of reliable and robust empirical studies.

Audience: Graduate

**M H R 975 – DOCTORAL RESEARCH SEMINAR IN MANAGEMENT**

3 credits.

Seminar for Ph.D. candidates majoring in management and at or near the doctoral thesis stage. Focus: Assisting the student in working through the conceptualization and design of a thesis topic.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Design and evaluate empirical research in management, applying principles of research design, measurement, and statistical analysis.

Audience: Graduate

2. Assess causal inference in management research, identifying potential threats such as endogeneity, measurement error, and bias.

Audience: Graduate

3. Apply quantitative research methods, including experimental, quasi-experimental, and observational approaches, to investigate management-related phenomena.

Audience: Graduate

4. Interpret and communicate empirical findings effectively, demonstrating an understanding of methodological trade-offs and implications for theory and practice.

Audience: Graduate

**M H R 976 – DOCTORAL RESEARCH SEMINAR IN MANAGEMENT**

2 credits.

Continuation of M H R 975.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Create and evaluate advances in scholarly theories of management processes and outcomes.

Audience: Graduate

2. Develop high-impact testable causal hypotheses and select appropriate evidence for their specific claims in the deductive research tradition, with awareness of inductive and abductive research strategies.

Audience: Graduate

3. Formulate, write, and distinguish compelling theory motivations/contributions for research studies to be published in top-level refereed journals.

Audience: Graduate

4. Assemble a broad research agenda into which a focal study fits and evaluate gaps that it would help to fill.

Audience: Graduate

**M H R 977 – EMERGING ENTREPRENEURSHIP THEORY AND RESEARCH**

3 credits.

This PhD seminar explores contemporary entrepreneurship theory and research topics; providing students an opportunity to probe and develop scholarly theories of entrepreneurial behavior and outcomes. The course will incorporate presentations by the instructor, students and invited speakers.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Analyze emerging topics and debates in entrepreneurship research, identifying key theoretical and empirical advancements.

Audience: Graduate

2. Evaluate diverse research methodologies used in entrepreneurship studies, assessing their strengths and limitations.

Audience: Graduate

3. Develop novel research questions and theoretical contributions that address gaps in the field.

Audience: Graduate

4. Communicate research insights effectively through written critiques, presentations, and scholarly discourse.

Audience: Graduate

**M H R 990 – MANAGEMENT INDEPENDENT RESEARCH PHD THESIS**

1-12 credits.

Individual work to complete dissertation requirement of Ph.D. program.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**M H R 999 – READING AND RESEARCH-MANAGEMENT AND HUMAN RESOURCES PHD**

1-6 credits.

Individual work suited to the needs of Ph.D. students may be arranged both during regular sessions and during the intersession periods.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**MARKETING (MARKETNG)****MARKETNG 300 – MARKETING MANAGEMENT**

3 credits.

Planning and controlling the elements of the marketing program; marketing organization, product and service, packaging, pricing, promotion and physical distribution.

**Requisites:** (ECON 101, 111, A A E 101, or 215 prior to Fall 2024) or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply marketing principles to develop a SWOT analysis, segment markets to identify a target, and position a product.

Audience: Undergraduate

2. Apply knowledge of marketing terms and functional areas of marketing to critically reflect upon the current issues/challenges facing the field.

Audience: Undergraduate

3. Demonstrate the market planning process.

Audience: Undergraduate

4. Evaluate a marketing situation and define measurable marketing objectives.

Audience: Undergraduate

5. Integrate and apply the marketing levers of product, price, promotion, and place to profitably address marketing objectives.

Audience: Undergraduate

**MARKETNG 305 – CONSUMER BEHAVIOR**

3 credits.

Consumer behavior is a broad field that studies how individuals, families and groups acquire, consume, and dispose of goods, services, ideas and experiences. Provides an integrated view of consumer behavior that draws on psychological, economic, anthropological and sociological perspectives to enhance understanding of consumer acquisition processes.

**Requisites:** MARKETNG 300 or declared in the Business Exchange program. Not open to students with credit for CNSR SCI 657.

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Examine consumers as active agents, participating in diverse environments (e.g. cultural, sub-cultural, physical, social, etc.) that shape consumer behavior in the marketplace  
Audience: Undergraduate

2. Integrate their own consumption approaches/experiences to reflect on how these environments shape their behavior.  
Audience: Undergraduate

3. Consider theoretical frameworks that highlight the socio-cultural and historical influences upon consumer choices, preferences, and marketplace behaviors and contrast how these explanations differ from other approaches  
Audience: Undergraduate

4. Develop frameworks as a way to think about and analyze consumer behavior/ marketing strategy relationships.  
Audience: Undergraduate

5. Evaluate appropriate research tools for analyzing consumer experiences  
Audience: Undergraduate

**MARKETNG 310 – MARKETING RESEARCH**

3 credits.

Systematic and objective search for and analysis of information relevant to the identification and solution of problems in marketing.

**Requisites:** MARKETNG 300 and (GEN BUS 206 or 306), or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe different stages of the marketing research process, including research terminology and methodology  
Audience: Undergraduate

2. Articulate the managerial importance of marketing research  
Audience: Undergraduate

3. Design marketing research studies for problems of interest  
Audience: Undergraduate

4. Develop analytical skills and apply suitable methods for effective marketing research  
Audience: Undergraduate

5. Apply insights from marketing research to make effective business recommendations  
Audience: Undergraduate

**MARKETNG 335 – BRAND MANAGEMENT & STRATEGY**

3 credits.

Learn about brands, how they work, and apply that knowledge to managerial situations. Covers brand history, societies, and cultures; critical mental processes; marketing imperatives; and the economies that underlie them.

**Requisites:** MARKETNG 300 or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe the concept of branding and why strong branding can help a brand create shareholder value.  
Audience: Undergraduate

2. Cultivate a set of practical skills including how to develop a brand position, manage a brand experience, and manage relevancy over time.  
Audience: Undergraduate

3. Recognize the top branding strategies that the current strongest brands employ and how to implement them.  
Audience: Undergraduate

4. Work with a brand to create a compelling marketing campaign that resonates with the brand and its shareholders.  
Audience: Undergraduate

**MARKETNG 340 – TECHNOLOGY PRODUCT MARKETING**

3 credits.

Introduction to marketing strategy for technology companies and products. Learn how traditional marketing tools can be adopted to help technology products succeed, and what new frameworks beyond the traditional 5C's and 4P's are needed for the marketing of technology products. Topics covered include technology development and adoption, managing disruptive technologies, economics of IT products, AI, and platform strategy.

**Requisites:** MARKETNG 300 or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify key challenges in the process of new technology development and adoption.

Audience: Undergraduate

2. Explain the concept of disruptive technologies and their managerial implications.

Audience: Undergraduate

3. Perform economic analysis to design smart marketing strategies for IT products.

Audience: Undergraduate

4. Recognize and apply the concept of multisided platforms and the drivers of successful platform companies.

Audience: Undergraduate

**MARKETNG 349 – GLOBAL IMMERSION EXPERIENCE IN MARKETING**

1-3 credits.

Participation in a global immersion experience (short term study abroad) in Marketing. Enrollment in a UW-Madison resident study abroad program.

**Requisites:** None

**Repeatable for Credit:** Yes, for 8 number of completions

**Learning Outcomes:** 1. Demonstrate personal and leadership qualities that help achieve success in global enterprise.

Audience: Undergraduate

**MARKETNG 350 – GLOBAL IMMERSION IN MARKETING**

2 credits.

In preparation for a global immersion experience in marketing, explore topics such as social innovation, globalization, cultural studies, religion, history, and technology in relation to the travel destination. Delve into personal and leadership qualities that facilitate a successful experience in a global setting. Travel requirements, such as a valid passport, may apply to the immersion experience component.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, for 8 number of completions

**Learning Outcomes:** 1. Examine local and regional cultures and societies, including using socio-economic frameworks.

Audience: Undergraduate

2. Understand how globalization is shaping the local economy, and how the local economy in turn impacts globalization.

Audience: Undergraduate

3. Transfer international business theory to professional practice.

Audience: Undergraduate

4. Demonstrate personal and leadership qualities that help achieve success in global enterprise.

Audience: Undergraduate

**MARKETNG 355 – MARKETING IN A DIGITAL AGE**

3 credits.

A foundational understanding of digital marketing channels and how successful marketing campaigns use the numerous online and mobile platforms. Fundamentals of digital marketing including internet marketing strategies, user-generated content, search engine optimization, website design and management, inbound marketing, email marketing, social media campaigns, mobile apps, content strategy and paid search advertising.

**Requisites:** MARKETNG 300 or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Develop a digital marketing strategy.

Audience: Undergraduate

2. Select appropriate digital marketing tools to achieve marketing and sales goals.

Audience: Undergraduate

3. Describe the strategy behind and tactical implementation of the following: website design and management, social media, search engine optimization, paid search advertising, E-commerce, email marketing, mobile apps.

Audience: Undergraduate

**MARKETNG 365 – CONTEMPORARY TOPICS**

1-3 credits.

A course for the exploration of subject areas possibly to be introduced into the business curriculum.

**Requisites:** (MARKETNG 300 and sophomore standing) or declared in the Business Exchange program

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MARKETNG 375 – SOCIAL MEDIA MARKETING**

3 credits.

Social Media (Facebook, Twitter, Instagram etc.) has changed the way brands communicate with their consumers and vice versa. In this digital age, marketers and entrepreneurs can create competitive advantage for their brand by mastering the science and art of social media strategy.

The goal is to understand how brands can leverage social for competitive advantage, consumer listening and innovation. Provides a strong theoretical foundation coupled with practical experience of developing and managing social media strategies for brands.

**Requisites:** MARKETNG 300 or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Measure and explain social media metrics and social network basics.

Audience: Undergraduate

2. Perform social media brand health audits.

Audience: Undergraduate

3. Identify brand personality, goals, and target audience from social media listening.

Audience: Undergraduate

4. Generate insights from user generated content to understand customers and improve firm decision making.

Audience: Undergraduate

5. Create, manage, and monitor social media campaigns and integrate social with the overall IMC strategy of the brand.

Audience: Undergraduate

**MARKETNG 399 – READING AND RESEARCH-MARKETING**

1-6 credits.

Individual work suited to the needs of undergraduate students may be arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MARKETNG 410 – SPORTS MARKETING**

3 credits.

An overview of trends in sports marketing, the issues facing sport organizations, and the use of marketing techniques to solve problems. Includes a focus on the challenges faced by organizations that use sports properties to enhance their marketing efforts. Learn how to attract the customer in a competitive, fragmented and global market, and how sports marketers develop and apply strategies to meet their objectives.

**Requisites:** (MARKETNG 300 or JOURN 150) or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the role of marketing in sports business entities and the use of sports in traditional marketing

Audience: Undergraduate

2. Articulate an understanding of sport as industry and the fan as consumer

Audience: Undergraduate

3. Apply strategic sports marketing decisions appropriate to various industries

Audience: Undergraduate

4. Demonstrate an understanding of the unique aspects of sports marketing

Audience: Undergraduate

5. Demonstrate an understanding of the interrelationship of integrated marketing communications and sport

Audience: Undergraduate

### MARKETNG 415 – SOCIAL CREATIVE MARKETING

3 credits.

Covers multiple approaches to marketing communications. Identifies unique opportunities for creatively solving problems. Develops skills to approach marketing solutions from creative ethical perspectives. Builds and refines marketing skills required to identify, articulate, and resolve marketing and policy problems. Leverages marketing communications to improve society and well-being.

**Requisites:** MARKETNG 300 or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recognize and capitalize upon unique opportunities within the marketing discipline through application of critical and creative thinking

Audience: Undergraduate

2. Develop and evaluate provocative marketing questions and present plausible and ethical solutions using marketing principles.

Audience: Undergraduate

3. Demonstrate effective and persuasive oral and written communication skills in the presentation and evaluation of marketing communications and ideas.

Audience: Undergraduate

4. Recognize how to address ambiguity and uncertainty using broad contextual and creative thinking.

Audience: Undergraduate

### MARKETNG/INTL BUS 420 – GLOBAL MARKETING STRATEGY

3 credits.

Structure of foreign trading; commercial facilities available to exporters and importers; application of economic analysis in marketing decisions; contemporary trends in international economy affecting foreign trade policies and practices.

**Requisites:** (MARKETNG 300 and sophomore standing) or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recognize and analyze the impact of government intervention on trade and investment at national and transnational levels.

Audience: Undergraduate

2. Explain the role of the US in the global economy considering changes in demographics, technology, government intervention, trade, and resource scarcity.

Audience: Undergraduate

3. Identify challenges faced by global marketers due to differences in legal systems, laws, jurisdiction, and enforcement of property rights, including ethical considerations.

Audience: Undergraduate

4. Conduct cultural research to prepare for negotiations with potential suppliers, distributors, and consumers.

Audience: Undergraduate

5. Develop proposals that adapt a firm's international business strategy based on evaluations of how risk, culture, and macro- and national-level economic factors influence foreign national and sub-national environment.

Audience: Undergraduate

## MARKETNG/OTM 421 – FUNDAMENTALS OF SUPPLY CHAIN MANAGEMENT

3 credits.

Supply chain management (SCM) is a dynamic, cross-functional discipline that encompasses the areas of strategy, product development/innovation, marketing, finance, sourcing, production, logistics, and technology in both product and service industries. The supply chain is responsible for the sustainable and efficient movement of products, services, funds, and data along the value chain. Companies must effectively coordinate these functions not only within the firm, but with business partners and customers around the world. SCM is a critical, strategic component of any business or organization, from high-tech to healthcare, and it is a fundamental knowledge base for any student of business.

**Requisites:** Sophomore standing and (MARKETNG 300 or OTM 300) or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the business purpose and primary functions of supply chain management and their cross-functional linkages/interdependencies across an organization

Audience: Undergraduate

2. Apply supply chain management in strategic and tactical frameworks to optimize financial, operational, and customer objectives

Audience: Undergraduate

3. Analyze the influence of supply chain management on business performance and its role in delivering competitive advantage to an organization

Audience: Undergraduate

4. Identify and apply the economic, political, and business issues that impact how companies develop and execute supply chain strategy including globalization, sustainability, risk management, and ethics/society

Audience: Undergraduate

## MARKETNG/OTM 422 – LOGISTICS MANAGEMENT

3 credits.

Provides a management perspective on the fundamental activities, concepts, and current practices in logistics. Transportation management, order fulfillment, warehousing, global logistics, key performance indicators, outsourcing, and introduction to radio frequency identification and barcoding. Use of case studies and industry speakers.

**Requisites:** MARKETNG 300, OTM 300, and sophomore standing, or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate understanding of fundamental logistics principles and fluency in the language of logistics.

Audience: Undergraduate

2. Articulate key activities performed by the logistics function including distribution, transportation, global logistics and inventory control.

Audience: Undergraduate

3. Demonstrate understanding of order fulfillment processes and best practices utilized in supply chain operations.

Audience: Undergraduate

4. Analyze and utilize supply chain data to make business decisions and expand applied data analysis skills.

Audience: Undergraduate

**MARKETNG/OTM 423 – PROCUREMENT AND SUPPLY MANAGEMENT**

3 credits.

Procurement and supply management is the business function concerned with an organization's acquisition of required materials, services, and equipment. Explores the key aspects of modern supply management including the purchasing process, cost management, negotiation, sourcing strategies, supplier management, category management, acquisition methods for materials and services, and outsourcing.

**Requisites:** Sophomore standing and (MARKETNG 300 or OTM 300) or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the importance of supply management, its functions and impact within firms, and the managerial strategies and operational tactics required of entry-level professionals in supply change management.

Audience: Undergraduate

2. Analyze a scenario to determine the appropriate sourcing strategy, [and] propose the most effective supplier management processes.

Audience: Undergraduate

3. Apply, at a foundational level, the necessary legal and ethical considerations to the examination and implementation of supply management.

Audience: Undergraduate

4. Apply a proper process in evaluating a decision to outsource and utilize a rigorous approach to the development of service contracts.

Audience: Undergraduate

5. Assess which of the generic purchasing and P2P process steps add value, explain the basis for that assessment, and suggest possible improvement methods.

Audience: Undergraduate

6. Demonstrate how to operationalize cost management and use it to make decisions.

Audience: Undergraduate

7. Prepare a risk assessment utilizing the knowledge and tools acquired in class.

Audience: Undergraduate

**MARKETNG 424 – SALES STRATEGY AND MANAGEMENT**

3 credits.

Emphasis on business and organizational selling and covers professional selling techniques, business development and relationship building, integrating sales and marketing, utilizing sales technology and analytics, as well as building and managing an effective sales force.

**Requisites:** (MARKETNG 300 and sophomore standing) or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop the skills required to be an effective salesperson

Audience: Undergraduate

2. Articulate and apply the steps involved in the sales process

Audience: Undergraduate

3. Integrate knowledge of marketing, technology, and analytics to facilitate sales

Audience: Undergraduate

4. Recognize and apply principles of effective sales force management

Audience: Undergraduate

**MARKETNG 425 – ROUTE TO MARKET STRATEGIES**

3 credits.

Explores the critical role of 'Place' within the marketing mix, focusing on how to effectively design, implement, and manage the marketing channels that make products and services available at the right place, time, and value proposition. Covers identifying customer needs, aligning them with the strengths of various market intermediaries, addressing conflicts associated with direct-to-consumer strategies, and understanding incentivization, power dynamics, and control. Delves into managing relationships, the role of brands, and the transition to an omnichannel environment.

**Requisites:** MARKETNG 300 or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Articulate how and why marketing channels are a key source of value creation and innovation for a firm and its customers.

Audience: Undergraduate

2. Identify and demonstrate the use of fundamental channel frameworks and structures for designing and evaluating various routes to market.

Audience: Undergraduate

3. Identify and analyze sources of channel power and strategies for effective channel governance.

Audience: Undergraduate

4. Analyze and assess the various aspects of a route-to-market including customer segmentation; allocation of channel functions and responsibilities; management of relationships and incentives.

Audience: Undergraduate

**MARKETNG 426 – STRATEGIC RETAILING**

3 credits.

Provides an overview of the different types of retailers and the channels they use, the retailing environment, the functions retailers perform, the decision-making processes of consumers with respect to retailers and their offerings, and various issues in retailing strategy, merchandise management and store management.

**Requisites:** Sophomore standing or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Explain the different classifications of retailers (e.g., food, general merchandise, service, ownership), characteristics and trends for each of the retailer classifications, and the key functions retailers perform

Audience: Undergraduate

2. Examine the different channels (i.e., store and non-store) that retailers leverage to sell and deliver merchandise and services to customers and will analyze the characteristics, benefits, and challenges for each of these channels.

Audience: Undergraduate

3. Explain how consumer decision-making and environmental trends impact retailers

Audience: Undergraduate

4. Explain how successful retailers utilize various strategies to secure competitive advantages (e.g., growth opportunities, financial management, location selection, human resource management, information systems and supply chain).

Audience: Undergraduate

5. Examine data to better understand how retailers assess their financial performance and determine appropriate inventory levels.

Audience: Undergraduate

**MARKETNG/OTM 427 – INFORMATION TECHNOLOGY IN SUPPLY CHAINS**

3 credits.

Explores the concepts and practices of using information technology to effectively manage and operate supply chains of businesses and other organizations. Topics include supply chain processes, enterprise resource planning (ERP) system implementation, and supply chain simulations using SAP software.

**Requisites:** MARKETNG 300, OTM 300, and sophomore standing, or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe key business processes related to supply chain management

Audience: Undergraduate

2. Effectively utilize an ERP system to execute key business processes related to supply chain management and have an intermediate level of ability to navigate within an ERP system

Audience: Undergraduate

3. Identify and analyze appropriate data and information from an ERP system as a means to making measurable improvements in the performance of a business

Audience: Undergraduate

4. Understand and recognize principles and best practices of implementing enterprise systems and have the ability to articulate common implementation mistakes

Audience: Undergraduate

**MARKETNG/OTM 428 – SUPPLY CHAIN CAPITAL MANAGEMENT**

3 credits.

Introduce the set of activities and solutions available to finance an organization's supply chain infrastructure. Define and study the related influencers. Investigate risks and mitigation techniques relative to associated metrics and strategies. Analyze multiple cases in group study work. Identify and recommend improvement opportunities.

**Requisites:** Junior standing and (MARKETNG 300 or OTM 300), or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze multiple aspects of a supply chain network and provide recommendations on how to improve operations and efficiency of a business.

Audience: Undergraduate

2. Recognize and compose appropriate business contract language.

Audience: Undergraduate

3. Recognize and interpret financial statements to understand the current financial state of the organization; identify improvement opportunities and develop solutions to improve the entity's performance.

Audience: Undergraduate

4. Construct specific actions to take to improve working capital efficiency and release.

Audience: Undergraduate

5. Articulate the impact of geopolitical and international issues on supply chains.

Audience: Undergraduate

**MARKETNG/OTM 429 – GLOBAL EXPERIENCE: SUPPLY CHAIN MANAGEMENT**

1-2 credits.

Companies and organizations operate globally – sourcing, producing, and distributing to/from markets around the world. For business leaders in this environment, political, economic, historical, and cultural frameworks are critical to understand and navigate. Learn and explore these themes via classroom and applied experiences in global supply chain management.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply supply chain management theory and practice in a global and industry-specific context

Audience: Undergraduate

2. Analyze how cultural, political, economic, and historical factors impact global business generally and industry-specific

Audience: Undergraduate

3. Develop cultural awareness and appreciation through interactions with students, faculty, and business professionals in the host country

Audience: Undergraduate

**MARKETNG 430 – STRATEGIC PRICING**

3 credits.

Pricing is one of the most important but least understood of marketing decisions. This course aims to equip you with key concepts and techniques for evaluating and formulating pricing strategies. We will use a combination of analytical and experiential learning methods to accomplish this objective.

**Requisites:** (MARKETNG 300 and sophomore standing) or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**MARKETNG 437 – NEW PRODUCT INNOVATION**

3 credits.

Explore strategies and processes by which organizations effectively discover, develop, and launch impactful new products. Includes design thinking methods and the stage-gate approach to generate and evaluate new product ideas.

**Requisites:** MARKETNG 300 or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize key barriers and drivers of successful new product launches

Audience: Undergraduate

2. Develop a deeper consumer empathy that leads to new product ideas

Audience: Undergraduate

3. Explain a stage-gate and other processes companies use for new product development

Audience: Undergraduate

4. Create new product ideas

Audience: Undergraduate

5. Explain different market research methods used in new product development

Audience: Undergraduate

### **MARKETNG 442 – CURRENT TOPICS IN MARKETING ANALYTICS & INSIGHTS**

1 credit.

Exposure to emerging and current topics in the marketing insights and analytics industry through applied learning experiences including case studies, industry meetings, exercises, and/or workshops.

**Requisites:** MARKETNG 300 or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explore how organizations utilize marketing analytics and insights through interactions with industry professionals.

Audience: Undergraduate

2. Articulate insights from interactions with industry professionals.

Audience: Undergraduate

3. Recognize how to advance career success in organizations.

Audience: Undergraduate

4. Explain the role of the marketing researcher.

Audience: Undergraduate

### **MARKETNG 445 – DIGITAL MARKETING ANALYTICS**

3 credits.

Introduces business analytic techniques applied in the context of digital marketing. Includes approaches to design, run, evaluate, and improve online marketing tactics in order to meet specific business objectives such as customer acquisition. Covers digital analytics methods and execution of marketing tactics with data-driven techniques. Emphasizes the implementation of analytic skills on practical problems.

**Requisites:** Sophomore standing, MARKETNG 300 and (GEN BUS 303 or 306), or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop an understanding of digital marketing tools and their applications including but not limited to targeted advertising, social media marketing, and search engine advertising

Audience: Undergraduate

2. Identify and apply analytical methods of evaluation including data visualization, experimental design, regression analysis, and machine learning methods

Audience: Undergraduate

3. Gather and analyze data for a product category/brand from a variety of digital sources to evaluate the effectiveness of digital marketing approaches

Audience: Undergraduate

### **MARKETNG 450 – MARKETING ANALYTICS**

3 credits.

Impact of analytics on successful marketing decisions. Topics include marketing metrics, digital analytics, marketing response models, segmentation, product design, experimentation and big data. It is designed for students with some background in quantitative methods and an exposure to basic marketing research concepts. A combination of lectures, cases and hands-on model building focused on marketing analytics.

**Requisites:** Sophomore standing, MARKETNG 300, and 310. Not open to graduate students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize that the effective use of data is a critical success factor for any business.

Audience: Undergraduate

2. Apply online and offline behavior-based metrics to make effective marketing decisions.

Audience: Undergraduate

3. Apply marketing mix models, multivariate statistics, experimental analyses and machine learning tools to a variety of marketing problems.

Audience: Undergraduate

4. Acquire a portfolio of quantitative methods commonly used in business practice.

Audience: Undergraduate

5. Explain the impact of marketing analytics in areas such as market research, product management and consulting.

Audience: Undergraduate

### **MARKETNG 460 – MARKETING STRATEGY**

3 credits.

Capstone marketing decision-making course emphasizing analysis of the external environment. The coordination of tactical and strategic marketing plans with the goals and objectives of the firm.

**Requisites:** Senior standing, MARKETNG 300, 305, and 310, or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### MARKETNG/JOURN 605 – DIGITAL BRAND BUILDING

3 credits.

Provides an overview of the rapidly changing digital landscape and its role and importance in the marketing mix. Explores the digital revolution and its impact on building brands in today's digital first environment. Examines themes of the revolution and their effects on how organizations market their brands and, more broadly, on culture.

**Requisites:** MARKETNG 300, JOURN 201, or declared in the Business Exchange program

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Explain how the digital marketing landscape has evolved over time, including specific disruptions and revolutions that have made the greatest impact.

Audience: Undergraduate

2. Articulate how brand marketers adapted their strategies to compete in a changing digital ecosystem.

Audience: Undergraduate

3. Develop critical thinking and communication skills that will require analysis and synthesis of class lessons and topics.

Audience: Undergraduate

### MARKETNG 700 – MARKETING MANAGEMENT

2-3 credits.

Provides a framework for evaluating marketing problems and developing a marketing strategy. Customer, competitor, and collaborator factors are emphasized as foundations for marketing decision-making. Examines the key aspects of product, pricing, distribution, and promotion strategy.

**Requisites:** Declared in a Master of Business Administration degree program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify frameworks for making marketing decisions, including decisions regarding a) new products and services, b) pricing, c) distribution channels, and d) marketing communications.

Audience: Graduate

2. Recognize that an analysis of customers and competitors is a prerequisite for marketing decision-making

Audience: Graduate

3. Apply the frameworks to make decisions in the context of company case studies.

Audience: Graduate

### MARKETNG 705 – CONSUMER BEHAVIOR

2-3 credits.

Analysis of theories and models of behavior which underlie the process of consumer decision-making. Marketing applications of psychological, sociological and social-psychological factors.

**Requisites:** Graduate/professional standing and (MARKETNG 300, 700 or GEN BUS 311), or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop frameworks as a way to think about and analyze consumer behavior/ marketing strategy relationships.

Audience: Graduate

2. Examine consumers as active agents, participating in diverse environments (e.g. cultural, subcultural, physical, social, etc.) that shape consumer behavior in the marketplace.

Audience: Graduate

3. Integrate own consumption approaches/experiences to reflect on how these environments shape behavior.

Audience: Graduate

4. Apply use of appropriate research tools for analyzing consumer experiences and make strategic recommendations based on data.

Audience: Graduate

**MARKETNG 710 – MARKETING RESEARCH**

2-3 credits.

An overview of the marketing research process from a methodological perspective. Topics: Research design, data collection procedures, sampling and data analysis.

**Requisites:** Graduate/professional standing and (MARKETNG 300, 700 or GEN BUS 311), or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe different stages of the marketing research process, including research terminology and methodology  
Audience: Graduate

2. Articulate the managerial importance of marketing research  
Audience: Graduate

3. Design marketing research studies for problems of interest  
Audience: Graduate

4. Develop analytical skills and apply suitable methods for effective marketing research  
Audience: Graduate

5. Apply insights from marketing research to make effective business recommendations  
Audience: Graduate

**MARKETNG 715 – SOCIAL CREATIVE MARKETING**

2-3 credits.

Covers multiple approaches to marketing communications. Identifies unique opportunities for creatively solving problems. Develops skills to approach marketing solutions from creative ethical perspectives. Builds and refines marketing skills required to identify, articulate, and resolve marketing and policy problems. Leverages marketing communications to improve society and well-being.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recognize and capitalize upon unique opportunities within the marketing discipline through application of critical and creative thinking.  
Audience: Graduate

2. Evaluate contemporary marketing problems and issues using prior learning and course-related concepts.  
Audience: Graduate

3. Develop and evaluate provocative marketing questions and present plausible and ethical solutions using marketing principles.  
Audience: Graduate

4. Demonstrate effective and persuasive oral and written communication skills in the presentation and evaluation of marketing communications and ideas.  
Audience: Graduate

5. Recognize how to address ambiguity and uncertainty using broad contextual and creative thinking.  
Audience: Graduate

**MARKETNG/OTM 722 – LOGISTICS MANAGEMENT**

2-3 credits.

A foundation in transportation, order fulfillment, warehousing, materials planning including MRP, demand planning, import/export fundamentals, ERP systems, supply chain metrics, and leading supply chain technologies such as RFID.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate an understanding of fundamental logistics principles and fluency in the language of logistics.

Audience: Graduate

2. Recognize the key activities performed by the logistics function including distribution, transportation, global logistics, and inventory control.

Audience: Graduate

3. Demonstrate an introductory level of understanding of information technology used in logistics operations.

Audience: Graduate

4. Analyze and use supply chain data to make business decisions in order to expand their applied data analysis skills.

Audience: Graduate

**MARKETNG/OTM 724 – STRATEGIC GLOBAL SOURCING**

3 credits.

Supply management (procurement) is widely recognized as one of the most critical elements in global supply chain management. The function plays a major role in maximizing the value and the integration of supply chain operations. Explores the key aspects of modern supply management including functional responsibilities and exemplary practices for major industry sectors.

**Requisites:** Graduate/professional standing and (MARKETNG 300 and OTM 300) or (MARKETNG 700 and OTM 700)

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the importance of supply management, its functions and impact within firms.

Audience: Graduate

2. Assess which of the generic purchasing process steps add value, explain the basis for that assessment, and suggest possible improvement methods.

Audience: Graduate

3. Demonstrate how to operationalize cost management techniques and use them to make decisions.

Audience: Graduate

4. Apply a proper process in evaluating a decision to outsource and utilize a rigorous approach to the development of service contracts.

Audience: Graduate

5. Apply, at a foundational level, the necessary legal considerations to the examination and implementation of supply management.

Audience: Graduate

6. Identify and define the primary elements of a commercial negotiation process applicable in both domestic U.S. and international venues.

Audience: Graduate

7. Identify and define the major ethical considerations in global supply management.

Audience: Graduate

8. Demonstrate an understanding of the political, economic, social, technological, legal, and environmental (PESTLE) factors that influence sourcing strategies and decision-making.

Audience: Graduate

9. Analyze a supply management scenario to determine the appropriate sourcing strategy, and propose the most effective supplier management processes.

Audience: Graduate

10. Prepare a risk assessment utilizing the knowledge and tools acquired in class.

Audience: Graduate

**MARKETNG 725 – ROUTE TO MARKET STRATEGIES**

2-3 credits.

Explores the critical role of 'Place' within the marketing mix, focusing on how to effectively design, implement, and manage the marketing channels that make products and services available at the right place, time, and value proposition. Covers identifying customer needs, aligning them with the strengths of various market intermediaries, addressing conflicts associated with direct-to-consumer strategies, and understanding incentivization, power dynamics, and control. Delves into managing relationships, the role of brands, and the transition to an omnichannel environment.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Articulate how and why marketing channels are a key source of value creation and innovation for a firm and its customers.

Audience: Graduate

2. Identify and demonstrate the use of fundamental channel frameworks and structures for designing and evaluating various routes to market.

Audience: Graduate

3. Identify and analyze sources of channel power and strategies for effective channel governance.

Audience: Graduate

4. Analyze and assess the various aspects of a route-to-market including customer segmentation; allocation of channel functions and responsibilities; management of relationships and incentives.

Audience: Graduate

5. Using case analysis methodology, develop a toolkit to solve complex unstructured, and often intractable problems that are commonly faced by managers.

Audience: Graduate

**MARKETNG/OTM 726 – SUPPLY CHAIN STRATEGY**

3 credits.

Focuses on strategic issues and current theory and practice in supply chain management. Effective design and management of supply chain resources is a key source of competitive advantage for organizations. Supply chain management is a cross-functional discipline that concentrates on the management of goods, services, and information among all links in the value chain.

**Requisites:** (MARKETNG 300 and OTM 300) or (MARKETNG 700 and OTM 700) and graduate/professional standing, or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Summarize the current theory and practice of supply chain management (SCM)

Audience: Graduate

2. Describe the emergence of SCM as a management function and academic discipline in a global economy

Audience: Graduate

3. Recognize the role of supply chain management in emerging business models

Audience: Graduate

4. Identify supply chain networks and the drivers of supply chain design

Audience: Graduate

5. Describe the impact of product design and innovation on supply chain design and costs

Audience: Graduate

6. Apply the importance of internal coordination and external collaboration to firm performance

Audience: Graduate

7. Demonstrate understanding of the critical and integrative role of supply chain management in business and society

Audience: Graduate

**MARKETNG/OTM 727 – INFORMATION TECHNOLOGY IN SUPPLY CHAINS**

3 credits.

Explores the concepts and practices of using information technology to effectively manage and operate supply chains of businesses and other organizations. Topics include supply chain processes, enterprise resource planning (ERP) system implementation, and supply chain simulations using SAP software.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe key business processes related to supply chain management.

Audience: Graduate

2. Effectively utilize an ERP system to execute key business processes related to supply chain management and have an intermediate level of ability to navigate within an ERP system

Audience: Graduate

3. Identify and analyze appropriate data and information from an ERP system as a means to making measurable improvements in the performance of a business

Audience: Graduate

4. Understand and recognize principles and best practices of implementing enterprise systems and have the ability to articulate common implementation mistakes

Audience: Graduate

**MARKETNG/OTM 728 – SUPPLY CHAIN CAPITAL MANAGEMENT**

3 credits.

Supply chain capital management refers to the set of activities and solutions available to finance an organization's supply chain infrastructure. As supply chains become more extended and complicated a need has developed to both manage and fund the supply network. Define and study the various influencers on the supply chain capital structure. Investigate risks, mitigation techniques, metrics and themes relating to the topic.

**Requisites:** Graduate Students Only

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze multiple aspects of a supply chain network and provide recommendations on how to improve operations and efficiency of a business.

Audience: Graduate

2. Recognize and compose appropriate business contract language.

Audience: Graduate

3. Recognize and interpret financial statements to understand the current financial state of the organization; identify improvement opportunities and develop solutions to improve the entity's performance.

Audience: Graduate

4. Construct specific actions to take to improve working capital efficiency and release.

Audience: Graduate

5. Articulate the impact of geopolitical and international issues on supply chains.

Audience: Graduate

**MARKETNG 730 – STRATEGIC PRICING**

2-3 credits.

Pricing is one of the most important but least understood of marketing decisions. Focus on key concepts and techniques for evaluating and formulating pricing strategies through analytical and experiential learning methods.

**Requisites:** Graduate/professional standing and (MARKETNG 300, 700 or GEN BUS 311), or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Articulate the strengths and weaknesses of common pricing strategies including cost-plus, value based, bundle and dynamic pricing

Audience: Graduate

2. Perform qualitative and quantitative pricing modeling based on market variables

Audience: Graduate

3. Demonstrate concept knowledge by successfully participating in a pricing simulation

Audience: Graduate

4. Apply various tools to increase the perceived value of an offering in an attempt to drive further pricing power

Audience: Graduate

5. Explain how various people and organizations have handled the challenges of overseeing strategic pricing responsibilities in an organization and be able to articulate your own process for doing so

Audience: Graduate

**MARKETNG 735 – BRAND STRATEGY**

2-3 credits.

Provides a comprehensive and up-to-date treatment of the subjects of brand, brand equity, and strategic brand management. Examines the concepts and techniques to improve the long-term performance of brand strategies.

**Requisites:** Graduate/professional standing and (MARKETNG 300, 700 or GEN BUS 311), or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Differentiate what constitutes a strong brand from a weak brand

Audience: Graduate

2. Apply key frameworks to the development of an organization's brand

Audience: Graduate

3. Recognize different approaches to bringing a brand to life

Audience: Graduate

4. Identify different types of brand architectures

Audience: Graduate

5. Create a brand strategy

Audience: Graduate

### MARKETNG 737 – NEW PRODUCT INNOVATION

2-3 credits.

Explores strategies and processes by which organizations effectively discover, develop, and launch impactful new products. Includes design thinking methods and the stage-gate approach to generate and evaluate new product ideas.

**Requisites:** Graduate/professional standing and (MARKETNG 300, 700 or GEN BUS 311), or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Utilize design thinking skills and qualitative research techniques to identify unmet or unarticulated needs in the marketplace

Audience: Graduate

2. Generate a number of new business and product ideas designed to meet those needs and to evaluate those ideas to determine which ones deserve future investments

Audience: Graduate

3. Estimate the potential market size for a new product using multiple methods

Audience: Graduate

4. Make decisions and recommendations regarding target market and launch strategies for new products based on a solid understanding of innovation adoption / diffusion of innovations

Audience: Graduate

### MARKETNG 740 – TECHNOLOGY PRODUCT MARKETING

2-3 credits.

Introduction to marketing strategy for technology companies and products. Learn how traditional marketing tools can be adopted to help technology products succeed, and what new frameworks beyond the traditional 5C's and 4P's are needed for the marketing of technology products. Topics covered include technology development and adoption, managing disruptive technologies, economics of IT products, AI, and platform strategy.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify key challenges in the process of new technology development and adoption.

Audience: Graduate

2. Explain the concept of disruptive technologies and their managerial implications.

Audience: Graduate

3. Perform economic analysis to design smart marketing strategies for IT products.

Audience: Graduate

4. Recognize and apply the concept of multisided platforms and the drivers of successful platform companies.

Audience: Graduate

5. Evaluate the latest technological advancements and novel business prospects.

Audience: Graduate

**MARKETNG 745 – DIGITAL MARKETING ANALYTICS**

2-3 credits.

Introduces business analytic techniques applied in the context of digital marketing. Includes approaches to design, run, evaluate, and improve online marketing tactics in order to meet specific business objectives such as customer acquisition. Covers digital analytics methods and execution of marketing tactics with data-driven techniques. Emphasizes the implementation of analytic skills on practical problems.

**Requisites:** Graduate/professional standing and (MARKETNG 300, 700 or GEN BUS 311), or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop an understanding of digital marketing tools and their applications including but not limited to targeted advertising, social media marketing, and search engine advertising

Audience: Graduate

2. Identify and apply analytical methods of evaluation including data visualization, experimental design, regression analysis, and machine learning methods

Audience: Graduate

3. Gather and analyze data for a product category/brand from a variety of digital sources to evaluate the effectiveness of digital marketing approaches

Audience: Graduate

**MARKETNG 750 – BRAND ASSET MANAGEMENT**

2-3 credits.

Learn how brands add value for consumers and customers and how an understanding of this process can be used to create and leverage intangible brand assets for the organizations that own and control brands.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Explain the strategic issues in branding, the impact of marketing decisions on brand equity, and the building and managing of brands and brand portfolios.

Audience: Graduate

2. Integrate and apply the tools, concepts, and theories of marketing to solve complex business problems and make sound business decisions.

Audience: Graduate

3. Make marketing decisions consistent with creating and sustaining brand equity.

Audience: Graduate

4. Develop effective self-assessment, communication, and collaboration skills through the execution of brand strategy decisions.

Audience: Graduate

**MARKETNG 755 – MARKETING IN A DIGITAL AGE**

2-3 credits.

A foundational understanding of digital marketing channels and how successful marketing campaigns use the numerous online and mobile platforms. Fundamentals of digital marketing including internet marketing strategies, user-generated content, search engine optimization, website design and management, inbound marketing, email marketing, social media campaigns, mobile apps, content strategy and paid search advertising.

**Requisites:** Graduate/professional standing and (MARKETNG 300, 700 or GEN BUS 311), or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop an Internet marketing strategy

Audience: Graduate

2. Select appropriate Internet marketing tools to achieve marketing and sales goals

Audience: Graduate

3. Explain the strategy behind and tactical implementation of the following: website design and management, social media, search engine optimization, paid search advertising, E-commerce, email marketing, mobile apps

Audience: Graduate

**MARKETNG 760 – GROWTH MARKETING STRATEGIES**

2-3 credits.

Development and effective implementation of planned growth marketing strategies is a pre-requisite to enhancing business performance but is difficult to do. Explore the following topics utilizing an evidence-based approach: growth marketing strategy frameworks; resources and capability for marketing strategy formulation and execution; market orientation, customer orientation, and competitor orientation; key strategy decision points (market selection, value proposition, timing); common implementation problems; organizing for execution; and metrics and performance assessment.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate understanding of the major strategic and managerial issues in formulating a growth marketing strategy.

Audience: Graduate

2. Design and effectively lead a growth marketing strategy development process.

Audience: Graduate

3. Utilize tools, concepts, and theories necessary to make and execute effective growth marketing strategy decisions.

Audience: Graduate

4. Recognize the complexities and underlying causes of common strategy implementation problems.

Audience: Graduate

**MARKETNG 765 – CONTEMPORARY TOPICS**

1-4 credits.

Exploration of advanced subject areas possibly to be introduced into the business curriculum.

**Requisites:** Graduate standing and (MARKETNG 300 or 700)

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MARKETNG 770 – MARKETING CONSULTING PRACTICUM**

2-4 credits.

Apply and synthesize acquired knowledge through an applied consulting project. Provides the opportunity to explore/apply concepts like identifying and understanding the business challenge; applying marketing research and analytics methods to discover consumer insight to help answer the business challenge; developing recommendations based on the discovered findings; and communicating findings and recommendation(s).

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Learn and apply management consulting practices through conducting a marketing consulting project on a current business problem

Audience: Graduate

2. Articulate a business problem and translate into a marketing question(s).

Audience: Graduate

3. Evaluate a business problem by selecting and conducting an appropriate marketing research or analytical technique to address the problem.

Audience: Graduate

4. Clearly articulate a business recommendation based on the discovered finding(s).

Audience: Graduate

5. Learn and apply project management skills.

Audience: Graduate

6. Demonstrate professional written and verbal communication skills.

Audience: Graduate

7. Articulate personal insights about their preparation for graduation and post-MBA career.

Audience: Graduate

**MARKETNG 775 – SOCIAL MEDIA MARKETING**

2-3 credits.

Social Media (Facebook, Twitter, Instagram etc.) has changed the way brands communicate with their consumers and vice versa. In this digital age, marketers and entrepreneurs can create competitive advantage for their brand by mastering the science and art of social media strategy.

The goal is to understand how brands can leverage social for competitive advantage, consumer listening and innovation. Provides a strong theoretical foundation coupled with practical experience of developing and managing social media strategies for brands.

**Requisites:** Graduate/professional standing and (MARKETNG 300, 700 or GEN BUS 311), or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Measure and explain social media metrics and social network basics.

Audience: Graduate

2. Perform social media brand health audits.

Audience: Graduate

3. Identify brand personality, goals, and target audience from social media listening.

Audience: Graduate

4. Generate Insights from user generated content to understand customers and improve firm decision making.

Audience: Graduate

5. Create, manage, and monitor social media campaigns and integrate social with the overall IMC strategy of the brand.

Audience: Graduate

6. Discern how primary research findings from current literature can be applied to a real world business situation.

Audience: Graduate

**MARKETNG 779 – BAYESIAN MACHINE LEARNING FOR MARKETING**

2-3 credits.

Learn to resolve common marketing tasks such as consumer choice prediction, market analysis, and product development by using Bayesian statistical learning methods. A broad range of methods are covered, from standard approaches such as hierarchical modeling to more advanced techniques, including Bayesian Optimization and Bayesian Deep Learning.

**Requisites:** Graduate/professional standing and (GEN BUS 656, ECON 704, 709, STAT 609, or STAT/MATH 709) or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Design and utilize complex models to solve business problems.

Audience: Graduate

2. Explain how Bayesian models can be used to model uncertainty in business settings.

Audience: Graduate

3. Interpret results and effectively communicate findings in relevant business applications.

Audience: Graduate

**MARKETNG/E P D/GEN BUS 782 – MARKETING FOR NON-MARKETING PROFESSIONALS**

1 credit.

An overview of marketing's role within an organization, the key elements of a marketing plan, and how the plan is implemented. Students will learn about buyer demographic, psychographic and purchasing decision behavior. A thorough understanding of the customer enables students to develop a coordinated marketing mix (product, price promotion and place) that will satisfy the customer better than the competition and at the required margin. Students will leave the course understanding the degree to which all company functions must be coordinated and focused on the customer. This course will not apply toward fulfilling the MBA degree requirements.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Explain how the marketing function impacts an organization's business operations

Audience: Graduate

2. Identify and use marketing terminology and concept

Audience: Graduate

3. Use both demographic and psychographic information to segment markets and select a target market

Audience: Graduate

4. Research and create a basic marketing plan that aligns customer expectations with organizational marketing activities and the organization's resources

Audience: Graduate

5. Coordinate consistency between product, price, promotion, and place (distribution)

Audience: Graduate

6. Relate and utilize the product life cycle concept to product and service offerings

Audience: Graduate

**MARKETNG 799 – READING AND RESEARCH-MARKETING**

1-6 credits.

Individual work suited to the needs of graduate students may be arranged both during regular sessions and the intersession periods.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2023

**MARKETNG 805 – QUALITATIVELY-BASED MARKETING INSIGHTS**

2-3 credits.

Understanding and application of in-depth qualitative market research methods, with an emphasis on the interpretation of qualitative data. Provides hands-on experience with different methodological techniques and immersion in a cultural perspective for systematically analyzing data from a marketing perspective.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand and use core methodological principles for designing a research project that highlights important relationships between the meanings that consumers attribute to brands and consumption practices and their socio-cultural positions.

Audience: Graduate

2. Translate a cultural analysis of a consumer group into viable strategic actions.

Audience: Graduate

3. Evaluate the key assumptions that are implicit to various methodological techniques used to generate qualitative data.

Audience: Graduate

4. Assess the strengths, weaknesses, and respective degrees of "fit" of these methodological techniques for specific research problems and questions.

Audience: Graduate

5. Critically evaluate the findings and strategic interpretations or results that derive from meaning-based marketing research.

Audience: Graduate

6. Apply culturally-oriented theories and concepts that are useful in deriving breakthrough marketing insights from qualitative data.

Audience: Graduate

**MARKETNG 815 – MARKETING ANALYTICS**

2-3 credits.

Study of the impact of analytics on successful marketing decisions. A spectrum of topics include Marketing Metrics, Digital Analytics, Marketing Response Models, Segmentation, Product Design, Experimentation and Big Data. Applicable to careers in marketing analytics, product management and consulting.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply online, and offline behavior-based metrics to make effective marketing decisions

Audience: Graduate

2. Apply marketing mix models, multivariate statistics, experimental analyses and machine learning tools to a variety of marketing problems

Audience: Graduate

3. Acquire a portfolio of quantitative methods commonly used in business practice

Audience: Graduate

4. Explain the impact of marketing analytics in areas such as market research, product management and consulting

Audience: Graduate

5. Utilize data in compiling brand recommendations.

Audience: Graduate

**MARKETNG 840 – CURRENT TOPICS IN MARKETING**

1 credit.

Expose to emerging and current topics in the industry of marketing through applied learning experiences - case studies, industry meetings, and exercises or workshops.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 3 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Reflect on their interactions with and learnings from industry professionals

Audience: Graduate

2. Clearly articulate a business recommendation based on in-class activities and analysis

Audience: Graduate

3. Demonstrate professional written and verbal communication skills

Audience: Graduate

4. Articulate their current career aspirations

Audience: Graduate

**MARKETNG 842 – CURRENT TOPICS IN MARKETING ANALYTICS & INSIGHTS**

1 credit.

Exposure to emerging and current topics in the marketing insights and analytics industry through applied learning experiences including case studies, industry meetings, exercises, and/or workshops.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explore how organizations utilize marketing analytics and insights through interactions with industry professionals.

Audience: Graduate

2. Articulate insights from interactions with industry professionals.

Audience: Graduate

3. Recognize how to advance career success in organizations.

Audience: Graduate

4. Explain the role of the marketing researcher.

Audience: Graduate

5. Articulate a business problem and translate it into a set of marketing research questions and adopt suitable qualitative and quantitative methodologies for the studies they design.

Audience: Graduate

**MARKETNG 971 – SEMINAR-MARKETING PHD, CONTEMPORARY TOPICS IN MARKETING**

1-3 credits.

Analysis and discussion of contemporary issues in marketing.

**Requisites:** Declared in Business PHD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Articulate current and emerging research questions and topics in Marketing

Audience: Graduate

2. Demonstrate the ability to analyze, critique and creatively think about social sciences research.

Audience: Graduate

3. Demonstrate the ability to formulate novel research questions and ideas.

Audience: Graduate

4. Articulate and present ideas in written and oral format for research studies in the marketing discipline.

Audience: Graduate

5. Demonstrate the principles of research ethics.

Audience: Graduate

**MARKETNG 972 – SEMINAR-MARKETING PHD, RESEARCH METHODS IN MARKETING**

1-3 credits.

Specialized subject matter of current interest to doctoral students.

**Requisites:** Declared in Business PHD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Articulate current and emerging research questions and topics in Marketing.

Audience: Graduate

2. Demonstrate the ability to analyze, critique and creatively think about social sciences research.

Audience: Graduate

3. Demonstrate the ability to formulate novel research questions and ideas.

Audience: Graduate

4. Articulate and present ideas in written and oral format for research studies in the marketing discipline

Audience: Graduate

5. Demonstrate the principles of research ethics

Audience: Graduate

**MARKETNG 990 – MARKETING INDEPENDENT RESEARCH PHD THESIS**

1-12 credits.

Individual work to complete dissertation requirement of Ph.D. program.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**MARKETNG 999 – READING AND RESEARCH-MARKETING PHD**

1-6 credits.

Individual work suited to the needs of Ph.D. students may be arranged both during regular sessions and during the intersession periods.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

# MATERIALS SCIENCE AND ENGINEERING (M S & E)

## M S & E 1 – COOPERATIVE EDUCATION PROGRAM

1 credit.

Work experience which combines classroom theory with practical knowledge of operations to provide students with a background upon which to base a professional career.

**Requisites:** Sophomore standing

**Course Designation:** Workplace - Workplace Experience Course

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify and respond appropriately to real-life engineering ethics cases relevant to co-op work

Audience: Undergraduate

2. Synthesize and apply appropriate technical education to real world technical work

Audience: Undergraduate

3. Communicate effectively in writing and speaking with a range of audiences in the workplace, including those without disciplinary expertise

Audience: Undergraduate

4. Develop professional and transferable habits like time management skills, collaborative problem-solving skills, and research skills for learning new information

Audience: Undergraduate

## M S & E 151 – MATERIALS OF THE MODERN WORLD

3 credits.

The properties and structure of everyday materials. A non-mathematical exploration of the relation between structure and resulting properties of metals, plastics, ceramics, glasses, and composite materials. Case studies of important materials in the modern and historical context.

**Requisites:** None

**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Classify types of modern materials and their properties

Audience: Undergraduate

2. Describe the relationship between materials properties and atomic to microscopic scales

Audience: Undergraduate

3. Explore case studies of modern and historic applications

Audience: Undergraduate

4. Explain the role of materials in current and future applications

Audience: Undergraduate

**M S & E 260 – MATERIALS EXPERIENCE**

2 credits.

Provides overview of the field of Materials Science and Engineering, with significant design and hands-on components. Highlights different types of materials, with a focus on describing the extensive impact that Materials Science and Engineering has had on society. Small teams provide hands-on experience in materials design, synthesis, and processing and the fabrication of materials with desired properties and function.

**Requisites:** (MATH 113, 114, or 171) and (CHEM 103, 109, or 115 or concurrent enrollment)

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Acquire introductory competency in materials science and engineering principles.

Audience: Undergraduate

2. Describe the broad impact of materials science and engineering on society.

Audience: Undergraduate

3. Learn the basics of materials design, synthesis, processing, properties, and function in a hand-on laboratory setting.

Audience: Undergraduate

4. Develop communication skills including laboratory notebook organization, oral presentation, and technical reporting.

Audience: Undergraduate

5. Obtain professional skills pertaining to team-based problem solving, project management, multicriteria optimization, and engineering ethics.

Audience: Undergraduate

**M S & E 299 – INDEPENDENT STUDY**

1-3 credits.

Independent study under faculty supervision.

**Requisites:** Consent of instructor

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**M S & E 330 – THERMODYNAMICS OF MATERIALS**

4 credits.

Introduction to thermodynamics of materials, equilibrium constants, solutions, heterogeneous equilibria and electrochemistry.

**Requisites:** MATH 222 and (CHEM 104, 109, or 115), or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply the basic principles of the thermodynamics to important processes in materials such as diffusion, phase transformations, and chemical reactions

Audience: Undergraduate

2. Predict the stable chemical and physical state of materials under different thermal, mechanical, and chemical conditions

Audience: Undergraduate

3. Evaluate the mutual conversion between the chemical energy of a material and other forms of energy such as thermal, mechanical, electrical

Audience: Undergraduate

4. Communicate the solutions to technical problems through written assignments and group activities

Audience: Undergraduate

5. Connect materials thermodynamics to societal problems in energy and human health

Audience: Undergraduate

**M S & E 331 – TRANSPORT PHENOMENA IN MATERIALS**

3 credits.

Basic principles of fluid flow, heat transfer and diffusion are introduced. Examples relevant to design and processing of materials including metals, semiconductors, glasses, polymers, and ceramics are given.

**Requisites:** M S & E 330 and (MATH 319, 320, 376, or concurrent enrollment), or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply mathematics, chemistry, physics, and materials science and engineering principles to quantitatively describe fluid flow, heat transport, mass transport, and their interplay during materials processing and production

Audience: Undergraduate

2. Identify materials transport related problems and formulate plans to solve such problems pertaining to the synthesis, fabrication, and purification of materials

Audience: Undergraduate

3. Analyze transport phenomena and processes using both analytical and computational (finite element) methods

Audience: Undergraduate

4. Develop the mathematical and scientific principles to be able to design materials and the processes needed to produce them to meet desired needs within realistic constraints

Audience: Undergraduate

5. Broadly apply transport principles to understand the impact of materials science and engineering production in a global, economic, environmental, and societal context

Audience: Undergraduate

**M S & E 332 – MACROPROCESSING OF MATERIALS**

3 credits.

Topics include: ironmaking and steelmaking; production of Cu, Zn, Al and Mg by electrolysis; solidification processing of alloys by ingot casting, continuous casting and directional solidification; growth of bulk single crystals of semiconductors and ceramics from melts.

**Requisites:** M S & E 350, 351, or CBE 440, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe how macroscopic-scale materials are produced from ores, including ironmaking, steelmaking, electrolysis of aluminum, and electrolysis of magnesium

Audience: Undergraduate

2. Describe how macroscopic-scale materials are manufactured, including casting and welding of metals; molding of plastics; preparation of composites; growth of bulk single crystals of semiconductors and oxides; preparation of materials very complicated in shape (additive manufacturing)

Audience: Undergraduate

3. Design the processes for the production of macroscopic-scale materials

Audience: Undergraduate

4. Recognize the impact of the production of macroscopic-scale materials on the environment

Audience: Undergraduate

**M S & E 333 – MICROPROCESSING OF MATERIALS**

3 credits.

Integration of materials science theory and materials engineering practice as applied to the processing of materials at the microscopic level.

**Requisites:** M S & E 350, 351, or CBE 440, or member of Engineering Guest Students

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain basic semiconductor physics, and apply these same physics to approximate device carrier densities, mobility, switching behavior, and other electronically related quantities

Audience: Undergraduate

2. Design process flows based on the physical processes required for desired outcomes in target semiconductor device structures

Audience: Undergraduate

3. Describe how lithography processes are executed and be able to weigh the benefits of each lithography technique against each other

Audience: Undergraduate

4. Analyze device characteristics and connect this analysis with designed process flows

Audience: Undergraduate

### **M S & E 350 – INTRODUCTION TO MATERIALS SCIENCE**

3 credits.

The basic structures and resulting properties of solid materials, including phase equilibria, meta-stability, mechanical properties, failure, corrosion, and materials selection.

**Requisites:** CHEM 103, 109, 115, graduate/professional standing, or member of Engineering Guest Students. Not open to students with credit in M S & E 351.

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Describe some of the ways a range of materials, including ceramics, metals, and polymers, have economic, societal, and political ramifications, both on the present and in history

Audience: Undergraduate

2. Explain how the structure inside a material can be manipulated across a wide range of length scales (0.1nm – 1mm) to control its properties

Audience: Undergraduate

3. Analyze the interrelationships among structure, processing, properties, and performance in material

Audience: Undergraduate

4. Justify the use of a material based on the material properties, the engineering constraints of project, functionality, and human and environmental interaction

Audience: Undergraduate

5. Demonstrate a quantitative understanding of material properties and structure

Audience: Undergraduate

6. Interpret commonplace representations of data and concepts in materials (e.g. Arrhenius relationship, TTT diagram, Larson-Miller Plot, Ashby Map)

Audience: Undergraduate

7. Communicate with peers to analyze problems in materials selection and design and develop skills for working in collaborative environments

Audience: Undergraduate

### **M S & E 351 – MATERIALS SCIENCE-STRUCTURE AND PROPERTY RELATIONS IN SOLIDS**

3 credits.

Introduction to: atomic, electronic, and defect structures in materials; diffusional, mechanical and electrical properties of materials; and the role of structure and defects in diffusional, mechanical, and electrical properties.

**Requisites:** MATH 222 and (CHEM 103, 109, or 115), or member of Engineering Guest Students. Students with credit for M S & E 350 may not enroll in M S & E 351.

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe atomic-scale structure of crystalline materials and their defects using standard materials science and engineering methods

Audience: Undergraduate

2. List major mechanical and electrical properties of materials and the stimuli and responses they connect

Audience: Undergraduate

3. Describe relationships among elements of materials structure and materials properties at an introductory level and use them to predict materials behavior at an introductory level

Audience: Undergraduate

4. Exhibit skills required for successful completion of the MS&E undergraduate curriculum

Audience: Undergraduate

**M S & E 352 – MATERIALS SCIENCE-TRANSFORMATION OF SOLIDS**

3 credits.

The basic factors that determine phase equilibria, structural and transformation characteristics of solids. Principles governing the thermodynamics and kinetics of phase transformations and microstructure evolution. Nucleation and growth processes in precipitation, recrystallization, solidification, oxidation, martensitic, ordering and spinodal reactions. Transformation behavior in polymers, biomaterials and nanomaterials.

**Requisites:** M S & E 350, 351, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the basic factors that determine phase equilibria, structural and transformation characteristics of solids

Audience: Undergraduate

2. Apply principles of thermodynamics and kinetics to phase transformations and microstructure evolution

Audience: Undergraduate

3. Express nucleation and growth processes in precipitation, recrystallization, solidification, oxidation, martensitic, ordering and spinodal reactions

Audience: Undergraduate

4. Extend to transformation behavior in polymers, biomaterials and nanomaterials

Audience: Undergraduate

**M S & E 360 – STRUCTURES & PHASES LAB**

2 credits.

Laboratory instruction in sample preparation for and applications of quantitative microscopy, x-ray diffraction, and properties measurement in the context of structure-property relationships in materials.

**Requisites:** M S & E 350 or (M S & E 351 or concurrent enrollment) and declared in Materials Science and Engineering BS or Applied Mathematics, Engineering and Physics BS

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Characterize the structure and properties of materials using imaging and diffraction methods

Audience: Undergraduate

2. Perform experiments to explore the connections among composition, structure, and properties

Audience: Undergraduate

3. Perform data analysis including linear curve fitting and uncertainty analysis

Audience: Undergraduate

4. Produce professional reports including bibliography

Audience: Undergraduate

**M S & E 361 – KINETICS & THERMODYNAMICS LAB**

2 credits.

Experimental principles of materials science. Thermal, kinetic, structural, and materials synthesis experiments and associated concepts, data analysis, and presentation.

**Requisites:** Declared in Materials Science and Engineering BS or Applied Mathematics, Physics and Engineering BS and (M S & E 351 and 360)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform experiments measuring structure, properties, kinetics, and thermodynamics

Audience: Undergraduate

2. Explore correlations among structure, processing/synthesis, and properties, and relate these to the underlying thermodynamics and the kinetic processes upon which processing/synthesis relies

Audience: Undergraduate

3. Build upon experimental methods to design new experiments

Audience: Undergraduate

4. Perform data analysis to include, for instance, non-linear curve-fitting, error propagation, assessment of systematic error, and computer simulation of experimental data

Audience: Undergraduate

5. Function effectively in groups to carry out joint projects

Audience: Undergraduate

6. Produce professional reports including discussion of experimental hypotheses, presentation of data, and conclusion

Audience: Undergraduate

### **M S & E 362 – SYNTHESIS & CHARACTERIZATION LAB**

3 credits.

Experiments in the mechanical and electronic properties of matter in bulk and thin films; computer instrument control; and data analysis.

**Requisites:** M S & E 361

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Perform experiments exploring interrelationships across the full materials tetrahedron: synthesis, structure, properties, and performance

Audience: Undergraduate

2. Employ computers to control experiments and take measurements

Audience: Undergraduate

3. Work effectively in collaborative and inclusive teams to design and carry out experiments that seek optimization of materials performance for engineering applications

Audience: Undergraduate

4. Communicate effectively with a range of audiences using oral presentation, interdepartmental technical memos, and scientific posters

Audience: Undergraduate

### **M S & E 363 – BASIC MATERIALS CHARACTERIZATION TECHNIQUES**

2 credits.

The purpose of this course is to familiarize students with a variety of modern characterization techniques. Three general subject areas are covered: Physical Properties: Thermogravimetric analysis (TGA); differential scanning calorimetry (DSC); dynamic mechanical analysis (DMA); gel permeation chromatography (GPC). Spectroscopy, optical and x-ray: Ultraviolet/visible (VIS), molecular-infrared/Raman, Rheology; x-ray crystal and powder diffraction. Microscopy: scanning electron microscopy (SEM); SEM and energy dispersive analysis (EDS).

**Requisites:** Declared in Materials Science and Engineering BS or Applied Mathematics, Physics and Engineering BS and (M S & E 351 and 360)

**Repeatable for Credit:** No

### **M S & E 401 – SPECIAL TOPICS IN MATERIALS SCIENCE AND ENGINEERING**

1-3 credits.

Special topics of interest to students in materials science and engineering.

**Requisites:** M S & E 350, 351, or graduate/professional standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify and describe key theories, concepts, and methods in Materials Science and Engineering

Audience: Undergraduate

2. Apply key theories, concepts, and methods in Materials Science and Engineering, using appropriate tools, processes, and/or software

Audience: Undergraduate

3. Apply, analyze, or evaluate advanced theories, concepts, or methods in Materials Science and Engineering

Audience: Undergraduate

**M S & E/CHEM 421 – POLYMERIC MATERIALS**

3 credits.

Polymer chemistry and physics terminologies, structure-property relationship, polymer characterization, polymer synthesis, material requirements for optoelectronics including conjugated polymers, thin film transistors, light emitting diodes, non-linear optical materials, holographic data storage and liquid crystal polymers.

**Requisites:** CHEM 341, 343, or member of Engineering Guest Students

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Classify, identify, and write the structure of different types of common polymers

Audience: Undergraduate

2. Characterize the molecular weights of polymers, their microstructure, and morphology

Audience: Undergraduate

3. Describe the common methods for the synthesis of polymers

Audience: Undergraduate

4. Demonstrate quantitative understanding of the kinetics of polymerization

Audience: Undergraduate

5. Characterize the principle thermal transitions that occur in polymers

Audience: Undergraduate

6. Analyze the interrelationships among structure, properties, processing and applications of polymers

Audience: Undergraduate

**M S & E/N E 423 – NUCLEAR ENGINEERING MATERIALS**

3 credits.

Fundamentals of fuel and cladding behavior in terms of thermal properties, chemical behavior and radiation damage.

**Requisites:** M S & E 350 or 351, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**M S & E/N E 433 – PRINCIPLES OF CORROSION**

3 credits.

Thermodynamics and kinetics of metallic corrosion. The common forms of corrosion and corrosion susceptibility tests. Electrochemical measurement of corrosion rates. Corrosion prevention, economic considerations. High temperature oxidation and sulphidation. Corrosion case histories.

**Requisites:** M S & E 330, or graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**M S & E 434 – INTRODUCTION TO THIN-FILM DEPOSITION PROCESSES**

3 credits.

Introduction to major thin-film deposition techniques and properties of thin films. Evaporation, plasma assisted processes with emphasis on sputter deposition, chemical vapor deposition ion beams. Film properties and characterization methods, applications.

**Requisites:** (M S & E 330 and 351), graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**M S & E 441 – DEFORMATION OF SOLIDS**

3 credits.

Elastic and plastic deformation of real solids. Dislocation theory with applications to metals and alloys. Fracture, fatigue, brittle failure and methods for measuring the mechanical properties of materials.

**Requisites:** M S & E 352 or graduate/professional standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply elementary mechanics and tensor analysis (including Mohr's Circle) to solve problems involving force, displacement, stress, strain, and Hooke's law

Audience: Undergraduate

2. Apply theories of plasticity and viscoelasticity to solve engineering problems in uniform stress/strain

Audience: Undergraduate

3. Predict the mechanical response of a material (including deformation, failure, and microscopic mechanisms) under an arbitrary state of uniform stress or in the presence of stress concentrations and cracks, and across a wide range of temperatures and time-scale

Audience: Undergraduate

4. Choose materials and microstructures to optimize performance for engineering applications

Audience: Undergraduate

**M S & E 448 – CRYSTALLOGRAPHY AND X-RAY DIFFRACTION**

3 credits.

Crystal symmetry, projection methods, X-ray studies of structural problems in the solid state.

**Requisites:** M S & E 350 or 351, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**M S & E 451 – INTRODUCTION TO CERAMIC MATERIALS**

3 credits.

Primary objectives are to: 1) analyze how atoms and ions combine to form 3D crystals and glasses; 2) examine phase equilibria to understand the driving forces for the formation of particular ceramic phases; 3) introduce and discuss the nature of defects in ceramics; 4) discuss the migration of matter and of charge in ceramics; and 5) discuss properties and processing technologies of ceramics.

**Requisites:** M S & E 352 and (M S & E 330 or concurrent enrollment), or graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe how atoms and ions combine to form 3D crystals and glasses

Audience: Undergraduate

2. Relate phase equilibria to the driving forces for the formation of particular ceramic phases

Audience: Undergraduate

3. Recognize properties of ceramics and identify processing technologies of ceramics

Audience: Undergraduate

4. Analyze the nature of defects in ceramics and the migration of matter and charge in ceramics

Audience: Undergraduate

**M S & E 456 – ELECTRONIC, OPTICAL, AND MAGNETIC PROPERTIES OF MATERIALS**

3 credits.

Quantitative description of electronic, optical, and magnetic structure-property relationships of materials. Strategies for the development of new materials and introduction to applications of these materials.

**Requisites:** (M S & E 350 or 351) and (PHYSICS 202, 208, 248, or E C E/PHYSICS 235), graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Predict the electronic, optical, and magnetic properties of a material based on knowledge of the type (chemistry) and arrangement (micro- and macrostructure) of its constituent atoms

Audience: Undergraduate

2. Design materials and device properties by engineering the type and arrangement of atoms

Audience: Undergraduate

3. Analyze experimental transport, optical, and magnetic properties measurements and connect the outcomes of these measurements to electronic band structure

Audience: Undergraduate

**M S & E 460 – INTRODUCTION TO COMPUTATIONAL MATERIALS SCIENCE AND ENGINEERING**

3 credits.

An introduction to the theoretical and computational tools for computational materials, with hands on homework and laboratories. Topics may include atomistic simulation (e.g., molecular dynamics), mesoscale simulation (e.g., Phase field method), macroscale simulation (e.g., finite element method), thermodynamic and kinetic modeling (CALPHAD method), informatics (e.g., machine learning), and special topics (e.g., solar cell design, electronic device simulation, etc.)

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and utilize basic principles of how computers can aid in materials science and engineering.

Audience: Undergraduate

2. Assess and utilize literature and software tools related to computational materials science and engineering.

Audience: Undergraduate

3. Communicate effectively about technical work in oral and written presentation.

Audience: Undergraduate

**M S & E 461 – ADVANCED METAL CASTING**

3 credits.

Metallurgical and engineering principles applied in the foundry and related industries, primarily for those interested in foundry engineering.

**Requisites:** M S & E 350 or 352, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**M S & E/M E 462 – WELDING METALLURGY**

3 credits.

Metallurgical principles applied to welding; mechanisms of strengthening, phase equilibria, and microstructure of the weld zone. Modern processes including laser and electron beam welding.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Identify the specific types of fusion and solid-state processes for welding specific metals/alloys of specific geometries and joints

Audience: Undergraduate

2. Relate principles of heat transfer, fluid flow, mass transfer, chemical reactions, and phase transformations during welding to the development of microstructure, properties, and defects of welds

Audience: Undergraduate

3. Identify the causes and remedies of various defects in welds, such as gas porosity, loss of strength, loss of toughness, cracking, and corrosion

Audience: Undergraduate

4. Identify processes for welding dissimilar materials, such as aluminum alloys to steels, aluminum alloys to copper

Audience: Undergraduate

**M S & E 463 – MATERIALS FOR ELEVATED TEMPERATURE SERVICE**

3 credits.

The design, properties, processing and selection of high temperature materials for structural applications. The fundamentals of diffusion, phase transformations, dislocation motion and oxidation governing the high temperature mechanical properties and structural performance of metallic and ceramic materials.

**Requisites:** M S & E 352, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**M S & E 465 – FUNDAMENTALS OF HEAT TREATMENT**

3 credits.

Principles of phase transformations, heat transfer and mechanical properties as applied to heat treatment practice. The design, modeling and analysis of heat treatment processes.

**Requisites:** M S & E 352, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**M S & E 470 – CAPSTONE PROJECT I**

1 credit.

Capstone experiences in materials design, selection, and application. Emphasis on creativity and application of fundamental principles of public identification, experimental design, data acquisition and analysis, and presentation of results.

**Requisites:** Declared in Materials Science and Engineering BS, M S & E 352, and 362 (or concurrent enrollment in M S & E 362)

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Transition from materials science and engineering theory and concepts to real-world applications

Audience: Undergraduate

2. Conduct literature research including industry engineering standards, tools and techniques on a capstone project topic

Audience: Undergraduate

3. Develop a project's statement of work with a timeline of milestones, tasks, dates, and assignments

Audience: Undergraduate

4. Work effectively with a client (project sponsor) in a team environment, while practicing critical thinking, written and oral communication skills, problem solving and design

Audience: Undergraduate

### **M S & E 471 – CAPSTONE PROJECT II**

3 credits.

Capstone experiences in materials design, selection and application for MSE students. Emphasis on creativity and application of fundamental principles in problem identification, experimental design, data acquisition and analysis, and presentation of results.

**Requisites:** M S & E 470

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Conduct design of experiments (materials selection or failure modes effects analysis), critically analyze and solve a client sponsored capstone project

Audience: Undergraduate

2. Execute a project's statement of work with a timeline of milestones, tasks, dates, and assignments

Audience: Undergraduate

3. Apply industry engineering standards, tools and techniques while conducting design of experiments and research in a capstone project

Audience: Undergraduate

4. Work effectively with a client (project sponsor) in a team environment, while practicing critical thinking, written and oral communication skills, problem solving and design

Audience: Undergraduate

5. Demonstrate skill at project management including navigating the relationships among scheduling, planning, and prioritization of milestones and tasks

Audience: Undergraduate

6. Practice hands-on knowledge in areas that range from experimental design and project management to interpretation and presentation of results

Audience: Undergraduate

7. Apply modern laboratory techniques, skills, and engineering tools appropriate to materials science research and current engineering practices

Audience: Undergraduate

### **M S & E/CIV ENGR/G L E/GEOSCI 474 – ROCK MECHANICS**

3 credits.

Classification of rock masses, stress and strain in rock, linear and non-linear behavior of rock, failure mechanisms, state of stress in rock masses, lab testing, geological and engineering applications.

**Requisites:** E M A 201, PHYSICS 201, 207, or 247, or graduate/

professional standing, or member of Engineering Guest Students

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Measure basic index properties for rock mass classification

Audience: Both Grad & Undergrad

2. Describe stress and strain in continuums

Audience: Both Grad & Undergrad

3. Describe the factors which control the mechanical behavior of rocks

Audience: Both Grad & Undergrad

4. Apply basic concepts of rock mechanics and rock physics to analyze basic geomechanical engineering problems

Audience: Both Grad & Undergrad

5. Prepare rock samples for mechanical testing, conduct experiment, and analyze experimental data to obtain rock strength properties

Audience: Both Grad & Undergrad

6. Describe analytically time-dependent rock behaviors

Audience: Graduate

**M S & E 521 – ADVANCED POLYMERIC MATERIALS**

3 credits.

This course is directed at graduate and advanced undergraduates with focused interest in polymeric materials. Basic principles of compatibility between macromolecules and small molecules, physical chemistry of blends and concepts in phase separation, and selected topics on materials design using self-assembly concepts.

**Requisites:** CHEM/M S & E 421, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Analyze and contrast self-assembly across length-scales in natural and synthetic polymers

Audience: Both Grad & Undergrad

2. Relate self-assembled structure and function with the chemistry of the components

Audience: Both Grad & Undergrad

3. Apply the fundamentals of polymer science and concepts of self-assembly, in conjunction with current literature to design functional materials

Audience: Both Grad & Undergrad

4. Analyze problems in materials selection and design

Audience: Both Grad & Undergrad

5. Communicate design concepts to your peers

Audience: Both Grad & Undergrad

6. Demonstrate awareness of the latest advances using the scientific literature, lectures, and independent reading in the field

Audience: Graduate

**M S & E 530 – THERMODYNAMICS OF SOLIDS**

3 credits.

Thermodynamics of condensed matters as applied to materials science and engineering.

**Requisites:** M S & E 330, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe relationships between heat, work, and entropy and its implications for heat engines

Audience: Both Grad & Undergrad

2. Describe the connection between microscopic states and thermodynamic variables and how to calculate the latter from the former using partition functions

Audience: Both Grad & Undergrad

3. Describe how mixing alters the free energy of the unmixed components in terms of ideal and non-ideal contributions

Audience: Both Grad & Undergrad

4. Describe the role of thermodynamic potentials and their implications for materials properties

Audience: Both Grad & Undergrad

5. Describe how Gibbs energy, chemical potential, and activity are related and their role in chemical equilibrium

Audience: Both Grad & Undergrad

6. Read and interpret different types of phase diagrams

Audience: Both Grad & Undergrad

7. Analyze a scientific or engineering problem to obtain selected insights enabled by thermodynamic analysis and communicate them at a basic level

Audience: Undergraduate

8. Analyze a scientific or engineering problem to obtain the major insights enabled by thermodynamic analysis and communicate them at a semi-professional level

Audience: Graduate

**M S & E/E M A 541 – HETEROGENEOUS AND MULTIPHASE MATERIALS**

3 credits.

Principles of the mechanics of solid multiphase systems. Role of heterogeneity and anisotropy in determining physical properties including elastic, dielectric and piezoelectric properties. Applications in lightweight structures, ultrastrong materials, materials for protection of the body, and materials for the replacement of human tissues. Materials with fibrous, lamellar, particular, and cellular structures. Heterogeneous materials of biological origin. Biomimetic and bio-inspired materials.

**Requisites:** E M A 303, M E 306, or M S & E 441, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**M S & E 550 – MATERIALS FUNDAMENTALS**

3 credits.

Accelerated introduction to foundational materials concepts and the materials paradigm approach to problem solving and research. Atomic scale structure of materials; defects in crystalline materials; alloy phase diagrams, solid-state diffusion, phase transformations, microstructure development, micro/nano/atomic-scale structure-property relationships.

**Requisites:** Graduate/professional standing. Not open to students with credit in M S & E 350, 351, or 352.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Prepare to succeed in graduate level courses offered by the Materials Science and Engineering department  
Audience: Graduate

2. Analyze scholarly publications in their field of research at the level expected of an entry-level researcher  
Audience: Graduate

3. Analyze technical challenges in terms of structure-properties-processing-performance relationships  
Audience: Graduate

**M S & E 551 – STRUCTURE OF MATERIALS**

3 credits.

Atomic, nanoscale and microscale structure of materials. Course is designed for first year graduate students with interests in materials research.

**Requisites:** M S & E 451, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the atomic-scale structure of materials using multiple methods including one or more not typically required for B.S. degree in materials science and engineering  
Audience: Both Grad & Undergrad

2. Articulate the role of crystal symmetry in expression and anisotropy of properties at a level not typically required for a B.S. degree in materials science and engineering  
Audience: Both Grad & Undergrad

3. Describe the characteristics of crystal defects at a more advanced level than typically required for a B.S. degree in materials science and engineering  
Audience: Both Grad & Undergrad

4. Complete the structures section of the qualifying exam successfully if enrolled in the Ph.D. program  
Audience: Graduate

**M S & E 553 – NANOMATERIALS & NANOTECHNOLOGY**

3 credits.

The principal objectives of the course are to: i) introduce advanced processing methods for synthesizing nanomaterials, ranging from single nanoparticles to three-dimensional nanostructures, ii) discuss important thermodynamic and kinetic theories related to such processing, iii) describe methods for characterizing the structure and properties of nanomaterials, iv) discuss current and emerging applications for nanomaterials, and v) illustrate the interdisciplinary nature of nanotechnology and address critical challenges.

**Requisites:** M S & E 350, 351, or CBE 440, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Comprehend the scope and advances of nanomaterials and nanotechnology

Audience: Both Grad & Undergrad

2. Explain the fundamental physical and chemical knowledges involved in nanoscience

Audience: Both Grad & Undergrad

3. Relate the physical and chemical property of nanomaterials with their performance in different applications

Audience: Both Grad & Undergrad

4. Analyze the synthesis and fabrication of nanomaterials and their devices

Audience: Both Grad & Undergrad

5. Propose research projects that involve the use of nanomaterials/nanotechnology for certain applications

Audience: Graduate

6. Evaluate a research proposal from fundamental nanomaterials point of view

Audience: Undergraduate

**M S & E 561 – MACHINE LEARNING IN MATERIALS**

3 credits.

Introduction to applications of data science in materials science and engineering, including understanding the creation and use of modern data resources, data-centric approaches to materials, and the integration of machine learning across the materials landscape.

**Requisites:** Satisfied Quantitative Reasoning (QR) B requirement, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Recall and utilize basic principles and methods of how informatics (data science and machine learning) can be used in materials science and engineering

Audience: Both Grad & Undergrad

2. Apply software tools related to materials informatics

Audience: Both Grad & Undergrad

3. Communicate effectively about technical work in oral and written presentation

Audience: Both Grad & Undergrad

4. Develop machine learning workflows for informatics applications in materials science and engineering

Audience: Graduate

**M S & E 570 – PROPERTIES OF SOLID SURFACES**

3 credits.

Introduction to structure and electronic properties; surface energy; thermodynamics of surfaces; diffusion. Surface barriers, work function, vibrational and electronic states. Chemical interactions: chemisorption, oxidation, corrosion, absorption kinetics, catalysis. Experimental methods and applications in metals, semiconductors.

**Requisites:** PHYSICS 205, 241, 244, or (M S & E 351 and 333) or PHYSICS/E C E 235, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain how and why the surface and electronic properties of solid surfaces and interfaces differ from the bulk

Audience: Both Grad & Undergrad

2. Design and interpret experiments to measure surface properties

Audience: Both Grad & Undergrad

3. Evaluate the efficiency of various experimental techniques in measuring surface composition, surface structure, and electronic properties

Audience: Both Grad & Undergrad

4. Implement surface/interface phenomena in the design of devices

Audience: Graduate

**M S & E 648 – ADVANCED X-RAY SCATTERING METHODS IN MATERIALS SCIENCE AND ENGINEERING**

3 credits.

Advanced concepts and methods for the use of x-ray scattering, diffraction, and spectroscopy in materials science and engineering. Underpinning fundamental mathematical and scattering concepts, including kinematic and dynamical diffraction, diffuse scattering, and optical coherence in x-ray scattering. Practical aspects of experiments at synchrotron light sources and free electron lasers. Applications, including structure of metals and ceramics, polymeric materials, thin films and nanostructures, and magnetic materials.

**Requisites:** M S & E 448, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate knowledge and understanding of the principles of x-ray scattering, spectroscopy, and diffraction  
Audience: Both Grad & Undergrad

2. Apply quantitative x-ray analysis methods to characterization of important materials systems

Audience: Both Grad & Undergrad

3. Communicate the solutions to technical and scientific problems

Audience: Both Grad & Undergrad

4. Connect x-ray scattering to societal problems in energy and human health

Audience: Both Grad & Undergrad

5. Articulate the role of advanced x-ray characterization methods in materials research

Audience: Undergraduate

6. Apply x-ray scattering methods to specific problems in their own graduate-level scientific research

Audience: Graduate

**M S & E 660 – MESOSCALE MODELING OF MATERIALS**

3 credits.

Classical theories, analytical and numerical modeling of various kinetic processes in materials. Including but not limited to transport, grain growth, phase separation, solidification, precipitation, chemical reactions, and multiphysics problems involving electrical, optical, mechanical, and magnetic properties of materials.

**Requisites:** (MATH 319, 320, or 376) and (M S & E 350, 351, or CBE 440), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply the theory of irreversible dynamics to analyze many important kinetic processes of materials such as transport, phase transitions, and chemical reactions

Audience: Both Grad & Undergrad

2. Computationally model exemplary mesoscale problems in materials research

Audience: Both Grad & Undergrad

3. Analyze results from a computational model and extract useful understanding from it

Audience: Both Grad & Undergrad

4. Solve several representative types of partial differential equations using both analytical methods and numerical algorithms

Audience: Both Grad & Undergrad

5. Apply these analytical methods and numerical algorithms to students' own research

Audience: Graduate

**M S & E 699 – INDEPENDENT STUDY**

1-4 credits.

Courses in Metallurgical Engineering.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**M S & E 702 – GRADUATE COOPERATIVE EDUCATION PROGRAM**

1-2 credits.

Work experience that combines classroom theory with practical knowledge of operations to provide students with a background on which to develop and enhance a professional career. The work experience is tailored for MS students from within the U.S. as well as eligible international students.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**Learning Outcomes:** 1. Identify and respond appropriately to real-life engineering ethics cases relevant to co-op work

Audience: Graduate

2. Synthesize and apply appropriate technical education to real world technical work

Audience: Graduate

3. Communicate effectively in writing and speaking with a range of audiences in the workplace, including those without disciplinary expertise

Audience: Graduate

4. Develop professional and transferable habits like time management skills, collaborative problem-solving skills, and research skills for learning new information

Audience: Graduate

**M S & E 748 – STRUCTURAL ANALYSIS OF MATERIALS**

3 credits.

Introduction to transmission electron microscopy of materials, including imaging, diffraction, and microanalysis. Knowledge of diffraction [such as M S & E 448] strongly encouraged.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2023**Learning Outcomes:** 1. Use ray optics and Fourier optics to explain the operating modes and major subsystems of a transmission electron microscope (TEM)

Audience: Graduate

2. Apply electron diffraction theory and electron scattering theory to predict or simulate the results of the interaction of a high energy electron beam with a material, depending on the material's crystal structure, microstructure, composition, and bonding

Audience: Graduate

3. Predict the outcome of TEM experiments including imaging, diffraction, and spectroscopy, given appropriate data about the material's composition, crystal structure, microstructure, and interatomic bonding and information about the TEM experimental conditions

Audience: Graduate

4. Analyze experimental TEM data, including images, diffraction patterns, and spectra, to determine the material's crystal structure, microstructure, composition, or bonding, and the TEM experimental conditions, as appropriate

Audience: Graduate

5. Identify common artifacts in TEM data including images, diffraction patterns, and spectra and explain their origins

Audience: Graduate

6. Design a TEM experimental plan to address a research problem in structure of materials

Audience: Graduate

**M S & E 750 – IMPERFECTIONS AND MECHANICAL PROPERTIES**

3 credits.

Mathematical theory of dislocations and other crystal imperfections; mechanical properties of crystals in relation to imperfections. Knowledge of crystal structure and dislocations [such as M S & E 551] required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Apply mechanics and tensor analysis to solve problems in non-uniform strain related to stress-defect and defect-defect interactions

Audience: Graduate

2. Apply theories of plasticity and viscoelasticity to solve 3 dimensional problems in stress and strain

Audience: Graduate

3. Construct models of the strength of materials based on underlying microscopic mechanisms

Audience: Graduate

4. Construct maps of mechanical response (deformation, failure, and microscopic mechanisms) under arbitrary state of stress and in the presence of stress concentrations, cracks, and across a wide range of temperatures, time-scale, and length-scale

Audience: Graduate

**M S & E 752 – ADVANCED MATERIALS SCIENCE: PHASE TRANSFORMATIONS**

3 credits.

Phase transformations, nucleation theory and the role of structural imperfections, alloy phase equilibria, interface reactions and growth kinetics, continuous transformations. Knowledge of diffusion and reactions [such as M S & E 352] required.

**Requisites:** (M S & E 530 or concurrent enrollment) and graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**M S & E 756 – STRUCTURE AND PROPERTIES OF ADVANCED ELECTRONIC MATERIALS**

3 credits.

Prepares graduate students for research in electronic materials and related areas by examining (1) how does the physical structure of a material affect its electronic structure and properties: and (2) state-of-the-art advance electronic materials. Topics include: molecular and organic semiconductors; carbon nanomaterials (nanotubes, nanoribbons and graphene); advances in conventional bulk zinc-blende and wurtzite semiconductors; polycrystalline, amorphous, and disordered materials; state-of-the-art high- low-k dielectrics; and up-and-coming and next-generation materials. Knowledge of solid state physics [such as PHYSICS 551 or M S & E 456] required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Examine the physical and electronic structure relationships of advanced electronic materials

Audience: Graduate

2. Analytically deduce how the physical structure and composition of a material affect its electronic structure and properties employing concepts pertaining to quantum mechanics, bonding, crystal structure, spin, symmetry, and dimensionality

Audience: Graduate

3. Utilize concepts and tools including: experimental measurements, scientific literature, and models/calculations of energy and band structure, dielectric spectra, and transport phenomena

Audience: Graduate

4. Analyze conventional bulk zinc-blende and wurtzite semiconductors; oxides; Heuslers; carbon and 2D nanomaterials; polycrystalline and disordered materials; organic semiconducting molecules and crystals; and up-and-coming and next-generation electronic materials

Audience: Graduate

5. Connect fundamental principles to motivations from device applications (field effect transistors; light emitting devices; and photovoltaics)

Audience: Graduate

### **M S & E 758 – TRANSMISSION ELECTRON MICROSCOPY LABORATORY**

1 credit.

An introduction to the practice of transmission electron microscopy (TEM) and TEM sample preparation through hands-on laboratory training.

**Requisites:** M S & E 748 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Operate a transmission electron microscope safely for the operator and the instrument

Audience: Graduate

2. Obtain publication quality experimental TEM imaging and diffraction data

Audience: Graduate

3. Obtain publication quality experimental TEM data in one or more additional modalities related to the student's research interests

Audience: Graduate

### **M S & E 760 – MOLECULAR MODELING OF MATERIALS**

3 credits.

Hands-on experience in modern tools of atomic and molecular modeling, including density functional theory, interatomic potentials, and molecular dynamics. Select additional/advanced techniques like high-throughput calculations, (Kinetic) Monte Carlo, accelerated molecular dynamics, and machine learning.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Choose and use the appropriate molecular simulations to obtain properties of materials

Audience: Graduate

2. Apply ab initio methods to model materials properties

Audience: Graduate

3. Apply molecular dynamics methods to model materials properties

Audience: Graduate

4. Use results of molecular simulations in scientific literature to obtain properties of materials

Audience: Graduate

5. Use molecular simulations to analyze scientific or engineering problems to obtain selected insights and communicate them at a semi-professional level

Audience: Graduate

### **M S & E 790 – MASTER'S RESEARCH OR THESIS**

1-9 credits.

Under faculty supervision.

**Requisites:** Declared in Materials Science and Engineering M.S., Ph.D., or doctoral minor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate an ability to formulate and analyze advanced materials science and engineering problems

Audience: Graduate

2. Communicate research results in writing and seminars

Audience: Graduate

3. Work independently and collaboratively, as appropriate, on solutions for materials science and engineering problems

Audience: Graduate

4. Prepare for academic requirements such as the masters thesis document, masters thesis defense, or graduate preliminary exam

Audience: Graduate

### **M S & E 803 – SPECIAL TOPICS IN MATERIALS SCIENCE**

1-3 credits.

Topics vary.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify and describe key theories, concepts, and methods in materials science and engineering

Audience: Graduate

2. Apply key theories, concepts, and methods in materials science and engineering, using appropriate tools, equipment, processes, and/or software

Audience: Graduate

3. Apply, analyze, or evaluate advanced theories, concepts, or methods in materials science and engineering

Audience: Graduate

4. Communicate results in writing, in live presentations, written assignments, or recorded presentations

Audience: Graduate

### **M S & E 890 – PRE-DISSERTATOR'S RESEARCH**

1-9 credits.

Under faculty supervision.

**Requisites:** Declared in Materials Science and Engineering Ph.D. or doctoral minor.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate an ability to formulate and analyze advanced materials science and engineering problems

Audience: Graduate

2. Communicate research results in writing and seminars

Audience: Graduate

3. Work independently and collaboratively, as appropriate, on solutions for materials science and engineering problems

Audience: Graduate

4. Prepare for academic requirements such as the graduate preliminary exam

Audience: Graduate

### **M S & E 900 – MATERIALS RESEARCH SEMINAR**

1 credit.

Introduces graduate students to the breadth, wealth and practices of materials research at the University of Wisconsin and in the professional materials research community.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate awareness of current advances in materials science and engineering research gained from the material science and engineering seminar series

Audience: Graduate

2. Demonstrate awareness of professional responsibilities in maintaining and equitable and inclusive work environment

Audience: Graduate

3. Develop and apply professional skills in technical presentation and writing

Audience: Graduate

4. Demonstrate awareness of professional responsibilities with respect to ethics, intellectual property, and/or appropriate documentation of research

Audience: Graduate

### **M S & E 990 – RESEARCH AND THESIS**

1-9 credits.

Under faculty supervision.

**Requisites:** Declared in Materials Science and Engineering Ph.D. or doctoral minor.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate an ability to formulate and analyze advanced materials science and engineering problems

Audience: Graduate

2. Communicate research results in writing and seminars

Audience: Graduate

3. Work independently and collaboratively, as appropriate, on solutions for materials science and engineering problems

Audience: Graduate

4. Prepare for academic requirements such as the PhD thesis defense and PhD thesis

Audience: Graduate

### **M S & E 999 – INDEPENDENT WORK**

1-3 credits.

Independent study under faculty supervision.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2000

**Learning Outcomes:** 1. Conduct and report on independent materials science and engineering research

Audience: Graduate

2. Independently develop materials science and engineering research directions

Audience: Graduate

3. Appropriately utilize research materials including the scientific and technical literature

Audience: Graduate

4. Connect their research clearly to other research in their field of study

Audience: Graduate

# MATHEMATICS (MATH)

## MATH 96 – PREPARATORY ALGEBRA

3 credits.

Covers the necessary mathematical tools needed to succeed in our algebra course and provides fundamental mathematical skills. Topics include real numbers, linear equations and inequalities, integral and fractional exponents, polynomials and their arithmetic, polynomial equations and equations with fractional exponents, the quadratic formula and completing the square, systems of two linear equations, graphing, and problem solving using algebra and graphs. All students must pass an assessment on basic mathematical skills to complete the course. The course does not count for degree credit.

**Requisites:** Placement into MATH 96

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform arithmetic operations, such as addition, multiplication, exponentiation, and their inverses using various sets of numbers (including integers, fractions, decimals, and radicals).

Audience: Undergraduate

2. Algebraically manipulate polynomial, rational, and radical expressions.

Audience: Undergraduate

3. Solve various types of one-variable equations and inequalities.

Audience: Undergraduate

4. Identify functions and determine their domain, range, and other properties.

Audience: Undergraduate

5. Recognize the coordinate plane and relate two-variable equations to their graphs.

Audience: Undergraduate

6. Solve linear systems of two-variable equations.

Audience: Undergraduate

7. Evaluate real-world problems by applying linear and other equations.

Audience: Undergraduate

8. Support solutions by using algebraic concepts in justifications.

Audience: Undergraduate

## MATH 112 – COLLEGE ALGEBRA

3 credits.

Properties of elementary functions, such as polynomial, absolute value, radical, rational, exponential, and logarithmic functions. Topics include equations, inequalities, functions, and their graphs. Formulating, analyzing, solving, and interpreting mathematical and real-world problems. Provides the algebra skills required for calculus.

**Requisites:** MATH 96 or placement into MATH 112. MATH 118 does not fulfill the requisite

**Course Designation:** Gen Ed – Quantitative Reasoning Part A  
Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Solve equations and inequalities using algebraic techniques.

Audience: Undergraduate

2. Interpret the properties of functions, including their domains and ranges.

Audience: Undergraduate

3. Graph, transform, combine, compose, and solve for the inverse of functions.

Audience: Undergraduate

4. Interpret and graph polynomial, rational, exponential, logarithmic functions, and their combinations.

Audience: Undergraduate

5. Solve linear and nonlinear systems of equations.

Audience: Undergraduate

6. Model and analyze real-world problems using functions and their properties.

Audience: Undergraduate

7. Support solutions by applying mathematical concepts and reason to justifications.

Audience: Undergraduate

**MATH 113 – TRIGONOMETRY**

3 credits.

Covers the graphs, properties and geometric significance of trigonometric functions of a real variable. Other topics include trigonometric equations and identities, application, trigonometric form of complex numbers, DeMoivre's theorem, and polar and parametric equations. The course also has a significant number of applications, especially related to other disciplines.

**Requisites:** MATH 112 or placement into MATH 113

**Course Designation:** Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Define the sine, cosine, and tangent functions with respect to the unit circle and other geometric objects.

Audience: Undergraduate

2. Identify the properties of trigonometric functions, including their domains and ranges.

Audience: Undergraduate

3. Graph trigonometric functions using the concepts of amplitude, period, and phase shift.

Audience: Undergraduate

4. Interpret and graph inverse trigonometric functions using restricted domains.

Audience: Undergraduate

5. Solve equations using factoring, trigonometric identities, and other algebraic techniques.

Audience: Undergraduate

6. Model and analyze real-world problems using trigonometric functions and their properties.

Audience: Undergraduate

7. Support solutions and arguments by applying mathematical concepts and reason to justifications.

Audience: Undergraduate

**MATH 114 – PRECALCULUS**

5 credits.

Properties of elementary functions, such as polynomial, absolute value, radical, rational, exponential, logarithmic, and trigonometric functions. Topics include equations, inequalities, functions, and their graphs.

Other topics include trigonometric equations and identities and the geometric significance of trigonometry. Formulating, analyzing, solving, and interpreting mathematical and real-world problems. Provide the algebra and trigonometry skills required for calculus.

**Requisites:** MATH 96 or placement into MATH 114. MATH 118 does not fulfill the requisite

**Course Designation:** Gen Ed - Quantitative Reasoning Part A

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Solve equations and inequalities using algebraic and trigonometric techniques.

Audience: Undergraduate

2. Interpret the properties of functions, including their domains and ranges.

Audience: Undergraduate

3. Graph, transform, combine, compose, and solve for the inverse of functions.

Audience: Undergraduate

4. Interpret and graph polynomial, rational, exponential, and trigonometric functions.

Audience: Undergraduate

5. Define the sine, cosine, and tangent functions with respect to the unit circle and other geometric objects.

Audience: Undergraduate

6. Interpret and graph radical, logarithmic, and inverse trigonometric functions using restricted domains.

Audience: Undergraduate

7. Model and analyze real-world problems using functions and their properties.

Audience: Undergraduate

8. Support solutions and arguments by applying mathematical concepts and reason to justifications.

Audience: Undergraduate

**MATH 118 – SUMMER COLLEGIATE EXPERIENCE MATHEMATICS COURSE**

2 credits.

A preparation and introductory math course for students enrolled in the Summer Collegiate Experience program. Includes material from precalculus and calculus and related topics depending on students' results on the math placement exam.

**Requisites:** Enrolled in the Summer Collegiate experience program

**Course Designation:** Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2024

**MATH 141 – QUANTITATIVE REASONING AND PROBLEM SOLVING**

3 credits.

Develops a habit of mind, competency, and comfort in working with numerical data. Learn to reason and solve quantitative problems from a wide array of authentic contexts and everyday life situations, develop the ability to reason mathematically, and make and evaluate logical arguments supported by quantitative evidence. This course is for students who need to satisfy part A of the Quantitative Reasoning requirement and prepare for QR-B courses, but do not want to continue in the calculus sequence.

**Requisites:** MATH 96 or placement into MATH 141. MATH 118 does not fulfill the requisite

**Course Designation:** Gen Ed - Quantitative Reasoning Part A

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify appropriate models to fit scenarios described with numerical data and/or verbal descriptions (e.g. related to basic financial, probabilistic, and statistical models).

Audience: Undergraduate

2. Make predictions and draw conclusions in real world contexts using a model, and recognize the limitations of mathematical models in those contexts.

Audience: Undergraduate

3. Understand and be able to create and evaluate arguments supported by quantitative evidence and clearly communicate those arguments using words, tables, graphs, mathematical equations, etc., as appropriate in various contexts (e.g. with problems related to financial planning, basic probability).

Audience: Undergraduate

4. Construct and interpret graphical displays of data and understand how they can be used and misused.

Audience: Undergraduate

**MATH 171 – CALCULUS WITH ALGEBRA AND TRIGONOMETRY I**

5 credits.

Topics in algebra, trigonometry and precalculus are integrated with elementary differential calculus. Part of a 2-semester sequence with MATH 217; these two courses together are equivalent to MATH 114 and 221.

**Requisites:** MATH 96 or placement into MATH 171. MATH 118 does not fulfill the requisite

**Course Designation:** Gen Ed - Quantitative Reasoning Part A

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recall the algebraic and geometric properties of polynomial and power functions, use such functions to model practical situations, and use such properties to resolve practical problems.

Audience: Undergraduate

2. Recall formal and informal definitions and theory related to limits and use such statements to perform relevant computations, analyze the behavior of functions, and resolve practical problems (e.g., determine if a function is continuous, find horizontal asymptotes, determine long term behavior of a model, etc.).

Audience: Undergraduate

3. Recall formal and informal definitions and theory related to differential calculus and use such statements to perform relevant computations, analyze the behavior of functions, and resolve practical problems (e.g., determine where a function is increasing or decreasing, compute a linear approximation, predict future behavior, etc.).

Audience: Undergraduate

4. Recall formal and informal definitions and theory related to integrability and use such statements to perform relevant computations, analyze the behavior of functions, and resolve practical problems (e.g., compute antiderivatives, determine areas and volumes, compute average value, etc.).

Audience: Undergraduate

5. Convey informal mathematical arguments and formal computations using appropriate mathematical terminology, notation, and grammar.

Audience: Undergraduate

**MATH 198 – DIRECTED STUDY**

1-3 credits.

Directed study projects as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2012

**MATH 207 – TOPICS IN MATHEMATICS STUDY ABROAD**

1-5 credits.

Credit is awarded to students who have completed an appropriate math course abroad at the intermediate level having no direct equivalence within the math department offerings. The study abroad course must be pre-approved by the math department.

**Requisites:** None**Course Designation:** Breadth - Natural Science

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**MATH 211 – SURVEY OF CALCULUS 1**

4 credits.

Essential concepts of differential and integral calculus; exponential and logarithmic functions; functions of several variables. Primarily for students in prebusiness and some social sciences. Students preparing for advanced study in mathematics, physics, engineering and other sciences (including most biological sciences) should take MATH 221.

**Requisites:** MATH 112, 114, 171, or placement into MATH 211 or 221**Course Designation:** Gen Ed - Quantitative Reasoning Part B

Breadth - Natural Science

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply differential calculus to analyze rates of change, and in particular to model physical and economic phenomena (e.g., derivatives of exponential and logarithmic functions, modeling with linear differential equations, first and second derivative tests for extrema, applied optimization, etc.).

Audience: Undergraduate

2. Analyze the behavior of functions of one variable, including their asymptotic behavior, local behavior and existence of extrema (e.g., limits, continuity, tangent lines, finding extrema, etc.).

Audience: Undergraduate

3. Apply integral calculus to analyze the cumulative effects of continuous processes (e.g., difference between indefinite and definite integral, integration by parts, the Fundamental Theorem of Calculus, etc.).

Audience: Undergraduate

4. Analyze functions of two variables (e.g., partial derivatives, tangent lines to curves, maximization and minimization in two variables, etc.).

Audience: Undergraduate

5. Successfully perform computations related to limits, differentiation, and integration.

Audience: Undergraduate

6. Articulate mathematical knowledge and understanding of differential and integral calculus in a written context.

Audience: Undergraduate

**MATH 213 – SURVEY OF CALCULUS 2**

3 credits.

First order differential equations, introduction to multivariable calculus and constrained optimization, infinite sequences and series, methods of approximation, and a brief introduction to probability. Models and applications from business and the social sciences.

**Requisites:** MATH 211, 217, or 221**Course Designation:** Gen Ed - Quantitative Reasoning Part B

Breadth - Natural Science

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall the algebraic and geometric properties of polynomial and power functions and use these properties to resolve practical problems.

Audience: Undergraduate

2. Use definitions, properties, and theory related to the concept of the derivative to perform standard computations and analyze functions (e.g., use Lagrange multipliers to optimize multivariate functions, etc.).

Audience: Undergraduate

3. Use definitions, properties and theory related to limits, sequences, and series to determine convergence, divergence, and limit values as possible (e.g., geometric sums, use limit values as approximations to long term behavior, etc.).

Audience: Undergraduate

4. Use definitions, properties, and theory related to integrals to perform standard computations and analyze functions (e.g., numerical integration, multiple integrals, etc.).

Audience: Undergraduate

5. Use definitions, properties, and theory related to differential equations to produce families of solutions and resolve initial value problems (e.g., first-order linear and separable ordinary differential equations, etc.).

Audience: Undergraduate

6. Use functions to model practical behavior, analyze those functions using calculus concepts, and interpret that analysis in a practical context (e.g., identify concavity and use it to make investment decisions, model an annuity through a geometric series and determine its total present value, determine total change from a marginal rate, etc.).

Audience: Undergraduate

7. Produce informal arguments and formal computations in English using proper mathematical terminology, notation, and logic.

Audience: Undergraduate

**MATH 217 – CALCULUS WITH ALGEBRA AND TRIGONOMETRY II**

5 credits.

Continuation of MATH 171. Topics in algebra, trigonometry and precalculus are integrated with elementary differential calculus. Completion of MATH 217 implies completion of MATH 221 and 114.

**Requisites:** MATH 171

**Course Designation:** Gen Ed - Quantitative Reasoning Part B

Breadth - Natural Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall the algebraic and geometric properties of exponential and trigonometric functions, their inverses, and their algebraic combinations and compositions, and use these properties to resolve practical problems.

Audience: Undergraduate

2. Recall formal and informal definitions and theory related to limits (e.g., limit properties, continuity, the intermediate value theorem, etc.) and use such statements to perform relevant computations, analyze the behavior of functions, and resolve practical problems (e.g., determine if a function is continuous, find horizontal asymptotes, determine long term behavior of a model, etc.).

Audience: Undergraduate

3. Recall formal and informal definitions and theory related to the derivative (e.g., definition, chain rule, interpretation as rate of change, critical point theory, l'Hopital's rule, etc.) and use such statements to perform relevant computations, analyze the behavior of functions, and resolve practical problems (e.g., determine where a function is increasing, compute a linear approximation, etc.).

Audience: Undergraduate

4. Recall formal and informal definitions and theory related to integrability (e.g., definition as the limit of a Riemann sum, the fundamental theorem of calculus, definite integral as total change, etc.) and use such statements to perform relevant computations, analyze the behavior of functions, and resolve practical problems (e.g., compute antiderivatives, determine areas/volumes, etc.).

Audience: Undergraduate

5. Offer informal mathematical arguments and formal computations in English using appropriate mathematical terminology, notation, and grammar.

Audience: Undergraduate

**MATH 221 – CALCULUS AND ANALYTIC GEOMETRY 1**

5 credits.

Introduction to differential and integral calculus and plane analytic geometry; applications; transcendental functions.

**Requisites:** MATH 114 or (MATH 112 and 113) or placement into MATH 221.

MATH 211 or MATH 213 does not fulfill the requisite.

**Course Designation:** Gen Ed - Quantitative Reasoning Part B

Breadth - Natural Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply differential calculus to analyze rates of change, and in particular to model real world phenomena (e.g., derivatives of exponential, logarithmic and trigonometric functions, first and second derivative tests for extrema, applied optimization, etc.).

Audience: Undergraduate

2. Analyze the behavior of functions of one variable, including their asymptotic behavior, local behavior and existence of extrema (e.g., limits, continuity, tangent lines, finding extrema, etc.).

Audience: Undergraduate

3. Apply integral calculus to model the cumulative effects of continuous processes (e.g., difference between indefinite and definite integral, the Fundamental Theorem of Calculus, computing areas, volumes, and surface areas, etc.).

Audience: Undergraduate

4. Successfully perform computations related to limits, differentiation, and integration.

Audience: Undergraduate

## MATH 222 – CALCULUS AND ANALYTIC GEOMETRY 2

4 credits.

Techniques of integration, improper integrals, first order ordinary differential equations, sequences and series, Taylor series, vector geometry in two and three dimensions.

**Requisites:** MATH 217 or 221. MATH 211 or 213 does not fulfill the requisite.

**Course Designation:** Gen Ed - Quantitative Reasoning Part B  
Breadth - Natural Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply a variety of integration techniques to compute proper and improper integrals (e.g., integration by parts, substitution including trigonometric substitution, partial fractions, etc.).

Audience: Undergraduate

2. Find and analyze the solutions to first order differential equations and initial value problems (e.g., separable equations, equilibrium solutions, linear equations and integrating factors, etc.).

Audience: Undergraduate

3. Recall the main definitions and results related to limits, continuity, sequences, and series (e.g., convergence, divergence, convergence of geometric sequences, convergence of geometric series, different tests for convergence and divergence, the Integral test, etc.).

Audience: Undergraduate

4. Derive and manipulate asymptotic expansions of functions, and use these expansions to understand the properties of the functions they approximate (e.g., Taylor series, etc.).

Audience: Undergraduate

5. Describe objects in three dimensional space and how they interact with each other (the coordinate system, vector addition and scalar multiplication, the dot product and cross product, etc.).

Audience: Undergraduate

6. Describe physical and biological phenomena using mathematical models (e.g. linear growth models, logistic growth models, pressure and force, moments and center of mass, etc.).

Audience: Undergraduate

7. Offer informal mathematical arguments and formal computations in English using appropriate mathematical terminology, notation, and grammar.

Audience: Undergraduate

## MATH 228 – WES CALCULUS SUPPLEMENT

1 credit.

Topics in differential, integral and multi-variable calculus and analytic geometry.

**Requisites:** Concurrent enrollment in MATH 221, 222, or 234

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Practice problem-solving and critical thinking skills in group settings

Audience: Undergraduate

2. Demonstrate academic skills that increase engagement and belonging in mathematics

Audience: Undergraduate

3. Apply calculus to solve real-world problems

Audience: Undergraduate

4. Connect with the math learning support community via participation in various tutoring and small group study opportunities across campus

Audience: Undergraduate

**MATH 234 – CALCULUS--FUNCTIONS OF SEVERAL VARIABLES**

4 credits.

Introduction to calculus of functions of several variables; calculus on parameterized curves, derivatives of functions of several variables, multiple integrals, vector calculus.

**Requisites:** MATH 222

**Course Designation:** Breadth – Natural Science

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Analyze the behavior of functions of several variables, including their asymptotic behavior, local behavior, and existence of extrema with the tools of calculus (e.g., limits and continuity of multidimensional functions, derivatives and integrals of vector valued functions, arc length and curvature, partial derivatives, tangent planes, etc.).

Audience: Undergraduate

2. Describe and analyze motion in space with the tools of calculus (velocity vector and acceleration, directional derivatives and the gradient vector, etc.).

Audience: Undergraduate

3. Represent and compute areas and volumes by means of multiple integrals (e.g., integration over rectangles and more general spaces, average values, integration with polar, cylindrical, and spherical coordinates, general changes of variables, etc.).

Audience: Undergraduate

4. Derive relations between different physical phenomena and their integral representations (e.g., using Green's theorem, the Divergence theorem, and Stokes' theorem).

Audience: Undergraduate

5. Describe physical, biological, and/or economic phenomena using mathematical models (e.g., topographical maps and level curves, Lagrange multipliers, etc.).

Audience: Undergraduate

6. Offer informal mathematical arguments and formal computations in English using appropriate mathematical terminology, notation, and grammar.

Audience: Undergraduate

**MATH/COMP SCI 240 – INTRODUCTION TO DISCRETE MATHEMATICS**

3 credits.

Basic concepts of logic, sets, partial order and other relations, and functions. Basic concepts of mathematics (definitions, proofs, sets, functions, and relations) with a focus on discrete structures: integers, bits, strings, trees, and graphs. Propositional logic, Boolean algebra, and predicate logic. Mathematical induction and recursion. Invariants and algorithmic correctness. Recurrences and asymptotic growth analysis. Fundamentals of counting.

**Requisites:** MATH 217 or 221

**Course Designation:** Breadth – Natural Science

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**MATH 298 – DIRECTED STUDY IN MATHEMATICS**

1-3 credits.

Directed study projects as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

**MATH/STAT 309 – INTRODUCTION TO PROBABILITY AND MATHEMATICAL STATISTICS I**

3 credits.

Probability and combinatorial methods, discrete and continuous, univariate and multivariate distributions, expected values, moments, normal distribution and derived distributions, estimation.

**Requisites:** MATH 234, 376, or concurrent enrollment. Not open to students with credit for STAT/MATH 431 or STAT 311

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall the definitions of fundamental objects and concepts underlying probability theory (e.g. sample spaces and events, the axioms of probability, the notions of conditional probability and independence, random variables and their probability distributions, mathematical expectation, and the joint distribution of one or more random variables) and demonstrate understanding of their properties  
Audience: Undergraduate

2. Perform important operations in probability (e.g. calculate the probabilities of events, derive the probability distributions of random variables, compute moments and the expectation of functions of random variables, calculate covariances and correlations, and obtain conditional distributions and conditional expectations) and interpret the results  
Audience: Undergraduate

3. Explain the meaning of key results in probability theory that are especially important in mathematical statistics (e.g. Bayes' Theorem, probabilistic tail inequalities such as Markov's and Chebyshev's inequalities, the Law of Large Numbers, and the Central Limit Theorem)  
Audience: Undergraduate

4. Identify, utilize, and understand the key properties of, probability distributions that are especially important in statistics, including discrete families of distributions (e.g. the binomial, Poisson, geometric, and negative binomial distributions) and continuous families of distributions (e.g. the uniform, exponential, gamma, and normal distributions)  
Audience: Undergraduate

**MATH/STAT 310 – INTRODUCTION TO PROBABILITY AND MATHEMATICAL STATISTICS II**

3 credits.

Mathematical statistical inference aims at providing an understanding of likelihood's central role to statistical inference, using the language of mathematical statistics to analyze statistical procedures, and using the computer as a tool for understanding statistics. Specific topics include: samples and populations, estimation, hypothesis testing, and theoretical properties of statistical inference.

**Requisites:** (STAT/MATH 309, STAT 311, STAT/MATH 431, or MATH 531) and (STAT 240, STAT 301, STAT 302, STAT 324, STAT 371, or ECON 310), or graduate/professional standing

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Construct point estimators including maximum likelihood estimators, understand the theoretical properties of point estimation methods, and evaluate their performance  
Audience: Undergraduate

2. Construct hypothesis tests including likelihood ratio tests, interpret their results, evaluate their performance, and understand the theoretical properties of hypothesis testing methods  
Audience: Undergraduate

3. Construct interval estimators to quantify uncertainty, understand the theoretical properties of interval estimation methods, and interpret their results  
Audience: Undergraduate

4. Mathematically derive key quantities required for statistical inference methods and be familiar with simulation-based techniques for obtaining those quantities  
Audience: Undergraduate

5. Describe the Bayesian approach to inference and contrast it with the frequentist approach  
Audience: Undergraduate

6. Identify and describe the assumptions underlying methods of statistical inference and explain their importance  
Audience: Undergraduate

**MATH 319 – TECHNIQUES IN ORDINARY DIFFERENTIAL EQUATIONS**

3 credits.

Review of linear differential equations; series solution of linear differential equations; boundary value problems; Laplace transforms; possibly numerical methods and two dimensional autonomous systems.

**Requisites:** MATH 222 or graduate/professional standing

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions, properties, and theorems associated to ordinary differential equations (e.g. systems of linear ODEs, homogeneous/inhomogeneous ODEs, series solutions, Laplace transform, equilibria, etc.).

Audience: Undergraduate

2. Verify if a mathematical object has a given property used in ODEs (e.g. that a problem is well-posed, that a given function is a solution, etc.).

Audience: Undergraduate

3. Apply algorithms to describe the solutions to various types of ODEs (e.g. separable equations, linear systems, boundary value problems, etc.).

Audience: Undergraduate

4. Check the premises of theorems used in elementary ODEs in order to apply their conclusions (e.g., that a given equation satisfies conditions which guarantee the existence of a solution).

Audience: Undergraduate

5. Apply the presented techniques for solving ODEs to solve problems from physics (e.g. spring problems, pendulum problems, etc.).

Audience: Undergraduate

6. Express informal mathematical arguments in English using appropriate mathematical terminology and notation.

Audience: Undergraduate

**MATH 320 – LINEAR ALGEBRA AND DIFFERENTIAL EQUATIONS**

3 credits.

An introduction to linear algebra and differential equations with emphasis on the relationship between the theory of linear algebra and analytical and numerical techniques for solving differential equations. Linear algebra topics include linear systems, matrices and their algebra, vector spaces and linear transformations, eigenvalues and eigenvectors. Topics from differential equations include first order ODE, homogeneous and nonhomogeneous linear systems, and numerical methods.

**Requisites:** MATH 222 or graduate/professional standing

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recall and state the formal definitions, properties, and theorems associated to elementary linear algebra and ordinary differential equations (e.g. existence and uniqueness theorems for first-order ODEs, eigenvalues and eigenvectors, etc.).

Audience: Undergraduate

2. Verify if a mathematical object has a given property used in elementary linear algebra and differential equations (e.g., that a matrix is invertible, that a set is a vector subspace, that a vector is an eigenvector, etc.).

Audience: Undergraduate

3. Check the premises of theorems used in elementary linear algebra in order to apply their conclusions (e.g., that a given matrix has zero determinant and therefore cannot be inverted).

Audience: Undergraduate

4. Resolve algebraic statements related to elementary linear algebra through appropriate computations and compute solutions to elementary systems of ordinary differential equations.

Audience: Undergraduate

5. Express informal mathematical arguments in English using appropriate mathematical terminology and notation.

Audience: Undergraduate

**MATH 321 – APPLIED MATHEMATICAL ANALYSIS 1: VECTOR AND COMPLEX CALCULUS**

3 credits.

Vector analysis: algebra and geometry of vectors, index notation, 3D rotations, Euler angles; vector differential and integral calculus, theorems of Green, Gauss, and Stokes; grad, div, curl, and Laplacian in cylindrical and spherical coordinates; Complex analysis: analytic functions, Cauchy-Riemann equations, conformal mapping, complex integrals, residue theorem.

**Requisites:** (MATH 234 and 320), (MATH 234, 319, and 340), (MATH 319 and 341), MATH 376, or graduate/professional standing

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Accelerated Honors (!)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions, properties, and theorems associated to elementary vector calculus including complex calculus.

Audience: Undergraduate

2. Verify if a mathematical object has a given property used in complex and vector calculus (e.g., that a matrix is invertible, that a set of vectors is linearly independent, that a vector field is conservative, etc.)

Audience: Undergraduate

3. Check the premises of theorems used in complex and vector calculus in order to apply their conclusions (e.g., that a vector field is conservative and so one can apply the fundamental theorem of path integrals).

Audience: Undergraduate

4. Resolve algebraic statements and perform standard computations related to vector and complex calculus (e.g., compute residues, perform basis changes, use multivariate substitution in integrals, compute surface areas, etc.).

Audience: Undergraduate

5. Express informal mathematical arguments in English using appropriate mathematical terminology and notation.

Audience: Undergraduate

**MATH 322 – APPLIED MATHEMATICAL ANALYSIS 2: PARTIAL DIFFERENTIAL EQUATIONS**

3 credits.

Sturm-Liouville theory; Fourier series, including mean convergence; initial and boundary value problems for linear second order partial differential equations, including separation of variables and eigenfunction expansions; fundamental solutions and Green's functions in multiple dimensions.

**Requisites:** MATH 321, 376, or graduate/professional standing

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions, properties, techniques, and theorems associated to elementary partial differential equations (e.g., boundary value problem, linearity, eigenfunction, Fourier series, finite difference methods, etc.).

Audience: Undergraduate

2. Verify if a mathematical object has a given property used in elementary partial differential equations (e.g., homogeneous vs. nonhomogeneous PDEs, symmetry, etc.)

Audience: Undergraduate

3. Check the premises of theorems used in complex and vector calculus in order to apply their conclusions (e.g., that a finite series solution minimizes error, etc.).

Audience: Undergraduate

4. Resolve algebraic statements and perform standard computations related to elementary partial differential equations (e.g., derive series solutions to a given PDE, apply the finite element method to approximate a PDE solution, etc.).

Audience: Undergraduate

5. Express informal mathematical arguments in English using appropriate mathematical terminology and notation.

Audience: Undergraduate

**MATH 331 – INTRODUCTORY PROBABILITY**

3 credits.

Topics covered include axioms of probability, random variables, the most important discrete and continuous probability distributions, expectation and variance, conditional probability and conditional expectations, Markov's and Chebyshev's inequalities, laws of large numbers, and the central limit theorem. Includes a brief introduction to techniques of multivariate integration.

**Requisites:** MATH 213 or 222

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in basic probability theory (e.g., probability spaces, random variables and their probability distributions, named distributions, conditional probability, independence, etc.).

Audience: Undergraduate

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., whether certain events or random variables are independent or not, whether a random variable has one of the named distributions, etc.).

Audience: Undergraduate

3. Recall and state the standard theorems of probability theory. (e.g., Bayes' theorem, the law of large numbers, the central limit theorem, Markov's inequality etc.), and apply these theorems to solve problems in probability theory.

Audience: Undergraduate

4. Use multiple approaches to compute and estimate probabilities and expectations.

Audience: Undergraduate

5. Model simple real-life situations using techniques in probability theory and calculate probabilities and expectations associated with those models.

Audience: Undergraduate

6. Express informal mathematical arguments in English using appropriate mathematical terminology and notation

Audience: Undergraduate

**MATH 340 – ELEMENTARY MATRIX AND LINEAR ALGEBRA**

3 credits.

An introduction to linear algebra. Topics include matrix algebra, linear systems of equations, vector spaces, sub-spaces, linear dependence, span, basis, rank of matrices, determinants, linear transformations, coordinate representations, kernel, range, eigenvalues and eigenvectors, diagonalization, inner products and orthogonal vectors, symmetric matrices. Covers linear algebra topics in greater depth and detail than MATH 320. Formal techniques in mathematical argument [MATH 341] not covered.

**Requisites:** MATH 222

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recall and state the formal definitions, properties, and theorems associated to elementary linear algebra (e.g., matrix, eigenvector, rank, linear independence, vector space, etc.).

Audience: Undergraduate

2. Verify if a mathematical object has a given property used in elementary linear algebra (e.g., that a matrix is invertible, that a set is a vector subspace, that a vector is an eigenvector, etc.).

Audience: Undergraduate

3. Check the premises of theorems used in elementary linear algebra in order to apply their conclusions (e.g., that a given matrix has zero determinant and therefore cannot be inverted).

Audience: Undergraduate

4. Resolve algebraic statements related to elementary linear algebra through appropriate computations.

Audience: Undergraduate

5. Express informal mathematical arguments in English using appropriate mathematical terminology and notation.

Audience: Undergraduate

**MATH 341 – LINEAR ALGEBRA**

3 credits.

The theory of linear algebra with an introduction to proofs and proof writing. Topics include vector spaces, linear dependence, span, basis, linear transformations, kernel, image, inner products and inner product spaces, geometry, eigenvalues, eigenvectors, standard matrix factorizations. Other content includes basic set theory, logical operations, quantifiers, direct and indirect arguments, and induction. Differential equations [MATH 320] not covered.

**Requisites:** MATH 234**Course Designation:** Breadth - Natural Science

Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Honors - Accelerated Honors (!)

**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of mathematical objects and their properties used in elementary linear algebra (e.g., dimension of a vector space, linear dependence of a set of vectors, etc.).

Audience: Undergraduate

2. Use the standard methods and tools of mathematical argument in the context of linear algebra (e.g., direct and indirect methods, the construction of examples and counterexamples, induction arguments, 1st order logic, set theory, quantifiers, etc.).

Audience: Undergraduate

3. Verify if a mathematical construct does or does not have the condition of having a particular property (e.g., that a matrix is invertible, that a set is a vector subspace, that a vector is an eigenvector, etc.).

Audience: Undergraduate

4. Recall and state standard theorems used in elementary linear algebra (e.g., symmetric matrices are diagonalizable, linear operators with non-trivial kernel are not invertible, etc.).

Audience: Undergraduate

5. Verify the premises of standard theorems in elementary linear algebra in order to apply their conclusions in the context of longer arguments (e.g., that a given matrix has zero determinant and therefore has nullity larger than one, etc.).

Audience: Undergraduate

6. Prove or disprove statements related to the definitions, properties, and theorems of elementary linear algebra using the techniques of mathematical argument.

Audience: Undergraduate

7. Perform standard computations in the context of linear algebra (e.g., finding the rank of a matrix, computing the determinant of a square matrix, etc.).

Audience: Undergraduate

8. Convey formal mathematical arguments in English using appropriate mathematical terminology and notation.

Audience: Undergraduate

**MATH 345 – LINEAR ALGEBRA AND OPTIMIZATION**

4 credits.

Introduction to linear algebra, differential calculus in several variables, and basic optimization theory with applications to data science and related topics. Vectors, analytic geometry, matrices, linear functions, linear independence, orthogonality, inverses, partial derivatives and gradients, Taylor approximation, gradient descent, Lagrange multipliers, clustering, regression, classification. Implementation in Python.

**Requisites:** MATH 222 and (COMP SCI 200, 220, 300, 310, 320, or placement in COMP SCI 300). Not open to students with credit for MATH 320, 340, 341, or 375.

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions, properties, and theorems associated to elementary linear algebra (e.g., matrix, eigenvector, rank, linear independence, vector space, etc.).

Audience: Undergraduate

2. Verify if a mathematical object has a given property used in elementary linear algebra (e.g., that a matrix is invertible, that a set is a vector subspace, that a vector is an eigenvector, etc.).

Audience: Undergraduate

3. Check the premises of theorems used in elementary linear algebra in order to apply their conclusions (e.g., that a given matrix has zero determinant and therefore cannot be inverted).

Audience: Undergraduate

4. Resolve algebraic statements related to elementary linear algebra through appropriate computations, including using classical algorithms to solve data science problems using linear algebra and their implementation in Python.

Audience: Undergraduate

5. Analyze the behavior of functions of several variables, including their asymptotic behavior, local behavior, and existence of extrema with the tools of calculus (e.g., limits and continuity of multidimensional functions, derivatives and integrals of vector valued functions, arc length and curvature, partial derivatives, tangent planes, etc.).

Audience: Undergraduate

6. Express informal mathematical arguments in English using appropriate mathematical terminology and notation.

Audience: Undergraduate

## MATH 375 – TOPICS IN MULTI-VARIABLE CALCULUS AND LINEAR ALGEBRA

5 credits.

Vector spaces and linear transformations, differential calculus of scalar and vector fields, determinants, eigenvalues and eigenvectors, multiple integrals, line integrals, and surface integrals. Freshmen students are invited to enroll by the Department of Mathematics.

**Requisites:** Consent of Instructor

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify the formal definitions of mathematical objects and their properties used in linear algebra and differential multivariable calculus (e.g., vector spaces, linear transformations, derivatives of multivariate functions, etc.).

Audience: Undergraduate

2. Use the standard methods and tools of mathematical argument in the context of linear algebra and multivariate differential calculus (e.g., direct and indirect methods, the construction of examples and counterexamples, induction arguments, 1st order logic, set theory, quantifiers, etc.).

Audience: Undergraduate

3. Verify if a mathematical construct does or does not have the condition of having a particular property (e.g., that a matrix is invertible, that a set is a vector subspace, that a vector valued function is differentiable, etc.).

Audience: Undergraduate

4. Identify standard theorems in linear algebra and differential multivariate calculus and recall arguments for these theorems and the underlying logic of their proofs (e.g., symmetric matrices are diagonalizable, chain rule for multivariate functions, etc.).

Audience: Undergraduate

5. Prove or disprove statements related to the definitions, properties, and theorems of linear algebra and differential multivariate calculus using the techniques of mathematical argument.

Audience: Undergraduate

6. Perform standard computations in the context of linear algebra and differential multivariate calculus.

Audience: Undergraduate

7. Write mathematical proofs and concepts in logical, reasonable, and concise ways.

Audience: Undergraduate

## MATH 376 – TOPICS IN MULTI-VARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS

5 credits.

Topics in multi-variable calculus and introduction to differential equations.

**Requisites:** MATH 375

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the formal definitions of mathematical objects and their properties used in integral multivariable calculus and elementary ordinary differential equations (e.g., multivariate integrals, line and surface integrals, systems of linear ODEs, etc.).

Audience: Undergraduate

2. Understand and use the standard methods and tools of mathematical argument in the context of integral multivariable calculus and elementary ordinary differential equations (e.g. direct and indirect methods, the construction of examples and counterexamples, induction arguments, first-order logic, set theory, and quantifiers).

Audience: Undergraduate

3. Distinguish if a mathematical construct does or does not have the condition of having a particular property formally (e.g., that a vector field is conservative, that a given function is a solution, etc.).

Audience: Undergraduate

4. Identify standard theorems in integral multivariable calculus and elementary ordinary differential equations (e.g., Green's theorem, the Divergence theorem, Stokes' theorem, existence and uniqueness theorem for ODEs, etc.) and recall arguments for these theorems and the underlying logic of their proofs.

Audience: Undergraduate

5. Prove or disprove statements related to the definitions, properties, and theorems of integral multivariable calculus and elementary ordinary differential equations using the techniques of mathematical argument.

Audience: Undergraduate

6. Perform standard computations in the context of integral multivariable calculus and elementary ordinary differential equations (e.g. evaluate surface and line integrals, solve simple ordinary differential equations, etc.).

Audience: Undergraduate

7. Write mathematical proofs and concepts in logical, reasonable, and concise ways.

Audience: Undergraduate

**MATH 390 – UNDERGRADUATE RESEARCH WITH MADISON EXPERIMENTAL MATHEMATICS LAB**

3 credits.

An introduction to mathematical research. Instruction in ancillary skills such as literature review, mathematical software use, technical writing and communication, etc. Requires acceptance to the Madison Experimental Mathematics undergraduate research lab.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. work with a team to investigate open problems in mathematics.

Audience: Undergraduate

2. employ methods of mathematical research (e.g., numerical software, literature review, problem design, etc.)

Audience: Undergraduate

3. communicate mathematics in formal written and oral forms (e.g., journal article, poster presentation, seminar talk, etc.)

Audience: Undergraduate

**MATH 407 – TOPICS IN MATHEMATICS STUDY ABROAD**

1-5 credits.

Credit is awarded to students who have completed an appropriate math course abroad at the advanced level having no direct equivalence within the math department offerings. The study abroad course must be pre-approved by the math department.

**Requisites:** None

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**MATH 415 – APPLIED DYNAMICAL SYSTEMS, CHAOS AND MODELING**

3 credits.

An introduction to nonlinear dynamical systems including stability, bifurcations and chaos. The course will give underlying mathematical ideas, but emphasize applications from many scientific fields.

**Requisites:** MATH 376, (MATH 234 and 319), (MATH 234 and 320), (MATH 234 and 340), (MATH 234 and 341) or (MATH 234 and 375) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recall and state the formal definitions, properties, and theorems associated to linear and nonlinear dynamical systems (e.g., periodicity, critical points, chaotic behavior, contraction mapping principle, etc.).

Audience: Undergraduate

2. Verify if a mathematical object has a given property used in elementary linear and nonlinear dynamical systems (e.g., if a set is stable, etc.).

Audience: Undergraduate

3. Identify the type of bifurcation undergone by a dynamical system under a change of parameter values (e.g., saddle-node, pitchfork, and transcritical bifurcations, normal forms, etc.).

Audience: Undergraduate

4. Check the premises of theorems used in elementary linear and nonlinear dynamical systems in order to apply their conclusions (e.g., that a function satisfies a particular inequality and hence must have a fixed point, etc.).

Audience: Undergraduate

5. Resolve algebraic statements and perform standard computations and constructions related to elementary linear and nonlinear dynamical systems (e.g., computing eigenvectors, identifying invariant sets, draw a phase plane portrait, etc.).

Audience: Undergraduate

6. Design a mathematical model that embodies specific features of a physical or biological system (e.g., finite carrying capacity, predation).

Audience: Undergraduate

7. Express informal mathematical arguments in English using appropriate mathematical terminology and notation.

Audience: Undergraduate

**MATH 421 – THE THEORY OF SINGLE VARIABLE CALCULUS**

3 credits.

Covers material in first and second semester calculus but it is intended to teach math majors to write and understand proofs in mathematics in general and in calculus in particular.

**Requisites:** MATH 234 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Understand and use the standard methods and tools of mathematical argument (e.g direct and indirect methods, the construction of examples and counterexamples, induction arguments, first-order logic, set theory, and quantifiers).

Audience: Undergraduate

2. Recall and state the formal definitions of mathematical objects (e.g. sets, functions, and graphs) and their properties used in calculus.

Audience: Undergraduate

3. Distinguish if a mathematical construct does or does not have the condition of having a particular property formally (e.g. limits, continuity, differentiability, and integrability).

Audience: Undergraduate

4. Recall and state standard calculus theorems (e.g. Intermediate Value Theorem, Mean Value Theorems, and Fundamental Theorem of Calculus), and recall arguments for these theorems and the underlying logic of their proofs.

Audience: Undergraduate

5. Prove or disprove statements related to the definitions, properties, and theorems of calculus using the techniques of mathematical argument.

Audience: Undergraduate

6. Write mathematical proofs and concepts in logical, reasonable, and concise ways.

Audience: Undergraduate

**MATH/COMP SCI/ISYE 425 – INTRODUCTION TO COMBINATORIAL OPTIMIZATION**

3 credits.

Focuses on optimization problems over discrete structures, such as shortest paths, spanning trees, flows, matchings, and the traveling salesman problem. We will investigate structural properties of these problems, and we will study both exact methods for their solution, and approximation algorithms.

**Requisites:** (MATH 320, 340, 341, or 375) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify and use the structural properties of combinatorial optimization problems

Audience: Undergraduate

2. Apply algorithms for the solution -exact or approximate- of a combinatorial optimization problem

Audience: Undergraduate

3. Explain why the algorithms studied are correct and understand their running time

Audience: Undergraduate

**MATH/STAT 431 – INTRODUCTION TO THE THEORY OF PROBABILITY**

3 credits.

Topics covered include axioms of probability, random variables, the most important discrete and continuous probability distributions, expectation and variance, moment generating functions, conditional probability and conditional expectations, multivariate distributions, Markov's and Chebyshev's inequalities, laws of large numbers, and the central limit theorem.

**Requisites:** MATH 234 or 376 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in probability theory (e.g., probability spaces, random variables and random vectors and their probability distributions, named distributions, conditional probability, independence, linearity of expectation, etc.).

Audience: Undergraduate

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., whether certain events or random variables are independent or not, whether a random variable has one of the named distributions, whether or not a sequence of random variables is exchangeable, etc.).

Audience: Undergraduate

3. Recall and state the standard theorems of probability theory. (e.g., Bayes' theorem, the law of large numbers, the central limit theorem, etc.), and apply these theorems to solve problems in probability theory.

Audience: Undergraduate

4. Use multiple approaches to compute and estimate probabilities and expectations (e.g., using the indicator method, using conditioning, estimating probabilities using normal or Poisson approximation etc.).

Audience: Undergraduate

5. Construct mathematical arguments related to the above definitions, properties, and theorems, including the construction of examples and counterexamples.

Audience: Undergraduate

6. Convey his or her arguments in oral and written forms using English and appropriate mathematical terminology and notation (and grammar).

Audience: Undergraduate

7. Model simple real-life situations using techniques in probability theory and calculate probabilities and expectations associated with those models.

Audience: Undergraduate

**MATH/COMP SCI/E C E 435 – INTRODUCTION TO CRYPTOGRAPHY**

3 credits.

Cryptography is the art and science of transmitting digital information in a secure manner. Provides an introduction to its technical aspects.

**Requisites:** (MATH 320, 340, 341, or 375) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**MATH 443 – APPLIED LINEAR ALGEBRA**

3 credits.

Review of matrix algebra. Simultaneous linear equations, linear dependence and rank, vector space, eigenvalues and eigenvectors, diagonalization, quadratic forms, inner product spaces, norms, canonical forms. Discussion of numerical aspects and applications in the sciences.

**Requisites:** (MATH 320, 340, 341, or 375) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in applied linear algebra (e.g., system of equations, matrices, linear transformations, inner product spaces, quadratic forms, etc.).

Audience: Undergraduate

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., system of equations has a solution, matrix has an LU factorization, linear transformation is invertible, etc.).

Audience: Undergraduate

3. Recall and state the standard theorems of applied linear algebra. (e.g., Rank-Nullity theorem, Spectral theorem of normal operators, theorems leading to SVD and PCA methods, etc.). Moreover, apply these theorems to solve problems in applied linear algebra.

Audience: Undergraduate

4. Construct mathematical arguments related to the above definitions, properties, and theorems, including the construction of examples and counterexamples. Moreover, the student will learn classical algorithms to solve scientific problems using linear algebra (e.g., Page rank, Recommendation systems, SVD and matrix completion, Least square and Gram Schmidt process, etc.).

Audience: Undergraduate

5. Convey his or her arguments in oral and written forms using English and appropriate mathematical terminology and notation, and justify the applicability of classical linear algebra based algorithms in science.

Audience: Undergraduate

**MATH 444 – GRAPHS AND NETWORKS IN DATA SCIENCE**

3 credits.

Mathematical foundations of networks with an emphasis on their applications in modern data science, using tools from algorithmic graph theory and linear algebra. Topics include: basics of graph theory, network statistics, graph traversal algorithms and implementation, matrix methods, community detection, PageRank, simulation of random graph models.

**Requisites:** (MATH 320, 340, 341, or 375) and (COMP SCI 200, 220, 300, 310, 320, or placement in COMP SCI 300), graduate/professional standing, or declared in Mathematics VISP (undergraduate or graduate)

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. State formal definitions in graph theory and networks.

Audience: Both Grad & Undergrad

2. Describe essential network search algorithms (e.g., shortest path and minimum spanning tree) and prove their correctness and computational complexity

Audience: Both Grad & Undergrad

3. Understand how community detection algorithms using spectral analysis works; implement and/or use community detection algorithms and apply them to real-world networks using Python

Audience: Both Grad & Undergrad

4. Simulate various random graph models (Erdos-Renyi, Watts-Strogats, Stochastic Block Model, Configuration model, Preferential Attachment).

Audience: Both Grad & Undergrad

5. Use a programming language to load network data and apply deterministic and randomized algorithms for network data analysis; fit various random graph models to the given real-world network and infer its statistical properties.

Audience: Both Grad & Undergrad

6. Identify applications of course content in areas of modern research.

Audience: Graduate

**MATH 461 – COLLEGE GEOMETRY I**

3 credits.

An introduction to Euclidean or non-Euclidean geometry.

**Requisites:** MATH 234 or (MATH 222 and COMP SCI/MATH 240) or MATH 375 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of mathematical objects and their properties used in axiomatic and coordinate geometry with a special emphasis on triangles and circles (e.g., pedal triangles, Simson line, perpendicular bisector, etc.).

Audience: Undergraduate

2. Use the above definitions to argue if a mathematical construct does or does not have the condition of having a particular property (e.g., that two triangles are congruent, three points are collinear, etc.).

Audience: Undergraduate

3. Recall and state standard theorems used in axiomatic geometry including their proofs (e.g., opposite angles are congruent, Ceva's Theorem, nine-point circle theorem, etc.).

Audience: Undergraduate

4. Verify the premises of standard theorems in order to apply their conclusions in the context of longer arguments (e.g., arguing congruence by verifying angle sums, etc.).

Audience: Undergraduate

5. Prove or disprove statements related to the definitions, properties, and theorems of axiomatic geometry using the techniques of mathematical argument. In particular, the student will employ construction and computational techniques as necessary.

Audience: Undergraduate

6. Convey formal mathematical arguments in written and/or verbal English using appropriate mathematical terminology and notation.

Audience: Undergraduate

**MATH 467 – INTRODUCTION TO NUMBER THEORY**

3 credits.

An introduction to proof writing techniques through a study of classical topics in elementary number theory. Topics include the divisibility, basic properties of primes, congruences, Fermat's theorem.

**Requisites:** MATH 234, 375, (MATH 222 and COMP SCI/MATH 240), (MATH 222 and 320), or (MATH 222 and 340)

**Course Designation:** Breadth – Natural Science

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand and use the standard methods and tools of mathematical argument (e.g. direct and indirect methods, the construction of examples and counterexamples, induction arguments).

Audience: Undergraduate

2. State and describe the formal definitions of the mathematical objects and their properties used in elementary number theory (e.g., divisibility, prime numbers, congruences, etc.).

Audience: Undergraduate

3. State and apply the main theorems in elementary number theory (e.g. theorems related to modular arithmetic, divisibility, prime numbers, Fermat's Little Theorem).

Audience: Undergraduate

4. Prove or disprove statements and evaluate the validity of arguments related to the definitions, properties, and theorems elementary number theory.

Audience: Undergraduate

**MATH/CURRIC 471 – MATHEMATICS FOR SECONDARY SCHOOL TEACHERS**

3 credits.

Capstone for future middle and high school teachers, drawing connections between higher mathematics and school mathematics.

**Requisites:** (MATH 341, 375, or 421) and (MATH 461 or concurrent enrollment)

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Examine the conceptual difficulties, fundamental ideas, and techniques of secondary school mathematics.

Audience: Undergraduate

2. Describe connections between advanced mathematics and the content typically found in middle and high school mathematics curriculum.

Audience: Undergraduate

3. Recall and state alternate definitions, extensions, and constructions of content typically found in middle and high school mathematics curriculum.

Audience: Undergraduate

4. Demonstrate symbolic and computational proficiency.

Audience: Undergraduate

5. Justify mathematical reasoning as a means to deepen understanding.

Audience: Undergraduate

6. Analyze multiple solution strategies from a mathematical perspective (e.g. understanding different approaches to solving a problem, assessing whether a strategy generalizes, making connections between strategies, examining student strategies when appropriate etc.).

Audience: Undergraduate

7. Explain mathematics to others and assess the mathematical understanding of others.

Audience: Undergraduate

**MATH/HIST SCI 473 – HISTORY OF MATHEMATICS**

3 credits.

An historical survey of the main lines of mathematical development.

**Requisites:** Consent of instructor

**Course Designation:** Breadth – Either Humanities or Natural Science Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in various mathematical topics throughout history (e.g., content from number theory, analysis, algebra, etc.).

Audience: Undergraduate

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property in the context of these topics.

Audience: Undergraduate

3. Recall and state the standard theorems from these topics, and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Undergraduate

4. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Undergraduate

5. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation, and grammar.

Audience: Undergraduate

6. Explain mathematical ideas and describe their historical contexts.

Audience: Undergraduate

**MATH/COMP SCI/STAT 475 – INTRODUCTION TO COMBINATORICS**

3 credits.

Problems of enumeration, distribution, and arrangement. Inclusion-exclusion principle. Generating functions and linear recurrence relations. Combinatorial identities. Graph coloring problems. Finite designs. Systems of distinct representatives and matching problems in graphs. Potential applications in the social, biological, and physical sciences. Puzzles. Problem solving.

**Requisites:** (MATH 320, 340, 341, or 375) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Natural Science Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Understand basic counting strategies, such as staged thought-experiments, inclusion/exclusion, generating functions, and recurrence relations, and apply these strategies to solve a wide variety of counting problems.

Audience: Undergraduate

2. Recall basic objects that are used in combinatorics, such as permutations and combinations of sets and multisets, binomial and multinomial coefficients, the Catalan numbers, the Stirling numbers, and the partition numbers.

Audience: Undergraduate

3. Analyze a given combinatorial problem using the standard theorems of combinatorics, such as the pigeonhole principle, the Newton binomial theorem, the multinomial theorem, the Ramsey theorem, the Dilworth theorem, the Burnside theorem, and the Polya counting theorem.

Audience: Undergraduate

4. Construct mathematical arguments related to combinatorial problems using the above definitions, properties, theorems, and counting strategies; including the construction of examples and counterexamples.

Audience: Undergraduate

5. Convey his or her arguments in oral and written form in English, using appropriate mathematical terminology, notation, and grammar.

Audience: Undergraduate

**MATH 490 – UNDERGRADUATE SEMINAR**

1-3 credits.

Intermediate or upper level topics course in mathematics. Topics vary.

**Requisites:** Consent of instructor

**Course Designation:** Breadth – Natural Science Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

**MATH 491 – TOPICS IN UNDERGRADUATE MATHEMATICS**

3–4 credits.

Intermediate or upper level topics course in mathematics. Topics vary.

**Requisites:** None**Course Designation:** Breadth – Natural Science

Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2024**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in an area of mathematics.

Audience: Undergraduate

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property.

Audience: Undergraduate

3. Recall and state the standard theorems of an area of mathematics.

Audience: Undergraduate

4. Check the premises of theorems used in an area of mathematics in order to apply their conclusions.

Audience: Undergraduate

5. Resolve statements related to an area of mathematics through appropriate computations.

Audience: Undergraduate

6. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Undergraduate

**MATH/COMP SCI 513 – NUMERICAL LINEAR ALGEBRA**

3 credits.

Direct and iterative solution of linear and nonlinear systems and of eigenproblems. LU and symmetric LU factorization. Complexity, stability, and conditioning. Nonlinear systems. Iterative methods for linear systems. QR-factorization and least squares. Eigenproblems: local and global methods.

**Requisites:** (MATH 340, 341, or 375) and (COMP SCI 200, 300, 301, 302, 310, or placement into COMP SCI 300) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) program

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025**MATH/COMP SCI 514 – NUMERICAL ANALYSIS**

3 credits.

Polynomial forms, divided differences. Polynomial interpolation.

Polynomial approximation: uniform approximation and Chebyshev polynomials, least-squares approximation and orthogonal polynomials.

Numerical differentiation and integration. Splines, B-splines and spline approximation. Numerical methods for solving initial and boundary value problems for ordinary differential equations.

**Requisites:** (MATH 320, 340, 341, or 375), (MATH 322, 376, 421, or 521), and (COMP SCI 200, 220, 300, 310, or 301 prior to Spring 2020, or placement into COMP SCI 300); grad/professional standing; member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in numerical analysis (e.g., Lagrange polynomials, Gibbs phenomenon, Runge phenomenon, orthogonal polynomials, recurrence relation, Gaussian quadrature points, splines, etc.).

Audience: Both Grad &amp; Undergrad

2. Use different techniques of numerical analysis in their appropriate settings (e.g., polynomial interpolation, least square approximation, discrete Fourier transform, the Golub-Welsch algorithm, fast Fourier transform, trapezoidal rule and Simpson's rule, numerical differentiation, forward and backward Euler's method, etc.).

Audience: Both Grad &amp; Undergrad

3. State the main theoretical results related to the error analysis for different methods (e.g., least square error, numerical integration using a Riemann sum, the trapezoidal rule, Simpson's rule and Gaussian quadratures, (semi-)discrete Fourier transform, forward and backward Euler, etc.), and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad &amp; Undergrad

4. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad &amp; Undergrad

5. Identify applications of course content in current areas of research.

Audience: Graduate

**MATH 519 – ORDINARY DIFFERENTIAL EQUATIONS**

3 credits.

Provides a rigorous introduction to ordinary differential equations and dynamical systems. Intended for math majors and advanced (or graduate) students in other disciplines.

**Requisites:** (MATH 320, 340, 341, or 375) and (MATH 322, 376, 421, or 521) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in ordinary differential equations (e.g., systems of differential equations, dependence on initial conditions, exponentials of matrices, Lyapunov functions, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., that a function is a solution to an ode, local and global stability of an equilibrium, that an initial value problem has a unique solution, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of ordinary differential equations (e.g., the existence and uniqueness theorem, Hartman-Grobman theorem). Moreover, recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use such theorems in the context of longer arguments by examining their premises (e.g., differentiable dependence upon initial conditions, checking stability via Lyapunov functions, etc.).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Graduate

**MATH 521 – ANALYSIS I**

3 credits.

The real numbers, elements of set theory, metric spaces and basic topology, sequences and series, limits, continuity, differentiation, integration, sequences and series of functions, uniform convergence.

**Requisites:** (MATH 234 and 467), (MATH 322, 341, 376, or 421), graduate/professional standing, or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in classical real analysis (e.g., the of a set, continuity of a function, limit of a sequence, etc.).

Audience: Both Grad & Undergrad

2. Use the above definitions to prove if a mathematical construct does or does not have the condition of being a particular mathematical object or having a particular property (e.g., that a given function is continuous, that a given set is compact, that a series converges absolutely, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of classical real analysis. (e.g., the Bolzano-Weierstrass theorem, monotone bounded sequences converge, the fundamental theorem of calculus, etc.). Moreover, the student will be able to recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use the above theorems in the context of longer arguments by examining their premises (e.g., proving that a function has a maximum by verifying that it is continuous on a compact set).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in areas of modern research.

Audience: Graduate

**MATH 522 – ANALYSIS II**

3 credits.

Special functions, power series, Fourier series, approximation, contraction principle, characterizations of compactness in metric spaces, applications to differential equations. Differential calculus in normed spaces, including implicit and inverse function theorems. Course is essential for graduate work in mathematics.

**Requisites:** MATH 521 and (MATH 320, 340, 341, or 375) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in advanced real analysis (e.g., uniform and pointwise convergences, Fourier series, compactness, metric spaces, etc.).

Audience: Both Grad & Undergrad

2. Use the above definitions to prove if a mathematical construct does or does not have the condition of being a particular mathematical object or having a particular property (e.g. that a sequence of functions converges uniformly or not, whether a set in a metric space is compact or not, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of advanced real analysis. (e.g., Arzela-Ascoli theorem, Stone-Weierstrass theorem, the Contraction Principle etc.), and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use the above theorems in the context of longer arguments by examining their premises (e.g., using the Arzela-Ascoli theorem to check if a set of continuous functions is relatively compact or not).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Both Grad & Undergrad

**MATH/COMP SCI/ISYE/STAT 525 – LINEAR OPTIMIZATION**

3 credits.

Introduces optimization problems whose constraints are expressed by linear inequalities. Develops geometric and algebraic insights into the structure of the problem, with an emphasis on formal proofs. Presents the theory behind the simplex method, the main algorithm used to solve linear optimization problems. Explores duality theory and theorems of the alternatives.

**Requisites:** MATH 320, 340, 341, 375, or 443 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Use linear programming to formulate real world decision problems.

Audience: Both Grad & Undergrad

2. Apply algorithms to solve linear programming problems and demonstrate their correctness.

Audience: Both Grad & Undergrad

3. Combine different proving techniques explored in class in an original way to show new results.

Audience: Graduate

**MATH 531 – PROBABILITY THEORY**

3 credits.

A rigorous introduction to probability theory at an advanced undergraduate level. Only a minimal amount of measure theory is used, in particular, the theory of Lebesgue integrals is not needed. It is aimed at math majors and Master's degree students, or students in other fields who will need probability in their future careers. Gives an introduction to the basics (Kolmogorov axioms, conditional probability and independence, random variables, expectation) and discusses some classical results with proofs (DeMoivre-Laplace limit theorems, the study of simple random walk on the one dimensional lattice, applications of generating functions).

**Requisites:** MATH 376, 421, or 521 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. State, explain, and apply the axioms, principal results, definitions, and theorems of undergraduate probability theory. This includes concepts such as probability spaces, random variables and random vectors and their probability distributions, conditional probability, independence, law of large numbers, and the central limit theorem.

Audience: Undergraduate

2. Calculate probabilities and expectations in simple model problems.

Audience: Undergraduate

3. Use probability theory to model simplified real-world situations with random outcomes. In particular, students can identify and apply the most common probability distributions, including the Bernoulli, binomial, geometric, Poisson, uniform, normal, and exponential distributions.

Audience: Undergraduate

4. Analyze long-term behavior in simple model problems using the law of large numbers, the central limit theorem, and the Borel-Cantelli lemma.

Audience: Undergraduate

5. Construct proofs of simple theorems in probability theory.

Audience: Undergraduate

**MATH 535 – MATHEMATICAL METHODS IN DATA SCIENCE**

3 credits.

A rigorous introduction to mathematical concepts important for modern data science. Topics include: matrix factorizations, optimization theory and algorithms, probabilistic models, finite Markov chains. Mathematical techniques are motivated by and illustrated on a range of applied problems from machine learning and statistics.

**Requisites:** (MATH 320, 340, 341, 375 or M E/COMP SCI/E C E 532) and (STAT/MATH 309, 431, MATH 531, STAT 311 or E C E 331) and (MATH 322, 341, 375, 421, 467, or COMP SCI 577), graduate/professional standing, or member of Pre-Masters Mathematics (Visiting Intl) Prgrm

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. State and calculate eigenvalue, singular value and QR decompositions and apply them to data science techniques such as spectral clustering, principal components analysis and least-squares problems.

Audience: Both Grad & Undergrad

2. State and derive properties of multivariate normal distributions and apply them to data science problems based on Gaussian models such as mixtures of Gaussians and Gaussian graphical models.

Audience: Both Grad & Undergrad

3. Formulate certain machine learning and statistics problems as optimization problems, solve these problems using simple optimization algorithms such as first-order methods and state results about the convergence of these algorithms.

Audience: Both Grad & Undergrad

4. State and derive basic properties of finite Markov chain models and apply them to data science techniques such as Markov chain Monte Carlo.

Audience: Both Grad & Undergrad

5. Construct proofs of simple theorems in matrix factorizations, Gaussian modeling, optimization theory, and finite Markov chains.

Audience: Both Grad & Undergrad

6. Implement data science methods based on matrix factorizations, Gaussian modeling, optimization theory, and finite Markov chains in a programming language such as Python.

Audience: Both Grad & Undergrad

7. Identify and use course content in the context of current/modern research in mathematics and data science.

Audience: Graduate

**MATH 540 – LINEAR ALGEBRA II**

3 credits.

Review of linear transformations, duality. Diagonalization of linear transformations. The Cayley Hamilton Theorem. Minimal polynomials. The Jordan canonical form. Exponential function. Inner product spaces, orthonormal bases and Gram-Schmidt orthogonalization. Operators on inner product spaces. Self-adjoint, unitary and positive operators. Spectral theorem. singular value decomposition. Bilinear and quadratic forms. Norms, bounded linear operators, matrix norms. Basic multilinear algebra. This is a second course in linear algebra.

**Requisites:** (MATH 234 or 375), (MATH 320, 340, 341, or 375), and (MATH 341, 375, 421, 467, or 521), or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in advanced linear algebra (e.g., diagonalizable matrices, minimal polynomials, inner product spaces, and their operators, canonical forms, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., whether a matrix is diagonalizable, whether a space is an inner product space, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of advanced linear algebra (e.g., the spectral theorem, Sylvester's theorem, the Gram-Schmidt algorithm, etc.), and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use such theorems in the context of longer arguments by examining their premises (e.g., establishing results on canonical forms, applying algorithms to diagonalize matrices, find canonical forms, etc.).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in areas of modern research (Graduate only).

Audience: Graduate

**MATH 541 – MODERN ALGEBRA**

3 credits.

Groups, normal subgroups, Cayley's theorem, rings, ideals, homomorphisms, polynomial rings, abstract vector spaces.

**Requisites:** (MATH 234 or 375), (MATH 320, 340, 341, or 375), and (MATH 341, 375, 421, 467, or 521), or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in modern abstract algebra (e.g., groups and their actions, rings, fields, homomorphisms, standard examples of these, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., whether a group is abelian, whether a homomorphism is an isomorphism, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of abstract algebra. (e.g., the isomorphism theorems, the Sylow theorems, Lagrange's theorem, etc.), and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use such theorems in the context of longer arguments by examining their premises (e.g., to classify groups of a given order, prove that alternating groups are simple, etc.).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in areas of modern research.

Audience: Graduate

**MATH 542 – MODERN ALGEBRA**

3 credits.

Field extensions, roots of polynomials, splitting fields, simple extensions, linear transformations, matrices, characteristic roots, canonical forms, determinants.

**Requisites:** MATH 541 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in advanced abstract algebra (e.g., rings, modules, fields, Galois groups, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g. whether a field extension is normal, whether a ring is a principal ideal domain, classifying abelian groups, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of advanced abstract algebra (e.g. the fundamental theorem of Galois theory, the classification of modules over principal ideal domains, results on canonical forms of matrices, etc.) and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use such theorems in the context of longer arguments by examining their premises (e.g., determining if a polynomial is solvable over a given field, finding the normal and Jordan canonical forms of linear transformations and applying these to problems in various fields like differential equations, etc.).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Graduate

**MATH 551 – ELEMENTARY TOPOLOGY**

3 credits.

Topological spaces, connectedness, compactness, separation axioms, metric spaces.

**Requisites:** (MATH 234 or 375), (MATH 320, 340, 341, or 375), and (MATH 341, 375, 421, 467, or 521), or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in elementary point set topology (e.g., abstract topological spaces, metric spaces, Hausdorff spaces, compact spaces, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., connected, compact Hausdorff).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of point set topology (e.g., Extension theorems, Tychonoff Theorem, etc.) and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use such theorems in the context of longer arguments by examining their premises (e.g., proving a map is a homeomorphism).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in areas of modern research.

Audience: Graduate

**MATH 552 – ELEMENTARY GEOMETRIC AND ALGEBRAIC TOPOLOGY**

3 credits.

Introduction to algebraic topology. Emphasis on geometric aspects, including two-dimensional manifolds, the fundamental group, covering spaces, basic simplicial homology theory, the Euler-Poincare formula, and homotopy classes of mappings.

**Requisites:** (MATH 551 and 541) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in algebraic topology (e.g., covering spaces, universal covering spaces, fundamental group, CW-complexes, closed oriented surfaces, homology, euler characteristic, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., a set is simply connected, two sets are homotopic, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of algebraic topology (e.g., the classification of closed oriented surfaces, etc.), and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use such theorems in the context of longer arguments by examining their premises.

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples etc.).

Audience: Both Grad & Undergrad

6. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Graduate

**MATH 561 – DIFFERENTIAL GEOMETRY**

3 credits.

Theory of curves and surfaces by differential methods.

**Requisites:** (MATH 320, 340, 341, or 375) and (MATH 322, 376, 421, or 521) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in differential geometry in n-dimensional real space (e.g., vector spaces and inner product spaces, manifolds, Riemannian metric on a manifold, arc length, curvature, torsion, geodesic curves, etc.).

Audience: Both Grad & Undergrad

2. Recall and state the standard theorems of differential geometry (e.g., Frenet-Serret equations, Hopf winding number theorem, four vertex theorem for convex curves, etc.), and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

3. Compute various quantities related to curves and surfaces in the n-dimensional real space using the definitions and theorems (e.g., the fundamental forms, arc length, curvature, total derivative, etc.).

Audience: Both Grad & Undergrad

4. Use the covered theorems in the context of longer arguments by examining their premises (e.g., arguing paths are geodesics, applying the inverse function theorem to show a level set is a manifold, etc.).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Graduate

**MATH 567 – MODERN NUMBER THEORY**

3 credits.

A course in number theory covering fundamentals and modern applications in topics of recent interest: Modular arithmetic, quadratic reciprocity, arithmetic functions, zeta function, Diophantine equations, transcendental numbers, Roth's theorem, continued fractions, and the circle method. Optional material from probability including random matrix theory.

**Requisites:** MATH 541 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

Honors - Honors Optional (%)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in the field of Number Theory (e.g., congruence, quadratic residue, arithmetic function, elliptic curves, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., a number is transcendental, a continued fraction is positive, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of number theory. (e.g., quadratic reciprocity, Roth's theorem, etc.). Moreover, the student will be able to recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use such theorems in the context of longer arguments by examining their premises (e.g., Applying the euclidean algorithm to show that rational numbers have a finite continued fraction expansion, etc.).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments using English with appropriate mathematical terminology and notation.

Audience: Both Grad & Undergrad

7. Identify applications of course content in areas of modern research.

Audience: Graduate

**MATH 570 – FUNDAMENTALS OF SET THEORY**

3 credits.

Introduces the basic concepts of Set Theory including: Set-theoretical paradoxes and means of avoiding them, sets, relations, functions, orders and well-orders, proof by transfinite induction and definitions by transfinite recursion, cardinal and ordinal numbers and their arithmetic, construction of the real numbers, the axiom of choice and its consequences.

**Requisites:** (MATH 234 and 467) or (MATH 341, 375, 421 or 521) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in set theory (e.g., sets, power sets, cardinality, ordinals, Zermelo-Fraenkel Axiom System etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that sets do or do not have the condition of a particular property (e.g., that a set is countable, enumerable, well ordered, etc.).

Audience: Both Grad & Undergrad

3. Describe the role of the axiom system of Zermelo-Fraenkel set theory.

Audience: Both Grad & Undergrad

4. Recall and state the standard theorems of set theory (e.g., the Axiom of Choice, Zorn's Lemma, the Well-ordering Theorem, construction of the real numbers from the natural numbers, etc.) and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in areas of modern research.

Audience: Graduate

### **MATH/PHILOS 571 – MATHEMATICAL LOGIC**

3 credits.

Basics of logic and mathematical proofs; propositional logic; first order logic; undecidability.

**Requisites:** (MATH 234 or 375), (MATH 320, 340, 341, or 375), and (MATH 341, 375, 421, 467, or 521), or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recall and state the formal definitions of the first-order logic and their properties used in formal logic (e.g., truth assignments, syntax, semantics, theories, models, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue certain objects do or do not have the condition or property (e.g., decidability, compactness, undecidability, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of logic. (e.g., Soundness and Completeness Theorems, the Compactness Theorem, Godel's Incompleteness Theorem, etc.) and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use concepts from logic in the context of larger arguments (e.g., nonstandard models of arithmetic, etc.).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in areas of modern research .

Audience: Graduate

### **MATH 607 – TOPICS IN MATHEMATICS STUDY ABROAD**

1-5 credits.

Credit is awarded to students who have completed an appropriate math course abroad at the advanced level having no direct equivalence within the math department offerings. The study abroad course must be pre-approved by the math department.

**Requisites:** None

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**MATH/B M I/BIOCHEM/BMOLCHEM 609 – MATHEMATICAL METHODS FOR SYSTEMS BIOLOGY**

3 credits.

Provides a rigorous foundation for mathematical modeling of biological systems. Mathematical techniques include dynamical systems and differential equations. Applications to biological pathways, including understanding of bistability within chemical reaction systems, are emphasized.

**Requisites:** MATH 415 and (MATH 320, 340, 341, or 375) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties in systems biology (e.g., reaction networks, reaction rate equations, mass-action kinetics models, detailed balanced and complex balanced systems, Lyapunov functions, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., reversible, weakly reversible, mass-action, detailed balanced, complex balanced, globally stable, oscillatory, persistent, permanent, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of the field (e.g., the Horn-Jackson theorem, the deficiency zero theorem, theorems on characterization of mass-action systems, theorems on persistence and permanence, theorems on dynamical equivalence, etc.) and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Construct mathematical arguments related to the above definitions, properties, and theorems, including the construction of examples and counterexamples.

Audience: Both Grad & Undergrad

5. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

6. Model real biological systems by means of systems of differential equations, and be able to use software (such as Matlab) for visualization of their dynamics. Example models could include: (i) Enzymes, substrates and saturating kinetics, (ii) Glycolytic oscillations, (iii) Cell cycle control, budding yeast cell cycle models, (iv) Activator-inhibitor and positive feedback systems.

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Graduate

**MATH 616 – DATA-DRIVEN DYNAMICAL SYSTEMS, STOCHASTIC MODELING AND PREDICTION**

3 credits.

An introduction to data-driven dynamical systems, including mathematical theory, methodology, numerical algorithms, applications and the use of a programming language to solve related coding problems. Topics include stochastic toolkits for dynamical systems and data science, linear Gaussian processes, nonlinear stochastic systems, elementary stochastic differential equations, data assimilation, parameter estimation, forecasting and prediction.

**Requisites:** (MATH 320, 340, 341 or 375) and (STAT/MATH 309, 431, STAT 311 or MATH 531) and (MATH 322, 341, 375, 421, or 467), graduate/professional standing, or declared in Mathematics VISP

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Conduct numerical simulations of stochastic dynamical systems and implement data assimilation methods.

Audience: Both Grad & Undergrad

2. Analyze data from a stochastic dynamical system and characterize the system's properties in terms of its statistics, such as mean, variance, and autocorrelation function.

Audience: Both Grad & Undergrad

3. Calculate analytical formulas for the solutions of discrete-time stochastic processes and stochastic differential equations.

Audience: Both Grad & Undergrad

4. Recall and state the basic properties of Brownian motion and the Wiener process.

Audience: Both Grad & Undergrad

5. Illustrate the basic properties of Brownian motion and the Wiener process using numerical simulations.

Audience: Both Grad & Undergrad

6. Estimate the parameters of a dynamical system using simulated data.

Audience: Both Grad & Undergrad

7. Predict the future evolution of a dynamical system using analytical formulas and numerical simulations.

Audience: Both Grad & Undergrad

8. Assess the accuracy of a prediction in terms of different definitions of error and uncertainty.

Audience: Both Grad & Undergrad

9. Identify applications of course content in areas of modern research.

Audience: Graduate

**MATH 619 – ANALYSIS OF PARTIAL DIFFERENTIAL EQUATIONS**

3 credits.

A rigorous introduction to the theoretical underpinnings of the basic methods and techniques in the modern theory of PDEs. It is aimed at math majors, but will also be useful to some students in the sciences, engineering and economics who feel the need for a deeper understanding of the theory of PDEs. The emphasis is on the exposure to a number of different methods of solution of PDEs and their connection to physical phenomena modeled by the equations. The goals include both learning to solve some basic types of PDEs as well as to understand the motivation behind and inner workings of the techniques involved.

**Requisites:** (MATH 322, 421, or 521) and (MATH 319, 320, 376, 415, or 519) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MATH 621 – INTRODUCTION TO MANIFOLDS**

3 credits.

Integration in Euclidean spaces, change of variables, multilinear algebra, vector fields and differential forms, manifolds and tangent spaces, integration on manifolds, Stokes theorem. Classical vector analysis. Cauchy integral theorem.

**Requisites:** MATH 522, (MATH 521 and 561), graduate/professional standing, or declared in Mathematics VISP

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Use the techniques of multilinear algebra and apply them to differential forms in Euclidean space and on abstract differentiable manifolds. This includes being able to compute with the exterior derivative.

Audience: Both Grad & Undergrad

2. Identify and/or construct differentiable manifolds. This includes being able to identify spaces as differentiable manifolds and to endow abstract topological spaces with differentiable manifold structures.

Audience: Both Grad & Undergrad

3. Extend calculus concepts from Euclidean space in order to apply them to abstract differentiable manifolds. This includes being able to identify and work with differentiable maps between differentiable manifolds in computations and proofs

Audience: Both Grad & Undergrad

4. Use the essential definitions and theorems from calculus on manifolds in the context of computations and proofs. This includes taking Lie derivatives of vector fields on differentiable manifolds, computing integrals of curves, integrating differential forms, and Stokes' theorem.

Audience: Both Grad & Undergrad

5. Identify applications of course content in current areas of research.

Audience: Graduate

**MATH 623 – COMPLEX ANALYSIS**

3 credits.

Elementary functions of a complex variable; conformal mapping; complex integrals; the calculus of residues.

**Requisites:** MATH 321 or 521 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in complex analysis (e.g., principle branches, conjugates, holomorphic and analytic functions, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., that a function is complex differentiable, that an infinite product converges, classification of singularities, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of complex analysis (e.g., Cauchy's Integral formula, the maximum modulus principle, the Riemann mapping Theorem), and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use such theorems in the context of longer arguments by examining their premises (e.g., computation of real integrals using path integration techniques, computation of residues of meromorphic functions, that a given function has an analytic continuation, etc.).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Graduate

**MATH 627 – INTRODUCTION TO FOURIER ANALYSIS**

3 credits.

Fourier series and integrals, and their applications.

**Requisites:** MATH 521 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties relevant to the analysis of Fourier series, the Fourier transform, and their applications in mathematics (e.g., convergence, divergence, convolution, Lipschitz property, Schwartz space, etc.).

Audience: Both Grad & Undergrad

2. Use the above definitions to prove if a mathematical construct does or does not have the condition of being a particular mathematical object or having a particular property used in Fourier analysis (e.g., that a sequence is equidistributed, that a set of functions is uniformly bounded, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems and results of elementary Fourier analysis (e.g., the Fourier series of an integrable function converges to that function on its domain, etc.), and recall the arguments for these results and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Use the above theorems in the context of longer arguments by examining their premises (e.g., verifying integrability of a function in order to conclude that its Fourier series converges, etc.).

Audience: Both Grad & Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad & Undergrad

6. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Graduate

**MATH 629 – INTRODUCTION TO MEASURE AND INTEGRATION**

3 credits.

Lebesgue integral and measure, abstract measure and integration, differentiation, spaces of integrable functions.

**Requisites:** MATH 522 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in measure theory (e.g., measures and measurability, Lebesgue integral, absolute continuity, product measures,  $L_p$  spaces, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., that a measure is absolutely continuous with respect to another one, that a sequence of functions converge almost everywhere or in measure, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of measure theory (e.g., Fatou's Lemma, Egoroff's theorem, Hahn decomposition theorem, monotone convergence theorem, dominated convergence theorem, Holder's inequality, etc.), and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, etc.).

Audience: Both Grad & Undergrad

5. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

6. Identify applications of course content in current areas of research.

Audience: Graduate

**MATH/ISYE/OTM/STAT 632 – INTRODUCTION TO STOCHASTIC PROCESSES**

3 credits.

Topics include discrete-time Markov chains, Poisson point processes, continuous-time Markov chains, and renewal processes. Applications to queueing, branching, and other models in science, engineering and business.

**Requisites:** (STAT/MATH 431, 309, STAT 311 or MATH 531) and (MATH 320, 340, 341, 375, 421 or 531) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties for stochastic processes (e.g., discrete space Markov chains, Poisson processes, renewal processes, branching processes, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., irreducibility, aperiodicity, recurrence, transience, the Markov property, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of stochastic processes. (e.g., laws of large numbers for Markov chains, existence of limiting/stationary distributions, law of large numbers for renewal processes, etc.) and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Construct mathematical arguments related to the above definitions, properties, and theorems, including the construction of examples and counterexamples.

Audience: Both Grad & Undergrad

5. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

6. Model simple real life situations by means of discrete-space stochastic processes and calculate probabilities associated with those processes.

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Graduate

### MATH 635 – AN INTRODUCTION TO BROWNIAN MOTION AND STOCHASTIC CALCULUS

3 credits.

Presents an introduction to Brownian motion and its application to stochastic calculus. Sample path properties of Brownian motion, Ito stochastic integrals, Ito's formula, stochastic differential equations and properties of their solutions, and various applications will be included.

**Requisites:** (MATH 521 and STAT/ISYE/MATH/OTM 632) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in stochastic calculus (e.g., martingale, stopping time, filtration, Brownian motion, stochastic integral etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., checking if a discrete or continuous time process is a martingale, using characteristic functions to characterize a distribution, identifying different methods of convergence, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of stochastic calculus. (e.g., martingale convergence, optional stopping theorem, existence results related to the Ito integral, Ito's formula, etc.), and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Solve simple stochastic differential equations.

Audience: Both Grad & Undergrad

5. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

6. Model simple financial situations by means of stochastic processes and calculate probabilities associated with those processes (e.g., the Black-Scholes formula).

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Graduate

### MATH 681 – SENIOR HONORS THESIS

3 credits.

Individual study for honors math majors writing a thesis in mathematics.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### MATH 682 – SENIOR HONORS THESIS

3 credits.

Individual study for honors math majors writing a thesis in mathematics.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### MATH 691 – UNDERGRADUATE THESIS

2-4 credits.

Individual study for students writing a thesis in mathematics.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2002

### MATH 692 – UNDERGRADUATE THESIS

2-4 credits.

Individual study for students writing a thesis in mathematics.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2018

**MATH 698 – DIRECTED STUDY**

1-3 credits.

Directed study projects as arranged with a faculty member.

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties used in an area of mathematics.

Audience: Both Grad &amp; Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property.

Audience: Both Grad &amp; Undergrad

3. Recall and state the standard theorems of an area of mathematics and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad &amp; Undergrad

4. Use such theorems in the context of longer arguments by examining their premises.

Audience: Both Grad &amp; Undergrad

5. Prove or disprove statements related to the above definitions, properties, and theorems using techniques of mathematical argument (direct methods, indirect methods, constructing examples and counterexamples, induction, etc.).

Audience: Both Grad &amp; Undergrad

6. Convey arguments using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad &amp; Undergrad

7. Identify applications of course content in areas of modern research.

Audience: Graduate

**MATH 699 – DIRECTED STUDY**

1-6 credits.

Directed study projects as arranged with a faculty member.

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MATH 703 – METHODS OF APPLIED MATHEMATICS 1**

3 credits.

Study of the linear algebraic structure underlying discrete equilibrium problems. Boundary value problems for continuous equilibria: Sturm-Liouville equations, Laplace's equation, Poisson's equation, and the equations for Stokes flow. Contour integration and conformal mapping. Applications of dynamics leading to initial value problems for ODEs and PDEs. Green's functions for ODEs and introduction to asymptotic methods for ODEs, e.g. WKB analysis. Separation of variables and eigenfunction expansions for linear PDEs. Examples from physics and engineering throughout. Knowledge of undergraduate linear algebra, analysis and complex analysis is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**MATH 704 – METHODS OF APPLIED MATHEMATICS-2**

3 credits.

Derivation, nature and solution of canonical partial differential equations of applied mathematics. Conservation laws, advection, diffusion. First order PDEs, characteristics, shocks. Traffic flow, eikonal and Hamilton-Jacobi equations. Higher order PDEs: classification, Fourier analysis, well-posedness. Series solutions and integral transforms. Green's functions and distributions. Similarity solutions. Asymptotics of Fourier integrals. Laplace's method, stationary phase. Ship waves. Perturbation methods. Knowledge of undergraduate linear algebra, analysis and complex analysis is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**MATH 705 – MATHEMATICAL FLUID DYNAMICS**

3 credits.

Advanced introduction to fluid dynamics. Basic concepts; elementary viscous flow; Navier-Stokes equations. Elementary airfoil theory; boundary layers. Vortex motion. Waves. Very viscous flow. Compressible flows. Instabilities, bifurcations, turbulence. Requires working knowledge of multivariate calculus, differential equations and mechanics.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2024

**MATH/STAT 709 – MATHEMATICAL STATISTICS I**

4 credits.

An introduction to measure theoretic probability, random variables, and high-dimensional statistics; conditional expectation, sufficiency, and unbiased estimation; methods of large sample theory including laws of large numbers and central limit theorems.

**Requisites:** Declared in Statistics MS, Statistics PhD, Biomedical Data Science PhD, Biomedical Data Science MS, or Statistics Doctoral Minor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Define statistical estimation problems using rigorous mathematical languages

Audience: Graduate

2. Derive basic statistical properties of an estimator such as bias and variance

Audience: Graduate

3. Analyze and compare different statistical estimators, and articulate the strengths and weaknesses of each method

Audience: Graduate

4. Apply theoretical tools such as concentration inequalities to new statistical problems in the form of mathematical proofs

Audience: Graduate

5. Articulate the distinctions between classical large-sample statistical theory and high-dimensional statistical theory, and critique recent statistical research

Audience: Graduate

**MATH/STAT 710 – MATHEMATICAL STATISTICS II**

4 credits.

Estimation theory, efficiency, Neyman-Pearson theory of hypothesis testing, confidence regions, decision theory, likelihood ratio theory, current research topics in mathematical statistics.

**Requisites:** STAT/MATH 709

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Define and distinguish different notions of optimality in point estimation, hypothesis testing, and confidence sets.

Audience: Graduate

2. Apply standard techniques to derive optimal estimators, hypothesis tests, and confidence sets.

Audience: Graduate

3. Study statistical inference procedures for parametric and non-parametric models.

Audience: Graduate

4. Investigate asymptotic analysis of point estimators, hypothesis tests, and confidence sets.

Audience: Graduate

5. Understand and critique current research in mathematical statistics.

Audience: Graduate

**MATH/COMP SCI 714 – METHODS OF COMPUTATIONAL MATHEMATICS I**

3 credits.

Development of finite difference methods for hyperbolic, parabolic and elliptic partial differential equations. Analysis of accuracy and stability of difference schemes. Direct and iterative methods for solving linear systems. Introduction to finite volume methods. Applications from science and engineering. Students are strongly encouraged to have programming skills (e.g. COMP SCI 200) and some undergraduate numerical analysis (e.g. MATH/COMP SCI 514 or COMP SCI 412), analysis and differential equations (e.g. MATH 322 and MATH 521) and linear algebra (e.g. MATH 341).

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MATH/COMP SCI 715 – METHODS OF COMPUTATIONAL MATHEMATICS II**

3 credits.

Introduction to spectral methods (Fourier, Chebyshev, Fast Fourier Transform), finite element methods (Galerkin methods, energy estimates and error analysis), and mesh-free methods (Monte-Carlo, smoothed-particle hydrodynamics) for solving partial differential equations. Applications from science and engineering. Applications from science and engineering. Students are strongly encouraged to have programming skills (e.g. COMP SCI 200), undergraduate numerical analysis (e.g. MATH/COMP SCI 514 or COMP SCI 412), analysis (MATH 322 and 521) and linear algebra (e.g. MATH 341 or equiv.)

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MATH 716 – ORDINARY DIFFERENTIAL EQUATIONS**

3 credits.

Existence, uniqueness, and continuous dependence theorems, linear systems, stability, singular points, and boundary value problems. Qualitative behavior of nonlinear equations, stability, Lyapunov functions, invariant manifolds, bifurcation theory, periodic orbits, and connecting orbits.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MATH 717 – STOCHASTIC COMPUTATIONAL METHODS**

3 credits.

Introduction to computational methods that use stochastic algorithms and/or methods that are applied to random or stochastic mathematical problems. The main emphasis will be placed on learning practical tools, while some aspects of theoretical foundations will also be covered (e.g., basic error analysis for numerical solution of stochastic differential equations (SDEs), and basic convergence of Monte Carlo methods). Topics include Monte Carlo methods, Bayesian inference and Bayesian sampling, simulation of Markov chains, numerical analysis for SDEs, data assimilation / state estimation, stochastic optimization methods and random sketching. Applications to science, engineering, finance, data science, and other practical problems also included.

**Requisites:** Graduate/professional standing or declared in Mathematics Visiting International Student Program (graduate or dissertator)

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Implement a range of Monte Carlo solvers.

Audience: Graduate

2. Write clear and well-reasoned mathematical arguments that explain the convergence of Monte Carlo methods.

Audience: Graduate

3. Implement stochastic optimization methods, and understand the basic proofs for convergence.

Audience: Graduate

4. Explain and implement a range of data assimilation methods.

Audience: Graduate

5. Apply the Monte Carlo solvers, stochastic optimization solvers and data assimilation solvers to practical problems.

Audience: Graduate

6. Conduct error analysis for computational stochastic differential equations.

Audience: Graduate

**MATH 718 – RANDOMIZED LINEAR ALGEBRA AND APPLICATIONS**

3 credits.

Random solvers have been playing increasingly crucial roles in the modern computational tasks. The recent breakthroughs in applied and computational linear algebra that incorporate techniques of randomization have proven to be of great importance in modern applied math, computational sciences and data science, such as inverse problems, machine learning and scientific computing. The guiding principle is that one may greatly reduce computational and storage expenses at the cost of a small probability of failure. Systematic study of these modern methods of randomized linear algebra solvers will be provided, presenting mathematical backgrounds, algorithms, and concrete applications. Core theoretical topics include randomized Kaczmarz and its generalization to stochastic gradient descent, randomized singular value decomposition, random sketching, matrix completion, and compressive sensing, and corresponding applications.

**Requisites:** Graduate/professional standing or declared in Mathematics VISP (graduate or dissertator)

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Implement, in a computer language, the principal linear algebra solvers, namely, matrix completion, randomized SVD, matrix sketching, and the Kaczmarz algorithm.

Audience: Graduate

2. Identify the conditions, assumptions, and effectiveness of the principal linear algebra solvers.

Audience: Graduate

3. Reproduce the proof strategies for effectiveness of these algorithms and summarize the main parts of these proofs.

Audience: Graduate

4. Apply random linear algebra solvers to problems from image reconstruction, inverse problems and topic modeling.

Audience: Graduate

5. Model problems from the physical or social sciences in matrix form and identify regimes to apply linear algebra solvers.

Audience: Graduate

**MATH 719 – PARTIAL DIFFERENTIAL EQUATIONS**

3 credits.

Classical theory of partial differential equations, together with an introduction to the modern theory based on functional analysis. Familiarity with basic measure theory (e.g. MATH 629 or 721) or concurrent registration in MATH 721 is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recall and state the basic theorems regarding solutions to the transport, Laplace, heat, and wave equations.

Audience: Graduate

2. Use the above theorems to analyze solutions to first and second order linear partial differential equations of the above types, with novel initial data or boundary values.

Audience: Graduate

3. Apply basic tools for studying first order nonlinear partial differential equations to analyze conservation laws and equations of Hamilton-Jacobi type.

Audience: Graduate

4. Recall and state the definitions and basic theorems of Sobolev spaces.

Audience: Graduate

5. Analyze novel second order elliptic equations by establishing existence, regularity, and maximum principles of solutions, given initial or boundary data with various properties.

Audience: Graduate

**MATH 720 – PARTIAL DIFFERENTIAL EQUATIONS**

3 credits.

Linear elliptic, parabolic and hyperbolic equations, continuing with calculus of variations and then nonlinear initial value problems.

**Requisites:** Graduate/professional standing or declared in Mathematics VISP (graduate or dissertator)

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze notions of weak solutions to linear and nonlinear initial value problems defined by partial differential equations of first-order, elliptic, parabolic, and hyperbolic types.

Audience: Graduate

2. Analyze proof methods to establish uniqueness and existence of weak solutions to partial differential equations.

Audience: Graduate

3. Investigate regularity of weak solutions via various different viewpoints.

Audience: Graduate

4. Illustrate the general theory by applying it to concrete examples.

Audience: Graduate

5. Investigate parameter dependence of weak solutions to both linear and nonlinear PDE

Audience: Graduate

**MATH 721 – A FIRST COURSE IN REAL ANALYSIS**

3 credits.

Real analysis concentrating on measures, integration, and differentiation and including an introduction to Hilbert spaces. Knowledge of undergraduate analysis (e.g. the sequence MATH 521 and 522) is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MATH 722 – COMPLEX ANALYSIS**

3 credits.

The basic theory of functions of one complex variable including Cauchy formula, singularities and residues, meromorphic functions, conformal mappings, harmonic functions, approximation and the nonhomogeneous  $\bar{\partial}$ -equation. Requires knowledge of undergraduate analysis (e.g. the sequence MATH 521 and 522).

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MATH 725 – A SECOND COURSE IN REAL ANALYSIS**

3 credits.

Continuation of MATH 721. An introduction to further topics in real analysis: Banach spaces, Fourier transforms, elements of distribution theory, and applications.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MATH/COMP SCI/ISYE/STAT 726 – NONLINEAR OPTIMIZATION I**

3 credits.

Theory and algorithms for nonlinear optimization, focusing on unconstrained optimization. Line-search and trust-region methods; quasi-Newton methods; conjugate-gradient and limited-memory methods for large-scale problems; derivative-free optimization; algorithms for least-squares problems and nonlinear equations; gradient projection algorithms for bound-constrained problems; and simple penalty methods for nonlinearly constrained optimization. Students are strongly encouraged to have knowledge of linear algebra and familiarity with basic mathematical analysis.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MATH/COMP SCI/ISYE 728 – INTEGER OPTIMIZATION**

3 credits.

Introduces optimization problems over integers, and surveys the theory behind the algorithms used in state-of-the-art methods for solving such problems. Special attention is given to the polyhedral formulations of these problems, and to their algebraic and geometric properties. Applicability of Integer Optimization is highlighted with applications in combinatorial optimization. Key topics include: formulations, relaxations, polyhedral theory, cutting planes, decomposition, enumeration. Students are strongly encouraged to have knowledge of Linear Programming (e.g., MATH/COMP SCI/ISYE/STAT 525), including algorithms, duality and polyhedral theory.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe and explain the basics of polyhedral theory, which consists in the study of systems of linear inequalities both from an algebraic and a geometric point of view

Audience: Graduate

2. Define perfect formulations and identify what properties are desirable in an integer programming formulation of a problem

Audience: Graduate

3. Explain how valid inequalities can be used as cutting planes to strengthen integer programming formulations

Audience: Graduate

**MATH/COMP SCI/ISYE 730 – NONLINEAR OPTIMIZATION II**

3 credits.

Theory and algorithms for nonlinearly constrained optimization. Relevant geometric concepts, including tangent and normal cones, theorems of the alternative, and separation results. Constraint qualifications. Geometric and algebraic expression of first-order optimality conditions. Second-order optimality conditions. Duality. Nonlinear programming algorithms: merit functions and filters; interior-point, augmented Lagrangian, and sequential quadratic programming algorithms.

**Requisites:** STAT/COMP SCI/ISYE/MATH 726**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2022**MATH/STAT 733 – THEORY OF PROBABILITY I**

3 credits.

An introduction to measure theoretic probability and stochastic processes. Topics include foundations, independence, zero-one laws, laws of large numbers, convergence in distribution, characteristic functions, central limit theorems, random walks, conditional expectations. Familiarity with basic measure theory (e.g. MATH 629 or 721) or concurrent registration in MATH 721 is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Fall 2024**MATH/STAT 734 – THEORY OF PROBABILITY II**

3 credits.

Possible topics include martingales, weak convergence of measures, introduction to Brownian motion.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MATH 735 – STOCHASTIC ANALYSIS**

3 credits.

Foundations of continuous time stochastic processes, semimartingales and the semimartingale integral, Ito's formula, stochastic differential equations, stochastic equations for Markov processes, application in finance, filtering, and control. The course relies on measure theoretic probability theory that can be reviewed at the beginning of the semester.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**MATH 740 – ENUMERATIVE COMBINATORICS/SYMMETRIC FUNCTIONS**

3 credits.

Inclusion-exclusion principle, permutation statistics, sieve methods, unimodal sequences, posets, lattice theory, Mobius functions, generating functions, bases and transition matrices for symmetric functions, Young tableaux, plane partitions, polytopes, poset homology, Stanley-Reisner rings.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2020**MATH 741 – ABSTRACT ALGEBRA**

3 credits.

Usually a study of finite groups and noncommutative rings. Group theoretic topics may include: permutation groups, Lagrange's theorem, Cauchy's theorem and the Sylow theorems, solvable and nilpotent groups. Ring theoretic topics may include: Artinian rings and modules, the Wedderburn theorems, the Hopkins-Levitzki theorem, the Jacobson radical and density theorem. The basic prerequisite for all advanced graduate courses in algebra. Familiarity with topics in undergraduate algebra (e.g. MATH 541 and 542) is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**MATH 742 – ABSTRACT ALGEBRA**

3 credits.

Continuation of MATH 741. Usually the study of commutative rings and fields. Ring theoretic topics may include: modules over PIDs, Noetherian rings and the Hilbert basis theorem, the Lasker-Noether theorem, the Krull intersection theorem, integrality and the Hilbert Nullstellensatz. Field theoretic topics may include: algebraic extensions, Galois theory, solvability of polynomials and classical constructibility problems.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025

**MATH 746 – TOPICS IN RING THEORY**

3 credits.

Will alternate between commutative and noncommutative ring theory. Commutative topics include localization; local rings; dimension theory; Cohen-Macaulay rings. Noncommutative topics include projective modules; injective modules; flat modules; homological and global dimension; Wedderburn and Goldie rings. Basic graduate algebra courses (e.g. MATH 741 and 742) are strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**MATH 747 – LIE ALGEBRAS**

3 credits.

Lie algebras and matrix groups. Topics: tangent spaces; exponentials; Baker-Campbell-Hausdorff formula; (nilpotent, solvable, semisimple) Lie algebras; Engel's and Lie's theorems; Levi decomposition; Killing form;  $\mathfrak{sl}(2)$ -representations; root systems; Dynkin diagrams; Weyl groups; Cartan and Borel subalgebras; Serre's theorem. Basic graduate algebra courses (e.g. MATH 541 and 542 or MATH 741 and 742) are strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**MATH 748 – ALGEBRAIC NUMBER THEORY**

3 credits.

A rigorous introduction to the arithmetic of number fields; algebraic integers, geometry of numbers, Dirichlet's Unit Theorem, ideal class groups, first case of Fermat's Last Theorem; prime decompositions, Galois automorphisms. Basic graduate algebra courses (e.g. MATH 741 and 742) are strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MATH 749 – ANALYTIC NUMBER THEORY**

3 credits.

An introduction to the Riemann zeta function and Dirichlet L-functions, and their application to topics such as the distribution of prime numbers and the arithmetic of quadratic fields. Familiarity with elementary number theory [such as MATH 567] and complex analysis [such as MATH 623] is strongly recommended.

**Requisites:** Graduate/professional standing or declared in Mathematics VISP (graduate or dissertator)

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Examine a range of mathematical proofs and identify underlying principles and techniques.

Audience: Graduate

2. Write clear and well-reasoned mathematical arguments.

Audience: Graduate

3. Explain the methods used to establish the analytic continuation and functional equation of the Riemann zeta function and Dirichlet L-functions.

Audience: Graduate

4. Apply tools from complex analysis to analyze the distribution of zeros of L-functions.

Audience: Graduate

5. Apply the above results on the zeros of L-functions to analyze the distribution of prime numbers.

Audience: Graduate

**MATH 750 – HOMOLOGICAL ALGEBRA**

3 credits.

Topics include: complexes, cohomology, double complexes, spectral sequences; abelian categories, derived categories, derived functors; Tor and Ext, Koszul complexes; group cohomology; sheaf cohomology, hypercohomology. Basic graduate algebra courses (e.g. MATH 741 and 742) are strongly recommended

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MATH 751 – INTRODUCTORY TOPOLOGY I**

3 credits.

An introduction to algebraic and differential topology. Elements of homotopy theory, fundamental group, covering spaces. Differentiable manifolds, tangent vectors, regular values, transversality, examples of compact Lie groups. Homological algebra, chain complexes, cell complexes, singular and cellular homology, calculations for surfaces, spheres, projective spaces, etc. Familiarity with undergraduate algebra and topology (MATH 541 or 551) is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MATH 752 – INTRODUCTORY TOPOLOGY II**

3 credits.

Continuation of MATH 751. Cohomology, Universal Coefficient Theorem, K nneth Formula, cup and cap products, applications to manifolds, orientability, Poincar  Duality. Differential forms, integration and Stokes Theorem, De Rham Theorem. Calculations, further duality theorems, Euler class, Lefschetz Fixed-Point Theorem.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MATH 753 – ALGEBRAIC TOPOLOGY I**

3 credits.

Higher homotopy groups, elements of obstruction theory, fibrations, bundle theory, classifying spaces, applications to smooth manifolds, differential forms, vector bundles, characteristic classes, cobordism, applications and calculations. Basic graduate topology courses (e.g. MATH 751 and 752) are strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**MATH 758 – INTRODUCTION TO ERGODIC THEORY AND DYNAMICS**

3 credits.

An introduction to ergodic theory and dynamics covering fundamental theorems of ergodic theory, classical examples of one and two dimensional dynamics as well as applications to study of group actions.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze a range of mathematical proofs in discrete and continuous dynamical systems and recognize the underlying principles and techniques.

Audience: Graduate

2. Write clear and well-reasoned mathematical arguments to describe the long time behavior of measure preserving transformations.

Audience: Graduate

3. State the Birkhoff, von Neumann, and maximal ergodic theorems and reproduce their proofs.

Audience: Graduate

4. Apply fundamental ergodic theorems from classical dynamics to low-dimensional examples such as the circle rotation, interval exchange transformations, and geodesic and horocycle flows on two dimensional manifolds.

Audience: Graduate

5. Apply results in ergodic theory and dynamics to solve novel problems in geometric group theory and geometric topology.

Audience: Graduate

**MATH 761 – DIFFERENTIABLE MANIFOLDS**

3 credits.

Differentiable manifolds, vector bundles, implicit function theorem, submersions and immersions, vector fields and flows, foliations and Frobenius theorem, differential forms and exterior calculus, integration and Stokes' theorem, De Rham theory, Riemannian metrics. Familiarity with basic undergraduate analysis courses (MATH 521 and 522 or MATH 621) is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MATH 763 – INTRODUCTION TO ALGEBRAIC GEOMETRY**

3 credits.

Algebraic preliminaries, including local rings; valuation theory, and power series rings; geometry of algebraic varieties with emphasis on curves and surfaces.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MATH 764 – INTRODUCTION TO ALGEBRAIC GEOMETRY**

3 credits.

Continuation of MATH 763.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

**MATH 765 – DIFFERENTIAL GEOMETRY**

3 credits.

Covers the metric properties of Riemannian manifolds. The following topics will be covered: Vector bundles and connections, Riemannian metrics, submanifolds and second fundamental form, first variation of arc length, geodesics, Hopf-Rinow theorem, second variation of arc length, Jacobi fields and index lemmas, Bonnet-Meyer theorem, Rauch comparison theorem, spaces of constant curvature, Hodge-de Rham theory. Familiarity with the topics in a differential manifolds course (e.g. MATH 761) is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MATH 770 – FOUNDATIONS OF MATHEMATICS**

3 credits.

First-order logic syntax and semantics, Completeness and Compactness Theorems, Lowenheim-Skolem Theorem, computable and computably enumerable sets, Incompleteness Theorem, axioms of Zermelo-Fraenkel set theory with choice, ordinal and cardinal arithmetic.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MATH 771 – SET THEORY**

3 credits.

Martin's Axiom, Suslin and Aronszajn trees, diamond principle, absoluteness and reflection, constructible universe, and one-step forcing constructions. Familiarity with the topics in a basic Foundations course such as MATH 770 is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MATH 773 – COMPUTABILITY THEORY**

3 credits.

Turing degree and jump, strong reducibilities, arithmetic hierarchy, index sets, simple and (hyper)hypersimple sets, easy forcing arguments in computability theory, finite and infinite injury, Friedberg-Muchnik and Sacks Splitting Theorem, Sacks Jump and Sacks Density Theorems, computable ordinals. Familiarity with the topics in a basic Foundations course such as MATH 770 is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MATH 776 – MODEL THEORY**

3 credits.

Review of compactness and some consequences. Quantifier elimination with examples. The omitting types theorem. Categoricity. Baldwin-Lachlan theory. Strongly minimal and o-minimal theories. Saturated models. Morley's theorem. Familiarity with the topics in a basic Foundations course such as MATH 770 is strongly recommended.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**MATH 790 – MASTERS THESIS**

1-3 credits.

Work on a Master's thesis under the supervision of a faculty member.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Spring 2025

**MATH 801 – TOPICS IN APPLIED MATHEMATICS**

3 credits.

Selected topics in applied mathematics, applied analysis or numerical analysis and scientific computing.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**MATH/STAT 803 – EXPERIMENTAL DESIGN I**

3 credits.

Summary of matrix algebra required, theory of estimable functions, incomplete blocks, balanced incomplete block designs, partially balanced incomplete block designs.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MATH 807 – DYNAMICAL SYSTEMS**

3 credits.

Treats the qualitative behavior of continuous and discrete dynamical systems, including Hamiltonian systems of differential equations. Typical topics include periodic and almost periodic solutions, the fixed point theorem of Poincare and Birkhoff, invariant curves and KAM theory, celestial mechanics, and chaotic behavior.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

**MATH 821 – ADVANCED TOPICS IN REAL ANALYSIS**

3 credits.

Topics in partial differential equations and real analysis.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**MATH 823 – ADVANCED TOPICS IN COMPLEX ANALYSIS**

3 credits.

Several complex variables. Basic several complex variables or more special topics.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**MATH 825 – SELECTED TOPICS IN FUNCTIONAL ANALYSIS**

3 credits.

Topics will vary and may include spectral theory, nonlinear functional analysis or abstract harmonic analysis.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2021

**MATH 826 – ADVANCED TOPICS IN FUNCTIONAL ANALYSIS AND DIFFERENTIAL EQUATIONS**

3 credits.

Topics in functional analysis and differential equations.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MATH 827 – FOURIER ANALYSIS**

3 credits.

Introduction to Fourier analysis in Euclidean spaces and related topics that may include singular and oscillatory integrals and trigonometric series.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**MATH 828 – ADVANCED TOPICS IN HARMONIC ANALYSIS**

3 credits.

Continuation of MATH 827. Advanced topics in harmonic analysis.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MATH/STAT 833 – TOPICS IN THE THEORY OF PROBABILITY**

3 credits.

Advanced topics in probability and stochastic processes.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MATH/E C E 842 – TOPICS IN APPLIED ALGEBRA**

3 credits.

Applied topics with emphasis on algebraic constructions and structures. Examples include: algebraic coding theory; codes (algebraic-geometric, convolutional, low-density-parity-check, space-time); curve and lattice based cryptography; watermarking; computer vision (face recognition, multiview geometry).

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MATH 843 – REPRESENTATION THEORY**

3 credits.

Introduction to the representation theory of Lie groups and their combinatorics. Universal enveloping algebras, highest weight modules, induction, restriction, weights, characters, multiplicity formulas, tensor products, Shapovalov forms, filtrations, Kazhdan-Zetlin patterns, Littelmann paths.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**MATH 844 – ARITHMETIC GEOMETRY**

3 credits.

An introduction to arithmetic geometry with emphasis on arithmetic of elliptic curves.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**MATH 845 – CLASS FIELD THEORY**

3 credits.

Introduction to local and global class field theory. Theory of local fields; local and global class field theory; complex multiplication, adeles, ideles, idele class characters, Tchebotarev's Density Theorem, CM elliptic curves, construction of class fields of imaginary quadratic fields.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**MATH 846 – TOPICS IN COMBINATORICS**

3 credits.

Topics in algebraic combinatorics such as (but not limited to) association schemes, hypergeometric series, classical orthogonal polynomials, codes, lattices, invariant theory, alternating sign matrices and domino tilings, statistical mechanical models, 6j-symbols, buildings and diagram geometries, matroids.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

**MATH 847 – TOPICS IN ALGEBRA**

3 credits.

Topics may include: Lie groups, algebraic groups, Chevalley groups, simple groups and associated geometries, group cohomology, group rings, Hopf algebras, enveloping algebras, quantum groups, infinite-dimensional Lie algebras, Hecke algebras, automorphic forms, Galois representations, zeta and L-functions, abelian varieties.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2022

**MATH 848 – ADVANCED TOPICS IN NUMBER THEORY**

3 credits.

This is an advanced graduate topic course in number theory. Topics will vary. Target audience: Advanced graduate students in number theory, representation theory, and algebraic geometry.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2021

**MATH 849 – AUTOMORPHIC FORMS**

3 credits.

Classical and/or modern theory of automorphic forms. Representation theory of  $GL(2)$ .

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MATH 851 – TOPICS IN GEOMETRIC TOPOLOGY**

3 credits.

Advanced Topics in Geometric Topology.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MATH 853 – TOPICS IN ALGEBRAIC TOPOLOGY**

3 credits.

Topics in Algebraic Topology.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Fall 2022**MATH 856 – TOPICS IN DIFFERENTIAL TOPOLOGY**

3 credits.

The theory of differential manifolds such as differential forms and de Rham theorem, cobordism groups, Lie groups, homogeneous spaces, fiber bundles, characteristic classes.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Fall 2021**MATH 858 – INTRODUCTION TO DYNAMICS ON MODULI SPACES**

3 credits.

An introduction to ergodic theory and dynamics on the moduli space of translation surfaces with applications to counting problems in rational billiards and on flat surfaces. Covers dynamical techniques inspired by homogeneous dynamics including the use of Margulis functions to establish quantitative recurrence results; the use of random walks, inspired by work of Benoist and Quint, to prove measure rigidity statements; and the use of Zimmer's theory of the algebraic hull to prove finiteness results.

**Requisites:** Graduate/professional standing or declared in Mathematics VISP (graduate or dissertator)**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Learning Outcomes:** 1. Apply fundamental dynamical techniques and ergodic theorems to counting problems, for instance counting periodic trajectories on a billiard table or cylinders on a translation surface using the Siegel-Veech theorem, Nevo's ergodic theorem, and/or the trapezoid method of Eskin-Masur.

Audience: Graduate

2. Write clear and well-reasoned mathematical arguments to describe the frequency with which a trajectory will recur to a neighborhood of its starting point using Margulis functions.

Audience: Graduate

3. State the Eskin-Mirzakhani classification of  $SL(2, \mathbb{R})$  ergodic invariant measures on moduli spaces of translation surfaces and describe the use of random walks and the exponential drift argument of Benoist-Quint to prove measure rigidity statements.

Audience: Graduate

4. Apply results in ergodic theory and dynamics to solve novel problems in geometric topology.

Audience: Graduate

5. Analyze a range of mathematical proofs in dynamical systems on translation surfaces and their moduli spaces and recognize the underlying principles and techniques.

Audience: Graduate

**MATH 863 – ADVANCED TOPICS IN ALGEBRAIC GEOMETRY**

3 credits.

Geometry of several complex variables; algebraic groups, abelian varieties; topological aspects of algebraic geometry, including sheaf theory and homology theory; advanced theory of local rings; intersection theory of algebraic varieties.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025

**MATH 865 – ADVANCED TOPICS IN GEOMETRY**

3 credits.

Selected from advanced projective geometry, non-Euclidean geometry, Riemannian geometry, distance geometry and the geometry of convex surfaces, geometry of numbers.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**MATH 873 – ADVANCED TOPICS IN FOUNDATIONS**

3 credits.

Advanced topics from all areas of mathematical logic.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**MATH/E C E/STAT 888 – TOPICS IN MATHEMATICAL DATA SCIENCE**

1-3 credits.

Advanced topics in the mathematical foundations of data science

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply advanced mathematical concepts to solve a variety of data science problems

Audience: Graduate

2. Analyze rigorously the mathematical properties of methods used in data science

Audience: Graduate

**MATH 900 – GRADUATE TEACHING SEMINAR**

1 credit.

Focuses on theory and practical skills relevant to teaching mathematics at the graduate or post-secondary level.

**Requisites:** Declared in Mathematics PhD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Design lesson plans and curricular activities based on research-supported approaches to teaching mathematics at the university level.

Audience: Graduate

2. Develop individualized strategies to foster inclusive learning environments in the mathematics classroom.

Audience: Graduate

3. Critically evaluate a variety of teaching approaches through self and peer evaluations and examination of case studies.

Audience: Graduate

4. Apply best practices in teaching and learning in a low-stakes environment to practice and receive feedback on the performance of those skills.

Audience: Graduate

**MATH 921 – SEMINAR IN ANALYSIS**

1-3 credits.

Selected topics in Analysis.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MATH 941 – SEMINAR-ALGEBRA**

1-3 credits.

Selected topics in Algebra.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MATH 951 – SEMINAR IN TOPOLOGY**

1-3 credits.

Selected topics in Topology.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MATH 967 – SEMINAR IN NUMBER THEORY**

1-3 credits.

Selected topics in Number Theory.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MATH 975 – SEMINAR-THE FOUNDATIONS OF MATHEMATICS**

1-3 credits.

Selected topics in Mathematical Logic.

**Requisites:** Graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MATH 990 – READING AND RESEARCH**

1-3 credits.

Reading and research in all areas of Mathematics.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**MECHANICAL ENGINEERING  
(M E)****M E 1 – COOPERATIVE EDUCATION PROGRAM**

1 credit.

Work experience which combines classroom theory with practical knowledge of operations to provide students with a background upon which to base a professional career in industry.

**Requisites:** Sophomore standing**Course Designation:** Workplace - Workplace Experience Course**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**Learning Outcomes:** 1. Identify and respond appropriately to real-life engineering ethics cases relevant to co-op work

Audience: Undergraduate

2. Synthesize and apply appropriate technical education to real world technical work

Audience: Undergraduate

3. Communicate effectively in writing and speaking with a range of audiences in the workplace, including those without disciplinary expertise

Audience: Undergraduate

4. Develop professional and transferable habits like time management skills, collaborative problem-solving skills, and research skills for learning new information

Audience: Undergraduate

**M E 160 – ARCHITECTURAL GRAPHICS**

3 credits.

The skill of communicating through the graphic media of freehand and instrumental drawing. Architectural presentation, isometric, perspective and shades and shadows.

**Requisites:** None**Repeatable for Credit:** No**Last Taught:** Fall 2018

**M E 201 – INTRODUCTION TO MECHANICAL ENGINEERING**

3 credits.

Provides an introduction to the field of Mechanical Engineering in the context of a major, semester-long project that is carried out in small groups as well as several, smaller hands-on projects. Obtain a shop pass, design build and test small prototypes using the shop as well as 3-D printing, take measurements using various instruments, and use a microcontroller to control a system. Introduction to software that is particularly useful to Mechanical Engineers including SolidWorks and EES. Learn how to design experiments, obtain data, use data to develop simple models of systems, exercise models for the purposes of design, and present their results professionally. It will provide a context for the math, physics and chemistry classes that are taken during the first year of the Mechanical Engineering curriculum and also provide a preview of future ME courses and should also give you a glimpse into the breadth of opportunities afforded by a mechanical engineering degree.

**Requisites:** Declared in Biomedical, Biological Systems, Chemical, Civil, Computer, Electrical, Environmental, Geological, Industrial, Mechanical, or Nuclear Engineering, Materials Science and Engineering, Engineering Physics, or Engineering Mechanics

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Measure an electrical signal using digital equipment

Audience: Undergraduate

2. Calculate resolution of an electrical signal measurement

Audience: Undergraduate

3. Design a component to execute a specified task

Audience: Undergraduate

4. Construct a prototype based on a design

Audience: Undergraduate

5. Interpret test data from a test or experiment

Audience: Undergraduate

6. Solve a quantitative engineering problem using computer tools

Audience: Undergraduate

**M E 231 – GEOMETRIC MODELING FOR DESIGN AND MANUFACTURING**

3 credits.

Introduction to basic methods and fundamental concepts in geometric description and modeling of mechanical form, components, and assemblies. Topics include elements of descriptive geometry, engineering drawing standards, introduction to computer modeling, and geometric dimensioning and tolerancing (GDT). Lectures are reinforced by the laboratory experience where students operate modern commercial computer-aided design systems to model and to learn the basics of engineering communication, specification, and annotation.

**Requisites:** Declared in Biomedical, Biological Systems, Chemical, Civil, Computer, Electrical, Environmental, Geological, Industrial, Mechanical or Nuclear Engineering, Mat Sci and Engin, Engin Physics, Engineering Mechanics or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Model fully-constrained, three-dimensional engineering components using software

Audience: Undergraduate

2. Model the assembly of three-dimensional components

Audience: Undergraduate

3. Predict mechanical motion of a mechanism in an assembly

Audience: Undergraduate

4. Apply geometric dimensioning and tolerancing to components and assemblies

Audience: Undergraduate

5. Solve simple descriptive geometry and orthographic projection problems

Audience: Undergraduate

6. Apply engineering dimensions to a component and create engineering drawings

Audience: Undergraduate

7. Solve tolerance stack-up for parts/assemblies on an engineering drawing

Audience: Undergraduate

**M E 240 – DYNAMICS**

3 credits.

Rectilinear and curvilinear motion of a particle; force, mass, acceleration; work, potential, and kinetic energy; impulse and momentum; kinematics of rigid bodies; moving coordinate systems with relative motion; general planar rigid body kinematics and kinetics. Applications to linkages, cams and geared systems.

**Requisites:** E M A 201 and MATH 222, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Summer 2024

**Learning Outcomes:** 1. Derive kinematic relationships among position, velocity and acceleration for systems of particles and rigid bodies

Audience: Undergraduate

2. Apply and solve Newton-Euler equations to analyze the motion of systems of particles and rigid bodies

Audience: Undergraduate

3. Apply and solve work-energy equations to analyze the motion of systems of particles and rigid bodies

Audience: Undergraduate

4. Apply and solve momentum equations to analyze the motion of systems of particles and rigid bodies

Audience: Undergraduate

**M E 273 – ENGINEERING PROBLEM SOLVING WITH EES**

1 credit.

This course will serve the dual purpose of providing students with a high level of proficiency in the Engineering Equation Solver software as well as giving students the opportunity to solve high-level engineering problems using this tool. Students leaving the course will have a very solid understanding of equation solving software including advanced features that would not be covered in any other class on campus. Students will also get another opportunity to apply sophisticated computing tools to engineering applications.

**Requisites:** MATH 222 or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Solve engineering problems involving multiple, non-linear algebraic equations

Audience: Undergraduate

2. Analyze data to visualize time dependent solutions

Audience: Undergraduate

3. Apply numerical integration schemes to one-dimensional steady-state and transient problems

Audience: Undergraduate

4. Solve complex engineering problems using numerical methods

Audience: Undergraduate

**M E 291 – UNDERGRADUATE MECHANICAL ENGINEERING PROJECTS**

1-3 credits.

Individual lab projects under staff supervision.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply basic physical and mathematical principles to engineering research problems

Audience: Undergraduate

2. Communicate technical concepts to a diverse audience via verbal or written media

Audience: Undergraduate

**M E 299 – INDEPENDENT STUDY**

1-3 credits.

Directed study projects as arranged with instructor.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply basic physical and mathematical principles to complete an engineering project

Audience: Undergraduate

2. Apply basic mechanical engineering principles to complete an engineering project

Audience: Undergraduate

3. Communicate technical concepts to a diverse audience via verbal or written media

Audience: Undergraduate

### **M E 306 – MECHANICS OF MATERIALS**

3 credits.

Stress and strain, torsion, bending of beams, shearing stresses in beams, compound stresses, principal stresses, deflections of beams, statically indeterminate members, columns.

**Requisites:** E M A 201 and MATH 222, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2024

**Learning Outcomes:** 1. analyze stress, strain, and deflection of structures subjected to tension, compression, torsion, and bending

Audience: Undergraduate

2. predict failure of materials and structures

Audience: Undergraduate

3. identify the assumptions required to solve a mechanics problem

Audience: Undergraduate

4. interpret written derivations of key mechanics equations

Audience: Undergraduate

5. develop practices for independent learning and study

Audience: Undergraduate

### **M E/ E M A 307 – MECHANICS OF MATERIALS LAB**

1 credit.

Data processing, tension/compression tests, creep stress concentrations, fatigue, fracture, composite materials, combined stress, beam flexure, dynamic loads, buckling.

**Requisites:** (M E 306, E M A 303 or concurrent enrollment) or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Perform a tensile test

Audience: Undergraduate

2. Calculate material properties from tensile test data

Audience: Undergraduate

3. Compare experimentally determined values to theoretical values

Audience: Undergraduate

4. Plot experimental data in an efficient and effective manner

Audience: Undergraduate

5. Identify sources of error and uncertainty in mechanical tests

Audience: Undergraduate

### **M E 310 – MANUFACTURING: POLYMER PROCESSING AND ENGINEERING**

3 credits.

Introduction to all important aspects of polymer processing and engineering including polymeric materials, material properties, design and manufacturing considerations, processing methods, part performance, post-consumer recycling and upcycling, societal responsibilities and ethics, and various techniques for modeling in materials processing like dimensional analysis, design of experiments, analytical solutions, and computer simulation.

**Requisites:** (M E 306 or E M A 303) and M E 231

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the relationship among materials, properties, processes, and performance of plastics products

Audience: Undergraduate

2. Describe polymer processes, process selection, and optimal design and apply the basic terminology associated with the field of polymer processing and manufacturing

Audience: Undergraduate

3. Conduct experiments, analyze and interpret the data

Audience: Undergraduate

4. Identify techniques and decision making tools for increased quality, product safety, decreased cost, reduced cycle times and reliability and productivity

Audience: Undergraduate

5. Identify ethical and sustainability concerns that arise in manufacturing

Audience: Undergraduate

**M E 311 – MANUFACTURING: METALS AND AUTOMATION**

3 credits.

An introduction to processes for manufacturing metal parts, designing parts to make them easier to manufacture with these methods, and approaches for increasing productivity. Manufacturing automation, control, and metrology for increased safety, productivity, and part quality. Engineering economics for determining the cost of manufacturing a part.

**Requisites:** (M S & E 350, 351, or 352 or declared in Biological Systems Engineering: Machinery Systems BS), M E 231, and (M E 306 or E M A 303)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Take an engineering drawing or CAD model of a part and develop a production method for making the part

Audience: Undergraduate

2. Design with manufacturing in mind so their designs are inherently easy/economical to produce

Audience: Undergraduate

3. Improve manufacturing of products in terms of rates and quantities (w.r.t. profitability)

Audience: Undergraduate

4. Improve manufacturing of products in terms of quality and repeatability (w.r.t. part functionality)

Audience: Undergraduate

5. Describe the impact of manufacturing on the economy, society, and the environment

Audience: Undergraduate

6. Identify ethical concerns that arise in manufacturing

Audience: Undergraduate

**M E 313 – MANUFACTURING PROCESSES**

3 credits.

A quantitative and qualitative study of manufacturing processes including machining, extrusion, sheet metal forming, welding, and casting for metals; and additive manufacturing, extrusion, injection molding, thermoforming and blow molding for plastics. Emphasis on process selection for optimum design. Laboratory experiments and demonstrations. Quality, strength, and economic evaluations.

**Requisites:** (M S & E 350, 351, or 352) or (declared in Biological Systems Engineering: Machinery Systems, BS and M E 306 or E M A 303)

**Repeatable for Credit:** No

**Last Taught:** Spring 2021

**Learning Outcomes:** 1. Articulate that manufacturing is necessary to bring a design on paper into being and that failing to efficiently manufacture a product will make it uneconomical and ultimately a failure

Audience: Undergraduate

2. Articulate that the field of manufacturing contains a huge number of processes with varying capabilities in terms of quality and quantity of products produced

Audience: Undergraduate

3. Apply the criteria used to select a manufacturing process, including: production quantity, price point, geometry, material, and part functionality

Audience: Undergraduate

4. Articulate the importance of design for manufacturability

Audience: Undergraduate

5. Recognize the strong interrelationships between material properties and manufacturing processes

Audience: Undergraduate

6. Produce products using basic manufacturing processes, gaining a sense of accomplishment in having personally made a product

Audience: Undergraduate

7. Describe the breadth of the field of polymer processing and the most important polymer processing techniques, including process selection and optimum design

Audience: Undergraduate

8. Apply the basic terminology associated with these fields

Audience: Undergraduate

9. Recognize the strong interrelationships between material properties and polymer processing processes

Audience: Undergraduate

10. Demonstrate understanding of concepts from the lecture in the labs, including polymer processes like: Thermoforming, Compounding, Extrusion, Injection Molding and Additive Manufacturing

Audience: Undergraduate

11. Describe opportunities for sustainability in polymer processing and polymer product design

Audience: Undergraduate

### **M E 314 – MANUFACTURING FUNDAMENTALS**

3 credits.

An introduction to techniques for modeling in materials processing and improving decision making in increasing the productivity of design and manufacturing processes. Quality improvement and engineering simulation tools are presented as well as the methods of engineering economy and the role of manufacturing automation and systems, through lectures and laboratories.

**Requisites:** M E 313 and (M E 340 or concurrent enrollment)

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

### **M E 331 – COMPUTER-AIDED ENGINEERING**

3 credits.

Introduction to the fundamentals of Computer Aided Engineering. Topics include mathematical and programmable methods for modeling and design of mechanical shapes and assemblies; shape processing for manufacturing, including NC machining and 3D printing; and computer-aided analysis of structural, thermal and other physical properties.

**Requisites:** M E 231, (MATH 320, 340, 341, or 375), (M E 306 or E M A 303 or concurrent enrollment), (M E 240 or E M A 202), and (COMP SCI 200, 220, 300, 301, 310, or placement into COMP SCI 300), or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. comprehend Computer Aided Design (CAD) concepts such as 3D transformations, parametric curves and surfaces  
Audience: Undergraduate

2. comprehend Computer Aided Engineering (CAE) concepts such as structural loads, restraints, and finite element analysis  
Audience: Undergraduate

3. demonstrate ability to use CAD software for designing curves and surfaces  
Audience: Undergraduate

4. demonstrate ability to use CAE software for structural and thermal analysis  
Audience: Undergraduate

5. demonstrate ability to use CAE software for optimizing mechanical components  
Audience: Undergraduate

### **M E 340 – DYNAMIC SYSTEMS**

3 credits.

Mathematical modeling and analysis of dynamic systems with mechanical, thermal, and fluid elements. Topics: time domain solutions, analog computer simulation, linearization techniques, block diagram representation, numerical methods and frequency domain solutions. Students are assumed to have basic competence in particle and planar rigid body dynamics, matrix and vector algebra, and linear differential equations.

**Requisites:** (M E 240 or E M A 202) and (MATH 319, 320, or 375), or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Develop linear differential equations for mechanical, electrical, fluid, and thermal systems  
Audience: Undergraduate

2. Solve linear differential equations using Laplace transform methods and numerical techniques  
Audience: Undergraduate

3. Derive transfer functions and evaluate the system output response for impulse, step, and ramp input  
Audience: Undergraduate

4. Create frequency response diagrams for various first and second-order transfer functions  
Audience: Undergraduate

5. Calculate steady-state error and PID characteristics for simple feedback control systems  
Audience: Undergraduate

**M E 342 – DESIGN OF MACHINE ELEMENTS**

3 credits.

Analysis and design of machine elements and machines; loads, stresses, deflections, material selection, fatigue failure, finite elements; mechanical power transmission components including gearing, bearings, shafting, and frictional devices.

**Requisites:** (M E 306 or E M A 303) and (M E 331, B M E 201, or concurrent enrollment or declared in Biological Systems Engineering), or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Sketch failure envelopes for both brittle and ductile static failure theories and use these to estimate safety factor against potential static stress failure

Audience: Undergraduate

2. Calculate safety factor for high cycle fatigue of steel components

Audience: Undergraduate

3. Assess safety factor for straight cut spur gears against bending and surface fatigue failure

Audience: Undergraduate

4. Predict the failure rate of components based on property and load distributions and estimate the cost of these failures in terms of human life and limb

Audience: Undergraduate

5. Quantify specifications of belt and pulley systems for successful transmission of power between parallel shafts

Audience: Undergraduate

6. Quantify specifications of rolling element bearings for successful shaft support

Audience: Undergraduate

**M E 349 – ENGINEERING DESIGN PROJECTS**

3 credits.

Applied engineering design projects. Emphasis on design of practical mechanical engineering systems, devices and/or components. Two 2-hr labs and one lecture per week. Lecture focuses on the design process, creativity, patents, and other applications to practical problems.

**Requisites:** Declared in Mechanical Engineering with senior standing and M E 331

**Repeatable for Credit:** No

**Last Taught:** Spring 2020

**Learning Outcomes:** 1. Define an engineering problem as it relates to clients and stakeholders, and translate stakeholder requirements into engineering specifications

Audience: Undergraduate

2. Research previous solutions to similar design problems

Audience: Undergraduate

3. Identify potentially relevant standards to design problems

Audience: Undergraduate

4. Work together on a team that fosters inclusiveness, delegate responsibility, and plan tasks and monitors effort to better achieve objectives that meet client requirements

Audience: Undergraduate

5. Build an effective physical or analytical prototype

Audience: Undergraduate

6. Communicate design progress in written and oral format

Audience: Undergraduate

7. Defend design decisions with engineering calculations

Audience: Undergraduate

### **M E 351 – INTERDISCIPLINARY EXPERIENTIAL DESIGN PROJECTS I**

3 credits.

First of a two-course sequence (M E 351 and 352) in which students design and fabricate systems and devices, typically having an interdisciplinary aspect. In the first course, emphasis will be on project planning, team dynamics, problem identification, and conceptual design and evaluation.

**Requisites:** Declared in Mechanical Engineering with senior standing and M E 331

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Define an engineering problem as it relates to clients and stakeholders, and translate stakeholder requirements into engineering specifications

Audience: Undergraduate

2. Research previous solutions to similar design problems

Audience: Undergraduate

3. Identify potentially relevant standards to design problem

Audience: Undergraduate

4. Work together on an team that fosters inclusiveness, delegates responsibility, and plans tasks and monitors effort to better achieve objectives that meet client requirements

Audience: Undergraduate

5. Build an effective physical or analytical prototype

Audience: Undergraduate

6. Present design progress in written and oral format

Audience: Undergraduate

7. Defend design decisions with engineering calculations

Audience: Undergraduate

### **M E 352 – INTERDISCIPLINARY EXPERIENTIAL DESIGN PROJECTS II**

3 credits.

Design and fabricate systems and devices, typically having an interdisciplinary aspect. Emphasis will be on detailed design, fabrication, testing, and modification of concepts developed in the previous course (M E 351).

**Requisites:** Senior standing and M E 351

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Define an engineering problem as it relates to clients and stakeholders, and translate stakeholder requirements into engineering specifications

Audience: Undergraduate

2. Research previous solutions to similar design problems

Audience: Undergraduate

3. Identify potentially relevant standards to design problem

Audience: Undergraduate

4. Work together on an team that fosters inclusiveness, delegates responsibility, and plans tasks and monitors effort to better achieve objectives that meet client requirements

Audience: Undergraduate

5. Build an effective physical or analytical prototype

Audience: Undergraduate

6. Present design progress in written and oral format

Audience: Undergraduate

7. Defend design decisions with engineering calculations

Audience: Undergraduate

**M E 361 – THERMODYNAMICS**

3 credits.

First and second laws of thermodynamics; thermodynamic properties of gases, vapors, and gas-vapor mixtures; energy-systems analysis including power cycles, refrigeration cycles and air-conditioning processes. Introduction to thermodynamics of reacting mixtures.

**Requisites:** (CHEM 103 or 109) and (E M A 201, PHYSICS 201, 207, or 247), or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Define both open and closed systems using a sketch

Audience: Undergraduate

2. Apply the first law to properly analyze open steady flow systems and closed systems

Audience: Undergraduate

3. Apply the second law to properly analyze open steady flow systems and closed systems

Audience: Undergraduate

4. Calculate property changes for ideal gases, incompressible substances, and real substances such as water

Audience: Undergraduate

5. Calculate First and Second Law efficiencies of engineering devices

Audience: Undergraduate

**M E 363 – FLUID DYNAMICS**

3 credits.

Laws of mechanics and thermodynamics applied to fluids at rest and in motion; potential flow; dimensional analysis; viscous flow; pipe flow; boundary-layer theory; compressible flow.

**Requisites:** M E 361 and (MATH 319, 320 or 375), or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply control volume analysis to solve fluid mechanics problems, for fluids at rest and in movement

Audience: Undergraduate

2. Simplify the equations of fluid mechanics to solve realistic engineering problems involving fluids by making appropriate assumptions

Audience: Undergraduate

3. Calculate losses in piping systems and other internal flows using dimensionless correlations

Audience: Undergraduate

4. Calculate forces created by external flow on a solid immersed in a fluid using dimensionless correlations

Audience: Undergraduate

**M E 364 – ELEMENTARY HEAT TRANSFER**

3 credits.

Fundamental concepts of conduction, convection, radiation. Heat-exchanger principles.

**Requisites:** M E 361 and (M E 363 or concurrent enrollment), or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Predict the rate of heat transfer for steady state situations involving conduction, convection, and radiation

Audience: Undergraduate

2. Develop numerical models of 0-D, 1-D, and 2-D transient temperature distributions

Audience: Undergraduate

3. Develop computer models of radiation situations involving multiple grey surfaces

Audience: Undergraduate

4. Simulate and optimize heat exchangers for a variety of applications

Audience: Undergraduate

5. Qualitatively predict the velocity and temperature distribution associated with boundary layers in convection problems

Audience: Undergraduate

### **M E 368 – ENGINEERING MEASUREMENTS AND INSTRUMENTATION**

4 credits.

Theory of modern instrumentation, the design and execution of experiments and the analysis of experimental data. Laboratory provides direct experience with concepts in the context of experimental design for hypothesis testing, for product evaluation and for control system design.

**Requisites:** (M E 306 or E M A 303), M E 361, 340, and (E C E 376, 230, or M E 376)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Use common sensors such as thermocouples, thermistors, microphones and strain gauges to make engineering measurements

Audience: Undergraduate

2. Set up a digital data acquisition system to record, analyze and effectively display experimental data

Audience: Undergraduate

3. Calculate the uncertainty of a measurement and take action to reduce uncertainty through calibration and noise reduction

Audience: Undergraduate

4. Analyze an experiment and the results; troubleshoot any errors or deviations from expected theoretical values

Audience: Undergraduate

5. Analyze and interpret data in the frequency domain

Audience: Undergraduate

### **M E 370 – ENERGY SYSTEMS LABORATORY**

3 credits.

Experimental evaluation and analysis of performance of various energy conversion systems such as turbines, compressors, refrigerators, fans, and internal combustion engines.

**Requisites:** M E 363 and (M E 364 or concurrent enrollment) and (M E 368 or concurrent enrollment)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Characterize the performance parameters for common energy systems

Audience: Undergraduate

2. Safely measure the operation of energy system equipment

Audience: Undergraduate

3. Utilize software tools to analyze the data from the operation of energy system equipment

Audience: Undergraduate

4. Work cooperatively in a team configuration

Audience: Undergraduate

5. Communicate findings from energy system experiments in written, oral, and discussion formats

Audience: Undergraduate

**M E 376 – INTRODUCTION TO MECHATRONICS**

4 credits.

Fundamentals of DC and AC circuit analysis and design, stressing tools needed to understand circuits typically used in instrumentation and control of physical systems (sensors/actuators); an introduction to the design of active and passive linear circuits for buffering and filtering signals; an introduction to digital circuits, Boolean logic, programming, especially as needed for computer interface operations in mechanical engineering applications (example: embedded microcontrollers). Laboratory exercises.

**Requisites:** (M E 340 or concurrent enrollment), (MATH 320, 319, or 376), and (PHYSICS 202, 208, or 248), or graduate/professional standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe and mathematically represent circuit element properties and their analogies to mechanical systems  
Audience: Undergraduate

2. Apply Kirchoff's and Ohm's laws to design and analyze AC and DC circuits

Audience: Undergraduate

3. Design and apply active and passive AC and DC circuits for instrumentation or control systems

Audience: Undergraduate

4. Design and analyze signal conditioning circuits utilized in instrumentation or control systems

Audience: Undergraduate

5. Write software to configure hardware, drive state machines, and control algorithms

Audience: Undergraduate

6. Utilize digital logic, computer interfaces, sensors, actuators, and programming approaches to solve mechanical engineering problems

Audience: Undergraduate

7. Communicate with experts in the various disciplines associated with instrumentation of and computer control of machines and processes

Audience: Undergraduate

**M E/B M E 414 – ORTHOPAEDIC BIOMECHANICS - DESIGN OF ORTHOPAEDIC IMPLANTS**

3 credits.

Apply the design process for orthopaedic implants (total joint replacements). Topics include: library skills; joint anatomy; tissue properties; surgical approach; joint loading; implants materials; preclinical testing and analysis.

**Requisites:** Senior standing and M E 342, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply engineering mechanics (statics, dynamics, mechanics of materials) to analyze human joints

Audience: Both Grad & Undergrad

2. Describe sources and implications of patient-to-patient variability in functional anatomy, biomechanics, and disease states

Audience: Both Grad & Undergrad

3. Synthesize knowledge about functional anatomy, biomechanics, and disease states to define clinical needs and design inputs

Audience: Both Grad & Undergrad

4. Justify design decisions and testing plans based on rigorous engineering calculations through both written and oral communication

Audience: Both Grad & Undergrad

5. Formulate rigorous testing plans for design and device verification and validation based on established standards and/or guidance documents

Audience: Both Grad & Undergrad

6. Analyze interactions between multiple sources of variability

Audience: Graduate

### **M E/B M E 415 – BIOMECHANICS OF HUMAN MOVEMENT**

3 credits.

An overview of experimental and modeling techniques used to study human movement. Specific topics will include locomotion, motion capture systems, force plates, muscle mechanics, musculoskeletal modeling, three dimensional kinematics, inverse dynamics, forward dynamic simulation and imaging based biomechanics. Homework and laboratory activities emphasize applications of movement biomechanics in orthopedics and rehabilitation.

**Requisites:** B M E 315 and M E 340, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify and describe fundamental concepts and methods in movement biomechanics

Audience: Both Grad & Undergrad

2. Apply fundamental concepts and methods in biomechanics to acquire experience and gain confidence using engineering tools to study movement

Audience: Both Grad & Undergrad

3. Establish a framework for self-teaching and research through open-ended laboratory assignments and a research project

Audience: Both Grad & Undergrad

4. Constructively review and provide feedback on written research proposals related to movement biomechanics

Audience: Graduate

### **M E 417 – TRANSPORT PHENOMENA IN POLYMER PROCESSING**

3 credits.

Description of the physical, thermal, mechanical, and rheological properties of polymeric materials relevant to their processing behavior. Review of the basic transport phenomena equations: mass, momentum, and energy. Analysis of various processing operations for the manufacture of polymeric articles, with particular emphasis on: extrusion, injection molding, blow molding, thermoforming, compression molding and additive manufacturing. Discussion of plastics recycling and environmental issues.

**Requisites:** Senior standing or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2023

**Learning Outcomes:** 1. Identify, formulate and solve problems related to the properties of polymeric material and how these properties are impacted by processing

Audience: Both Grad & Undergrad

2. Apply differential equations to transport phenomena

Audience: Both Grad & Undergrad

3. Demonstrate their understanding of various processing techniques including extrusion, injection molding, blow molding, thermoforming, compression molding, and additive manufacturing

Audience: Both Grad & Undergrad

4. Develop solutions to differential equations for transport problems that arise from polymer manufacturing processes

Audience: Graduate

**M E 418 – ENGINEERING DESIGN WITH POLYMERS**

3 credits.

Implications for plastics part design of polymer classification, structure, melt rheology, mixing, polymer blends, anisotropy, solidification, mechanical behavior, failure. Plastics design for electrical, optical, acoustic and barrier properties.

**Requisites:** Senior standing or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate an understanding of the basic polymer classifications

Audience: Both Grad & Undergrad

2. Apply knowledge of polymer classifications to part design

Audience: Both Grad & Undergrad

3. Utilize the techniques, skills and modern tools necessary for polymer part design

Audience: Both Grad & Undergrad

4. Synthesize knowledge about polymers and use insight and creativity to better understand and improve polymer parts

Audience: Graduate

**M E 419 – FUNDAMENTALS OF INJECTION MOLDING**

3 credits.

All major aspects of injection molding with emphases on design, processing, process physics, computer-aided engineering (CAE), troubleshooting, and advanced molding processes. Field trip, video presentation, case studies, term project with oral presentation, and hands-on sessions using commercial CAE simulation software.

**Requisites:** Senior standing, member of Engineering Guest Students, or declared in Capstone Certificate in Polymer Processing and Manufacturing

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply techniques and decision making tools for increased quality, product safety and reliability, and productivity

Audience: Undergraduate

2. Apply quality improvement methods that lead to better quality, decreased cost, reduced cycle time, and sustainability

Audience: Undergraduate

3. Demonstrate the use of concepts and practices of processing, materials, designs, general skill sets like control, computer-aided engineering (CAE), and optimization, and special topics that includes emerging and competing technologies and advanced molding processes

Audience: Undergraduate

4. Synthesize understanding in all aspects of injection molding and related processes, to take on tasks and challenges related to material processing

Audience: Undergraduate

5. Apply process insights and develop logical thinking, problem-solving skills, life-long learning attitude, independent research capabilities, as well as presentation and communication skills

Audience: Undergraduate

### **M E/STAT 424 – STATISTICAL EXPERIMENTAL DESIGN**

3 credits.

Introduction to statistical design and analysis of experiments. Topics include: principles of randomization, blocking and replication, randomized blocking designs, Latin square designs, full factorial and fractional factorial designs and response surface methodology. Substantial focus will be devoted to engineering applications.

**Requisites:** STAT 240, 301, 302, 312, 324, 371, or MATH/STAT 310

**Course Designation:** Breadth – Natural Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe key concepts in the design and analysis of experiments.

Audience: Undergraduate

2. Generate experimental designs and apply appropriate analysis techniques.

Audience: Undergraduate

3. Compare different experimental design and analysis methods in various scenarios.

Audience: Undergraduate

4. Apply experimental design and analysis methods in real-world projects.

Audience: Undergraduate

5. Implement experimental design and analysis methods in statistical software like R.

Audience: Undergraduate

### **M E 429 – METAL CUTTING**

3 credits.

Theory and applications of metal cutting; basic principles; significant features of current research. Chip formation mechanics, three-dimensional machining operations, tool life and machinability, economics of metal removal, and precision engineering.

**Requisites:** Senior standing and declared in Biomed, Biological Sys, Chemical, Civil, Computer, Electrical, Geological, Industrial, Mechanical or Nuclear Egr, Materials Sci & Egr, Egr Physics, Egr Mechanics, grad/professional standing or member of Egr Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply mechanics of materials, tribology, dynamics, conservation of mass, and heat transfer fundamentals to analyze chip formation, cutting temperatures, burr formation, chatter, and tool wear

Audience: Undergraduate

2. Recognize the interrelationships between process parameters and cutting performance

Audience: Undergraduate

3. Make a metal part on a CNC machine using G-code

Audience: Undergraduate

4. Present examples of how manufacturing impacts society, the economy, and the environment

Audience: Undergraduate

5. Apply professional codes to analyze problems in manufacturing ethics and arrive at defensible actions

Audience: Undergraduate

**M E 437 – ADVANCED MATERIALS SELECTION**

3 credits.

A structured approach is developed to address the complex problem of materials selection in design where multiple constraints and conflicting objectives need to be considered. Topics include: introductory fracture mechanics; corrosion and corrosion mitigation; effects of manufacturing processes and process selection; property development in metals, ceramics, polymers and composites; and material analysis techniques.

**Requisites:** (M S & E 350 and M E 310), M E 313, M S & E 332, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify designs at risk of brittle fracture

Audience: Undergraduate

2. Apply a basic fracture mechanics approach to minimize chance of part failure

Audience: Undergraduate

3. Apply corrosion mitigation techniques to material selection and design problems

Audience: Undergraduate

4. Apply a systematic process to materials selection

Audience: Undergraduate

5. Interpret microstructure of metallic alloys and predict material property development

Audience: Undergraduate

**M E/E C E 439 – INTRODUCTION TO ROBOTICS**

3 credits.

Hands-on introduction to key concepts and tools underpinning robotic systems in use and development today. Intended to give students the tools to understand robotic systems, to explore robotics for their own purposes, and to pursue advanced study in the field. Students are expected to have familiarity with a high level programming language such as Python (recommended), MATLAB, Java or Julia.

**Requisites:** Senior standing or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Predict and control the behavior of common mechatronic actuators

Audience: Undergraduate

2. Predict and interpret the response of common sensors in relation to their environment

Audience: Undergraduate

3. Apply standard algorithms to predict and control the behavior of robotic manipulators

Audience: Undergraduate

4. Interpret the operation of a robot control system and add new functionality to it

Audience: Undergraduate

5. Specify a simple task for a robot, and implement sensors, actuators and a control system to accomplish it

Audience: Undergraduate

6. Analyze the ethical challenges presented by specific robotic applications

Audience: Undergraduate

**M E 440 – INTERMEDIATE VIBRATIONS**

3 credits.

Harmonic motion; natural frequencies and vibration of damped and undamped single and multi-degree of freedom systems; modal analysis; influence coefficients; lumped-mass modeling; dynamic load factors; Rayleigh's method; flow-induced vibrations; shaft whirl; balancing; vibration absorbers and tuned mass dampers; finite element modeling.

**Requisites:** (M E 306 or E M A 303) and (M E 340 or E M A/M E 540), or graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Derive the equations of motion of single and multi-degree of freedom systems

Audience: Undergraduate

2. Determine the natural frequencies and mode shapes of single and multi-degree of freedom systems

Audience: Undergraduate

3. Evaluate the dynamic response of single and multi-degree of freedom systems under impulsive, harmonic and periodic loading

Audience: Undergraduate

4. Apply modal analysis and orthogonality conditions to establish the dynamic characteristics of multi-degree of freedom systems

Audience: Undergraduate

5. Generate finite element models of discrete systems to simulate the dynamic response to initial conditions and external excitations

Audience: Undergraduate

**M E/E C E 441 – KINEMATICS, DYNAMICS, AND CONTROL OF ROBOTIC MANIPULATORS**

3 credits.

Robotics analysis and design, focusing on the analytical fundamentals specific to robotic manipulators. Serial chain robotic manipulator forward and inverse kinematics, differential kinematics, dynamics, trajectory generation, and controls. Builds on knowledge of high-level computational programming language such as Matlab.

**Requisites:** M E 340 and (MATH 320, 340, 341, or 375), graduate/professional standing, or member of Engineering Guest Students. Not open to students with credit for E C E 739 prior to fall 2024.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze and design serial chain robotic manipulator kinematics

Audience: Both Grad & Undergrad

2. Simulate the dynamic motion of serial chain robotic manipulators

Audience: Both Grad & Undergrad

3. Form the equations of motion for robotic manipulators

Audience: Both Grad & Undergrad

4. Use feedback control for tracking and regulation of robotic manipulators for position, force, and hybrid control

Audience: Both Grad & Undergrad

5. Use trajectory generation methods to design robotic manipulator motion and force trajectories

Audience: Both Grad & Undergrad

6. Analyze the kinematics and controls of more complex serial chain manipulators

Audience: Graduate

7. Design the kinematics of serial chain manipulators using kinematic and dynamics analysis methods

Audience: Graduate

**M E 444 – DESIGN PROBLEMS IN ELASTICITY**

3 credits.

Analysis of elastic systems by strain-energy techniques. Determination of stresses and deflections in statically indeterminate structures encountered in design. Resilience in springs.

**Requisites:** M E 306, E M A 303, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Solve for the octahedral stress, stress invariants, principal stresses and direction cosines of the principal stresses for a state of stress involving 3 orthogonal normal stresses and 3 orthogonal shear stresses

Audience: Undergraduate

2. Calculate strain energy density and strain energy for normal stresses from axial and bending loads and for shear stresses from torque loads within the elastic range

Audience: Undergraduate

3. Apply energy methods to linear elastic structural mechanics problems including the Principle of Virtual work, Reciprocity Theorem, Unit Load Method, Castigliano's Theorem, Stationary Potential Energy and the Rayleigh-Ritz Method

Audience: Undergraduate

4. Verify compatibility and equilibrium of displacement fields for plane elasticity problems and solve for the corresponding stresses and/or strains

Audience: Undergraduate

5. Analyze the stresses, strains and displacements caused by thermal, pressurization and rotational loading of axisymmetric plane elasticity problems (hollow and solid disks)

Audience: Undergraduate

**M E 445 – MECHATRONICS IN CONTROL & PRODUCT REALIZATION**

3 credits.

Fundamentals of electromechanical control systems with a focus on subsystem design and their impacts at the system level. Integration of microcontrollers into products for control and/or instrumentation. Creation of intelligent interfaces between motors and sensors. C programming. Control computer system architecture Software and hardware principles for computer control.

**Requisites:** M E 376, E C E 376, 230, or (B M E 201 and B M E 310), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. Demonstrate understanding of the fundamentals of electromechanical control systems including motor and sensor interfaces and computer system architecture

Audience: Both Grad & Undergrad

2. Apply knowledge of microcontrollers embedded in products in order to create intelligent interfaces

Audience: Both Grad & Undergrad

3. Apply knowledge of software and hardware principles for computer control in order to develop and demonstrate control systems in lab

Audience: Both Grad & Undergrad

4. Practice good coding techniques in C and develop skills with troubleshooting both hardware and software

Audience: Both Grad & Undergrad

5. Demonstrate understanding of more advanced issues related to system level design issues

Audience: Graduate

**M E 446 – INTRODUCTION TO FEEDBACK CONTROL**

3 credits.

Overview of linear feedback control analysis and design techniques for mechanical systems. Modeling of linear dynamic mechanical systems (review), derivation of their defining differential equations, and analysis of their response using both transient and frequency response techniques; Analysis and design of feedback control of mechanical systems using classical control transform techniques such as root locus and frequency response; Analysis of system robustness through evaluation of phase and gain margins and the Nyquist stability criterion. Design of feedback controllers for mechanical systems using frequency domain loop-shaping methods. Design domains, including mechanical, thermal, and fluid feedback control systems. Effects of non-ideal system characteristics commonly encountered in mechanical systems, such as compliance, delay, and actuator and sensor saturation. Builds on knowledge of high-level computational programming language such as Matlab or Simulink.

**Requisites:** (M E 340 or E M A 545) and (MATH 319 or 320), graduate/professional standing, member of Engineering Guest Students, or declared in Capstone Certificate in Power Conversion and Control. Not open to students with credit for M E 346.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Solve for the time-domain response of differential equations associated with physical dynamic systems  
Audience: Both Grad & Undergrad

2. Simulate the time-domain response and frequency-response of physical dynamic systems using computer analysis and design tools such as Matlab  
Audience: Both Grad & Undergrad

3. Analyze and design PID feedback controllers for simple first and second order physical systems  
Audience: Both Grad & Undergrad

4. Analyze the stability of linear systems using the Nyquist stability criteria and its equivalent frequency domain representation  
Audience: Both Grad & Undergrad

5. Analyze and design modern feedback control systems using frequency domain analysis and design techniques, including the use of frequency loop shaping to achieve desired transient and steady-state design specifications  
Audience: Both Grad & Undergrad

6. Analyze and design complex linear feedback controllers for a range of mechanical dynamic systems, including systems with non-ideal characteristics such as flexible modes, time delay, actuator saturation, and unstable open-loop systems  
Audience: Graduate

**M E 447 – COMPUTER CONTROL OF MACHINES AND PROCESSES**

3 credits.

Discrete control theory reduced to engineering practice through a comprehensive study of discrete system modeling, system identification and digital controller design. Selected industrial processes and machines utilized as subjects on which computer control is to be implemented. Focus: computer control economics and planning as well as the control theory and programming.

**Requisites:** M E 340, 346, or 446, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**M E 448 – MECHANICAL SYSTEMS ANALYSIS**

3 credits.

Integrated treatment of mathematical modeling and analysis of mechanical systems. Modeling of linear and nonlinear systems and their performance under transient, periodic and random loads.

**Requisites:** Senior standing and declared in Biomed, Biological Sys, Chemical, Civil, Computer, Electrical, Geological, Industrial, Mechanical or Nuclear Egr, Materials Sci & Egr, Egr Physics, Egr Mechanics, Applied Math, Egr and Physics, grad/prof or EGRG

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**Learning Outcomes:** 1. Analyze ideal mechanisms and trusses systems  
Audience: Undergraduate

2. Apply Bayes theorem of probability  
Audience: Undergraduate

3. Carry out statistical analysis of mechanisms and truss systems  
Audience: Undergraduate

4. Use MATLAB toolbox for Monte Carlo analysis  
Audience: Undergraduate

5. Quantify the reliability of designs through first-order methods  
Audience: Undergraduate

6. Quantify the reliability of designs through second-order methods  
Audience: Undergraduate

**M E 449 – REDESIGN AND PROTOTYPE FABRICATION**

3 credits.

Principles of design, manufacturing, and prototype evaluation. A semester long project provides the opportunity to redesign of a thermo-mechanical device (Stirling Engine) using knowledge/skills acquired both through this course and previous course offerings in thermal sciences, mechanics and dynamics, manufacturing, and design. Instruction and hands-on experience using the manufacturing tools/processes available in the CoE. Design, dimensioning and tolerancing, manufacturing, and quantitative analysis are all covered in a structured semester project.

**Requisites:** Senior standing and (M E 306 or E M A 303), (M E 311 or 313 or concurrent enrollment), and M E 331, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate understanding of design, manufacturing and prototype evaluation

Audience: Both Grad & Undergrad

2. Redesign a thermo-mechanical device (Stirling Engine) using knowledge/skills in thermal sciences, mechanics and dynamics, manufacturing, and design

Audience: Both Grad & Undergrad

3. Utilize the techniques, skills and modern tools necessary for manufacturing small prototypes

Audience: Both Grad & Undergrad

4. Fabricate a Stirling Engine and test this prototype

Audience: Both Grad & Undergrad

5. Apply knowledge of design, dimensioning, and tolerancing

Audience: Both Grad & Undergrad

6. Write clear and concise technical reports and research articles

Audience: Graduate

**M E 451 – KINEMATICS AND DYNAMICS OF MACHINE SYSTEMS**

3 credits.

Graphical, analytical, and computer methods for the kinematic and dynamic analysis of mechanical linkages, mechanisms, and geared and cam systems.

**Requisites:** M E 240, E M A 202, PHYSICS 201, 207, 247, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Formulate the equations of motion for mechanisms that display 3D motion

Audience: Undergraduate

2. Describe the concept of joints between bodies that make up a mechanism

Audience: Undergraduate

3. Derive the kinematics equations

Audience: Undergraduate

4. Derive the dynamics equations of motion

Audience: Undergraduate

5. Solve differential equations that govern the evolution of a system

Audience: Undergraduate

6. Use numerical algorithms to solve the differential algebraic equations associated with the time evolution of a multi-body mechanical system

Audience: Undergraduate

### **M E 455 – MICROROBOTICS**

3 credits.

Microrobotics is an emerging interdisciplinary field at the intersection of robotics, microtechnology, materials science, and bioengineering gearing towards key applications in healthcare and biomedical sciences. Design, fabrication, powering/actuation, locomotion, localization, swarm operation and biomedical applications of microrobots.

**Requisites:** M E 342 and (M E 376 or B M E 310), or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Design and develop microrobots for biomedical applications

Audience: Both Grad & Undergrad

2. Employ scaling laws and micromechanics for microrobot design

Audience: Both Grad & Undergrad

3. Describe approaches to microrobot fabrication

Audience: Both Grad & Undergrad

4. Design and evaluate microrobot powering/actuation and locomotion strategies

Audience: Both Grad & Undergrad

5. Integrate localization and swarm operation techniques for microrobot control

Audience: Graduate

### **M E 458 – INTRODUCTION TO FEEDBACK CONTROL OF AUTONOMOUS SYSTEMS**

3 credits.

Feedback control theory fundamentals; numerical optimal control algorithms underpinning autonomous systems; quadcopter kinematics dynamics; quadcopter control and trajectory planning; hands-on labs on a nano quadcopter platform.

**Requisites:** M E 446, E M A 545, E C E 332, or 334, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Express a dynamic system into its state space form and determine its linearized model around a given operating point

Audience: Both Grad & Undergrad

2. Use Lyapunov direct and indirect methods to determine the stability of nonlinear systems

Audience: Both Grad & Undergrad

3. Explain and assess controllability, observability, and stability of linear systems

Audience: Both Grad & Undergrad

4. Solve general optimal control problems using off-the-shelf numerical software

Audience: Both Grad & Undergrad

5. Solve linear quadratic problems using linear quadratic regulator

Audience: Both Grad & Undergrad

6. Apply differential flatness for quadcopter trajectory generation, and design linear tracking controllers for quadcopters

Audience: Both Grad & Undergrad

7. Apply the maximum principle to find the optimal solution of an unconstrained optimal control problem

Audience: Graduate

### **M E 459 – COMPUTING CONCEPTS FOR APPLICATIONS IN ENGINEERING**

3 credits.

An overview of computing concepts that support modeling and simulation in engineering applications. Learn the basics of computer architecture, software development and the interplay between software and hardware components.

**Requisites:** COMP SCI 200, 220, 300, 301, 302, 320, or placement into COMP SCI 300, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Use Python and C to generate programs that can effectively perform data processing tasks on modern CPU architectures  
Audience: Both Grad & Undergrad

2. Describe how a central processing unit (CPU) functions  
Audience: Both Grad & Undergrad

3. Describe the roles of memory hierarchy and virtual memory in computing  
Audience: Both Grad & Undergrad

4. Identify the role of the operating system in computing  
Audience: Both Grad & Undergrad

5. Describe the implications of representing and carrying out operations with numbers using a finite number of bits  
Audience: Both Grad & Undergrad

6. Identify computational bottlenecks associated with suboptimal memory accesses and/or poor instruction pipelining  
Audience: Graduate

### **M E 460 – APPLIED THERMAL / STRUCTURAL FINITE ELEMENT ANALYSIS**

3 credits.

The course is designed for undergraduate students with no finite element (FE) analysis experience or knowledge. By the end of the semester the student will be able to simulate 1D, 2D and 3D structural and thermal systems, including both the static and transient response, using a common, commercially available FE software package. Analyses will be performed using both GUI and APDL. The emphasis of the course is on becoming proficient with the software and capable of operating an FE package at a high level, including benchmarking and verifying the FE model using simple analytical checks. An additional emphasis of the course is on understanding the impact of the temperature distribution in an object on the stress field through thermal expansion.

**Requisites:** M E 306 or E M A 303, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Generate an ANSYS FE model to assess the steady-state / static structural or thermal response of a 1-D, 2-D or 3-D component or structure  
Audience: Both Grad & Undergrad

2. Determine an appropriate element type, specify the material properties and apply loads, boundary conditions and constraints for both thermal and structural ANSYS simulations  
Audience: Both Grad & Undergrad

3. Apply time dependent loads and boundary conditions to perform both thermal and structural transient analyses  
Audience: Both Grad & Undergrad

4. Postprocess a FE model solution in ANSYS to possibly determine quantities such as temperature, stress, displacements and natural frequencies (and associated mode shapes)  
Audience: Both Grad & Undergrad

5. Generate an ANSYS FE model to assess the transient structural or thermal response of a 1-D, 2-D or 3-D component or structure  
Audience: Graduate

### **M E 461 – THERMAL SYSTEMS MODELING**

3 credits.

Analysis and design of engineering systems involving applications of thermodynamics, economics, heat transfer, and fluid flow.

**Requisites:** M E 364 or concurrent enrollment, or graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain the importance of advanced thermodynamics topics and novel cycles

Audience: Undergraduate

2. Apply the first and second laws of thermodynamics to complex thermal systems and system components

Audience: Undergraduate

3. Integrate rate mechanisms (i.e., heat transfer and fluid dynamics), economics, and optimization into the design and analysis of thermal systems

Audience: Undergraduate

4. Communicate the inherent uncertainty in the design and analysis of thermal systems

Audience: Undergraduate

5. Analyze yearly thermal system performance driven by weather variations

Audience: Undergraduate

6. Use a computer effectively to solve engineering problems

Audience: Undergraduate

7. Work in teams to solve open-ended design problems pertaining to thermal systems

Audience: Undergraduate

### **M E/M S & E 462 – WELDING METALLURGY**

3 credits.

Metallurgical principles applied to welding; mechanisms of strengthening, phase equilibria, and microstructure of the weld zone. Modern processes including laser and electron beam welding.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Identify the specific types of fusion and solid-state processes for welding specific metals/alloys of specific geometries and joints

Audience: Undergraduate

2. Relate principles of heat transfer, fluid flow, mass transfer, chemical reactions, and phase transformations during welding to the development of microstructure, properties, and defects of welds

Audience: Undergraduate

3. Identify the causes and remedies of various defects in welds, such as gas porosity, loss of strength, loss of toughness, cracking, and corrosion

Audience: Undergraduate

4. Identify processes for welding dissimilar materials, such as aluminum alloys to steels, aluminum alloys to copper

Audience: Undergraduate

### **M E 468 – COMPUTER MODELING AND SIMULATION OF AUTONOMOUS VEHICLES AND ROBOTS**

3 credits.

Introduction to the Robot Operating System (ROS). Concepts of vehicle dynamics modeling and simulation, with focus on tire, suspension, steering system, and powertrain modeling. Simulation of sensors (camera, lidar, radar, GPS, IMU). Terramechanics modeling for mobility on deformable terrains. Introduction to the autonomy stack (sensing, perception, planning, and control). Elements of artificial intelligence in autonomy. Elements of verification and validation.

**Requisites:** M E 459 and (COMP SCI 200, 220, 300, 301, 302, 320, or placement into COMP SCI 300), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Use computer simulation in the process of designing and analyzing new autonomous vehicles and robots

Audience: Both Grad & Undergrad

2. Create a ROS (Robot Operating System) infrastructure for a simple robot or small scale autonomous vehicle

Audience: Both Grad & Undergrad

3. Create a ROS infrastructure used in conjunction with an autonomy stack to simulate the behavior of a robot or autonomous vehicle

Audience: Both Grad & Undergrad

4. Identify the main modeling techniques used to approximate through computer simulation the real world dynamics/behavior of autonomous vehicles and robots

Audience: Both Grad & Undergrad

5. Gain a panoramic image of modeling and simulation requirements associated with the multi-disciplinary task of designing autonomous vehicles and robots

Audience: Undergraduate

6. Integrate the activities of designing, implementing, building, validating and positioning for release software for modeling and simulation of autonomous vehicles and robots

Audience: Graduate

7. Propose and evaluate alternate or novel methods to achieve modeling and simulation objectives, defend opinions

Audience: Graduate

### **M E 469 – INTERNAL COMBUSTION ENGINES**

3 credits.

Fundamental principles of engine operation and application including cycle analysis, gas analysis, effect of operating conditions and engine design on air pollution.

**Requisites:** M E 361, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify the basic characteristics of internal combustion engine operation

Audience: Both Grad & Undergrad

2. Use thermodynamic principles to analyze various types of internal combustion engines

Audience: Both Grad & Undergrad

3. Recognize, describe, predict, and analyze internal combustion engines subject to modifications and improvements that are related to the state of the art

Audience: Both Grad & Undergrad

4. Communicate effectively through written reports related to ongoing timely research in the area of internal combustion engines

Audience: Graduate

### **M E 471 – GAS TURBINE AND JET PROPULSION**

3 credits.

Principles of thermodynamics and fluid dynamics utilized in the analysis and design of gas-turbine cycles, components and systems for stationary, automotive and aircraft applications.

**Requisites:** M E 364, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain the importance of advanced thermodynamics topics and novel gas turbine cycles that are not covered (or too quickly covered) in undergraduate thermodynamics courses

Audience: Both Grad & Undergrad

2. Design and analyze various gas turbine components

Audience: Both Grad & Undergrad

3. Apply advanced gas turbine design concepts

Audience: Both Grad & Undergrad

4. Use a computer effectively to solve engineering problems

Audience: Both Grad & Undergrad

5. Carry out optimization of systems incorporating economic and other technical considerations

Audience: Graduate

### **M E 472 – ENERGY, SUSTAINABILITY, AND TECHNOLOGY**

3 credits.

Thermodynamic analysis of energy conversion systems with emphasis on efficiency and greenhouse gas emissions; basic economic analysis of energy systems; radiative energy exchange with participating atmosphere; global energy balance; electricity production and transportation sustainability.

**Requisites:** M E 361 and (COMP SCI 200, 220, 300, 301, 310, or placement into COMP SCI 300), or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Evaluate the sustainability of energy conversion systems

Audience: Both Grad & Undergrad

2. Calculate changes in radiation trapping in the atmosphere due to different compounds

Audience: Both Grad & Undergrad

3. Apply simple economic models to define levelized cost of electricity production

Audience: Both Grad & Undergrad

4. Develop a simple model to predict carbon dioxide concentration in atmosphere

Audience: Both Grad & Undergrad

5. Analyze transportation sustainability for light- and heavy-duty applications

Audience: Both Grad & Undergrad

6. Model and evaluate the sustainability of domestic heating requirements

Audience: Both Grad & Undergrad

7. Coordinate models of energy conversion and greenhouse gas emissions

Audience: Graduate

**M E/BSE 474 – FLUID POWER**

3 credits.

Engineering principles of design and analysis of fluid power systems and fluid power components. Topics include hydraulic fluid properties, fluid flow and, positive displacement pumps, valves for pressure, flow, and directional control, linear and rotary actuators, accumulators, pressure compensation, load sensing, energy management and system efficiency.

**Requisites:** M E 363, CIV ENGR 310, CBE 320, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze various positive displacement pumps for flow, pressure, power, and efficiency

Audience: Both Grad & Undergrad

2. Determine flow and pressure drop characteristics of spool-type and poppet-type proportional, on-off, and servovalves

Audience: Both Grad & Undergrad

3. Construct hydraulic system schematics and select components from a functional system description

Audience: Both Grad & Undergrad

4. Determine efficiency and design improvements for mobile and industrial hydraulic systems

Audience: Both Grad & Undergrad

5. Develop mathematical models of hydraulic system/components and solve using numerical techniques

Audience: Graduate

**M E/BSE 475 – ENGINEERING PRINCIPLES OF AGRICULTURAL MACHINERY**

3 credits.

Engineering design principles of machines for the production, processing and handling of crops for food, fuel, bio-mass and fiber. Environmental and biological factors that influence machine design and operation. Economic and capacity analysis of machines and systems.

**Requisites:** Declared in Biological Systems Engineering or Mechanical Engineering and (M E 240, E M A 202, PHYSICS 201, 207, or 247), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify and describe key operating and design principles, concepts, and methods related to agricultural field machinery

Audience: Both Grad & Undergrad

2. Calculate relevant quantities regarding the design and engineering of agricultural field machinery

Audience: Both Grad & Undergrad

3. Critically review results of engineering calculations to ensure answers are realistic

Audience: Both Grad & Undergrad

4. Choose, synthesize and effectively utilize appropriate ASABE engineering standards, methods, and concepts regarding agricultural field machinery

Audience: Both Grad & Undergrad

5. Hone skills in teamwork, oral and written communication, and problem solving

Audience: Both Grad & Undergrad

6. Critically review emerging technology and apply relevant concepts to current issues with agricultural field machinery

Audience: Both Grad & Undergrad

7. Demonstrate an ability to formulate, analyze, and independently solve advanced engineering problems

Audience: Graduate

### **M E/BSE 476 – ENGINEERING PRINCIPLES OF OFF-ROAD VEHICLES**

3 credits.

Engineering design principles of heavy-duty vehicles intended for off-road use: fuels, engine cycles, engine principles and construction, clutches, mechanical and hydrostatic transmissions, final drives, traction systems, traction modeling, dynamic behavior, suspension systems and braking.

**Requisites:** (M E 361 or concurrent enrollment), (M E 240, E M A 202, PHYSICS 201, 207, or 247), and declared in Biological Systems Engineering or Mechanical Engineering or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify, formulate, and solve engineering problems related to off-road vehicle dynamics and mobility

Audience: Both Grad & Undergrad

2. Glean relevant data from the engineering research literature and technical data sheets, and specify appropriate components and systems in the application of off-road vehicle design

Audience: Both Grad & Undergrad

3. Perform an experiment on off-road vehicle systems, analyze and interpret data, and use engineering judgment to draw conclusions

Audience: Both Grad & Undergrad

4. Apply knowledge gained in the course to evaluate off-road vehicle design alternatives

Audience: Both Grad & Undergrad

5. Critically review off-road vehicle research

Audience: Graduate

### **M E 489 – HONORS IN RESEARCH**

1-3 credits.

Undergraduate honors research projects supervised by faculty members.

**Requisites:** Consent of instructor

**Course Designation:** Honors - Honors Only Courses (H)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply basic physical and mathematical principles to engineering research problems

Audience: Undergraduate

2. Apply basic mechanical engineering principles to engineering research problems

Audience: Undergraduate

3. Communicate technical concepts to a diverse audience via verbal or written media

Audience: Undergraduate

### **M E 491 – MECHANICAL ENGINEERING PROJECTS I**

1-3 credits.

Individual lab projects under staff supervision.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply basic physical and mathematical principles to engineering research problems

Audience: Undergraduate

2. Apply basic mechanical engineering principles to engineering research problems

Audience: Undergraduate

3. Communicate technical concepts to a diverse audience via verbal or written media

Audience: Undergraduate

### **M E 492 – MECHANICAL ENGINEERING PROJECTS II**

1-3 credits.

Continuation of M E 491.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply basic physical and mathematical principles to engineering research problems

Audience: Undergraduate

2. Apply basic mechanical engineering principles to engineering research problems

Audience: Undergraduate

3. Communicate technical concepts to a diverse audience via verbal or written media

Audience: Undergraduate

**M E/B M E 505 – BIOFLUIDICS**

3 credits.

Introduction to the physics of biological fluid flow with an emphasis on the cardiovascular system including blood rheology, pulsatile flow, wave travel, and topics relevant to blood flow measurement and biomedical device design.

**Requisites:** B M E 330, CBE 320, M E 363, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain the physical properties of a fluid and the consequence of such properties on fluid flow; compare and contrast non-Newtonian models for blood rheology

Audience: Both Grad & Undergrad

2. State the conservation principles of mass, linear momentum, and energy for fluid flow

Audience: Both Grad & Undergrad

3. Analyze systems using the conservation equations

Audience: Both Grad & Undergrad

4. Identify the relevant parameters that govern a fluid system and use dimensional analysis to identify the fundamental variables that define flow

Audience: Both Grad & Undergrad

5. Describe the flow dynamic metrics in different physiological or pathological conditions

Audience: Both Grad & Undergrad

6. Identify the role of other professionals in biofluid mechanics

Audience: Graduate

7. Foster skills to interact with clinical professionals

Audience: Graduate

**M E/CIV ENGR/E M A 508 – COMPOSITE MATERIALS**

3 credits.

Physical properties and mechanical behavior of polymer, metal, ceramic, cementitious, cellulosic and biological composite systems; micro- and macro-mechanics; lamination and strength analyses; static and transient loading; fabrication; recycling; design; analytical-experimental correlation; applications.

**Requisites:** (E M A 303 or M E 306), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. List the different types of composite materials and describe their manufacturing processes

Audience: Both Grad & Undergrad

2. Describe the mechanical behavior of various composite materials under different types of loading conditions

Audience: Both Grad & Undergrad

3. Derive mathematical models and solve them for engineering stresses and deformations in a composite structure

Audience: Both Grad & Undergrad

4. Describe special theories for heterogeneous and non-isotropic materials and solve boundary value problems associated with composite structures

Audience: Both Grad & Undergrad

5. Use the knowledge acquired in this class to design and conduct a complex analysis, design, and/or experiment to address key challenges relevant to composite materials

Audience: Graduate

### **M E/I SY E 510 – FACILITIES PLANNING**

3 credits.

Introduction to plant location theory and analysis of models of plant location; models for determining plant size and time phasing; line balancing models; techniques for investigating conveyor and other material handling problems; and models of plant layout.

**Requisites:** I SY E 315, (I SY E 323 or E C E/COMP SCI/I SY E 524) and I SY E/PSYCH 349, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify, formulate, and solve facilities layout problems by applying principles of engineering and mathematics  
Audience: Both Grad & Undergrad

2. Apply engineering design to produce facilities design solutions that meet specified needs with consideration of productivity, safety, and economic factors  
Audience: Both Grad & Undergrad

3. Utilize computer software to study and illustrate the operation of a manufacturing system  
Audience: Both Grad & Undergrad

4. Collaborate with a team to develop solutions to engineering problems and communicate findings effectively  
Audience: Both Grad & Undergrad

5. Demonstrate ability to lead a facilities planning project integrating quantitative techniques and management tools  
Audience: Graduate

### **M E/I SY E 512 – INSPECTION, QUALITY CONTROL AND RELIABILITY**

3 credits.

Inspection data for quality control; sampling plans for acceptance inspection; charts for process control. Introduction to reliability models and acceptance testing.

**Requisites:** (STAT/MATH 309, STAT 311, 224, 324, or STAT/MATH 431), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply statistical process control analysis for measuring and controlling quality  
Audience: Undergraduate

2. Recognize, formulate, and analyze univariate continuous and discrete control charts  
Audience: Undergraduate

3. Use Minitab to perform basic statistical process control analysis  
Audience: Undergraduate

4. Communicate the results of the statistical process control analysis to management and other non-specialist users of engineering analyses  
Audience: Undergraduate

5. Recognize, formulate, and analyze advanced continuous control charts  
Audience: Graduate

6. Perform process capability and measurement system capability analysis  
Audience: Graduate

**M E 514 – POLYMER ADDITIVE MANUFACTURING**

3 credits.

A quantitative and qualitative study of additive manufacturing processes. Emphasis on proper additive manufacturing technique selection for optimized final product design and properties, as well as presentation of emerging additive manufacturing techniques.

**Requisites:** Senior standing and (M E 310 or 313), graduate/professional standing, member of Engineering Guest Students, or declared in Capstone Certificate in Polymer Processing and Manufacturing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Compare the different additive manufacturing (AM) techniques and identify their strengths and weaknesses  
Audience: Both Grad & Undergrad

2. Identify the key components and underlying principles of AM processes  
Audience: Both Grad & Undergrad

3. Identify the latest developments and critical challenges of AM  
Audience: Both Grad & Undergrad

4. Evaluate literature and/or news articles to assess the potential and maturity level of AM applications or technologies  
Audience: Both Grad & Undergrad

5. Use a 3D printer to produce a part from 3D model data  
Audience: Both Grad & Undergrad

6. Select the appropriate AM technology for specific product requirements  
Audience: Both Grad & Undergrad

7. Identify key principles of design for AM  
Audience: Both Grad & Undergrad

8. Recite the latest developments as presented in the archival journals in the field, such as the Journal of Additive Manufacturing  
Audience: Graduate

9. Explain the transport phenomena equations to model the underlying physics that control additive manufacturing techniques  
Audience: Graduate

**M E/B M E 516 – FINITE ELEMENTS FOR BIOLOGICAL AND OTHER SOFT MATERIALS**

3 credits.

Finite element modeling of soft materials, with an emphasis on biological tissues. Basics of the finite element method, verification and validation methods, and selection of constitutive models. Emphasis on finite element modeling for materials that are generally nonlinear, and that generally undergo large deformation.

**Requisites:** (M E 306 or E M A 303), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Define the finite element method, explain its mathematical basis, and articulate alternatives  
Audience: Both Grad & Undergrad

2. Justify the selection of a constitutive model for a particular modeling application  
Audience: Both Grad & Undergrad

3. Design and complete validation and verification analyses  
Audience: Both Grad & Undergrad

4. Build and analyze a finite element model, and present relevant results  
Audience: Both Grad & Undergrad

5. Complete a term project using finite element analysis individually  
Audience: Graduate

**M E/N E 520 – TWO-PHASE FLOW AND HEAT TRANSFER**

3 credits.

Two-phase flow and heat transfer in engineering systems. Pool boiling and flow boiling. Phenomenological modeling.

**Requisites:** M E 361 and (M E 364 or CBE 320), or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**M E 529 – DESIGN & APPLICATIONS OF SMART MANUFACTURING PROCESSES**

3 credits.

Introduction to smart manufacturing. Understand how a company can connect its operational technology systems (e.g., machine tools) to its information technology systems to improve operational efficiency. Covers terminology, sensors and data, industrial computing platforms, data workflow and analysis, cyber-security, human factors, sequential logic control, and case studies of their application in smart manufacturing. Provides the basis for making informed decisions about how manufacturing processes and systems can be designed to be more adaptive (flexible) by automating, collecting the right data, sharing that data, implementing control systems and understanding the impact on humans and organizational systems.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Describe elements of smart manufacturing  
Audience: Graduate

2. Identify applications for smart manufacturing in their company and articulate arguments for implementing it as well as challenges that may be encountered  
Audience: Graduate

3. Communicate with the various experts that will need to be engaged to implement smart manufacturing  
Audience: Graduate

4. Make informed decisions about manufacturing automation, monitoring, control, and human factors  
Audience: Graduate

**M E 531 – DIGITAL DESIGN AND MANUFACTURING**

3 credits.

Broad overview of concepts, methods and tools for manipulating digital geometric models for engineering design and manufacturing. Topics include freeform curves, surfaces, and solid modeling. Topics also include slicing, support generation and path planning for additive and subtractive manufacturing. Provides both cutting-edge knowledge and hands-on project experiences in digital design and manufacturing. It will involve the use of CAD software for creative shape design. It will also involve 3D printers and 3D scanners in the ME Instructional Lab and Maker Space.

**Requisites:** Senior standing or member of Engineering Guest Students**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2019**Learning Outcomes:** 1. identify concepts for modeling digital geometric models

Audience: Undergraduate

2. demonstrate skills in modeling complex freeform objects by modeling common engineering components  
Audience: Both Grad & Undergrad

3. apply modern concepts and methods in digital geometric design for advanced manufacturing  
Audience: Both Grad & Undergrad

4. identify how digital geometric models can be processed into machine instructions for additive and subtractive machines  
Audience: Both Grad & Undergrad

5. identify mathematics and computer representations for modeling digital geometric models  
Audience: Graduate

**M E/COMP SCI/E C E 532 – MATRIX METHODS IN MACHINE LEARNING**

3 credits.

Linear algebraic foundations of machine learning featuring real-world applications of matrix methods from classification and clustering to denoising and data analysis. Mathematical topics include: linear equations, regression, regularization, the singular value decomposition, and iterative algorithms. Machine learning topics include: the lasso, support vector machines, kernel methods, clustering, dictionary learning, neural networks, and deep learning. Previous exposure to numerical computing (e.g. Matlab, Python, Julia, R) required.

**Requisites:** (MATH 234, 320, 340, 341, or 375) and (E C E 203, COMP SCI 200, 220, 300, 301, 302, 310, 320, or placement into COMP SCI 300), graduate/professional standing, or declared in Capstone Certificate in Computer Sciences for Professionals

**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Use matrices and vectors to formulate classification, prediction and matrix completion problems using techniques such as least squares, regularized least squares, the singular value decomposition, subspace methods, support vector machines, neural networks and kernel methods.

Audience: Both Grad & Undergrad

2. Implement machine learning techniques for classification, prediction and matrix completion problems in software, and validate their performance on datasets using cross validation.

Audience: Both Grad & Undergrad

3. Apply advanced techniques to formulate and prove optimality of various matrix based techniques in machine learning.

Audience: Graduate

**M E 535 – COMPUTER-AIDED GEOMETRIC DESIGN**

3 credits.

Designed to acquaint the student with computer-aided design technology used for geometric design of engineered products. Currently used methods of creating three-dimensional computer-aided design (CAD) models will be discussed. Paradigms of three-dimensional wire-frame modeling, surface modeling and solids modeling as applied in product design. Techniques for freeform curve and surface modeling will be emphasized.

**Requisites:** Senior standing or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Identify concepts, techniques and mathematics for free-form curves and surfaces modeling

Audience: Both Grad & Undergrad

2. Demonstrate skills in manipulating spline models with CAD software

Audience: Both Grad & Undergrad

3. Apply the concepts and principles to model complex geometric objects

Audience: Both Grad & Undergrad

4. Demonstrate skills in programming geometric objects

Audience: Graduate

### **M E 536 – DATA DRIVEN ENGINEERING DESIGN**

3 credits.

Introduction to data-driven techniques for surrogate modeling based engineering design. Apply data-driven approaches to engineering design problems such as design of structural and thermofluid components and systems.

**Requisites:** (MATH 234 or 376), (MATH 320, 340, 341, or 375), and (I SY E 210, B M E 325, E C E 331, MATH/STAT 310, STAT 312, 324, 333 or 340), or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify concepts and techniques for data-driven engineering design

Audience: Both Grad & Undergrad

2. Demonstrate skills in constructing surrogate models for design problems

Audience: Both Grad & Undergrad

3. Demonstrate skills in applying data-driven models in design problems

Audience: Both Grad & Undergrad

4. Apply the data-driven methods to solve engineering design problems

Audience: Both Grad & Undergrad

5. Identify mathematics for data-driven engineering design

Audience: Graduate

### **M E/COMP SCI/E C E 539 – INTRODUCTION TO ARTIFICIAL NEURAL NETWORKS**

3 credits.

Theory and applications of artificial neural networks: multi-layer perceptron, self-organization map, deep neural network, convolutional neural network, recurrent network, support vector machines, genetic algorithm, and evolution computing. Applications to control, pattern recognition, prediction, and object detection and tracking.

**Requisites:** COMP SCI 200, 220, 300, 301, 302, 310, placement into COMP SCI 300, or graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify if a given data analysis task is a pattern classification problem or a model approximation problem.

Audience: Undergraduate

2. Apply multi-layer perceptron neural network training algorithm to develop artificial neural network (ANN) based pattern classifiers and data predictors.

Audience: Undergraduate

3. Apply deep learning network for pattern classification

Audience: Undergraduate

4. Apply support vector machine (SVM) to develop pattern classifiers.

Audience: Undergraduate

5. Apply self-organization map and k-means to perform clustering operations of a given data set.

Audience: Undergraduate

6. Apply stochastic optimization methods, including simulated annealing, genetic algorithm and random search to solve a discrete optimization problem.

Audience: Undergraduate

### **M E/ E M A 540 – EXPERIMENTAL VIBRATION AND DYNAMIC SYSTEM ANALYSIS**

3 credits.

Application of digital data acquisition to the investigation of mechanical components, structures and systems using time histories, transforms and response functions to characterize free, forced and transient inputs. Introduction to sensors, instrumentation and methods appropriate for dynamic system response.

**Requisites:** (M E 440, E M A 545, or concurrent enrollment) or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply common laboratory techniques to measure dynamic system responses

Audience: Both Grad & Undergrad

2. Demonstrate knowledge of instrumentation, data acquisition, signal processing, and results display for dynamic systems

Audience: Both Grad & Undergrad

3. Formulate analytical models with parameters identified from measured signals

Audience: Graduate

### **M E 548 – INTRODUCTION TO DESIGN OPTIMIZATION**

3 credits.

Introduces basic concepts and techniques used in the optimization of engineering design components and systems. Pose and solve typical optimization problems such as truss and finite-element-based optimization.

**Requisites:** M E 306 or E M A 303, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Translate a loosely worded optimization problem into a mathematical statement

Audience: Both Grad & Undergrad

2. Use the MATLAB optimization toolbox

Audience: Both Grad & Undergrad

3. Apply the fundamental theorems of optimization

Audience: Both Grad & Undergrad

4. Analyze and optimize structural designs

Audience: Both Grad & Undergrad

5. Implement numerical methods of optimization

Audience: Graduate

### **M E 549 – PRODUCT DESIGN**

3 credits.

A project oriented, interdisciplinary course with an emphasis on designing competitive, quality products. The product development process is covered from problem identification through detail design and evaluation. Included among the topics covered are: idea generation and evaluation, visualization, and quality.

**Requisites:** Senior standing and declared in Biomed, Biological Sys, Chemical, Civil, Computer, Electrical, Geological, Industrial, Mechanical or Nuclear Egr, Materials Sci & Egr, Egr Physics, Egr Mechanics, grad/professional standing or member of Egr Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply a structured design methodology to conceive and develop products that are not only feasible but viable and desirable

Audience: Both Grad & Undergrad

2. Integrate a range of low-fidelity prototyping methods and user testing into the design process, as a means of exploring and validating design concepts

Audience: Both Grad & Undergrad

3. Communicate to a diverse audience the ways in which proposed product attributes address user needs, through the use of sketches and storyboards

Audience: Both Grad & Undergrad

4. Situate the role of the engineer in the new product development process, and develop skills to collaborate effectively with peers from different disciplines (marketing, industrial design, human factors, etc.) who work together to bring new products to market

Audience: Both Grad & Undergrad

5. Develop advanced skills to collaborate effectively with peers from different disciplines (marketing, industrial design, human factors, etc.) who work together to bring new products to market

Audience: Graduate

### **M E 561 – INTERMEDIATE THERMODYNAMICS**

3 credits.

Fundamentals; phase and chemical equilibria; availability; thermodynamic relationships.

**Requisites:** M E 361 or CBE 311, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

### **M E 563 – INTERMEDIATE FLUID DYNAMICS**

3 credits.

Incompressible and compressible, laminar and turbulent flow of fluids. Classical and finite-difference analysis using differential and integral formulation of the continuity, momentum and energy equations. Application to ducts, plates, spheres, blades, pumps, turbines, lubrication, shockwaves, nozzles, diffusers and other mechanical engineering equipment.

**Requisites:** M E 363, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Perform a differential and integral analysis of the mass and momentum conservation laws

Audience: Both Grad & Undergrad

2. Develop a mathematical working knowledge of the common manipulations that are performed for three dimensional time-dependent flows

Audience: Both Grad & Undergrad

3. Perform a boundary layer analysis

Audience: Both Grad & Undergrad

4. Develop analytical solutions to selected Navier-Stokes problems including kinematics and potential flows

Audience: Both Grad & Undergrad

5. Implement numerical solution to selected fluid problems

Audience: Graduate

### **M E 564 – HEAT TRANSFER**

3 credits.

Applications of conduction, convection, and thermal-radiation principles to combined-mode problems; analytical and numerical techniques; heat-exchanger design; thermal stresses.

**Requisites:** M E 364, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop analytical models for conduction problems using separation of variables and Laplace transform techniques  
Audience: Both Grad & Undergrad

2. Develop high order numerical models of conduction problems using explicit and implicit techniques

Audience: Both Grad & Undergrad

3. Develop models of radiation problems involving semi-grey surfaces using the radiosity technique

Audience: Both Grad & Undergrad

4. Use the Monte Carlo technique to determine view factors

Audience: Both Grad & Undergrad

5. Use the Integral Technique to solve convection problems

Audience: Graduate

**M E/N E 565 – POWER PLANT TECHNOLOGY**

3 credits.

Design and performance of power plants for the generation of electric power; fossil, solar, wind, hydro and nuclear fuels, cycle analysis, component design and performance, plant operation, control, economics and environmental impact.

**Requisites:** M E 361, CBE 310, 320, or CIV ENGR 324, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe how electricity is produced in a power plant

Audience: Both Grad & Undergrad

2. Apply physical principles to model power plants including power output and efficiency

Audience: Both Grad & Undergrad

3. Observe and collect data on current issues and designs associated to power generation

Audience: Both Grad & Undergrad

4. Describe codes and regulations associated with power production, and how power is sold on the market and transmitted to the customer

Audience: Both Grad & Undergrad

5. Critically review scientific literature pertaining to power plant design

Audience: Both Grad & Undergrad

6. Effectively present detailed information regarding operation and maintenance of power plant components

Audience: Graduate

**M E/E P 566 – CRYOGENICS**

3 credits.

Applications of cryogenics, material properties at low temperatures, refrigeration and liquefaction systems, measurement techniques, insulation, storage and transfer of cryogenics, safety and handling.

**Requisites:** (M E 361 or PHYSICS 415) and (CBE 320 or M E 364), or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

**Learning Outcomes:** 1. Describe the similarities and distinctions between the cryogens

Audience: Both Grad & Undergrad

2. Characterize the operation and performance of large scale cryogenic refrigerators and liquefiers

Audience: Both Grad & Undergrad

3. Characterize the operation and performance of recuperative and regenerative cryocoolers

Audience: Both Grad & Undergrad

4. Select appropriate instrumentation to measure temperature, pressure, flow, and level in cryogenic systems

Audience: Both Grad & Undergrad

5. Determine the cooldown time for a cryogenic system including temperature dependent material properties, heat transfer, and refrigeration characteristics

Audience: Both Grad & Undergrad

6. Design a cryogenic system accounting for strength, insulation, fluid flow, and electrical characteristics

Audience: Graduate

### **M E/CBE 567 – SOLAR ENERGY TECHNOLOGY**

3 credits.

Radiant energy transfer and its application to solar exchangers; energy balances for solar exchangers, review of theory, economics, and practice of solar energy applications.

**Requisites:** (M E 364, CBE 326, or concurrent enrollment), or graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Predict available solar radiation at a given location and time, for a given surface orientation

Audience: Undergraduate

2. Predict and model thermal and optical losses for solar thermal systems

Audience: Undergraduate

3. Calculate the load on a solar system

Audience: Undergraduate

4. Predict and model long term performance of solar thermal systems

Audience: Undergraduate

### **M E 569 – APPLIED COMBUSTION**

3 credits.

Introduction to and analysis of combustion processes and combustion technology for gaseous, liquid, and solid fuels. Application to combustion engines, furnaces, fixed-bed, fluidized-bed, and suspension burning boilers.

**Requisites:** M E 364, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop analytical and computational techniques to analyze combustion chemical kinetics

Audience: Both Grad & Undergrad

2. Apply basic knowledge of combustion problems to understand practical energy conversion devices for power generation

Audience: Both Grad & Undergrad

3. Apply analytical techniques to describe transport-driven combustion phenomena

Audience: Graduate

### **M E/E M A 570 – EXPERIMENTAL MECHANICS**

3 credits.

Experimental methods for design and analysis of mechanical components, structures and materials. Electrically and optically recorded stress, strain and deformation data; computer acquisition/reduction/presentation techniques; applications to static and transient events, sensors, transducer design, NDT, fracture and residual stresses.

**Requisites:** Senior standing and (M E 306, E M A 303 or 304) or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. Apply knowledge of experimental techniques and measurement systems for mechanical components, structures and materials

Audience: Both Grad & Undergrad

2. Work in groups in the formulation of analytical models, configuration of measurement systems, interpretation of experimental and theoretical results, and presentation of conclusions

Audience: Both Grad & Undergrad

3. Use digital data acquisition systems, computer aided data reduction and display, and commercial software packages for modeling and data analysis

Audience: Both Grad & Undergrad

4. Evaluate clarity and/or accuracy of written work

Audience: Graduate

**M E 572 – INTERMEDIATE GAS DYNAMICS**

3 credits.

Thermodynamics and fluid dynamics of compressible gas flows with friction and heat transfer, and application to nozzles, shock tubes and propulsion devices. Wave phenomena and engine port tuning. Physics of high temperature gases and equilibrium, non-equilibrium and frozen flows.

**Requisites:** M E 363, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Quantitatively analyze steady and unsteady high-speed flows in one and two dimensions

Audience: Both Grad & Undergrad

2. Apply the method of characteristics to study a wave field

Audience: Both Grad & Undergrad

3. Use Matlab or similar software to solve nonlinear algebraic high-speed flow problems and visualize complex relationships

Audience: Both Grad & Undergrad

4. Use shock and rarefaction polar curves to study wave interactions

Audience: Graduate

**M E 573 – COMPUTATIONAL FLUID DYNAMICS**

3 credits.

Provides an in-depth introduction to the methods and analysis techniques used in computational solutions of fluid mechanics and heat transfer problems. Model problems are used to study the interaction of physical processes and numerical techniques. Contemporary methods for boundary layers, incompressible viscous flows, and inviscid compressible flows are studied. Finite differences and finite volume techniques are emphasized. Knowledge of programming language such as Python, C++, MATLAB or Java required.

**Requisites:** M E 363, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**M E/E C E 576 – PRINTED AND FLEXIBLE ELECTRONICS: MANUFACTURING, DEVICES, AND APPLICATIONS**

3 credits.

Exploration of additive fabrication of thin-film electronics. Various techniques, materials, and applications of printable electronics with a key focus on mechanically flexible electronic devices. Identify the appropriate printing technology and materials to achieve desired device performance.

**Requisites:** E C E 230 or 376, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Define the broad field of printed/thin-film electronics

Audience: Both Grad & Undergrad

2. Describe the multiple techniques for printing electronics

Audience: Both Grad & Undergrad

3. Identify the appropriate technique for specific target applications

Audience: Both Grad & Undergrad

4. Describe applications of materials for insulating, conducting, and semiconducting, required for advanced thin-film electronics

Audience: Both Grad & Undergrad

5. Benchmark printed devices including sensors and thin-film transistors

Audience: Both Grad & Undergrad

6. Design printable electronic sensors to desired specifications

Audience: Graduate

7. Describe the current challenges of the field of printable electronics

Audience: Graduate

**M E/E C E 577 – AUTOMATIC CONTROLS LABORATORY**

4 credits.

Control theory is reduced to engineering practice through the analysis and design of actual systems in the laboratory. Experiments are conducted with modern servo systems using both analog and digital control. Systems identification and modern controls design are applied to motion and torque control.

**Requisites:** M E 346 or E C E 332, or graduate/professional standing or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

### **M E 578 – MARINE ROBOTICS**

3 credits.

Modeling, control, perception, and navigation of autonomous marine robots, including Autonomous Surface Vehicles (ASVs) and Autonomous Underwater Vehicles (AUVs). Core topics include kinematics, dynamics, optimal control, state estimation, perception, communication, and guidance tailored for marine robotic systems. Development and testing of dynamic models, controllers, and perception algorithms on simulated/real marine robot platforms.

**Requisites:** (M E 340 or concurrent enrollment), (MATH 320 or 376), (PHYSICS 202, 208, or 248), and E C E/M E 439, or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Explain the core principles of underwater robotics, including kinematics, dynamics, control, localization, and communication

Audience: Both Grad & Undergrad

2. Implement control and perception algorithms for Autonomous Surface Vehicles (ASVs) and Autonomous Underwater Vehicles (AUVs) to achieve specified tasks

Audience: Both Grad & Undergrad

3. Execute simulations/experiments with small autonomous robotic systems and analyze the resulting data to evaluate and improve system performance

Audience: Both Grad & Undergrad

4. Communicate technical findings about marine systems effectively

Audience: Both Grad & Undergrad

5. Assess the environmental and ethical implications of autonomous marine systems

Audience: Both Grad & Undergrad

6. Design optimal control systems for marine robots to ensure robust performance in dynamic and disturbed aquatic environments

Audience: Graduate

### **M E 601 – SPECIAL TOPICS IN MECHANICAL ENGINEERING**

1-3 credits.

Advanced topics of special interest in various areas of Mechanical Engineering, such as vibrations, balancing, lubrication and wear, special manufacturing processes, automation, energy systems, etc.

**Requisites:** Senior standing or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify and describe key theories, concepts, and methods in Mechanical Engineering

Audience: Both Grad & Undergrad

2. Apply key theories, concepts, and methods in Mechanical Engineering, using appropriate tools, processes, and/or software

Audience: Both Grad & Undergrad

3. Apply, Analyze or evaluate advanced theories, concepts, or methods in Mechanical Engineering

Audience: Graduate

### **M E/B M E 605 – SPECIAL TOPICS IN BIOMECHANICS**

1-3 credits.

Various special topics in biomechanics.

**Requisites:** None

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Learning Outcomes:** 1. Identify and describe key theories, concepts, and methods in biomechanics

Audience: Both Grad & Undergrad

2. Apply key theories, concepts, and methods in biomechanics, using appropriate tools, processes, and/or software

Audience: Both Grad & Undergrad

3. Apply, analyze, or evaluate advanced theories, concepts, or methods in biomechanics

Audience: Graduate

**M E/B M E 615 – TISSUE MECHANICS**

3 credits.

Focus on solid mechanics of prominent musculoskeletal and cardiovascular tissues. Their normal and pathological behaviors (stiffness, strength, relaxation, creep, adaptive remodeling, etc.) in response to physiologic loading will be examined and quantified.

**Requisites:** M E 306 or E M A 303, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Mathematically and conceptually define stress and strain tensors

Audience: Both Grad & Undergrad

2. Calculate stress given a deformation and a constitutive relationship

Audience: Both Grad & Undergrad

3. Describe key features of tissue mechanics

Audience: Both Grad & Undergrad

4. Describe structure-function relationships for biological tissues

Audience: Both Grad & Undergrad

5. Summarize and present current biomechanical knowledge on a specific tissue

Audience: Graduate

**M E/I SY E 641 – DESIGN AND ANALYSIS OF MANUFACTURING SYSTEMS**

3 credits.

Covers a broad range of techniques and tools relevant to the design, analysis, development, implementation, operation and control of modern manufacturing systems. Case studies assignments using industry data will be used to elaborate the practical applications of the theoretical concepts.

**Requisites:** I SY E 315, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify suitable analysis techniques to investigate processes related to manufacturing, planning, engineering or office operations within a manufacturing firm

Audience: Both Grad & Undergrad

2. Perform analysis to describe, predict and analyze behavior of a manufacturing system to meet desired managerial and economic objectives for a real-world or realistic manufacturing systems improvement project/case study

Audience: Both Grad & Undergrad

3. Develop recommendations that will improve manufacturing system performance (e.g. reduce flow time, increase throughput)

Audience: Both Grad & Undergrad

4. Collaborate effectively in teams to develop solutions to engineering problems and communicate findings effectively

Audience: Both Grad & Undergrad

5. Reflect on personal strengths and weaknesses with respect to team leadership and project management

Audience: Graduate

**M E/I SY E 643 – PERFORMANCE ANALYSIS OF MANUFACTURING SYSTEMS**

3 credits.

Examines the state of the art in the use of stochastic network theory to develop performance models of modern manufacturing systems.

**Requisites:** (I SY E 624 or STAT/I SY E/MATH/OTM 632) and (COMP SCI 200, 220, 300, 301, 302, 400, or placement into COMP SCI 300), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2021

**Learning Outcomes:** 1. Model a variety of manufacturing problems as stochastic models using Markov Chain and Process theory

Audience: Both Grad & Undergrad

2. Identify the basic assumptions underlying stochastic models and understand what can happen when these assumptions do not hold

Audience: Both Grad & Undergrad

3. Apply queueing theory to model manufacturing systems

Audience: Both Grad & Undergrad

4. Apply the line balancing method for assembly systems design

Audience: Both Grad & Undergrad

5. Perform cost analysis for manufacturing systems

Audience: Both Grad & Undergrad

6. Apply the analytical approaches of performance analysis for manufacturing systems to real industry cases

Audience: Both Grad & Undergrad

7. Apply advanced Markov process method to solve complicated performance evaluation problems encountered in manufacturing production systems

Audience: Graduate

**M E 699 – ADVANCED INDEPENDENT STUDY**

1-3 credits.

Directed study projects as arranged with instructor.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply advanced physical and mathematical principles to engineering research problems

Audience: Graduate

2. Apply advanced mechanical engineering principles to engineering research problems

Audience: Graduate

3. Communicate technical concepts to a diverse audience via verbal or written media

Audience: Graduate

**M E 702 – GRADUATE COOPERATIVE EDUCATION PROGRAM**

1-2 credits.

Work experience that combines classroom theory with practical knowledge of operations to provide students with a background on which to develop and enhance a professional career. The work experience is tailored for MS students from within the U.S. as well as eligible international students.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify and respond appropriately to real-life engineering ethics cases relevant to co-op work

Audience: Graduate

2. Synthesize and apply appropriate technical education to real world technical work

Audience: Graduate

3. Communicate effectively in writing and speaking with a range of audiences in the workplace, including those without disciplinary expertise

Audience: Graduate

4. Develop professional and transferable habits like time management skills, collaborative problem-solving skills, and research skills for learning new information

Audience: Graduate

**M E/E M A 703 – PLASTICITY THEORY AND PHYSICS**

3 credits.

Physical foundations of plasticity as a basis for choices made in the formulation of theories representing plastic deformation and their limitation. Motion of dislocations and formation and growth of deformation twins. Experimental results in the context of plasticity models. Traditional and research topics of plasticity and theories for rate-independent, rate-dependent, single and polycrystal descriptions. Numerical solution of equations and computational plasticity. Knowledge of mechanics of materials [such as E M A 303 or M E 306] and continuum mechanics [such as E M A 622] required.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2023**Learning Outcomes:** 1. Identify the physical sources of plastic deformation in materials

Audience: Graduate

2. Explain and apply traditional and advanced theories of plasticity

Audience: Graduate

3. Execute a computational study of plasticity with a common engineering material

Audience: Graduate

4. Given a material model, know how to evaluate the material parameters in the model

Audience: Graduate

5. Provide critical assessment of seminal and modern plasticity literature

Audience: Graduate

**M E/E M A 708 – ADVANCED COMPOSITE MATERIALS**

3 credits.

Contemporary topics in composite materials, including innovations in sandwich structures, textile composites, and architected materials; fracture mechanics; durability and damage tolerance; experimental techniques; transient, micro, nonlinear, inelastic and environmental effects; advanced manufacturing methods: repair and applications. Knowledge of basic composite materials [such as CIV ENGR/E M A/M E 508] is strongly encouraged.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2016**Learning Outcomes:** 1. Describe different types of advanced composites and manufacturing processes

Audience: Graduate

2. Describe the mechanical behavior of various composite materials under different types of loading conditions

Audience: Graduate

3. Mathematically model and solve for engineering stresses and deformations in a composite structure

Audience: Graduate

4. Assess the key challenges and impact of technical work being conducted in the area of composite materials

Audience: Graduate

### **M E/B M E 715 – ADVANCED TISSUE MECHANICS**

3 credits.

Central topics in solid mechanics applied to soft tissues, including analysis of strain in the setting of large deformations, computation of stress in multiple experimental loading configurations, constitutive modeling of biomaterials using hyperelastic strain-energy functions, modeling tissue growth and remodeling, and the main theories for soft tissue failure will be covered. Application of finite elasticity theory in practical laboratory situations, and key papers and concepts in soft tissue mechanics.

**Requisites:** (M E/B M E 615, E M A 710, or 622 prior to Fall 2024) and graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Compute strain from multiple different types of marker and image data

Audience: Graduate

2. Compute stresses using data from uniaxial, biaxial, and inflation mechanical tests

Audience: Graduate

3. Construct and utilize constitutive models appropriate for soft tissues

Audience: Graduate

4. Formulate and analyze continuum models of biological growth

Audience: Graduate

5. Identify common failure criteria applied to soft tissues

Audience: Graduate

### **M E 717 – ADVANCED POLYMER PROCESSING**

3 credits.

Advanced analysis and modeling of plastics extrusion, injection molding, and other processes; mold and equipment design; materials consideration. Knowledge of polymer processing [such as M E 417] strongly encouraged.

**Requisites:** Graduate/professional standing or declared in Capstone Certificate in Polymer Processing and Manufacturing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

### **M E 718 – MODELING AND SIMULATION IN POLYMER PROCESSING**

3 credits.

This course is designed to acquaint the student with computer simulation technology used for the engineering of polymer processes. Knowledge of polymer processing [such as M E 417] strongly encouraged.

**Requisites:** Graduate/professional standing or declared in Capstone Certificate in Polymer Processing and Manufacturing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

### **M E/E M A 722 – INTRODUCTION TO POLYMER RHEOLOGY**

3 credits.

Formulation of constitutive equations using embedded base vectors.

Viscosity, normal stress differences, stress relaxation, elastic recoil.

Polymer rheology; homogeneous strain history. Knowledge of differential equations [such as MATH 320] strongly encouraged.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2023

### **M E 729 – ADVANCED MACHINING**

3 credits.

Advanced topics of mechanical machining process with theory and its applications, material behavior during machining process, 5-axis machining, micro-machining, and difficult-to-cut materials. Ductile to brittle transition of crystalline materials such as metals and ceramics, subsurface damage, and residual stress using theoretical development, empirical observation, and molecular dynamics. Knowledge of metal cutting [such as M E 429], materials science [such as M S & E 350], and manufacturing processes [such as M E 311] required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Describe techniques for mechanical machining of difficult-to-cut materials

Audience: Graduate

2. Adapt techniques for emerging materials

Audience: Graduate

3. Apply cutting theory, including understanding of ductile to brittle transition, residual stress and subsurface damage, and other advanced topics of machining

Audience: Graduate

4. Identify industry needs for scalable machining processes

Audience: Graduate

5. Identify manufacturing's impact on the global economy, the environment, social paradigms, and government policy

Audience: Graduate

6. Discuss professional and ethical responsibilities of manufacturing practices

Audience: Graduate

**M E/E C E 732 – DYNAMICS OF CONTROLLED SYSTEMS**

3 credits.

Emphasis on obtaining equations which define the behavior of physical systems frequently subjected to control; mechanical processing, fluid power, and thermal systems; analytical, experimental, and computer techniques. Knowledge of Automatic Controls [such as M E 446 or E C E 322] is required.

**Requisites:** Graduate/professional standing. Not open to students with credit for M E 746.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe how physical state feedback affects dynamic stiffness of a control system

Audience: Graduate

2. Analyze the sensitivity of the system with eigenvalue migration analysis  
Audience: Graduate

3. Develop improved control systems by implementing active state feedback which mimics the physical system and augments the system performance  
Audience: Graduate

4. Differentiate command tracking from disturbance rejection. The student will characterize the necessary command feedforward structure in order to achieve optimal command tracking.  
Audience: Graduate

5. Manipulate observer inputs and state feedback inputs to achieve zero-lag properties  
Audience: Graduate

6. Draw the block diagram of physical systems identifying the appropriate inputs required for a properly formed observer  
Audience: Graduate

7. Implement observers for state estimation in multi-variable control systems  
Audience: Graduate

**M E/E C E 733 – ADVANCED COMPUTER CONTROL OF MACHINES AND PROCESSES**

3 credits.

Digital control theory, design methodology, and techniques for controller implementation on digital computers. Advanced single and multi-axis motion generation algorithms. Multiple processor control systems. Multiple objective control systems for machinery guidance and manufacturing processes. Precision control. Knowledge of continuous and discrete time control [such as M E 447 or E C E 332] is required.

**Requisites:** Graduate/professional standing. Not open to students with credit for M E 747.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Explain and apply physics-based discrete time system modeling

Audience: Graduate

2. Analyze and design in both the continuous and discrete domains  
Audience: Graduate

3. Analyze and design control systems using tools such as Matlab and Simulink  
Audience: Graduate

4. Describe physics-based control structures for computer control systems  
Audience: Graduate

### **M E 737 – SCIENTIFIC COMPUTING AND MACHINE LEARNING FOR ENGINEERING APPLICATIONS**

3 credits.

Key computational topics for engineering applications will be discussed, encompassing both established classical numerical methods and the emerging field of machine learning. Knowledge of calculus [such as MATH 221], linear algebra and differential equations [such as MATH 320], probability [such as MATH 331] and programming in Python or MATLAB [such as COMP SCI 220] is required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Implement representative machine learning methods for regression analysis to solve engineering problems  
Audience: Graduate

2. Apply both classical numerical methods and machine learning techniques to solve Ordinary Differential Equations (ODEs) and Partial Differential Equations (PDEs)  
Audience: Graduate

3. Evaluate the strengths and weaknesses of classical numerical methods and machine learning techniques for solving engineering problems  
Audience: Graduate

4. Develop reduced-order models to accelerate computation  
Audience: Graduate

### **M E 740 – ADVANCED VIBRATIONS**

3 credits.

Vibration of mechanical components subject to dynamic loads; analytical, numerical and finite element methods applied to the analysis and design of mechanical systems consisting of cables, bars, shafts, beams, frames, rings, membranes, plates and shells. Knowledge of vibrations [such as M E 440] strongly encouraged.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

### **M E 746 – DYNAMICS OF CONTROLLED SYSTEMS**

3 credits.

Emphasis on obtaining equations which define the behavior of physical systems frequently subjected to control; mechanical processing, fluid power, and thermal systems; analytical, experimental, and computer techniques. Knowledge of Automatic Controls [such as M E 446 or E C E 332] is required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. Describe how physical state feedback affects dynamic stiffness of a control system  
Audience: Graduate

2. Analyze the sensitivity of the system with eigenvalue migration analysis.

Audience: Graduate

3. Develop improved control systems by implementing active state feedback which mimics the physical system and augments the system performance.  
Audience: Graduate

4. Differentiate command tracking from disturbance rejection. The student will characterize the necessary command feedforward structure in order to achieve optimal command tracking.  
Audience: Graduate

5. Manipulate observer inputs and state feedback inputs in order to achieve zero-lag properties.  
Audience: Graduate

6. Draw the block diagram of physical systems identifying the appropriate inputs required for a properly formed observer.  
Audience: Graduate

7. Implement observers for state estimation in multi-variable control systems.  
Audience: Graduate

**M E 747 – ADVANCED COMPUTER CONTROL OF MACHINES AND PROCESSES**

3 credits.

Digital control theory, design methodology, and techniques for controller implementation on digital computers. Advanced single and multi-axis motion generation algorithms. Multiple processor control systems. Multiple objective control systems for machinery guidance and manufacturing processes. Precision control. Knowledge of digital control [such as M E 447] strongly encouraged.

**Requisites:** (M E 446 or E C E 332) and graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**M E 748 – OPTIMUM DESIGN OF MECHANICAL ELEMENTS AND SYSTEMS**

3 credits.

Formulation and solution of mechanical design problems by use of mathematical programming methods.

**Requisites:** M E 548 and graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**M E 751 – ADVANCED COMPUTATIONAL DYNAMICS**

3 credits.

Overview of techniques used to understand the time evolution (dynamics) of multi-body mechanical engineering systems. Modeling, equation formulation, and numerical methods used to determine the dynamics of multi-body mechanical systems. Rigid and flexible multi-body dynamics, friction and contact. Knowledge of Python or MATLAB strongly recommended. Knowledge of dynamic systems [such as M E 240 or 340] required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**Learning Outcomes:** 1. Solve problems that pertain to the Kinematics and Dynamics of complex mechanical systems (mechanisms) made up of both rigid and deformable bodies

Audience: Graduate

2. Formulate basic multi-physics models

Audience: Graduate

3. Use Matlab or Python programming to produce a simulation engine that draws on the concepts introduced in this class

Audience: Graduate

4. Use third party software to solve real-life problems tied to mechanical systems that include rigid and compliant elements and might interact with a fluid

Audience: Graduate

**M E 753 – FRICTION, LUBRICATION AND WEAR**

3 credits.

Behavior of frictional surfaces under different types of loading. Mechanisms of heat generation and surface damage (wear, scuffing, pitting, fretting, etc.). Rheological effects. Effect of lubrication. Surface interaction in metal cutting. Design considerations. Knowledge of mechanics/strength of materials [such as E M A 303 or M E 306] strongly encouraged.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**M E 758 – SOLID MODELING**

3 credits.

Mathematical modeling, computer representations, and algorithms for manipulation of two- and three-dimensional shapes on a computer. Applications of shape modeling to design, representation, and analysis of mechanical parts and processes; other engineering and scientific applications of shape and solid modeling. Knowledge of advanced programming [such as COMP SCI 400] and knowledge of linear algebra [such as MATH 340] strongly encouraged.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**Learning Outcomes:** 1. Utilize advanced mathematical representations of shapes

Audience: Graduate

2. Translate mathematical representations to computer algorithms

Audience: Graduate

3. Apply shape modeling to design problems

Audience: Graduate

**M E/COMP SCI/E C E/E M A/E P 759 – HIGH PERFORMANCE COMPUTING FOR APPLICATIONS IN ENGINEERING**

3 credits.

An overview of hardware and software solutions that enable the use of advanced computing in tackling computationally intensive Engineering problems. Hands-on learning promoted through programming assignments that leverage emerging hardware architectures and use parallel computing programming languages. Students are strongly encourage to have completed COMP SCI 367 or COMP SCI 400 or to have equivalent experience.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **M E 761 – TOPICS IN THERMODYNAMICS**

3 credits.

Thermostatic behavior of nonideal gases; equations of state, with emphasis on their empirical and statistical development, including mixture rules; more detailed study of chemical and phase equilibrium; selected applications of the foregoing; real gas processes, combustion, direct energy conversion devices. Knowledge of thermodynamics [such as M E 561] strongly encouraged.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

### **M E 764 – ADVANCED HEAT TRANSFER I-CONDUCTION**

3 credits.

Analytical methods in conduction; Bessel functions, separation of variables, Laplace transforms, superposition, oscillating solutions; computer methods; finite differences, finite elements. Knowledge of basic heat transfer [such as M E 564] strongly encouraged.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Use Duhamel's theorem to solve conduction problems

Audience: Graduate

2. Use Complex Combination to solve conduction problems

Audience: Graduate

3. Use Separation of Variables to solve conduction problems

Audience: Graduate

4. Use Superposition to solve conduction problems

Audience: Graduate

5. Use Finite Difference and Finite Element techniques to solve conduction problems

Audience: Graduate

### **M E 768 – PRECISION MEASUREMENTS**

3 credits.

General concepts for predicting, characterizing, and reducing noise in measurements. Address the key questions of all experimentalists: (1) How can I improve my signal-to-noise ratio? (2) What is the ultimate detection limit of my measurement approach? Knowledge of Matlab programming and basic circuit design [such as E C E 230] is required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Differentiate between different sources of measurement noise

Audience: Graduate

2. Employ noise circuit analysis to predict the detection limit of a measurement

Audience: Graduate

3. Characterize measurement noise in the frequency domain

Audience: Graduate

4. Design and test analog filter circuits

Audience: Graduate

5. Implement lock-in detection techniques to measure small signals

Audience: Graduate

**M E 769 – COMBUSTION PROCESSES**

3 credits.

Combustion theory and practice. Thermodynamics of combustion, flame theory, detonation, spray and droplet combustion related to various engine applications. Knowledge of internal combustion engines [such as M E 469], thermodynamics [such as M E 561], and combustion [such as M E 569] strongly encouraged.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Write computer code to solve equilibrium combustion problems

Audience: Graduate

2. Write computer code to solve zero-dimensional transient combustion problems

Audience: Graduate

3. Write computer code to solve transport equations for a one-dimensional reacting flow

Audience: Graduate

4. Perform design level calculations using a commercial computational fluid dynamics or chemical kinetics code

Audience: Graduate

**M E 770 – ADVANCED EXPERIMENTAL INSTRUMENTATION**

3 credits.

Theory and design of instruments for transient physical phenomena especially related to internal combustion engines. Basic knowledge of kinetic theory of gases, statistical mechanics, and quantum mechanics for gases, and measurement theory [such as M E 601: Physics of Gases] required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Identify sources of systematic and random uncertainties for measurement systems

Audience: Graduate

2. Perform uncertainty analysis for complex systems

Audience: Graduate

3. Define vocabulary and nomenclature associated with optical and laser-based diagnostics

Audience: Graduate

4. Perform basic optics calculations and gaussian beam propagation calculations

Audience: Graduate

5. Apply knowledge of physics to estimate diagnostic performance

Audience: Graduate

**M E 774 – CHEM KINETICS OF COMBUST SYSTEMS**

3 credits.

Application of gas-phase chemical reaction rate theory to power and propulsion systems, both earthbound and airborne. Aerothermochemistry, kinetics of combustion reactions, kinetics related to air pollutant generation. Development and comparison of transition state theory, collision theory and bond-energy-bond-order method. Intermediate knowledge of thermodynamics and combustion and basic understanding of kinetic theory of gases, statistical mechanics, and quantum mechanics for gases [such as M E 601: Physics of Gases] required.

**Requisites:** M E 569 and graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Define terminology associated with kinetics and reaction dynamics

Audience: Graduate

2. Solve chemical equilibrium using the method of element potentials

Audience: Graduate

3. Apply reaction rate theories for bimolecular and unimolecular reactions to estimate rate coefficients

Audience: Graduate

4. Solve and analyze reaction mechanisms using computational tools

Audience: Graduate

5. Identify dominant ignition pathways for hydrocarbon fuels

Audience: Graduate

**M E/CIV ENGR/E M A 775 – TURBULENT HEAT AND MOMENTUM TRANSFER**

3 credits.

Stochastic methods in turbulent heat and momentum transfer; fully developed turbulence; numerical methods including model applications to boundary layers, reacting flows, mass transfer, and unsteady flows; linear and non-linear stability and transition; emphasis on applications of interest to Mechanical, Aerospace, and Environmental Engineers. Knowledge of fluid mechanics [such as M E 363 or CBE 320] strongly encouraged.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the physics and mathematics of turbulence theory and modeling

Audience: Graduate

2. Describe general features of turbulence

Audience: Graduate

3. Use analysis tools to solve problems and process data related to turbulence

Audience: Graduate

4. Use turbulence concepts to understand and explain turbulent behavior in more complex systems

Audience: Graduate

**M E/E P 777 – VACUUM TECHNOLOGY**

3 credits.

Topics defining modern vacuum technology, including the kinetic theory of gases, conductance, pumping systems, pump technologies, pressure measurement, gas-surface interactions, sealing technologies, leak detection, and residual gas analysis will be addressed through a combination of lectures, laboratory activities, problem solving, and group discussions. Knowledge of fluid mechanics [such as M E 363 or B M E 320] strongly encouraged.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2022**Learning Outcomes:** 1. Use kinetic theory to determine key characteristics of a rarified gas such as the mean free path length, molecular flux and the average velocity

Audience: Graduate

2. Calculate the conductance of a vacuum system for molecular, viscous, and transitional flow regimes

Audience: Graduate

3. Calculate the time dependent pump down behavior of a vacuum system

Audience: Graduate

4. Repair a rotary vane vacuum pump

Audience: Graduate

5. Characterize the operation, advantages and disadvantages of low, medium, and high vacuum pumps

Audience: Graduate

6. Characterize the operation, advantages and disadvantages of low and high vacuum gauges

Audience: Graduate

7. Define and utilize appropriate leak detection methods for small, medium, and large leak rates

Audience: Graduate

**M E 790 – MASTER'S RESEARCH AND THESIS**

1-9 credits.

Directed study projects as arranged with instructor.

**Requisites:** Declared in a Mechanical Engineering graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**M E 890 – PHD RESEARCH AND THESIS**

1-9 credits.

Directed study projects as arranged with instructor.

**Requisites:** Declared in a Mechanical Engineering graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**M E 903 – GRADUATE SEMINAR**

0 credits.

Topics vary.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**M E 964 – SPECIAL ADVANCED TOPICS IN MECHANICAL ENGINEERING**

1-3 credits.

Advanced topics in design, manufacturing, energy, etc.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Identify and describe key theories, concepts, and methods in mechanical engineering

Audience: Graduate

2. Apply key theories, concepts, and methods in mechanical engineering, using appropriate tools, processes, and/or software

Audience: Graduate

3. Apply, analyze, or evaluate advanced theories, concepts, or methods in mechanical engineering

Audience: Graduate

**M E 990 – DISSERTATOR RESEARCH AND THESIS**

1-9 credits.

Directed study projects as arranged with instructor.

**Requisites:** Declared in Mechanical Engineering PhD**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**M E 999 – ADVANCED INDEPENDENT STUDY**

1-5 credits.

Directed study projects as arranged with instructor.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Fall 2024

# MEDICAL GENETICS (MD GENET)

## MD GENET/GENETICS 565 – HUMAN GENETICS

3 credits.

Principles, problems, and methods of modern human genetics. Focuses on how researchers discover the genetics of diseases and how those discoveries are used to improve clinical practice. Surveys aspects of (i) the molecular function of the human genome, (ii) the basic principles of human genetics including statistical genetics, quantitative genetics, and genomic variation in human populations, (iii) the genetics of rare disorders and common diseases, and genomic analysis approaches, including genome-wide association studies and sequencing, and (iv) how genetics are used in medicine and discussions covering ethical considerations of human genomic data.

**Requisites:** GENETICS 466, 468, BIOCORE 587, or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Predict and describe how different classes of genetic variants, as defined by (a) mutation mechanism, (b) variant size, (c) population frequency, and (d) location in the genome, could affect molecular and cellular functions and risk for disease

Audience: Both Grad & Undergrad

2. Design experimental approaches to investigate the mechanisms of human genetic disorders

Audience: Both Grad & Undergrad

3. Explain and give examples of genetic inheritance patterns and the contribution of inherited factors to disease risk

Audience: Both Grad & Undergrad

4. Describe the design, strengths, and weaknesses of the various approaches for identifying genes or loci associated with a human disease or trait (e.g. linkage mapping, genetic association, sequencing), and interpret results from these studies

Audience: Both Grad & Undergrad

5. Explain how genetic information is used in the practice of medicine for diagnosis or to guide treatment and the limitations of current clinical diagnostic or treatment tools

Audience: Both Grad & Undergrad

6. Apply human genetics concepts to critically analyze published scientific studies and to describe experimental approaches that can be performed to address shortcomings and/or extend the findings of published work

Audience: Graduate

## MD GENET/BIOCHEM/GENETICS 620 – EUKARYOTIC MOLECULAR BIOLOGY

3 credits.

Focuses on the basic molecular mechanisms that regulate DNA, RNA, and protein metabolism in eukaryotic organisms.

**Requisites:** BIOCHEM 501, 508 or graduate/professional standing

**Course Designation:** Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall core principles that govern the structure and function of DNA, RNA, and protein.

Audience: Both Grad & Undergrad

2. Describe techniques for quantifying the expression, interaction, and cellular localization of specific molecules and for determining their necessity and sufficiency in molecular processes.

Audience: Both Grad & Undergrad

3. Explain how molecular processes that control the synthesis, decay, interactions, localization, folding, and modification of molecules are silenced, initiated, maintained, and terminated.

Audience: Both Grad & Undergrad

4. Describe how information is transferred between molecules to alter cellular activity in response to developmental and environmental signals.

Audience: Both Grad & Undergrad

5. Critique and weigh the credibility of existing molecular data.

Audience: Both Grad & Undergrad

6. Develop and draw hypotheses that use existing data to account for as yet unexplained molecular processes in eukaryotic organisms.

Audience: Both Grad & Undergrad

7. Design discovery/observation, loss-of-function, and gain-of-function experiments to test molecular hypotheses.

Audience: Both Grad & Undergrad

8. Implement problem solving strategies in thesis research project.

Audience: Graduate

### MD GENET/GENETICS/POP HLTH 636 – PUBLIC HEALTH GENOMICS

1 credit.

Provides an introduction to public health genomics through a review of fundamental principles of genetics, the use of genetic information in clinical and research settings, and its implications for disease management and prevention, and health promotion. Explores policies that guide public health and discusses current ethical, legal, and social implications of these policies.

**Requisites:** (Junior standing and ZOOLOGY/BIOLOGY/BOTANY 151) or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Discuss the impact of genetics on clinical care and public health practice

Audience: Both Grad & Undergrad

2. Critically discuss genetic/genomic policies and the relevant ethical, legal, and social implications (ELSI) of these policies

Audience: Both Grad & Undergrad

3. Read, summarize, critique, and relate current news articles to key concepts in public health genomics

Audience: Graduate

### MD GENET/GENETICS 662 – CANCER GENETICS

3 credits.

Focuses on the genetic basis by which cancer manifests. Provides a comprehensive overview of how cancer is generated as a result of abnormalities at the DNA level, paying special attention to oncogenes, tumor suppressors, DNA mutations, DNA repair mechanisms, chromosomal instability, and tumor heterogeneity. Stresses the role of the immune system in combating cancer, the phenomenon of cancer resistance, anti-tumor strategies, and epigenetic influences on tumorigenesis. Highlights connections between course material and clinical relevance.

**Requisites:** GENETICS 466, 467 or BIOCORE 383

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Describe major research advances in cancer genetics

Audience: Undergraduate

2. Discuss the promises and challenges that await the field of cancer genetics.

Audience: Undergraduate

3. Apply your understanding of cancer genetics to generate research questions and improve hypothetical patient care

Audience: Undergraduate

4. Critically evaluate primary literature regarding cancer genetics

Audience: Undergraduate

5. Organize and deliver a scientific presentation to your peers

Audience: Undergraduate

### MD GENET/GENETICS 677 – ADVANCED TOPICS IN GENETICS

1-3 credits.

Contents vary; consideration of subjects not included in the curriculum.

**Requisites:** Graduate/professional standing, GENETICS 466, 468, or BIOCORE 383

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply, analyze, or evaluate advanced theories, concepts, or methods in genetics and genomics.

Audience: Both Grad & Undergrad

2. Apply knowledge of experimental genetics and genomics to related research projects.

Audience: Graduate

### MD GENET 699 – INDEPENDENT READING

1-3 credits.

Directed study projects as arranged with instructor.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2015

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Undergraduate

2. Develop critical, analytical, and independent thinking skills

Audience: Undergraduate

### MD GENET/GENETICS 707 – GENETICS OF DEVELOPMENT

3 credits.

A research-level analysis of the current status of the investigation of processes controlling differential gene activity and cellular behavior. The major emphasis is genetic. In successive years, the focus moves from the gene to the cell to the organism.

**Requisites:** Declared in Genetics graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Critically evaluate papers, form meaningful questions based on the material, and engage scientists in conversations about their work.

Audience: Graduate

2. Improve oral presentations and scientific writing (grants, review articles).

Audience: Graduate

3. Expand scientific literacy.

Audience: Graduate

### MD GENET/GENETICS 708 – METHODS AND LOGIC IN GENETIC ANALYSIS

3 credits.

Contemporary issues in genetic, developmental, cell, and molecular biology are addressed in a discussion format. Invited speakers give research lectures and reading material is taken from the primary literature. The discussion focuses on evaluating genetic approaches to biological problems.

**Requisites:** Declared in Genetics graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Critically evaluate papers, form meaningful questions based on the material, and engage scientists in conversations about their work.

Audience: Graduate

2. Improve oral presentations and scientific writing (grants, review articles).

Audience: Graduate

3. Expand scientific literacy.

Audience: Graduate

### MD GENET 911 – MODERN CLINICAL GENETICS: HOW TO APPROACH A RAPIDLY CHANGING FIELD

2 credits.

Genetics and genomics are rapidly evolving fields. In modern clinical care settings, clinicians will be exposed to genetic and genomic data, including that brought by patients, and knowing how to read genetic and genomic data is increasingly necessary in clinical practice. Genetics and genomics in a clinical setting spans a wide range of topics including diagnosis and treatment of genetic diseases. Familiarity with clinical genetic analysis, and the genetic approaches used in basic science, helps medical students better understand genetic disease background. Learn how to bridge basic concepts of human genetics and clinical genetics (actual diseases). Emphases will include research into human genetic diseases, including designing genetic testing, using model organisms and/or cell culture systems, and the development of genetic testing technologies.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Demonstrate understanding of basic concepts of human genetics

Audience: Graduate

2. Describe various genetic approaches and models for studying human genetic diseases

Audience: Graduate

3. Apply basic concepts of genetics to answering questions in human genetic diseases

Audience: Graduate

4. Explain fundamentals of clinical genetics, including genetic testing

Audience: Graduate

5. Model logical thinking process to organize scientific discussion and presentation

Audience: Graduate

### MD GENET 999 – INDEPENDENT WORK

1-3 credits.

Directed study projects as arranged with instructor.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2010

**Learning Outcomes:** 1. Exhibit a broad understanding of general Genetics and Genomics principles.

Audience: Graduate

2. Conduct advanced independent research using a variety of approaches.

Audience: Graduate

## MEDICAL HISTORY AND BIOETHICS (MED HIST)

### MED HIST/HIST SCI/HISTORY 132 – BEES, TREES, GERMS, AND GENES: A HISTORY OF BIOLOGY

3 credits.

How did today's biology emerge out of the diverse traditions of agriculture and natural history (bees and trees), biomedicine and molecular biology (germs and genes), which stretch back into the eighteenth century? Examines classic texts and "game-changers" in the history of biology, putting them into broader scientific and social contexts to see how these different ways of knowing intertwined, competed, and yielded novel approaches to the study of life that still shape today's life sciences.

**Requisites:** None

**Course Designation:** Breadth - Either Humanities or Social Science Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

### MED HIST/HIST SCI 212 – BODIES, DISEASES, AND HEALERS: AN INTRODUCTION TO THE HISTORY OF MEDICINE

3 credits.

A survey of different conceptions of how the body as a site of sickness has been understood from Antiquity to contemporary medicine. Includes consideration of the origins and evolution of public health, the changing social role of healers, and the emergence of the modern "standardized" body in health and illness.

**Requisites:** None

**Course Designation:** Breadth - Humanities Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**MED HIST/ANTHRO 231 – INTRODUCTION TO SOCIAL MEDICINE**  
 3 credits.

Provides analytical tools for the critical examination of the social, cultural, political and economic determinants of health conditions and medical practice. Pays special attention to how these factors determine how patients and providers experience and ideate disease and treatment, and how they respond to specific health care policies. Emphasizes the important role that conditions of structural violence and inequality play as determinants of health conditions in a globalized world.

**Requisites:** None

**Course Designation:** Breadth – Either Humanities or Social Science Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**Learning Outcomes:** 1. Identify and analyze within their social, cultural and economic contexts key historical issues, and their significance, in the history of healing practices and public health.

Audience: Undergraduate

2. Develop an understanding of the mutually shaping interactions between perceptions of health, illness and medical practices and culture and society.

Audience: Undergraduate

3. Analyze the role of social factors, race, gender, ethnicity, class, among others, in shaping cultural realities related to body normativity, health, medical practice, public health and medical education.

Audience: Undergraduate

4. Identify the role that patients, healthcare providers, institutions and the state play in modeling medical practice, ideas about the body, public health policies, and medical education.

Audience: Undergraduate

5. Discern the impact of programs of global health as they intersect with international politics in the shaping of ideas about human rights, race, medical hierarchies and public health policies.

Audience: Undergraduate

**MED HIST/HIST SCI/RELIG ST 331 – SCIENCE, MEDICINE AND RELIGION**  
 3 credits.

Introduction to the study of religion, science, and medicine. Focus on how religion, science, and medicine have shaped practices of knowledge production and meaning making with respect to human life, by considering theories of human history and racial progress; how logics of contagion structure human relationships and communal boundaries; the variety of ways of understanding and caring for bodies; and the place of humans within broader ecologies.

**Requisites:** Junior standing

**Course Designation:** Breadth – Humanities

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. read and interpret critically primary and secondary source texts about religion, science, and medicine

Audience: Both Grad & Undergrad

2. access and utilize a variety of resources and methods for critical inquiry and research in religious studies, history of science and medicine, and science and religion

Audience: Both Grad & Undergrad

3. categorize, analyze, and compare core concepts in religious studies, the history of science and medicine, and science and religion, such as the conflict thesis; knowledge production; creation/evolution; eugenics; race; gender; embodiment; care; health/healing; capitalism; and progress narratives

Audience: Both Grad & Undergrad

4. identify, evaluate, and interpret the interrelationships and impact of religious and scientific worldviews as related to health, bodies and communities

Audience: Both Grad & Undergrad

5. perform textual analysis, primary source research and synthesis of scholarly ideas, in persuasive writing, oral communication, active listening, and with critical empathy

Audience: Both Grad & Undergrad

6. create conversations about complex topics that seek academic excellence, honesty, and integrity

Audience: Both Grad & Undergrad

7. engage with the academic literature on religion, science, and medicine that is pertinent to the student's specific research area and apply it to facilitate original primary source analysis

Audience: Graduate

**MED HIST/PHILOS 344 – FOOD ETHICS**

3 credits.

There are many ethical issues related to food production, distribution, consumption, and policy, including animal welfare, animal rights, vegetarianism and veganism, environmental impact, treatment of workers, prospects for agricultural reform, ethical responsibilities of corporate and industry actors, and labeling issues surrounding the use of genetically engineered foods. Some are more theoretical, such as which individuals affected by agriculture deserve direct moral consideration. Other are more practical, such as how to feed a growing global population. We will begin with a brief survey of ethical theories and methods of ethical reasoning, and then explore, from both personal and policy perspectives, several food ethics issues. Among the aims of the course are the goals of helping you think critically about the ethically relevant impacts of your own food choices and improving your understanding of ethical issues implicated in food systems.

**Requisites:** Sophomore standing**Course Designation:** Breadth – Either Humanities or Social Science Level – Intermediate

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2021**Learning Outcomes:** 1. Think critically about arguments.

Audience: Undergraduate

2. Interpret complex texts accurately and analyze them logically.

Audience: Undergraduate

3. Think critically about ethical issues.

Audience: Undergraduate

4. Explain the social, economic, and/or environmental dimensions of the sustainability challenge(s) of modern food systems.

Audience: Undergraduate

5. Apply sustainability principles and/or frameworks to addressing the challenge of human and environmental harms arising from modern food systems.

Audience: Undergraduate

**MED HIST/PATH-BIO 370 – ADDRESSING CONTROVERSY: THE SCIENCE, ETHICS, AND PUBLIC DISCUSSION OF ANIMAL RESEARCH**

3 credits.

Addresses the science, ethics, history, and communication strategies associated with the use of animals in research. Seeks to identify and employ common ground among those with different perspectives to enable students to make good decisions about this contentious topic.

**Requisites:** Satisfied Communications A requirement**Course Designation:** Gen Ed – Communication Part B Breadth – Either Humanities or Natural Science

Level – Intermediate

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2024**Learning Outcomes:** 1. Identify and employ communication practices that encourage tolerant and non-threatening discussion of controversial topics.

Audience: Undergraduate

2. Explain how scientific knowledge is acquired, with special reference to research with animals.

Audience: Undergraduate

3. Explain and compare ethical principles associated with animal use in research.

Audience: Undergraduate

4. Explore and apply principles of effective communication of complex and value-laden science.

Audience: Undergraduate

5. Describe the history and evaluate the present status of the animal research controversy.

Audience: Undergraduate

6. Construct and critique written and verbal presentations about animal research.

Audience: Undergraduate

7. Refine and defend your own position on animal research in a respectful and non-judgmental way that encourages additional dialog.

Audience: Undergraduate

8. Identify common ground among differing perspectives on animal research, and develop best practices for communicating this subject to diverse audiences.

Audience: Undergraduate

9. Practice critical reading, logical thinking, and the use of evidence.

Audience: Undergraduate

10. Employ appropriate style and disciplinary conventions in writing and speaking.

Audience: Undergraduate

11. Learn to use core library resources specific to the discipline.

Audience: Undergraduate

### **MED HIST/PHILOS 505 – JUSTICE AND HEALTH CARE**

3 credits.

Examines ethical issues in the distribution, financing, and delivery of health care (primarily in the United States). Explores key issues in U.S. health policy and forms the empirical foundation for the rest of the class. Engages in ongoing debates in moral and political philosophy over putative entitlements to health and health care. Investigates the nature, justifiability, and methods of health care rationing (including bedside rationing by doctors) and the myriad issues implicated by the near-universally shared goal of health care cost containment.

**Requisites:** Junior standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2019

**Learning Outcomes:** 1. Understand the conversation about justice and health care as an enterprise incorporating moral philosophy, bioethics, and evidence-based social science

Audience: Both Grad & Undergrad

2. Identify and clarify diverse moral norms and principles that underlie diverse convictions about justice and health care

Audience: Both Grad & Undergrad

3. Subject these norms and principles to dispassionate critical reasoning aimed at evaluating the force of underlying reasons for and against them

Audience: Both Grad & Undergrad

4. Write clear and concise essays subjecting issues concerning justice and health to dispassionate ethical analysis

Audience: Both Grad & Undergrad

5. Write a clear and concise 15-page essay arguing for a novel thesis concerning justice and health.

Audience: Graduate

### **MED HIST/HIST SCI/HISTORY 508 – HEALTH, DISEASE AND HEALING II**

3-4 credits.

Medicine in Europe from the 18th century to mid-20th century, investigating changes in disease and demography, state interest in health care, the medical professions, and both scientific and alternative medical ideas.

**Requisites:** Junior standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Recognize the utility of humanistic methods for the study of medicine and public health

Audience: Undergraduate

2. Develop critical thinking skills through techniques of close reading and written analysis

Audience: Undergraduate

3. Understand essential developments in the evolving relationship between medicine and public health in modern societies.

Audience: Undergraduate

### **MED HIST/HIST SCI 509 – THE DEVELOPMENT OF PUBLIC HEALTH IN AMERICA**

3 credits.

Health problems in the U.S. from the colonial period to the twentieth century; efforts made toward their solutions.

**Requisites:** Junior standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify major historical trends in the history of public health in the United States.

Audience: Undergraduate

2. Understand the tensions between individual rights and population health as they have played out in the past.

Audience: Undergraduate

3. Analyze the social, political, and cultural factors that have influenced societal responses to epidemics and pandemics in American history.

Audience: Undergraduate

4. Develop critical thinking skills by engaging with both primary sources and secondary texts to understand how historians have written the history of public health.

Audience: Undergraduate

5. Evaluate the ways in which understanding the past history of public health can shape policy making in the present.

Audience: Undergraduate

### **MED HIST/PHILOS 515 – PUBLIC HEALTH ETHICS**

3 credits.

Focuses on ethical issues implicated in a population-level approach to disease prevention and health promotion. Explores prominent theoretical approaches to public health ethics and engages with several ethical tensions. Example issues include: the use of coercive or intrusive public health; the justification of paternalistic measures in societies; the extent to which societies should hold individuals responsible for their health conditions; the need to decide who receives life-saving treatment or vaccination; and climate changes and intergenerational justice; ethical issues in international pharmaceutical research.

**Requisites:** Junior standing

**Course Designation:** Breadth – Humanities

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Understand the conversation about public health ethics as an enterprise incorporating moral philosophy, bioethics, and evidence-based social science.

Audience: Both Grad & Undergrad

2. Identify and clarify diverse moral norms and principles that underlie diverse convictions about public health ethics.

Audience: Both Grad & Undergrad

3. Subject these norms and principles to dispassionate critical reasoning aimed at evaluating the force of underlying reasons for and against them.

Audience: Both Grad & Undergrad

4. Write clear and concise essays subjecting issues of public health ethics to dispassionate ethical analysis.

Audience: Both Grad & Undergrad

5. Write a clear and concise 15-page essay arguing for a novel thesis concerning public health ethics.

Audience: Graduate

**MED HIST/AFROAMER/HIST SCI 523 – RACE, AMERICAN MEDICINE AND PUBLIC HEALTH**

3 credits.

Provides historical perspectives on current dilemmas facing black patients and health care professionals.

**Requisites:** Junior standing

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify key developments, actors, ideas, and institutions in the broad history of race, medicine and public health in America between 1700 and 2000.

Audience: Both Grad & Undergrad

2. Analyze and write critically about primary and secondary historical sources by examining diverse interpretations of past events and ideas in their historical contexts.

Audience: Both Grad & Undergrad

3. Evaluate the ways in which ideas about race and assumptions about the meaning of racial difference influenced the care patients of color received and how they experienced their illnesses and injuries.

Audience: Both Grad & Undergrad

4. Understand how conceptions of race profoundly influenced the medical and nursing professions, as well as medical institutions (dispensaries, hospitals, and blood donation centers).

Audience: Both Grad & Undergrad

5. Evaluate the different methodological approaches historians have used to analyze the multiple histories of race, medicine, and public health in the United States in the last two centuries.

Audience: Graduate

**MED HIST/ENGL/HIST SCI 525 – HEALTH AND THE HUMANITIES**

3 credits.

Explores how a humanistic perspective can broaden our understanding of health and medicine. Specifically, we will examine the role of language and culture in the creation and circulation of biomedical knowledge; our lived experiences with illness (physical and mental); the intricate intersections of race, gender, sexuality, disability and medicine; the political dimensions of diagnosis, disease, and epidemics, and the role that fiction, creative non-fiction, comics, and film play in shaping our experiences with health and medicine as health care providers and as patients. The course does not assume any background in science or medicine. One of our recurrent topics, in fact, will be to consider how non-experts interact with medicine and its technical vocabularies. Although the primary objective of the course is to understand the cultural, social, and political dimensions of health and medicine, a secondary objective is for students to become more savvy patients and, for the few students who might emerge on the other side of the stethoscope one day, more well rounded health care professionals.

**Requisites:** Declared in the Health and the Humanities certificate

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**MED HIST/GEN&WS/HIST SCI 531 – WOMEN AND HEALTH IN AMERICAN HISTORY**

3 credits.

Women as patients and as health professionals in America from the colonial period to the present.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**MED HIST/GEN&WS/HIST SCI 532 – THE HISTORY OF THE (AMERICAN) BODY**

3 credits.

This course demonstrates that human bodies have social and cultural histories. It will highlight the social values placed on different bodies, the changing social expectations bodies create, and the role of science and medicine in creating the cultural meanings of bodies.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**MED HIST/PHILOS 534 – ETHICS AND THE BRAIN**

3 credits.

In-depth analysis of ethical issues arising from the practices and advances of brain science in clinical, research, legal, and consumer contexts. Includes a foundation in ethical theory and philosophical methodology.

**Requisites:** Junior standing

**Course Designation:** Breadth – Humanities

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Gain knowledge about neurological and neuroscientific technologies and practices.

Audience: Both Grad & Undergrad

2. Gain understanding of major ethical theories and approaches.

Audience: Both Grad & Undergrad

3. Learn to employ philosophical methodology.

Audience: Both Grad & Undergrad

4. Utilize ethical theories and approaches, and philosophical methodologies to critically interrogate the ethical dimensions of the brain sciences.

Audience: Both Grad & Undergrad

5. Develop the skill of writing rigorous, analytical philosophical papers.

Audience: Graduate

6. Expand research beyond material learned in class to incorporate outside scientific and philosophical work.

Audience: Graduate

**MED HIST 545 – ETHICAL AND REGULATORY ISSUES IN CLINICAL INVESTIGATION**

1 credit.

Explores and examines the ethical issues central to clinical research, regulations governing clinical investigation, and the role of good clinical practice for clinical trials.

**Requisites:** Consent of instructor

**Course Designation:** Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Know the basic elements of the federal regulations for human subjects research ("The Common Rule").

Audience: Both Grad & Undergrad

2. Provide examples of a conflict between the Common Rule and ethical principles guiding human subjects research.

Audience: Both Grad & Undergrad

3. Develop a skeptical attitude about conventional wisdom on ethical and legal issues in human subjects research.

Audience: Both Grad & Undergrad

4. Write a critical analysis of an ethically complex research study.

Audience: Graduate

**MED HIST/HIST SCI/POP HLTH 553 – INTERNATIONAL HEALTH AND GLOBAL SOCIETY**

3 credits.

Major problems in international health from 1750 to the present. Focus on disease epidemiology and ecology; political economy of health; migration; quarantine; race, ethnicity, and health care; international health research; cross-cultural healing; mental and maternal health; growth of international health organizations.

**Requisites:** Junior standing

**Course Designation:** Breadth – Either Humanities or Social Science

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Recognize the utility of humanistic methods for the study of modern international health

Audience: Undergraduate

2. Develop critical thinking skills through techniques of close reading and written analysis

Audience: Undergraduate

3. Understand essential developments in the evolving relationship between global history, politics, and public health on a global scale.

Audience: Undergraduate

### MED HIST/PHILOS 558 – ETHICAL ISSUES IN HEALTH CARE

3 credits.

Ethical issues apparently created by new biomedical technologies, such as genetic screening, prenatal diagnosis, prolongation of life, treatment of severe birth defects, in vitro fertilization, behavior modification, psychosurgery, and transplantation.

**Requisites:** Junior standing

**Course Designation:** Breadth – Humanities

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Gain knowledge about ethical issues in healthcare

Audience: Both Grad & Undergrad

2. Communicate precisely and concisely in both writing and speech

Audience: Both Grad & Undergrad

3. Think critically about arguments related to ethical issues in health care with the aim of uncovering the truth

Audience: Both Grad & Undergrad

4. Practice interpretive charity and intellectual honesty, which includes appropriate attribution to others of their ideas, and recognition and frankness about the limitations of one's own ideas

Audience: Both Grad & Undergrad

5. Independently locate and engage with the latest relevant empirical and philosophical research relevant to evaluating ethical issues in health care

Audience: Graduate

6. Exhibit substantial synthetic and analytic abilities in considering the ethical dimensions of ethical issues in health care

Audience: Graduate

### MED HIST 559 – TOPICS IN ETHICS AND HISTORY OF MEDICINE

3 credits.

A survey of ethical and social issues in medical ethics and history of medicine. Cooperating faculty may be drawn from philosophy, law, medical ethics, history, political science, public health, economics, education, and communication, as well as medicine and the biological sciences.

**Requisites:** Junior standing

**Course Designation:** Breadth – Either Humanities or Social Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2020

**Learning Outcomes:** 1. Apply, analyze, or evaluate advanced theories, concepts, or methods in History of Medicine

Audience: Undergraduate

### MED HIST/HIST SCI/HISTORY 564 – DISEASE, MEDICINE AND PUBLIC HEALTH IN THE HISTORY OF LATIN AMERICA AND THE CARIBBEAN

3 credits.

Examines the history of illness and medical practice in Latin America and the Caribbean from the colonial era until the present. Using an interdisciplinary set of sources, students will explore the different meanings of disease, body normativity, medical practice, and ideas about public health across different historical circumstances in the region.

**Requisites:** Junior standing

**Course Designation:** Breadth – Either Humanities or Social Science

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

**Learning Outcomes:** 1. Identify and analyze within their social, cultural and economic contexts key historical issues, and their significance, in the history of healing practices and public health in Latin America from the fifteenth century to the present.

Audience: Both Grad & Undergrad

2. Develop an understanding of the mutually shaping interactions between perceptions of health, illness and medical practices and culture and society in different Latin American historical scenarios.

Audience: Both Grad & Undergrad

3. Analyze the role of social factors -- race, gender, ethnicity, class, and sexual orientation, among others -- in shaping cultural realities related to body normativity, health, medical practice, public health and medical education in Latin America.

Audience: Both Grad & Undergrad

4. Analyze and synthesize information, provide evidence-based interpretations about the past, and develop arguments regarding social and cultural differences related to health and body concepts in different Latin American societies.

Audience: Both Grad & Undergrad

5. Identify the role patients, healthcare providers, institutions and the state played in modeling medical practice, ideas about the body, public health policies, and medical education in Latin America.

Audience: Both Grad & Undergrad

6. Discern the impact of international politics, acting through European and American programs of medical research and humanitarianism, in the shaping of ideas about race, medical hierarchies and public health policies in Latin American and Caribbean nations.

Audience: Both Grad & Undergrad

7. Understand the different methodological approaches and research strategies that historians, anthropologists, and other scholars have used to examine the histories of the medicine in Latin America from the sixteenth century to the present.

Audience: Graduate

### **MED HIST/C&E SOC/PHILOS 565 – THE ETHICS OF MODERN BIOTECHNOLOGY**

3 credits.

An in-depth study of a selection of ethical issues arising from the application of modern biotechnology to microorganisms, plants, non-human animals, and human beings. We will aim at a discussion that is informed by empirical research and by work done in ethical theory, political philosophy, and other relevant disciplines, and whose character is rigorous, clear, nuanced, and unbiased.

**Requisites:** Junior standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Think critically about arguments.

Audience: Both Grad & Undergrad

2. Communicate precisely and concisely in both writing and speech.

Audience: Both Grad & Undergrad

3. Exchange reasons about controversial matters respectfully and with the aim of uncovering the truth.

Audience: Both Grad & Undergrad

4. Practice interpretive charity and intellectual honesty, which includes appropriate attribute to others of their ideas, and recognition and frankness about the limitations of one's own ideas.

Audience: Both Grad & Undergrad

5. Independently locate and engage with the latest relevant empirical and philosophical research.

Audience: Graduate

6. Exhibit substantial synthetic and analytic abilities by considering how an application of modern biotechnology ethically compares to the status quo and to other possible alternatives.

Audience: Graduate

### **MED HIST/ENGL/HIST SCI 599 – DIRECTED STUDY IN HEALTH AND THE HUMANITIES**

1 credit.

Offers students enrolled in the Health and the Humanities certificate an opportunity to conduct independent research under the guidance of a faculty member. It allows students who have enrolled in or completed a Health and the Humanities Capstone an opportunity to go into greater depth on a topic covered in the capstone course. In consultation with a faculty member, students will design a project that builds on lessons learned or work completed as part of their capstone experience.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**Learning Outcomes:** 1. Design scholarly research questions based on their knowledge of the existing literature

Audience: Undergraduate

2. Conduct original primary research by identifying, accessing, and interpreting appropriate sources

Audience: Undergraduate

3. Effectively convey the results of their research through writing or other creative media

Audience: Undergraduate

4. Work independently and manage a large project through to completion

Audience: Undergraduate

### **MED HIST/CRB 615 – REGENERATIVE MEDICINE ETHICS AND SOCIETY**

3 credits.

Study of regenerative medicine and stem cell research within social, ethical and political contexts.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand current and past legal, political and social issues related to regenerative medicine. This includes laws and regulations, but also an understanding of clinical ethics issues, translational research and commercialization, and emerging, novel techniques requiring careful ethical consideration.

Audience: Both Grad & Undergrad

2. Understand more about relations of science, the state, and public, particularly around controversial or novel innovations and will learn how best to address emerging controversies and public concerns ethically in their professional careers.

Audience: Both Grad & Undergrad

3. Learn the guidelines for the responsible conduct of research for stem cell science, where to access regulatory and oversight documents, and how to apply for research protocols with ethics oversight.

Audience: Both Grad & Undergrad

4. Gain analytical skills for addressing policy, legal and social issues through research and writing exercises. Analytical and professional presentation skills will also be learned through classroom interactions and discussion.

Audience: Graduate

### **MED HIST 699 – INDEPENDENT STUDY IN MEDICAL HISTORY**

1-3 credits.

Directed study projects as arranged with instructor.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Undergraduate

2. Read and effectively search scientific literature

Audience: Undergraduate

3. Develop critical, analytical, and independent thinking skills

Audience: Undergraduate

### **MED HIST 708 – HEALTH, DISEASE AND HEALING II**

1 credit.

Advanced readings in primary and secondary literature concerning medicine in Europe from the 18th century to mid-20th century, investigating changes in disease and demography, state interest in health care, and medical professions, and both scientific and alternative medical ideas.

**Requisites:** Graduate/professional standing and concurrent enrollment in MED HIST/HIST SCI/HISTORY 508

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Become familiar with major debates in the historiography of modern European medicine and public health

Audience: Graduate

2. Understand how to conduct a review of scholarly literature in a specific field within the modern history of European medicine and public health

Audience: Graduate

### **MED HIST 709 – DEVELOPMENT OF PUBLIC HEALTH IN AMERICA**

1 credit.

Advanced readings in primary and secondary literature concerning public health issues and problems in America from the eighteenth to the twentieth century, and efforts made toward their solutions.

**Requisites:** Graduate/professional standing and concurrent enrollment in MED HIST/HIST SCI 509

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Develop understanding of the historiography of American medicine and public health.

Audience: Graduate

2. histories of public health in the United States in the last two centuries.

Audience: Graduate

**MED HIST 729 – INTRODUCTION TO BIOETHICS**

1 credit.

Opportunity to learn and employ foundational methods and principles of bioethics. Gain an understanding of modes of argument in bioethics and hone the craft of analyzing and constructing ethical arguments, and foreseeing and responding to potential objections.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate understanding of foundational methods and principles of bioethics

Audience: Graduate

2. Clarify diverse moral values and principles that create bioethical dilemmas

Audience: Graduate

3. Critically assess these values and principles using analytical tools of bioethics

Audience: Graduate

4. Explicate others' ethical claims and arguments clearly and concisely

Audience: Graduate

5. Write a clear and concise argumentative paper defending an ethical thesis bearing on a pressing bioethics topic

Audience: Graduate

**MED HIST 730 – TOPICS IN BIOETHICS**

1 credit.

Survey in bioethics aimed at students in the health sciences. Topics to include a mix of important perennial issues and emerging problems.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze controversies involving ethical issues in the health sciences and related social institutions

Audience: Graduate

2. Engage in interdisciplinary discourse

Audience: Graduate

3. Describe controversial issues from multiple perspectives

Audience: Graduate

4. Construct a clear and concise ethical argument

Audience: Graduate

**MED HIST 734 – GRADUATE STUDIES IN MEDICAL ETHICS**

1-3 credits.

Graduate level special topics course in medical ethics or bioethics more broadly.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2016

**Learning Outcomes:** 1. Apply, analyze, or evaluate advanced theories, concepts, or methods in Medical Ethics

Audience: Graduate

**MED HIST 740 – NARRATIVE MEDICINE AND PUBLIC HEALTH**

2 credits.

Narrative medicine is the practice of using stories to understand health and illness in the context of people's lives. Whether through fiction or nonfiction, poetry or prose, text or graphics, giving voice to the stories of patients and caregivers allows their experiences to be heard, made sense of, and valued. Learning to listen to others and to express one's own vulnerabilities are valuable tools for all health practitioners, but they are especially valuable in the context of public health. The scope of public health interventions encourages practitioners to think in terms of populations, but efforts to improve quality of life through prevention must ultimately be grounded in individual lives. Explore how narrative medicine techniques can enrich the practice of public health, both through the power of listening to stories to understand how individuals experience health and through the power of telling stories to mobilize communities.

**Requisites:** (MED SC-M 810, 811, 812 and 813) or declared in Physician Assistant, Nursing, Physical Therapy, Pharmacy, or Genetic Counselor Studies.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify and employ narrative components such as plot, setting, characters, point of view, and tone

Audience: Graduate

2. Use narrative medicine skills in the context of clinical encounters and public health interventions.

Audience: Graduate

3. Express yourself in different modes (fiction, nonfiction, poetry, film, graphic novels), and use both free writing and sustained writing techniques.

Audience: Graduate

4. Explain the connections between public health and individual experience, and the difference between viewing problems as personal problems vs public issues.

Audience: Graduate

5. Reflect on the meaning of health in the context of people's everyday lives, especially people who are different from themselves.

Audience: Graduate

### **MED HIST 741 – ETHICAL ISSUES IN PUBLIC HEALTH**

2 credits.

Analyze ethical dimensions of population-level efforts to protect and promote health. Gain understanding of different ethical frameworks, their theoretical underpinnings, and their prospects for resolving real-world policy dilemmas in the context of medicine and public health. Hone the craft of constructing ethical arguments, and foreseeing and responding to potential objections.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Demonstrate understanding of public health ethics as an enterprise incorporating moral philosophy, bioethics, and evidence-based biological and social science  
Audience: Graduate

2. Clarify diverse moral values and principles that create various public health dilemmas  
Audience: Graduate

3. Critically assess these values and principles using tools of philosophical analysis  
Audience: Graduate

4. Explain others' ethical claims and arguments clearly, concisely, and accurately  
Audience: Graduate

5. Write a clear and concise argumentative paper defending an ethical thesis bearing on the practice of public health  
Audience: Graduate

### **MED HIST 742 – ETHICS AND U.S. HEALTH CARE POLICY**

2 credits.

Understand and analyze the U.S. health care system through the lens of ethical criticisms made by and on behalf of the diverse populations it serves. Gain understanding of philosophical debates over universal health insurance coverage, fair health care financing, effective cost-containment, and rationing. Hone the craft of constructing ethical arguments, and foreseeing and responding to potential objections.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate understanding of U.S. health care policy and its implementing institutions  
Audience: Graduate

2. Clarify diverse moral values and principles that underlie ethical debates about health insurance access, cost, and quality in the U.S. policy context  
Audience: Graduate

3. Critically assess relevant ethical values and debates using tools of philosophical analysis  
Audience: Graduate

4. Explain others' ethical claims and arguments clearly, concisely, and accurately  
Audience: Graduate

5. Write a clear and concise argumentative paper defending an ethical thesis bearing on an important dimension of U.S. health care policy  
Audience: Graduate

**MED HIST 744 – INTRODUCTION TO THE MEDICAL HUMANITIES**

2 credits.

Introduction to the medical humanities and their application to clinical practice, utilizing a variety of humanistic approaches, drawing from history, philosophy, anthropology, literary studies, and religious studies. Engage with a variety of forms of expression, including essays, poetry, film, podcasts, music, and visual art. These humanistic approaches complement the science-focused approach of contemporary medical education by enhancing students' ability to offer more compassionate and culturally competent care, and helping students build resiliency through using artistic forms of expression to process their experiences. Engage with the medical humanities through a different theme, such as the doctor-patient relationship, death and dying, or healing and wholeness.

**Requisites:** MED SC-M 810, 811, 812, and 813**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Identify the different humanistic approaches that fall under the umbrella of the medical humanities, and compare and contrast the strengths of these approaches for understanding health and illness.

Audience: Graduate

2. Apply techniques from the medical humanities to analyze literature, film, podcasts, and visual art.

Audience: Graduate

3. Locate one's own experiences of health and illness in broader societal and historical contexts, and recognize how the meaning and experience of health might differ for people occupying different social positions.

Audience: Graduate

4. Critically examine harms caused by medicine and scientific research in both a historical and contemporary context.

Audience: Graduate

5. Identify the ways in which the experiences of marginalized people may frequently be invalidated by the medical community, and understand how the invalidation of personal experience can constitute both physical and structural violence.

Audience: Graduate

6. Translate the experience of bearing witness into specific actions, taken on an individual or societal level, to help alleviate suffering and promote human flourishing.

Audience: Graduate

**MED HIST 745 – CLINICAL ETHICS - INDIVIDUAL AND POPULATION CONSIDERATIONS**

2 credits.

Examine how ethical issues in clinical practice affect public health outcomes. Gain an understanding of the ethical frameworks and practices that are employed in medicine, in order to understand the complex interplay between public health and clinical care. Develop the ability to identify the ethically salient features of a patient case and to employ ethical analysis to generate recommendations that improve public health outcomes.

**Requisites:** MED SC-M 810, 811, 812, and 813**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Demonstrate understanding of the interplay between clinical ethics as an applied domain grounded in clinical practice, and public health as the pursuit of health and wellbeing for all members of society

Audience: Graduate

2. Critically assess how the public health principles of trust, interdependence, and distributional justice are affected by clinical ethics principles such as beneficence and autonomy.

Audience: Graduate

3. Clarify diverse moral and cultural values that generate various clinical ethics and public health tensions.

Audience: Graduate

4. Identify the ethically salient features of a clinical case and evaluate their implication on moral decision-making and public health outcomes

Audience: Graduate

5. Clearly and concisely articulate issues related to public health and clinical ethics

Audience: Graduate

**MED HIST 746 – RACE, SCIENCE, AND MEDICINE: PAST AND PRESENT**

2 credits.

Examine ideas about race and ethnicity and their relationship to the history of "Western" medicine and science. Analyze the role of social, economic, cultural, and political developments in the shaping of scientific and medical notions of race and bodily difference. Study how skin color (and other elements of "racial identity") has influenced the experiences of patients and populations, physicians and nurses, and medical researchers. Discuss how conceptions of race have shaped both the health concerns and health outcomes of Americans in the past three hundred years, and the structure of medical institutions in the United States. Topics include the origins of racial classification, race and colonialism, the health and medical care of the enslaved, the use of enslaved people as research subjects, the history of racial disparities in medicine, structural racism of the medical establishment, race and reproduction, and the struggle for justice in health care during the past few decades.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify and analyze within their social, cultural and economic contexts key historical issues, and their significance, in the history of the idea of race as it relates to scientific and medical developments.

Audience: Graduate

2. Develop an understanding of the mutually shaping interactions between ideas about race and perceptions of social hierarchy, health, illness and medical and anthropological categories.

Audience: Graduate

3. Understand how conceptions of race have influenced the medical and nursing professions, as well as medical institutions.

Audience: Graduate

4. Analyze the role of social factors like gender and class, among others, in shaping cultural realities related to race and body normativity.

Audience: Graduate

5. Identify the role that scientists, physicians, patients, healthcare providers, scientific institutions and the state play in modeling, ideas about race.

Audience: Graduate

6. Discern the impact of programs of global science as they intersect with international politics in the shaping of ideas about human rights, ethnicity, and race.

Audience: Graduate

**MED HIST 747 – FEMINIST BIOETHICS**

2 credits.

Gain an appreciation of the intersection of feminist themes with ethical issues in medicine and public health. Feminist epistemology and care ethics. Applied feminist bioethics topics, including abortion and maternal-fetal medicine. Apply a feminist lens to bioethical theories and topics, and identify and analyze an array of issues that arise from sex and gender.

**Requisites:** Declared in Medicine MD, Physical Therapy DPT, Physician Assistant MPAS, Genetic Counselor Studies MGCS, or Public Health MPH

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Demonstrate understanding of the feminist approaches to bioethical theory and topics.

Audience: Graduate

2. Critically assess how public health is affected by feminist concerns such as epistemic injustice, sex bias in medicine, and the lack of women in research.

Audience: Graduate

3. Clearly and concisely articulate ethical and philosophical issues related to feminist bioethics topics.

Audience: Graduate

4. Identify how feminist bioethics concerns intersect with black bioethics concerns.

Audience: Graduate

5. Construct clearly and persuasively written arguments in feminist bioethics.

Audience: Graduate

### **MED HIST 750 – OUTBREAK!: EPIDEMICS, MIGRATION, AND THE CHANGING CONTOURS OF GLOBAL HEALTH**

2 credits.

Explore national and international health projects aimed to address infectious disease epidemics in the context of changing ideas about human difference, the shifting economic and socio-political dimensions of international health, and the history of migration. Using a range of sources from historical documents, social science, films, and biomedical research, explore circumstances linking ideas about "alien" people (a term historically used to talk about enslaved people, Native Americans, minorities, and immigrants), and "plagues." Examine the relationship between ideas about disease and migration, risk factors and disease patterns related to migration, migrant populations' access to health-care resources, perceived threats of infectious diseases related to migrant populations and the ways such threats have shaped medical theories, and the institutional landscape of global health.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze evidence coming from a broad range of disciplines to discuss issues of public health as they relate to epidemics and immigrant populations.

Audience: Graduate

2. Describe clinical relevance of knowledge coming from disciplines such as history, anthropology, economics, sociology, and geography.

Audience: Graduate

3. Describe the cultural, social, and structural circumstances shaping the lives of mobile populations, and how such circumstances should inform clinical encounters with migrant communities.

Audience: Graduate

4. Describe circumstances that have shaped the health of immigrant populations, and governmental responses to epidemic diseases.

Audience: Graduate

5. Engage in policy discussions related to these issues.

Audience: Graduate

6. Demonstrate understanding of the historical links between ideas about race, epidemics, immigration, and public health policy in the United States.

Audience: Graduate

7. Critically engage with "Global Health" projects and how to identify the long history of colonial international medical humanitarianism shapes these initiatives.

Audience: Graduate

### **MED HIST 753 – INTERNATIONAL HEALTH AND GLOBAL SOCIETY**

1 credit.

Advanced readings that examine major problems in modern international health. Focus on epidemiology and disease ecology; political economy of health; migration; quarantine; international health research; cross-cultural healing; mental and maternal health; growth of international health organizations.

**Requisites:** Graduate/professional standing and concurrent enrollment in POP HLTH/HIST SCI/MED HIST 553

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Become familiar with major debates in the historiography of modern global medicine and public health.

Audience: Graduate

2. Understand how to conduct a review of scholarly literature in a specific field, or to produce an original research paper, within the modern history of global medicine and public health.

Audience: Graduate

### **MED HIST 890 – READING AND RESEARCH**

1-3 credits.

Independent reading, research and writing for medical professional students under the supervision of a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Read and effectively search scientific literature

Audience: Graduate

2. Design research questions based on coursework or literature searches

Audience: Graduate

3. Effectively convey research results through writing or other media

Audience: Graduate

4. Apply concepts learned in coursework to real life situations

Audience: Graduate

### **MED HIST/HIST SCI 919 – GRADUATE STUDIES IN MEDICAL HISTORY**

3 credits.

Analyzes the scientific and social aspects of the development of modern medicine and public health in Europe and America.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Apply, analyze, or evaluate advanced theories, concepts, or methods in Medical History

Audience: Graduate

### **MED HIST/SURGERY 984 – TRANSPLANT ETHICS**

2 credits.

Understand and analyze the ethics of transplantation practice and policy in the U.S. health care system, especially considering ethical criticisms made by and on behalf of the diverse populations it serves. Gain an understanding of philosophical debates over important issues in transplant ethics. Hone the craft of constructing ethical arguments, and foreseeing and responding to potential objections.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Demonstrate understanding of transplant-related dimensions of the U.S. health care system.

Audience: Graduate

2. Critically analyze transplant candidate evaluation, deceased donor allocation policy, ethics of living donation, and novel transplant and procurement techniques using the tools of ethical analysis.

Audience: Graduate

3. Exposit others' ethical claims and arguments about transplant ethics clearly, concisely, and charitably.

Audience: Graduate

### **MED HIST 999 – ADVANCED INDEPENDENT STUDY**

1-3 credits.

Independent research and writing for graduate students under the supervision of a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Graduate

2. Read and effectively search scientific literature

Audience: Graduate

3. Develop critical, analytical, and independent thinking skills

Audience: Graduate

## **MEDICAL MICROBIOLOGY AND IMMUNOLOGY (M M & I)**

### **M M & I 301 – PATHOGENIC BACTERIOLOGY**

2 credits.

Medically important bacteria, emphasizing the process of pathogenesis and host/parasite interactions, as well as intervention strategies, immunity and genetics as they apply to the pathogens.

**Requisites:** (BIOCORE 381 and 382), (ZOOLOGY/BIOLOGY 101 and 102), or ZOOLOGY/BIOLOGY/BOTANY 152

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. Identify and label parts of a bacterial cell and parts of bacterial genes and other genetic elements, and explain the function of those features to bacterial processes.

Audience: Undergraduate

2. Apply bacteriological and immunological concepts to draw conclusions about detection, treatment, and prevention of bacterial infection.

Audience: Undergraduate

3. Apply bacteriological and immunological concepts to draw conclusions about bacterial survival, proliferation, and transmission and human host responses including those leading to host damage.

Audience: Undergraduate

4. Demonstrate knowledge about the significance of historical discoveries in bacteriology and molecular biology.

Audience: Undergraduate

5. Demonstrate knowledge about specific bacterial pathogens and the diseases they cause including virulence mechanisms, distinctive bacterial and disease characteristics, and methods of disease prevention.

Audience: Undergraduate

**M M & I 341 – IMMUNOLOGY**

3 credits.

An introduction to the immune response to infectious disease. Examines the role of the host in host-parasite relationships using select microbial agents or antigens to illustrate the nonspecific and specific mechanisms of host defenses. Includes study of the nonspecific inflammatory response, the nature of microbial antigens, current concepts of antibody and cell-mediated immune reactions to infectious agents and the principles underlying the development of vaccines.

**Requisites:** ZOOLOGY/BIOLOGY 101 or ZOOLOGY/BIOLOGY/BOTANY 151 or BIOCORE 381

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Identify the common types of immune cells and describe their main functions

Audience: Undergraduate

2. Summarize how innate and adaptive immune cells recognize antigens and other ligands

Audience: Undergraduate

3. Differentiate between cell-mediated and humoral immune responses

Audience: Undergraduate

4. Understand immunological pathways used to respond to specific challenges (e.g. viruses, bacteria, fungi, parasites)

Audience: Undergraduate

**M M & I/ENTOM/PATH-BIO/ZOOLOGY 350 – PARASITOLOGY**

3 credits.

The biology of water-borne, food-borne, soil-borne and vector-borne parasites of animals including humans. Parasites are explored in the context of transmission, associated disease, diagnosis and treatment options, and environmental, cultural and socioeconomic drivers of disease epidemiology.

**Requisites:** ZOOLOGY/BIOLOGY 101 and 102, or ZOOLOGY/BIOLOGY/BOTANY 152 or ZOOLOGY 153, or BIOCORE 381

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Be conversant in terminology used in the field of Parasitology.

Audience: Undergraduate

2. Recall scientific and common names for parasites and hosts, and the name of the resulting disease in humans or animals.

Audience: Undergraduate

3. Attribute parasite behavior and characteristics to specific disease features in the host.

Audience: Undergraduate

4. Identify appropriate means to diagnose infections with parasites.

Audience: Undergraduate

5. Describe and identify factors that determine when, where, and why parasitic diseases exist.

Audience: Undergraduate

6. Integrate terminology, scientific nomenclature, diagnostic features and demographics to solve case studies where the parasitic culprit is unknown.

Audience: Undergraduate

7. Compare and contrast commonalities in parasite life cycles to demonstrate how flexibility in those life cycles has resulted in many different potential means of transmission.

Audience: Undergraduate

8. Deconstruct the impact of parasitic diseases on human and animal health, from disease symptoms and pathology in an individual, to socioeconomics in communities and countries.

Audience: Undergraduate

9. Identify reliable resources (primarily internet-based) available for researching the biology and epidemiology parasitic diseases.

Audience: Undergraduate

### **M M & I/PATH-BIO 528 – IMMUNOLOGY**

3 credits.

Development and functions of immune response in animals; a comprehensive study of experimental humoral and cellular immunity.

**Requisites:** (CHEM 104 or CHEM 109) and (ZOOLOGY/BIOLOGY 101, ZOOLOGY/BIOLOGY/BOTANY 151 or BIOCORE 383), or graduate/professional standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify lymphatic tissues and describe their functions

Audience: Undergraduate

2. Differentiate between innate and adaptive immune responses

Audience: Undergraduate

3. State the products of B and T cell activation in adaptive immunity

Audience: Undergraduate

4. Describe the steps in B and T cell activation and the immune mechanisms regulating their activity

Audience: Undergraduate

5. Explain how the adaptive immune system recognizes diverse antigens

Audience: Undergraduate

6. Summarize coordination of innate and adaptive immune responses in host defense against cancer and infectious diseases

Audience: Undergraduate

7. List examples of when the immune system goes awry (hypersensitivity, autoimmunity)

Audience: Undergraduate

8. Apply course concepts to design new therapies for cancer, infectious disease, or organ transplant

Audience: Undergraduate

### **M M & I 554 – EMERGING INFECTIOUS DISEASES AND BIOTERRORISM**

2 credits.

Identification of analysis and solution of emerging infectious disease problems and the problems of bioterrorism.

**Requisites:** ZOOLOGY/BIOLOGY/BOTANY 152, ZOOLOGY/BIOLOGY 101, (BIOCORE 383 and M M & I 301), MICROBIO 101, MICROBIO 303, or graduate/professional standing.

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. Explain the problems due to infectious diseases in the pre-antibiotic era and how this has changed today

Audience: Both Grad & Undergrad

2. Describe the factors of infectious disease emergence and provide a disease example for each

Audience: Both Grad & Undergrad

3. Address a new Emerging Infectious Disease outbreak by identifying the problem, the reason this problem arose, and what can be done about it

Audience: Graduate

**M M & I/BIOCHEM 575 – BIOLOGY OF VIRUSES**

2 credits.

Broad coverage of animal virology taught at molecular level. Topics include virus structure, viral replication/lifecycle, aspects of pathogenesis and prevention.

**Requisites:** (BIOCORE 381 and 382), ZOOLOGY/BIOLOGY/BOTANY 151, M M & I 301, or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify and recognize fundamental members of the predominant families of RNA and DNA viruses that affect animals (humans included) by causing viral diseases, including AIDS, cancer, flu, and COVID-19

Audience: Both Grad & Undergrad

2. Describe and demonstrate the basic concepts of virus particle structure and the biochemical mechanisms for entry and multiplication of diverse RNA and DNA viruses

Audience: Both Grad & Undergrad

3. Recognize and apply the basic principles of virus transmission and viral pathogenicity, combined with the factors that contribute to virus emergence and evolution, to situations involving virus outbreaks that affect global health

Audience: Both Grad & Undergrad

4. Identify and evaluate individual steps in a virus' replication cycle that can be effectively targeted by anti-viral drugs for pharmaceutical intervention of virus diseases

Audience: Both Grad & Undergrad

5. Design effective strategies for a) prevention of infection through development of viral vaccines and b) treatment of diverse human diseases by gene therapy through the design and administration of genetically engineered virus vectors

Audience: Both Grad & Undergrad

6. Use knowledge gained in lecture to critically assess primary literature and data presented in the weekly Molecular Virology Seminar Series

Audience: Graduate

**M M & I/ONCOLOGY/PL PATH 640 – GENERAL VIROLOGY-MULTIPLICATION OF VIRUSES**

3 credits.

The structure, multiplication, genetics, pathology and control of animal and plant viruses.

**Requisites:** (GENETICS 466 or 467) and (BIOCHEM 501 or 508) or graduate/professional standing

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify the major classes of viruses infecting animals and plants, and summarize their basic replication strategies.

Audience: Both Grad & Undergrad

2. Identify the major innate and adaptive antiviral immunity mechanisms of animals and plants, and examples of viral countermeasures against these.

Audience: Both Grad & Undergrad

3. Summarize the burdens and threats of viruses to public health, agriculture, etc.

Audience: Both Grad & Undergrad

4. Identify the major approaches and challenges to virus control at the single organism and host population levels, including why viruses are generally harder to control than bacteria, and major steps in developing new antiviral agents.

Audience: Both Grad & Undergrad

5. Illustrate beneficial uses of viruses and their genes in research, biotechnology and medicine.

Audience: Both Grad & Undergrad

6. Design and evaluate basic experiments to address specific questions in virology.

Audience: Both Grad & Undergrad

7. Read and evaluate primary literature papers in virology.

Audience: Graduate

**M M & I/BOTANY/GENETICS/PL PATH 655 – BIOLOGY AND GENETICS OF FUNGI**

3 credits.

Fungal genetics, genomics, and physiology using plant pathogenic fungi and the genetic models *Aspergillus nidulans* and *Neurospora crassa* as model systems to explore the current knowledge of fungal genetics and plant/fungal interactions.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate a basic understanding of fungal biology and genetics  
Audience: Graduate

2. Analyze current research topics in fungal genetics/biology  
Audience: Graduate

3. Identify members of the fungal research community  
Audience: Graduate

4. Write and critique research grants  
Audience: Graduate

5. Critique and discuss peer reviewed manuscripts  
Audience: Graduate

6. Develop and deliver oral presentations (research paper and own research)  
Audience: Graduate

7. Improve communication skills (oral and written)  
Audience: Graduate

**M M & I 677 – ADVANCED TOPICS IN MEDICAL MICROBIOLOGY**

1-3 credits.

Specialized topics of current interest in medical microbiology.

**Requisites:** Graduate/professional standing

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify and describe key theories, concepts, and methods in medical microbiology and immunology  
Audience: Both Grad & Undergrad

2. Apply, analyze, or evaluate advanced theories, concepts, or methods in medical microbiology and immunology  
Audience: Graduate

**M M & I 691 – FIRST SEMESTER SENIOR THESIS**

3 credits.

First semester independent study with the goal to do the preliminary research to write a senior thesis in Medical Microbiology Immunology.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify a novel research question from the primary literature  
Audience: Undergraduate

2. Develop a testable hypothesis around the novel research question  
Audience: Undergraduate

3. Design experiments to test the hypothesis  
Audience: Undergraduate

**M M & I 692 – SECOND SEMESTER SENIOR THESIS**

3 credits.

Second semester independent study with the goal to complete a senior thesis in Medical Microbiology Immunology.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Execute and analyze data from designed experiments  
Audience: Undergraduate

2. Develop the next testable hypothesis from the primary data from the experiments  
Audience: Undergraduate

3. Write an honors thesis describing the gap in knowledge, the hypothesis addressing the gap in knowledge and the results of the experiments designed to test the hypothesis  
Audience: Undergraduate

### **M M & I 696 – CRITICAL THINKING IN MEDICAL MICROBIOLOGY AND IMMUNIOLOGY**

3 credits.

Present assigned research papers from journals for critical evaluation. Write critiques of each paper evaluating the paper's introduction, methods, results, and discussion sections.

**Requisites:** M M & I 301 and 341

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. Articulate next-generation, DNA and RNA sequencing approaches and critically review their use in immune system studies

Audience: Both Grad & Undergrad

2. Describe proteomic techniques and their immune applications

Audience: Both Grad & Undergrad

3. Interpret the use of metabolomics in immunometabolism research

Audience: Both Grad & Undergrad

4. Explain technological advances that allow us to analyze complex immune systems at the single-cell level

Audience: Both Grad & Undergrad

5. Design omics experiments for immunology research

Audience: Graduate

### **M M & I 699 – DIRECTED STUDY**

1-3 credits.

Independent research in medical microbiology and immunology for undergraduates under the supervision of MMI faculty. Carry out literature reviews and laboratory bench work on an independent project; participate in laboratory meetings; and produce some written presentation of the work, usually in the form of a poster presentation at a local or national meeting.

**Requisites:** Consent of instructor

**Course Designation:** Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Both Grad & Undergrad

2. Read and effectively search scientific literature

Audience: Both Grad & Undergrad

3. Develop critical, analytical, and independent thinking skills

Audience: Both Grad & Undergrad

4. Develop independent scientific research development skills

Audience: Graduate

### **M M & I 704 – INFECTIOUS DISEASES OF HUMAN BEINGS**

3 credits.

Pathogenesis, clinical descriptions, and prevention.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe the epidemiology, pathogenesis, and clinical presentation of the key infectious disease syndromes presented and relate these diseases with their causative agents

Audience: Graduate

2. Explain how key infectious diseases are diagnosed and treated

Audience: Graduate

3. Explain how key infectious diseases impact patient health and public health, and describe how they can be prevented

Audience: Graduate

4. Discuss the basic pharmacologic concepts of antimicrobial drug therapy and be able to apply these concepts in clinical infectious disease settings

Audience: Graduate

5. Explain the role of the clinical microbiology laboratory in the identification and treatment of infectious diseases

Audience: Graduate

### **M M & I 740 – MECHANISMS OF MICROBIAL PATHOGENESIS**

3 credits.

Host-pathogen relationships in microbial diseases.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate understanding of the fundamentals of conserved strategies for bacterial pathogenesis across human, animal and plant pathogens

Audience: Graduate

2. Be able to critically read and review primary research literature in bacterial pathogenesis

Audience: Graduate

3. Develop grant writing skills

Audience: Graduate

4. Demonstrate understanding of how NIH grant review and study sections work and be able to critically review peer grants

Audience: Graduate

### **M M & I/PATH-BIO 750 – HOST-PARASITE RELATIONSHIPS IN VERTEBRATE VIRAL DISEASE**

3 credits.

Detailed study of the pathogenesis of vertebrate viral disease, stressing viral invasion, dissemination, mechanisms of disease production, immune pathology, persistence, resistance, and transmission.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate understanding of mechanisms involved in pathogenesis of viral infections

Audience: Graduate

2. Obtain experience in critically reading scientific research

Audience: Graduate

3. Enhance scientific presentation skills

Audience: Graduate

4. Design and prepare funding applications for research projects in viral pathogenesis

Audience: Graduate

### **M M & I 760 – QUANTITATIVE SYSTEMS BIOLOGY AND DISEASE**

3 credits.

An overview of methods used in quantitative systems biology, with a focus on biochemical systems relevant to the study of host-pathogen interactions, disease and microbial communities.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize biochemical systems and pathways relevant to the study of host-pathogen interactions, disease, and microbes and microbial communities.

Audience: Graduate

2. Develop mathematical models of biochemical systems by integrating basic mathematical and engineering concepts with principals from biochemistry, cellular and molecular biology, and immunology.

Audience: Graduate

3. Translate molecular pathways relevant to immunity and disease into computational models and simulations.

Audience: Graduate

4. Gain a working knowledge of resources and databases available for systems biology modeling and simulation.

Audience: Graduate

5. Use programming tools (e.g., MATLAB, Python) to implement and test a systems biology model.

Audience: Graduate

### **M M & I 770 – CURRENT TOPICS IN IMMUNOLOGY RESEARCH AND APPLICATIONS FOR HEALTH AND DISEASE**

3 credits.

Designed to provide an overview of current immunology research and applications. Explores current advances and applications in immunology research including: adaptive immunity, innate immunity, mucosal immunology, autoimmunity, host-microbe interactions, and cancer immunology.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Develop knowledge of current immunology research areas and advances in both health and disease

Audience: Graduate

2. Describe common mechanisms by which immune dysfunction contributes to the pathophysiology of disease, including autoimmunity and cancer.

Audience: Graduate

3. Develop knowledge of cutting-edge research findings and common approaches to developing new treatments for immune related disorders.

Audience: Graduate

4. Evaluate primary immunology-related research articles and demonstrate critical reasoning with regards to methods and conclusions.

Audience: Graduate

5. Design new and feasible research directions at the cutting edge of immunology research by integrating instruction material and personally-researched scientific texts to formulate individual thoughts on topics not directly covered in lecture.

Audience: Graduate

### **M M & I 901 – SEMINAR**

1 credit.

Seminar series led by MMI faculty members.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Gain overall breadth of knowledge in microbiology

Audience: Graduate

2. Provide a platform for student interaction with invited faculty from UW-Madison and other institutions

Audience: Graduate

3. Develop skills for communicating complex ideas in a clear and understandable manner

Audience: Graduate

### **M M & I 902 – THE ROLE OF THE HUMAN MICROBIOME IN HEALTH AND DISEASE**

2 credits.

The human microbiome can profoundly influence the balance between health and disease. Advances in next-generation sequencing technology and bioinformatics enabled the detailed study of the trillions of microorganisms living in us and on us and their associations with both healthy and disease conditions. Current state of the art approaches to study the microbiome through examples of human diseases with a known microbiome component. Critically assess the microbiome literature and design clinical studies aiming to include the microbiome as a variable. Bioinformatics tools required to study complex microbial communities by reproducing published datasets from human patients and learn ecological concepts to interpret results in a clinically meaningful way.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate a clear understanding of the current literature regarding the human microbiome and its role in health.

Audience: Graduate

2. Compare and contrast current state-of-the art methodologies to study the human microbiome and further demonstrate the ability to apply this knowledge to critically assess clinical study outcomes involving microbiome data.

Audience: Graduate

3. Describe and explain how basic bioinformatic pipelines are used to analyze and interpret microbiome data.

Audience: Graduate

4. Apply learned ecological concepts to the analysis of a real human microbiome dataset generated by researchers at the UW-Madison.

Audience: Graduate

5. Design a human microbiome study, clearly defining possible endpoints and inherent limitations.

Audience: Graduate

### **M M & I 911 – MICROBIOLOGY DIAGNOSTICS IN PUBLIC HEALTH**

2 credits.

Learn firsthand how a public health lab handles testing. Learn about the different areas of testing in the lab from the experts and how we work with the CDC and clinical labs for surveillance, diagnostics, and outbreak response. Useful training for diagnostic testing and those that will order these tests in their practice.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the different testing areas of the Communicable Disease Division at the Wisconsin State Laboratory of Hygiene (WSLH).

Audience: Graduate

2. Describe the basics of common diagnostic test methods like PCR, sequencing, culture, and serology. Interpret test results and understand the limitations of those tests.

Audience: Graduate

3. Describe how the WSLH works with epidemiologists to identify outbreaks of disease.

Audience: Graduate

4. Describe how the WSLH works between clinical labs and the CDC for public health.

Audience: Graduate

### **M M & I 990 – RESEARCH AND THESIS**

1-12 credits.

Carry out an independent research project that represents novel science in the chosen area under the guidance of an MMI faculty member. Evidence of success is measured by publication of results as first-authored papers in peer-reviewed papers.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Exhibit a broad understanding of general medical microbiology and/or immunology principles

Audience: Graduate

2. Conduct independent research using a variety of approaches

Audience: Graduate

3. Think critically to address research challenges

Audience: Graduate

4. Exhibit and foster professional and ethical conduct in research

Audience: Graduate

5. Collaborate with other investigators within or outside the thesis lab

Audience: Graduate

# MEDICAL PHYSICS (MED PHYS)

## MED PHYS/PHYSICS 265 – INTRODUCTION TO MEDICAL PHYSICS

2 credits.

A general interest survey that introduces the principles and applications of medical physics. Topics include biomechanics, energy usage and temperature regulation, pressure, sound and hearing, ultrasound, electricity in the body, optics and the eye, ionizing radiation in diagnosis and therapy, radiobiology, and nuclear medicine.

**Requisites:** PHYSICS 104, 202, 208, or 248

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply physics concepts, such as force, energy, and pressure, to the study of human physiology

Audience: Undergraduate

2. Describe the relevance of physics concepts to the etiology of major disease, such as heart failure, sudden cardiac death, obstructive lung disease, and nerve conduction disorders

Audience: Undergraduate

3. Explain the principles of medical imaging based on x-rays, gamma rays, sound, and other physical phenomena

Audience: Undergraduate

4. Understand the principles of radiobiology that underlie radiation sickness and radiation therapy

Audience: Undergraduate

## MED PHYS/H ONCOL 410 – RADIOBIOLOGY

2-3 credits.

Effects of ionizing radiations of living cells and organisms, including physical, chemical, and physiological bases of radiation cytotoxicity, mutagenicity, and carcinogenesis; lecture and lab.

**Requisites:** Graduate/professional standing or (PHYSICS 202 or 208 and ZOOLOGY/BIOLOGY/BOTANY 152 or 153)

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Gain an understanding of the physical, chemical and molecular basis of the action of radiation on biological systems

Audience: Both Grad & Undergrad

2. Describe the radiobiological principles forming the basis for the use of radiation as a cancer therapy

Audience: Both Grad & Undergrad

3. Understand the potential deleterious short and longer-term effects of radiation on normal tissues and organs and on the whole body

Audience: Both Grad & Undergrad

4. Describe how chemotherapy and molecularly targeted agent can alter response of biological systems to radiation.

Audience: Both Grad & Undergrad

5. Understand the principles of radiation protection

Audience: Graduate

**MED PHYS/B M E/H ONCOL/PHYSICS 501 – RADIATION PHYSICS AND DOSIMETRY**

3 credits.

Interactions and energy deposition by ionizing radiation in matter; concepts, quantities and units in radiological physics; principles and methods of radiation dosimetry.

**Requisites:** (PHYSICS 323, 449 and MATH 320) or graduate/professional standing or declared in Medical Physics VISP

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Use the physics of microscopic structures of nucleus, nuclear decay, electronic structure of atoms to calculate nuclear decay lifespan and solid state energy band structure

Audience: Both Grad & Undergrad

2. Calculate the radiation power spectrum for an accelerating charge particle under different physical conditions

Audience: Both Grad & Undergrad

3. Calculate cross-sections for the following interaction processes between photons and matter: Rayleigh scattering, photoelectric effect, Compton scattering, and pair production

Audience: Both Grad & Undergrad

4. Calculate the scattering cross-section of Coulomb scattering and energy transfer cross-section in collisions processes and radiative energy loss processes

Audience: Both Grad & Undergrad

5. Calculate radiation dose for both external photon beams, neutron beams, and charged particle beams

Audience: Both Grad & Undergrad

6. Identify open research topics in radiation imaging, radiation therapy, and radiation protection fields

Audience: Graduate

**MED PHYS/N E 506 – MONTE CARLO RADIATION TRANSPORT**

3 credits.

Use of Monte Carlo technique for applications in nuclear engineering and medical physics. Major theory of Monte Carlo neutral particle transport is discussed. Standard Monte Carlo transport software is used for exercises and projects. Major emphasis is on analysis of real-world problems.

**Requisites:** N E 305 and (N E 405, N E 408, PHYSICS/B M E/H ONCOL/MED PHYS 501 or N E/MED PHYS 569) or graduate/professional standing

**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Use an industry-relevant software package to perform Monte Carlo radiation transport simulations for analysis of fixed source and/or multiplying systems

Audience: Both Grad & Undergrad

2. Explain how random processes are used to simulate a single particle transport history through an engineering system, including source, streaming and collisions

Audience: Both Grad & Undergrad

3. Explain how the paths of many particle transport histories are combined to provide estimates of engineering results

Audience: Both Grad & Undergrad

4. Analyze the statistical performance of a simulation and suggest ways to improve that performance

Audience: Both Grad & Undergrad

5. Apply Monte Carlo radiation transport to a problem related to your research

Audience: Graduate

### **MED PHYS 510 – FUNDAMENTALS OF CELLULAR, MOLECULAR, AND RADIATION BIOLOGY**

3 credits.

Cellular, molecular, and radiation biology principles and their common application in medical physics.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explore a new phenomenon or modality in the medical physics area and apply the knowledge gained to research in the field

Audience: Both Grad & Undergrad

2. Describe fundamental biomolecule and molecular biology principles and their common applications in medical physics.

Audience: Both Grad & Undergrad

3. Describe fundamental cellular biology principles and their common applications in medical physics.

Audience: Both Grad & Undergrad

4. Describe fundamental radiation biology principles and their applications in medical physics.

Audience: Both Grad & Undergrad

5. Describe fundamental immunology principles and their applications in medical physics.

Audience: Both Grad & Undergrad

6. Demonstrate an ability to integrate key fundamental principles of immunology and cellular, molecular, and radiation biology in medical physics applications in both imaging as well as therapy.

Audience: Both Grad & Undergrad

7. Propose and discuss example medical physics applications of fundamental principles of immunology and cellular, molecular, and radiation biology.

Audience: Graduate

### **MED PHYS/B M E 535 – INTRODUCTION TO ENERGY-TISSUE INTERACTIONS**

3 credits.

Explore physical interactions between thermal, electromagnetic and acoustic energies and biological tissues with emphasis on therapeutic medical applications.

**Requisites:** PHYSICS 202, 208, 248, or PHYSICS/MED PHYS 265, or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Derive and solve bioheat transfer problems relevant to therapeutic hyperthermia and hypothermia

Audience: Both Grad & Undergrad

2. Explain changes at the tissue and cellular levels during thermal therapies

Audience: Both Grad & Undergrad

3. Analyze technologies that apply electromagnetic and acoustic energy to tissue

Audience: Both Grad & Undergrad

4. Discuss medical applications and regulatory guidelines/requirements involving energy-tissue interactions

Audience: Both Grad & Undergrad

5. Demonstrate an advanced ability to synthesize recent literature, formulate technical problems, and describe plausible solutions

Audience: Graduate

### **MED PHYS 563 – RADIONUCLIDES IN MEDICINE AND BIOLOGY**

2-3 credits.

Physical principles of radioisotopes used in medicine and biology and operation of related equipment; lecture and lab.

**Requisites:** MATH 234 and (PHYSICS 241 or 249) or graduate/professional standing

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2018

**Learning Outcomes:** 1. Identify the components of radioactive decay that are relevant to nuclear medicine diagnostic imaging and radionuclide therapy.

Audience: Both Grad & Undergrad

2. Apply important nuclear physics concepts to understand the design of nuclear medicine imaging systems and scanners.

Audience: Both Grad & Undergrad

3. Differentiate the characteristics of radiotracers that make them suitable for research and clinical applications in human physiology.

Audience: Both Grad & Undergrad

4. Identify the defining strengths and limitations with utilizing the imaging modalities for conducting research investigations of human physiology and disease.

Audience: Graduate

### **MED PHYS/B M E 566 – PHYSICS OF RADIOTHERAPY**

3 credits.

Ionizing radiation use in radiation therapy to cause controlled biological effects in cancer patients. Physics of the interaction of the various radiation modalities with body-equivalent materials, and physical aspects of clinical applications.

**Requisites:** PHYSICS/B M E/H ONCOL/MED PHYS 501

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate knowledge of the potentials and limits, with respect to fundamental physics, of ionizing radiation production and therapy

Audience: Both Grad & Undergrad

2. Apply the concepts and/or techniques of radiation physics in cancer therapy

Audience: Both Grad & Undergrad

3. Accurately compute radiation dose and dose delivery for clinically acceptable conditions

Audience: Both Grad & Undergrad

4. Communicate applied concepts in a clear and understandable manner

Audience: Undergraduate

5. Communicate complex applied concepts in a clear and understandable manner, including concepts of medical imaging, radiation biology, radiation production, and radiation detection as they apply to radiation physics in cancer therapy

Audience: Graduate

### MED PHYS/B M E 567 – THE PHYSICS OF DIAGNOSTIC RADIOLOGY

4 credits.

Physics of x-ray diagnostic procedures and equipment, radiation safety, general imaging considerations; lecture and lab.

**Requisites:** MATH 234 and (PHYSICS 241 or 249) or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2018

**Learning Outcomes:** 1. Learn the physics and technology of medical x-ray system design and the parameters that determine image contrast, noise, spatial resolution, and patient radiation dose.

Audience: Both Grad & Undergrad

2. Gain a detailed knowledge of x-ray sources, x-ray detectors, and data acquisition strategies used in radiography, mammography, fluoroscopy, angiography and computed tomography.

Audience: Both Grad & Undergrad

3. Apply a knowledge of x-ray systems and physics to analyze and compare the performance of different medical x-ray imaging systems.

Audience: Both Grad & Undergrad

4. Through laboratory modules, receive hands on experience concerning the first three objectives. This includes learning the proper means for evaluating the performance and conducting measurements on x-ray systems which are commonly done by a clinical medical physicist.

Audience: Both Grad & Undergrad

5. Identify the defining strengths and limitations with utilizing the imaging modalities for conducting research investigations of human physiology and disease.

Audience: Graduate

### MED PHYS/B M E 568 – MAGNETIC RESONANCE IMAGING (MRI)

2 credits.

Core course covering the physics associated with magnetic resonance imaging emphasizing techniques employed in medical diagnostic imaging. Major MRI topics include: physics of MR, pulse sequences, hardware, imaging techniques, artifacts, and clinical applications. At the completion of this course, students should have an understanding of the technical and scientific details of modern magnetic resonance imaging and its use in diagnosing disease. Graduate students who have not taken MATH 222 and PHYSICS 202 at UW-Madison must have the equivalent coursework in order to be successful in this course.

**Requisites:** Graduate/professional standing or (MATH 222 and PHYSICS 202, 208, 241, 244, 248 or 249)

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Identify the mechanisms in which nuclear magnetic resonance harnessed for imaging

Audience: Both Grad & Undergrad

2. Differentiate the different MRI sequences used and the appearance of disease aspects in each of these sequences

Audience: Both Grad & Undergrad

3. Evaluate potential biological effects of imaging on patients and effects of patients on imaging

Audience: Both Grad & Undergrad

4. Contextualize the acquired knowledge to formulate research questions to solve specific clinical needs

Audience: Graduate

### **MED PHYS/N E 569 – HEALTH PHYSICS AND BIOLOGICAL EFFECTS**

3-4 credits.

Physical and biological aspects of the use of ionizing radiation in industrial and academic institutions; physical principles underlying shielding instrumentation, waste disposal; biological effects of low levels of ionizing radiation.

**Requisites:** MATH 234 and (PHYSICS 241 or 249), graduate/professional standing, or declared in Medical Physics VISP

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Investigate theoretical concepts that are used in radiation safety practice.

Audience: Both Grad & Undergrad

2. Evaluate the effectiveness of radiation safety practice considering theoretical, economic, political, and societal perspectives.

Audience: Both Grad & Undergrad

3. Consider the ethical consequences of radiation safety regulations.

Audience: Both Grad & Undergrad

4. Integrate knowledge into research and/or clinical work

Audience: Graduate

### **MED PHYS/B M E 573 – MATHEMATICAL METHODS IN MEDICAL PHYSICS**

3 credits.

Mathematical fundamentals required for medical physics and biomedical applications, including signal analysis and mathematical optimization.

**Requisites:** (MATH 234 and 319), (MATH 234 and 320), or MATH 376 and (PHYSICS 202 or 208), graduate/professional standing, or declared in Medical Physics VISP

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Summarize the utility of signal analysis in one and several dimensions

Audience: Both Grad & Undergrad

2. Identify and apply convolutions and Fourier Transforms in one and several dimensions

Audience: Both Grad & Undergrad

3. Apply the properties of the Fourier Transform in medical physics and other biomedical settings

Audience: Both Grad & Undergrad

4. Illustrate the limitations of the Fourier transform, and recall the advantages of alternative signal analysis tools (e.g. wavelet transform)

Audience: Graduate

5. Distinguish between types of optimization problems, including convex vs non-convex, and unconstrained vs constrained

Audience: Both Grad & Undergrad

6. Recognize the relative performance of basic optimization algorithms

Audience: Both Grad & Undergrad

7. Formulate image reconstruction as an optimization problem

Audience: Both Grad & Undergrad

8. Formulate therapy planning as an optimization problem

Audience: Both Grad & Undergrad

9. Implement practical optimization algorithms using computational methods

Audience: Both Grad & Undergrad

**MED PHYS/B M E 575 – DIAGNOSTIC ULTRASOUND IMAGING**

2 credits.

Propagation of ultrasonic waves in biological tissues; principles of ultrasonic measuring and imaging instrumentation; design and use of currently available tools for performance evaluation of diagnostic instrumentation; biological effects of ultrasound.

**Requisites:** Graduate/professional standing or (MATH 234, 319, or 320 and PHYSICS 202 or 208)

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

**Learning Outcomes:** 1. Explain principles underlying ultrasound propagation and biological effects of ultrasound.

Audience: Both Grad & Undergrad

2. Apply knowledge of clinical uses and limitations/artifacts of ultrasound imaging.

Audience: Both Grad & Undergrad

3. Recall the technical details of modern medical ultrasound devices and methods to measure acoustic parameters.

Audience: Both Grad & Undergrad

4. Utilize and integrate ultrasound imaging approaches for diagnostic and therapeutic research and clinical applications.

Audience: Graduate

**MED PHYS/B M E 578 – NON-IONIZING DIAGNOSTIC IMAGING**

4 credits.

Covers the physics associated with magnetic resonance imaging and diagnostic ultrasound emphasizing techniques employed in medical diagnostic imaging. Major MRI topics include: physics of MR, pulse sequences, hardware, imaging techniques, artifacts, and spectroscopic localization. Ultrasound based topics covered include: propagation of ultrasonic waves in biological tissues, principles of ultrasonic measuring and imaging instrumentation, design and use of currently available tools for performance evaluation of diagnostic instrumentation, and biological effects of ultrasound. Gain an understanding of the technical and scientific details of modern non-ionizing medical magnetic resonance and ultrasound devices and their use in diagnosing disease.

**Requisites:** MATH 234, (MATH 319 or 320) and (PHYSICS 202, 208, 241 or 248), or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Accurately describe, using the correct mathematics and terminology, how the signals for MRI and ultrasound are generated, the sensitivity of these techniques to tissue variations

Audience: Both Grad & Undergrad

2. Accurately describe, using the correct mathematics and terminology, spatial encoding methods for MRI and ultrasound and trade offs in imaging parameter and hardware selection

Audience: Both Grad & Undergrad

3. Identify and develop strategies to mitigate common artifacts

Audience: Both Grad & Undergrad

4. Understand how to apply the knowledge to their own research projects

Audience: Graduate

**MED PHYS/B M E 580 – THE PHYSICS OF MEDICAL IMAGING WITH IONIZING RADIATION**

4 credits.

Concepts and principles on the physics of medical imaging systems that form images using high energy photons are presented. Such systems are divided into two categories: (1) those based on the transmission of x-rays through the human body, including radiography, mammography, fluoroscopy, and computed tomography (CT), and (2) those based on the emission of gamma rays or annihilation radiation following radioactive decay of an internal radiolabeled molecule, including the gamma camera, single photon emission tomography (SPECT), and positron emission tomography (PET) and PET hybrid imaging systems. Emphasis is placed on understanding how physics, system design, and imaging technique determine image performance metrics such as contrast, signal-to-noise ratio, and spatial resolution. Clinical applications and radiation safety concepts are detailed for the different types of imaging systems.

**Requisites:** PHYSICS/B M E/H ONCOL/MED PHYS 501 and MED PHYS/B M E 573

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the physical principles underlying imaging technologies used in radiology and nuclear medicine: radiography, mammography, fluoroscopy, computed tomography (CT), scintigraphy, single-photon emission tomography (SPECT), and positron emission tomography (PET).

Audience: Both Grad & Undergrad

2. Describe each imaging modality in terms of a general imaging framework in which (i) a form of energy or probe is introduced to the body, (ii) a clinically interesting signal is generated within the body, and (iii) this signal is detected and spatially localized to form an image.

Audience: Both Grad & Undergrad

3. Apply physics and engineering concepts to understand how the design and operation of an imaging system determines the contrast, noise, and spatial resolution of the images produced by the system.

Audience: Both Grad & Undergrad

4. Differentiate the characteristics of radiotracers that make them suitable for research and clinical applications in human physiology.

Audience: Both Grad & Undergrad

5. Identify the defining strengths and limitations with utilizing the imaging modalities for conducting research investigations of human physiology and disease.

Audience: Graduate

**MED PHYS 581 – LABORATORY FOR MEDICAL IMAGING WITH IONIZING RADIATION**

1 credit.

Presents concepts and principles on the physics of medical radiographic imaging systems, based on the transmission of x-rays. Emphasis is placed on understanding the operation of imaging equipment and how it is used in clinical applications. Evaluation of imaging systems, optimization of their use and design and the solution of image quality problems is investigated.

**Requisites:** B M E/MED PHYS 580

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify the physical components of diagnostic x-ray imaging equipment

Audience: Both Grad & Undergrad

2. Summarize the operation and clinical uses of these imaging systems

Audience: Both Grad & Undergrad

3. Test and analyze the performance characteristics of diagnostic x-ray imaging equipment

Audience: Both Grad & Undergrad

4. Investigate factors that affect image quality and patient dose in x-ray imaging systems involving their use and design

Audience: Both Grad & Undergrad

5. Apply investigative thinking to the solution of image problems and artifacts

Audience: Both Grad & Undergrad

6. Apply what has been learned to their current research project

Audience: Graduate

**MED PHYS/B M E/PHMCO-M/PHYSICS/RADIOL 619 – MICROSCOPY OF LIFE**

3 credits.

Survey of state of the art microscopic, cellular and molecular imaging techniques, beginning with subcellular microscopy and finishing with whole animal imaging.

**Requisites:** PHYSICS 104, 202, 208, or 248 or PHYSICS/MED PHYS 265

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MED PHYS 651 – METHODS FOR NEUROIMAGING RESEARCH**

3 credits.

Provides a practical foundation for neuroimaging research studies with statistical image analysis. Specific imaging methods include functional BOLD MRI, structural MRI morphometry, and diffusion tensor imaging. Lectures and associated in-class computer exercises will cover the physics and methods of image acquisition, steps and tools for image analyses, the basis for statistical image analyses and interpretation of the results.

**Requisites:** Graduate/professional standing or (PHYSICS 104, 202 or 208)

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Develop a basic understanding of magnetic resonance imaging, anatomical imaging methods, functional BOLD MRI (fMRI), and diffusion tensor imaging (DTI).

Audience: Both Grad & Undergrad

2. Learn and apply basic methods for statistical image analyses.

Audience: Both Grad & Undergrad

3. Gain hands-on experience with tools for processing and analyses of fMRI, DTI and anatomic brain images.

Audience: Both Grad & Undergrad

4. Develop and demonstrate skills to independently process, analyze, troubleshoot and interpret MRI neuroimaging data

Audience: Graduate

**MED PHYS 662 – RAD LAB - DIAGNOSTIC RADIOLOGICAL PHYSICS**

1 credit.

Provides hands on experience using and testing radiographic, fluoroscopic and mammographic x-ray systems. Imaging requirements, image quality, and radiation dose aspects of each modality are covered, along with practical methods for evaluating the performance of clinical units.

**Requisites:** MED PHYS/B M E 580 or declared in Medical Physics VISP

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the major components and geometry of radiographic, fluoroscopic and mammographic x-ray systems and how they function

Audience: Both Grad & Undergrad

2. Describe the characteristics of radiation dose in radiographic, fluoroscopic and mammographic x-ray systems scanning including the x-ray dose index, average dose in the scanned volume and effective dose; as well as the effect of scan parameters on the radiation dose to the patient

Audience: Both Grad & Undergrad

3. Perform a physicist's evaluation of a radiographic, fluoroscopic and mammographic x-ray systems including measurements of geometric accuracy, image quality and radiation dose

Audience: Both Grad & Undergrad

4. Explain the characteristics of radiographic, fluoroscopic and mammographic x-ray systems quality including pixel values, contrast, noise, low contrast detectability and spatial resolution

Audience: Graduate

5. Demonstrate understanding of some of the basic system tests, as recommended by the American College of Radiology (ACR), that are performed during routine quality assurance testing of a radiographic, fluoroscopic and mammographic x-ray systems

Audience: Graduate

### **MED PHYS 663 – RAD LAB - NUCLEAR MEDICINE PHYSICS**

1 credit.

Provides an introduction to the technical skills required in nuclear medicine physics. This includes laboratory rotations in basic radiopharmaceutical production and quality control, basic operation and quality control testing on PET and SPECT scanners, time series image analysis of radiotracer studies and nuclear medicine dosimetry and radiation safety training.

Gain a firsthand understanding of the professional duties performed by a nuclear medicine medical physicist.

**Requisites:** MED PHYS/B M E 580 or declared in Medical Physics VISP

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the basic methods for the production of radionuclides used in nuclear medicine imaging, including cyclotron produced parent / progeny generators.

Audience: Both Grad & Undergrad

2. Illustrate how to perform evaluations/ testing of the nuclear medicine imaging systems for proper performance. This includes scanner characteristic measures that would be made for acceptance test and periodic QC measures.

Audience: Both Grad & Undergrad

3. Perform these evaluations/tests in an accurate fashion.

Audience: Both Grad & Undergrad

4. Analyze the results of these tests.

Audience: Both Grad & Undergrad

5. Create a report of these results which document the findings and communicate them to someone who is not a scientist.

Audience: Both Grad & Undergrad

6. Properly use individual radiation protection techniques during the testing.

Audience: Both Grad & Undergrad

7. Describe how radionuclides are synthesized into radiopharmaceuticals for human use. This includes how quality control tests are performed and the significance of each test.

Audience: Graduate

### **MED PHYS 664 – RAD LAB - HEALTH PHYSICS**

1 credit.

Uses project-based learning (PBL) as a powerful teaching method to address common challenges and solutions addressed by medical health physicists. Each semester, students work on a different project that addresses concepts that are important in the current health physics environment.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Learn about health physics instrumentation through hands-on experiments

Audience: Both Grad & Undergrad

2. Operate health physics instrumentation to address relevant health physics problems

Audience: Both Grad & Undergrad

3. Learn statistical principles of laboratory data analysis.

Audience: Both Grad & Undergrad

4. Communicate lab results clearly and effectively through high quality written reports.

Audience: Both Grad & Undergrad

5. Integrate knowledge into other course material, research and/or clinical work.

Audience: Graduate

**MED PHYS 665 – RAD LAB - CT, MRI, AND DSA PHYSICS**

1 credit.

Provides hands on experience using and testing computerized tomography (CT), magnetic resonance imaging (MRI), and digital subtraction angiography (DSA) systems. Image quality, MRI and radiation safety, accreditation, and regulatory compliance issues with these modalities are also covered.

**Requisites:** B M E/MED PHYS 580 and 578 or declared in Medical Physics VISP

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe the major components and geometry of current computed tomography (CT) scanners and the factors affecting image quality and radiation dose in CT scanners.

Audience: Both Grad & Undergrad

2. Explain the characteristics of CT image quality including pixel values, contrast, noise, low contrast detectability and spatial resolution.

Audience: Both Grad & Undergrad

3. Describe the characteristics of radiation dose in CT scanning including: dose profiles, the CT dose index, average dose in the scanned volume and effective dose; as well as the effect of scan parameters on the radiation dose to the patient.

Audience: Both Grad & Undergrad

4. Perform a physicist's evaluation of a CT scanner including measurements of geometric accuracy, image quality and radiation dose.

Audience: Graduate

5. Explain the safety screening process that all patients must undergo in order to determine whether they are eligible to safely undergo an MRI exam.

Audience: Both Grad & Undergrad

6. Describe the function of i) the major components of the MRI system, including the main magnetic field, the radiofrequency transceiver, and the magnetic field gradients, ii) the elements included in every MRI room, including the radiofrequency shielding, the magnet rundown unit, and the cryogen exhaust system, and iii) patient safety considerations related to these components.

Audience: Both Grad & Undergrad

7. Understand some of the basic system tests, as recommended by the American College of Radiology (ACR), that are performed during routine quality assurance testing of an MRI system.

Audience: Graduate

8. Identify the components of a digital subtraction angiography system.

Audience: Both Grad & Undergrad

9. Understand the basic properties of DSA systems; contrast, signal to noise ratio, image dynamic range, and logarithmic image processing.

Audience: Both Grad & Undergrad

10. Understand dual-energy subtraction and its advantages and disadvantages compared to time subtraction.

Audience: Graduate

**MED PHYS 666 – RAD LAB - MEDICAL ULTRASOUND PHYSICS**

1 credit.

Introduces concepts and methodology for measuring acoustic properties of materials and for operating and performing physics tests of state of the art clinical ultrasound scanners. Set up and operate a laboratory apparatus employing single element ultrasound transducers. This is followed by hands on experiments that challenge students to explain physical and engineering characteristics of clinical scanners, details of operator controls, features of Doppler and color flow modes, and resolution limitations. Practical scanning exercises provide familiarity with selected applications of clinical ultrasound equipment, both for diagnosis and for guiding interventions. Routine quality assurance tests done by medical physicists are also performed.

**Requisites:** MED PHYS/B M E 578 or declared in Medical Physics VISP

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Provide a technical overview of ultrasound scanner operations, including relevant tissue properties involved in forming images, ultrasound transducer properties and types, signal processing, image frame rate limitations, and typical instrument controls.

Audience: Both Grad & Undergrad

2. Demonstrate basic operation of an ultrasound scanner (GE Logiq E9 or Siemens Acuson Sequoia). This will be done using basic ultrasound QA phantoms.

Audience: Both Grad & Undergrad

3. Describe Doppler and color flow modes and indicate technical factors needed to measure blood flow accurately.

Audience: Both Grad & Undergrad

4. Show how instrumentation settings affect gray scale imaging and Doppler data from selected sites, such as the human carotid artery, the heart, or the abdomen.

Audience: Both Grad & Undergrad

5. Show the difference between cystic and solid lesions using phantoms; demonstrate image guided interventions using phantoms.

Audience: Both Grad & Undergrad

6. Complete the tests (i.e., system set up and scanning) and report writing for basic quality assurance testing following American College of Radiology (ACR) guidelines.

Audience: Graduate

**MED PHYS 671 – SELECTED TOPICS IN MEDICAL PHYSICS**

1-4 credits.

In-depth examination of current and newly discovered modalities and/or phenomena in medical physics. Critical reading of literature, hands-on lab work and exploration of medical issues related to discoveries will be included.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explore a new phenomenon or modality in the medical physics area and apply the knowledge gained to research in the field

Audience: Graduate

2. Identify the physical principles underlying imaging technologies used in radiology and nuclear medicine: radiography, mammography, fluoroscopy, computed tomography (CT), scintigraphy, single-photon emission tomography (SPECT), and positron emission tomography (PET).

Audience: Both Grad & Undergrad

**MED PHYS 674 – DATA SCIENCE IN MEDICAL PHYSICS**

3 credits.

Concepts and principles of statistics and machine learning for medical physics-related research problems. Topics covered include probability and independence, discrete and continuous random variables and statistical distributions, random sampling and central limit theorem, inference for means, variances, proportions, moment generating functions, maximum likelihood, hypothesis testing, ANOVA, linear regression, correlation and basic design of experiments with application to quality assurance, reliability, and reproducibility.

**Requisites:** (PHYSICS/B M E/H ONCOL/MED PHYS 501 and B M E/MED PHYS 573) or (STAT/MATH 309 or 431) or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze experimental data by calculating mathematical expectation, co-variance, and variance for both discrete and continuous random variables from experimental measurements and determine statistical parameters using parametric statistical models

Audience: Both Grad & Undergrad

2. Draw proper statistical conclusions from experimental data by constructing confidence intervals for estimated statistical parameters from data at a given statistical significance level and formulate a statistical hypothesis for drawing possible conclusions. Construct test statistics to perform hypothesis testing using the P-value method and the rejection-zone method at a given significance level

Audience: Both Grad & Undergrad

3. Perform supervised learning using linear regression methods and interpret the regression results for experimental data as well as perform supervised learning using logistic regression methods for classification tasks such as image segmentation

Audience: Both Grad & Undergrad

4. Perform unsupervised learning using K-means clustering, Expectation-Maximization (EM) methods, and kernel tricks to recognize underlying patterns in experimental data as well as perform supervised learning using deep neural network modeling and backpropagation learning schemes

Audience: Graduate

**MED PHYS 679 – RADIATION PHYSICS METROLOGY**

3 credits.

Metrology, the science of measurement, is a critical component of medical physics. Topics covered: measurement statistics, determination of uncertainty, characteristics of ionization chambers, electrometers and other ionizing radiation measurement devices. Effects of instrumentation on clinical measurements.

**Requisites:** PHYSICS/B M E/H ONCOL/MED PHYS 501

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Integrate the physics and operation of ionization chambers and electrometers

Audience: Both Grad & Undergrad

2. Integrate the physics and operation of other instruments used for dosimetry

Audience: Both Grad & Undergrad

3. Analyze and apply the luminescent process and its use in metrology

Audience: Both Grad & Undergrad

4. Evaluate and demonstrate principles of uncertainty involved in metrology

Audience: Graduate

**MED PHYS/PHYSICS 688 – RADIATION PRODUCTION AND DETECTION**

4 credits.

Physics of ionizing radiation production and detection in medical science; ionization chambers, solid-state detectors, charged and neutral particles for external beam radiotherapy, radionuclides activated with accelerators for diagnostic and therapeutic applications, radiochemistry, and X-ray tube physics.

**Requisites:** PHYSICS/B M E/H ONCOL/MED PHYS 501

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Achieve competence in experimental measurement methods of radiation dose

Audience: Both Grad & Undergrad

2. Develop a functional understanding of the principles and operation of the major types of ionizing radiation detectors used in modern medical physics including ion chambers, scintillators, semiconductors, chemical detectors, and calorimeters.

Audience: Both Grad & Undergrad

3. Apply fundamental atomic and nuclear physics and chemistry to radiation production using charged and neutral particles with accelerators and reactors, especially in the context of radionuclide production for diagnostic and therapeutic medical applications.

Audience: Both Grad & Undergrad

4. Develop an understanding of the principles and operation of medical electron linear accelerators for radiation therapy.

Audience: Both Grad & Undergrad

5. Apply physics and engineering concepts to understand the basic hardware configuration of an x-ray tube, the production of electrons by thermionic emission, the acceleration of electrons to a target material, and the physical interactions in the target resulting in x-rays.

Audience: Both Grad & Undergrad

6. Apply what has been learned to their current research project.

Audience: Graduate

## MED PHYS 699 – INDEPENDENT READING OR RESEARCH

1-3 credits.

Provides opportunities for graduate students to gain experience using the scientific method to address specific scientific problems. This includes selection of a research topic, performing literature reviews to evaluate peer-reviewed and other publications, developing a research design, identifying possible pitfalls, and performing and reporting on experiments performed. Communication of the research findings within and outside the university is encouraged.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Both Grad & Undergrad

2. Read and effectively analyze scientific literature

Audience: Both Grad & Undergrad

3. Develop critical, analytical, and independent thinking skills

Audience: Both Grad & Undergrad

4. Create literature reviews and publications

Audience: Graduate

## MED PHYS 701 – ETHICS AND THE RESPONSIBLE CONDUCT OF RESEARCH AND PRACTICE OF MEDICAL PHYSICS

1 credit.

Addresses the concepts of ethics in the daily practice of medical physics and other scientific disciplines and provide tools for identifying resources. Special emphasis will be placed in how these principles have to be applied to ensure the confidentiality of the patients, the safety of the research subjects (human and animals), differentiation between ethical and legal issues, as well as the understanding of the principles that deal with authorships, intellectual property in the academic- and industry- based environment.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recall and discuss the rationale behind the ethical principles governing medical physics practice

Audience: Graduate

2. Apply these principles to ensure the confidentiality of the patients, and the safety and respect of the research subjects (humans and animals).

Audience: Graduate

3. Ensure proper and honest data collection and analysis

Audience: Graduate

4. Identify and prevent conflict of interest

Audience: Graduate

5. Discuss and define authorships, and basic intellectual property concepts for the academic- and industry- based environment.

Audience: Graduate

### **MED PHYS/PEDIAT 705 – WOMEN AND LEADERSHIP: SCIENCE, HEALTH AND ENGINEERING**

2 credits.

Multiple professional and scientific groups have identified the underrepresentation and lack of advancement of women in academia as a national workforce problem. Review evolving perspectives of leadership and how unconscious assumptions about the behaviors and traits of men, women, and leaders impede women's advancement. Emphasizes the implications for women in the fields of science, health and engineering and explore the potential impact on the advancement of knowledge and improvements in health. Provides the opportunity to apply evidence-based perspectives using experiential methods.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Be conversant with several definitions and styles of leadership, as well as with research on how leadership and gender intersect/interact, particularly in an academic context.

Audience: Graduate

2. Reflect on personal leadership goals and skills based on readings, discussion, and online reflection assignments.

Audience: Graduate

3. Demonstrate knowledge of effective evidence-based leadership strategies.

Audience: Graduate

4. Consider the integral link between women leaders and the advancement of women's health.

Audience: Graduate

### **MED PHYS/B M E 710 – ADVANCES IN MEDICAL MAGNETIC RESONANCE**

3 credits.

Addresses the theory and applications of magnetic resonance (MR) in medicine, by providing the necessary theoretical background to understand advanced MR techniques including magnetic resonance imaging (MRI).

**Requisites:** MED PHYS/B M E 568 or 578

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recall and apply principles of MR signal generation, relaxation, echo generation, and spatial encoding.

Audience: Graduate

2. Compose and test concepts of advanced MR image reconstruction concepts including partial Fourier MRI, parallel MRI, non-Cartesian MRI, compressed sensing.

Audience: Graduate

3. Apply and judge image processing methods for the analysis of MR images for biomarkers such as T1 and T2 mapping and metabolite maps.

Audience: Graduate

4. Summarize and organize advanced MR applications used in the clinic and research including quantitative MRI, BOLD MRI (fMRI), MR Angiography with and without contrast agents, motion sensitive MRI, perfusion and diffusion MRI, and PET-MRI.

Audience: Graduate

5. Organize and compose concepts on sampling theory, signal-to-noise, artifacts, and pulse sequences to design protocols for MRI data acquisition, reconstruction, or processing.

Audience: Graduate

6. Demonstrate scientific communication skills for MRI research by composing oral presentations, written reports, and critiquing the work of others.

Audience: Graduate

**MED PHYS/B M I/COMP SCI/E C E 722 – COMPUTATIONAL OPTICS AND IMAGING**

3 credits.

Computational imaging includes all imaging methods that produce images as a result of computation on collected signals. Learn the tools to design new computational imaging methods to solve specific imaging problems. Provides an understanding of the physics of light propagation and measurement, and the computational tools to model it, including wave propagation, ray tracing, the radon transform, and linear algebra using matrix and integral operators and the computational tools to reconstruct an image, including linear inverse problems, neural networks, convex optimization, and filtered back-projection. Covers a variety of example computational imaging techniques and their applications including coded apertures, structured illumination, digital holography, computed tomography, imaging through scattering media, compressed sensing, and non-line-of-sight imaging.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Apply ray and wave based light propagation models

Audience: Graduate

2. Explain the process of image formation in conventional imaging systems using theory and computational models

Audience: Graduate

3. Select and combine the different components required in an imaging system to perform light manipulation, collection, and image reconstruction

Audience: Graduate

4. Apply the linear matrix and integral operators that model light propagation

Audience: Graduate

5. Apply the linear inverse algorithms that allow an imaging system to reconstruct properties of the scene from collected data

Audience: Graduate

6. Simulate different computational imaging systems and perform computation on simulated datasets

Audience: Graduate

7. Understand the most common computational imaging techniques and be able to use and adapt them for their own applications

Audience: Graduate

**MED PHYS/B M E/CHEM 750 – BIOLOGICAL OPTICAL MICROSCOPY**

3 credits.

Covers several aspects of state-of-the-art biological and biophysical imaging with an emphasis on instrumentation, beginning with an overview of geometrical optics and optical and fluorescence microscopy. The bulk of the course will focus on advanced imaging techniques including nonlinear optical processes (multi-photon excitation, second harmonic generation, and stimulated Raman processes) and emerging super-resolution methods. Special emphasis will be given to current imaging literature and experimental design. Knowledge of physics-based optics [such as PHYSICS 202] strongly recommended.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2021**Learning Outcomes:** 1. Provide a clear, concise oral presentation critiquing a paper in the literature

Audience: Graduate

2. Write a hypothesis driven research proposal and present an oral defense

Audience: Graduate

3. Write a critical written assessment of literature papers

Audience: Graduate

4. Use course concepts to better design experiments and extract quantitative information

Audience: Graduate

5. Articulate a fundamental understanding of the function of a microscope

Audience: Graduate

**MED PHYS 770 – ADVANCED BRACHYTHERAPY PHYSICS**

3 credits.

The use of radioactive sources for radiotherapy including: materials used, source construction dosimetry theory and practical application, dosimetric systems, localization and reconstruction. Covers low dose rate, high dose rate and permanently placed applications.

**Requisites:** MED PHYS/B M E 566

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Demonstrate an understanding of common brachytherapy source isotopes, including energy, source construction, and half-life, as well as their clinical use in the treatment of gynecological, breast, prostate, and other cancer types.

Audience: Graduate

2. Create clinical treatment plans for gynecological, breast, and prostate brachytherapy treatments.

Audience: Graduate

3. Explain and understand each component of the TG-43 brachytherapy dose calculation formalism

Audience: Graduate

4. Gain familiarity with HDR afterloaders and the required quality assurance

Audience: Graduate

5. Demonstrate an understanding of LDR brachytherapy concepts including safe source handling, calibration, and quality assurance

Audience: Graduate

6. Understand radiation protection concepts relevant to brachytherapy including state/national regulations and the components of a quality management program for brachytherapy

Audience: Graduate

**MED PHYS 772 – ADVANCED RADIATION TREATMENT PLANNING**

3 credits.

Physics of clinical, computer-based radiotherapy planning is taught. Topics include dose algorithms, measurement data, commissioning, contouring and volume definition, beam placement, modifiers and apertures and plan evaluation. Forward based and inverse planning (including IMRT optimization) are taught.

**Requisites:** MED PHYS/B M E 566 and graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Design simple and intermediate forward-based photon and electron external beam plans using beam arrangements/energy, wedges and blocks intelligently with regards to underlying physics

Audience: Graduate

2. Create target and region at risk planning volumes, setup objectives for, and optimize, inverse planned intensity modulated plans.

Audience: Graduate

3. Evaluate dose distributions using a variety of metrics.

Audience: Graduate

4. Understand beam model commissioning process and limitations including data requirements and processing.

Audience: Graduate

5. Understand dose algorithms used in radiation therapy (including but not limited to: convolution superposition, Monte Carlo, pencil beam.)

Audience: Graduate

### MED PHYS 775 – ADVANCED ULTRASOUND PHYSICS

3 credits.

Mathematical and physical foundations of the application of acoustics in diagnostic ultrasound. Derivation of wave equations for mechanical waves in fluids and solids from a continuum mechanics perspective. Diffraction theory and methods for acoustic field calculation (analytic, angular spectrum, simulations). Review of interactions of acoustic waves with biological tissue and methods to measure their acoustic properties. In-depth discussion of methods for structural image formation including ray-line scanning, plane wave compounding, synthetic aperture, coded excitation, and spatial coherent imaging. Introduction to novel functional imaging approach, including ultrafast Doppler, molecular ultrasound, functional ultrasound, and super-resolution imaging. Application of the acquired knowledge to perform a systematic literature review of the state-of-the-art of the field for the solution of a relevant clinical problem.

**Requisites:** B M E/MED PHYS 573 and 578

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Provide detailed physical explanations, based on advanced mathematical grounds, of (a) the basic principles of the propagation and interactions of mechanical waves in tissues, and (b) several ultrasound-based structural and functional imaging techniques  
Audience: Graduate

2. Critically assess recent technological developments in medical ultrasound imaging by appraising the motivation, strengths, and limitations of published research in this area  
Audience: Graduate

3. Based on a critical review of the state of the art of biomedical ultrasound, define the goal and specific aims of a research proposal focused on addressing a knowledge gap in the field and/or solving a relevant clinical problem using advanced concepts of ultrasound image acquisition, formation, and processing  
Audience: Graduate

### MED PHYS 777 – PRINCIPLES OF X-RAY COMPUTED TOMOGRAPHY

3 credits.

Understand the basic principles of x-ray computed tomography (CT), and how to think when a technical problem arises in CT. Accomplished through a review of the history of CT developments and key components of CT systems, lectures on various CT reconstruction algorithms, image quality, and radiation dose, origin and correction methods of various CT artifacts.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Understand the basic principles of x-ray CT imaging systems  
Audience: Graduate

2. Understand the mathematical foundation of basic CT reconstruction algorithms  
Audience: Graduate

3. Be able to implement filtered backprojection (FBP) reconstruction algorithms for various CT geometries  
Audience: Graduate

4. Understand CT image quality metrics and their dependence on CT system properties  
Audience: Graduate

5. Understand the physical origin of common CT image artifacts and the corresponding correction methods  
Audience: Graduate

**MED PHYS/B M E/E C E 778 – MACHINE LEARNING IN ULTRASOUND IMAGING**

3 credits.

Concepts and machine learning techniques for ultrasound beamforming for image formation and reconstruction to image analysis and interpretation will be presented. Key machine learning and deep learning concepts applied to beamforming, compressed sampling, speckle reduction, segmentation, photoacoustics, and elasticity imaging will be evaluated utilizing current peer-reviewed publications.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Critically read and evaluate peer-reviewed journal papers describing machine learning applications in ultrasound imaging.  
Audience: Graduate

2. Apply, implement and expand upon ideas from these publications to applications in ultrasound imaging.

Audience: Graduate

3. Present the results of their critical evaluation and implementation to the class.

Audience: Graduate

4. Write a research paper based on their findings suitable for publication.

Audience: Graduate

**MED PHYS 780 – PHARMACOKINETIC MODELING IN BIOMEDICAL IMAGING**

2 credits.

Concepts and techniques of pharmacokinetic modeling will be presented in the context of biomedical imaging. Examine applications in various specialties, e.g. neurology and oncology, using different imaging tools, e.g. positron emission tomography (PET) and magnetic resonance imaging (MRI).

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2020

**Learning Outcomes:** 1. Understand fundamental principles of pharmacokinetic modeling within the context of biomedical imaging  
Audience: Graduate

2. Implement appropriate mathematical models for given biological tracer systems

Audience: Graduate

3. Apply these skills to biomedical research questions

Audience: Graduate

4. Analyze biomedical imaging data to investigate pharmacokinetic properties

Audience: Graduate

5. Create a publication quality research paper

Audience: Graduate

**MED PHYS 900 – JOURNAL CLUB AND SEMINAR**

1 credit.

Provides medical physics graduate students with the opportunity to critically evaluate and report on published research and/or research seminar presentations by speakers, from both within the university and from the larger scientific community.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand the various areas of Medical Physics given in seminars

Audience: Graduate

2. Explore the subject of a seminar and understand medical terms

Audience: Graduate

### **MED PHYS 990 – RESEARCH**

1-12 credits.

Provides graduate students with mentorship to support their development of independent research goals and methods needed to address specific scientific problems that will result in a comprehensive dissertation.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Conduct independent and focused research using a variety of approaches.

Audience: Graduate

2. Analyze and think critically to address research challenges.

Audience: Graduate

3. Exhibit and foster professional and ethical conduct in their research.

Audience: Graduate

4. Collaborate with other investigators within or outside their lab.

Audience: Graduate

## **MEDICAL SCIENCES – MEDICAL SCHOOL (MED SC-M)**

### **MED SC-M 722 – CLINICAL ANATOMY AND RADIOLOGY**

2 credits.

Study of the anatomy of the head and neck, body wall, body cavities, limbs, and pelvic outlet through complete dissection of human cadavers. Hands-on experience in interpreting radiological cross-sectional images. Surgical correlates will be presented by practicing surgeons.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Rediscover and explore human anatomy through active dissection.

Audience: Graduate

2. Integrate anatomical concepts into surgical anatomy and approaches.

Audience: Graduate

3. Explore applications of radiology imaging in anatomy and clinical diagnosis.

Audience: Graduate

4. Develop a thoughtful and informative oral presentation and dissection video which combine anatomical, radiologic, and surgical concepts.

Audience: Graduate

### **MED SC-M 723 – INDEPENDENT ADVANCED ANATOMY DISSECTION**

2 credits.

Complete dissection and advanced study of the anatomy, histology, embryology, and neuroanatomy of a specific anatomical region as defined by student-generated learning objectives.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Formulate appropriate student learning objectives and develop a plan to achieve learning objectives

Audience: Graduate

2. Perform an advanced dissection of a specific anatomical region in alignment with formulated learning objectives

Audience: Graduate

3. Create a thoughtful and informative video presentation which integrates anatomy, histology, embryology, and neuroanatomy concepts of a specific anatomical region

Audience: Graduate

4. Demonstrate professionalism in day-to-day activities

Audience: Graduate

5. Communicate effectively and in a timely manner with peers and instructors

Audience: Graduate

6. Incorporate feedback into daily work

Audience: Graduate

### **MED SC-M 735 – MEDICAL SPANISH FOR HEALTH SCIENCE STUDENTS**

1 credit.

Medical interviewing, physical examination and cultural competency skills to enhance their ability to provide care for Spanish-speaking patients and their families. Pertinent medical vocabulary for clinical histories and physical exams, and grammar components to facilitate effective and professional communication. For health science students with intermediate or advanced Spanish proficiency.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MED SC-M 740 – OVERVIEW OF RURAL HEALTH**

1 credit.

Designed to introduce students in Phase 1 of the ForWard Curriculum to the rural community, its people, the health care issues they face, and the practice of medicine in rural communities. Key concepts of rural medicine, including health resources, access to care, injuries and illnesses associated with farming and agri-business, safety and protective equipment, and health policies. Preparation for clinical training and work in rural areas of Wisconsin.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MED SC-M 770 – PATIENTS, PROFESSIONALISM AND PUBLIC HEALTH**

4 credits.

Introduction to concepts of health and disease, which vary from patient to patient and through time. View health from a population standpoint, with an introduction to basic public health concepts as well as how physicians may positively impact both individual and population level health. Woven within that framework are introductions to key aspects of professionalism, patient-centered history-taking, and core communication skills.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MED SC-M 771 – BODY IN BALANCE**

11 credits.

Organized around physiological themes, the course includes material related to the cardiovascular system, hematology, nephrology, and pulmonology to present an integrated picture of how these systems function together to maintain homeostasis. In addition, there is significant content from other competency domains such as public health, ethics, evidence-based medicine, patient care/communication and clinical skills.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MED SC-M 772 – FOOD, FASTING & FITNESS**

9 credits.

Organized around biomedical themes including nutrients, the digestive system, the biochemistry and endocrine control of metabolism, exercise and fitness and the removal of waste products and toxins to present an integrated picture of how these systems function together to maintain homeostasis. Integrates developmental content from competency domains, or "longitudinal threads", including communication, patient care, ethics, health information technology, public health, professionalism, quality improvement, patient safety, and scientific inquiry.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MED SC-M 773 – HUMAN FAMILY TREE**

8 credits.

Focuses on molecular, genetic, embryologic, hormonal, anatomical and physiological factors that govern fertility, cell growth, fetal development, and pregnancy as well as the congenital anomalies that can occur when those processes are aberrant. Encompasses the full life-cycle spectrum including childhood growth and development, young adulthood/puberty, issues affecting adolescents and young adults, genetic basis of human disease, reproductive health, menopause, aging, unregulated cell growth (cancer) and end of life issues. Significant content from other competency domains, or "longitudinal threads", such as public health, advocacy, ethics, patient care/communication and clinical skills.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MED SC-M 774 – INVADERS AND DEFENSE**

9 credits.

Integrated examination of how the immune system interacts with foreign microbes, the normal micro biome, and self tissues, both normal and malignant. Examines inflammation and the impacts of this type of response on normal cells, in wound healing, infectious disease, and inflammatory diseases including autoimmune disease and dermatologic conditions, including neoplasia of the skin. Covers the development of adaptive immune responses from vaccination, infectious processes, and organ transplantation. Covers the basic biology and pathophysiology of "invaders" of the human body, including viruses, fungi, and bacteria, along with their clinical diagnosis and therapy. Addresses malignant transformation of the immune effector cells themselves, including cancers of mature lymphoid cells and bone marrow derived malignancies.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MED SC-M 775 – MIND & MOTION**

10 credits.

Introduction to core basic science, pathophysiologic, and diagnostic principles requisite for the care and treatment of patients with musculoskeletal, neurologic, and psychiatric presentations and disorders. Basic science concepts include those from the traditional disciplines of cell biology, histology, biochemistry, anatomy, embryology, neuroscience, and behavioral science. Regular integration of these topics with their pathologic and pathophysiologic counterparts. Integration of content related to other competency domains, or "longitudinal threads", that include patient care communication, evidence based medicine, health information technology, quality improvement patient safety, professionalism, scientific inquiry and public health.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MED SC-M 810 – SPECIALIZED CARE OF OBSTETRIC, GYNECOLOGIC, AND PEDIATRIC PATIENTS (SCOPE)**

12 credits.

Develop clinical knowledge and skills necessary to care for patients in Pediatrics and Obstetrics and Gynecology, with emphasis on unique skills such as taking care of vulnerable populations as identified in women's and child health and working with caregivers in addition to the patient themselves. Increase knowledge of fundamental science concepts introduced in Human Family Tree during Phase I of the curriculum, such as embryology and teratology, genetic testing, and neurodevelopment. Clinical experiences will occur in a range of representative inpatient, outpatient and surgical settings. In structured educational sessions, compare and contrast selected topics in pediatric, obstetric, and gynecologic patient populations, highlighting the relevant physiology, pathophysiology, basic science, and public health topics.

**Requisites:** MED SC-M 770, 771, 772, 773, 774, and 775**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Demonstrate an inclusive and humanistic approach to patient care.

Audience: Graduate

2. Demonstrate the relevant foundational knowledge for the diagnosis and/or differential diagnosis

Audience: Graduate

3. Appropriately interpret objective data such as vital signs and commonly used diagnostic studies (including CBC, urinalysis, CSF analysis, serum chemistries), accounting for the age of the patient, presence or absence of disease, and testing modality employed

Audience: Graduate

4. Describe the appropriate use of the following common medications (accounting for age/weight and other patient factors), including when it is NOT appropriate to treat with these medications: analgesics, antipyretics, antibiotics, bronchodilators, corticosteroids, IV fluids.

Audience: Graduate

5. Adapt your approach (medical interview and complete or focused physical examination) as is appropriate to your interaction with the patient and/or their caregivers, the patient's age/level of development, as well as the presenting concern and clinical setting

Audience: Graduate

6. Generate an appropriate differential diagnosis and plan for the presenting problem and patient's age

Audience: Graduate

7. Consider the invasiveness, benefits, limitations, costs, and evidence-based best practices when generating plans for patients in different clinical scenarios.

Audience: Graduate

8. Develop familiarity with common procedures performed in obstetrics and gynecology inpatient and outpatient settings.

Audience: Graduate

9. Responsibly manage information within the electronic health record (EHR) to effectively obtain and document patient care and utilize clinical decision support.

Audience: Graduate

10. Actively participate as an interprofessional team member to promote

**MED SC-M 811 – CHRONIC AND PREVENTIVE CARE**

12 credits.

Identify the roles of physicians, interdisciplinary providers, health care systems, and communities in screening, treating, and preventing common, chronic conditions. Activities are centered on health promotion, outpatient-based chronic disease management, and community health. Clinical experiences will occur in primary care, behavioral health, and other ambulatory and community-based settings that focus on chronic disease management.

**Requisites:** Declared in Medicine program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**MED SC-M 812 – ACUTE CARE**

12 credits.

Focus on assessing patients with urgent medical conditions, providing acute inpatient care, and transitioning patients to other care settings or home under the care of other professionals. Provide acute care in inpatient and outpatient urgent care settings as well as on the inpatient wards, and develop acute management plans and subsequent transition of care plans. Clinical experiences in acute care settings such as the emergency department and inpatient medicine (both general and subspecialty), psychiatry, and neurology. Builds upon fundamental science concepts introduced in Body in Balance and Mind and Motion, including Ohm's Law, acid-base balance, and volume regulation. Organ system-based approach employing varied modalities. Complete an integrated patient-centered experience by participating in the care of a patient from an urgent admission through inpatient treatment and discharge.

**Requisites:** Declared in Medicine program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**MED SC-M 813 – SURGICAL AND PROCEDURAL CARE**

12 credits.

Care of adults and children undergoing an operation or procedure, including perioperative preparation, operative care, and post-operative cares for core clinical conditions in the specialties of anesthesia, neurosurgery, ophthalmology, general surgery, otolaryngology, urology, cardiothoracic surgery, peripheral vascular surgery, orthopedics, plastic and reconstructive surgery, and gynecology, as well as interventional radiology, procedural cardiology and gastroenterology. Basic science concepts include cerebral spinal fluid production and flow, fluids and electrolytes, consciousness, inflammation and wound healing, and cancer biology. Anatomic approach using case discussions, podcasts, curated independent reading, online nationally supported modules, and simulation skills. Longitudinal patient care experience integrating communication, evidence based medicine, health information technology, quality improvement patient safety, professionalism, scientific inquiry, and public health.

**Requisites:** Declared in Medicine program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025

**MED SC-M 850 – INTRODUCTION TO HEALTHCARE SIMULATION**

3 credits.

Learn the history and best practices of healthcare simulation. Gain global perspective on simulation terminology and best practices in simulation facilitation to advance safe, high-quality, patient-centered care.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 3 number of completions

**Learning Outcomes:** 1. Define healthcare simulation and describe applications in formal health professions education and post certification/licensure (practicing professionals) continuing education.

Audience: Graduate

2. Apply educational techniques to design competency-based education to healthcare disciplines and programs.

Audience: Graduate

3. Describe simulation methods that enhances standards of patient care, safety, and population health.

Audience: Graduate

**MED SC-M 851 – INSTRUCTIONAL DESIGN IN SIMULATION**

3 credits.

In-depth curriculum development and instructional design of a simulation activity. Practice conducting a thorough needs assessment. Develop clearly defined goals and objectives in determining best educational strategies as they relate to healthcare simulation.

**Requisites:** MED SC-M 850 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Learning Outcomes:** 1. Identify Kern's six step approach to curriculum design

Audience: Graduate

2. Define the process of using Blooms Taxonomy to create effective learning objectives

Audience: Graduate

3. Describe the origins, use and value of learning objectives from the instructional design perspective

Audience: Graduate

4. Demonstrate understanding of value of appropriate educational strategies based on learner type, goals and objectives

Audience: Graduate

**MED SC-M 852 – SIMULATION FACILITATION**

3 credits.

Best-practices in simulation facilitation, including crucial components such as prebriefing, skills-based education, immersive experiences, debriefing, learner evaluation and curriculum assessment.

**Requisites:** MED SC-M 850 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Learning Outcomes:** 1. Define simulation methodologies as they relate to meeting specific course objectives.

Audience: Graduate

2. Summarize best-practices in course construct pertaining to cognitive, psychomotor, and affective domains.

Audience: Graduate

3. Design and facilitate a simulation-based activity from scenario creation to evaluation and continuous improvement.

Audience: Graduate

**MED SC-M 853 – DEBRIEFING IN HEALTHCARE SIMULATION**

3 credits.

Continued development in health care simulation methodology. Best practices in debriefing both procedural and immersive simulation scenarios.

**Requisites:** MED SC-M 850 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Learning Outcomes:** 1. Define the value in debriefing in health care simulation

Audience: Graduate

2. Compare and contrast procedural, immersive and clinical event debriefing

Audience: Graduate

3. Demonstrate how to navigate various debriefing scenarios, including difficult debriefing scenarios

Audience: Graduate

### **MED SC-M 902 – AMBULATORY ACTING INTERNSHIP**

4 credits.

Designed for students to assume primary responsibility of patients in the outpatient setting. Work with direct oversight by a faculty attending physician as you interview and examine patients, decide upon accurate diagnoses and formulate an appropriate treatment plan. Offered among various specialties and across the statewide campus. A primary focus of this rotation is medical decision-making regarding the ordering of tests and labs, medications and other therapeutic interventions. Students are expected to demonstrate effective communication with patients.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MED SC-M 909 – INTERNSHIP PREP COURSE**

3 credits.

Designed for students to apply the knowledge and skills developed over four years of medical school and prepare them for the transition from medical student to intern. The course will cover topics in the following domains: Common and Critical Medical Conditions, Laboratory Interpretation and Procedural Skills, Professionalism and Communication, Hospital and Team Functioning and Life Skills. Sessions will include core topics for all students and sessions for those who will pursue medical or surgical specialties.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

### **MED SC-M 910 – MEDIC CLINICS SELECTIVE: A STUDY OF MARGINALIZED POPULATIONS AND INTERPROFESSIONAL COLLABORATION**

2 credits.

Provides a two-pronged opportunity for fourth year medical students to re-engage with MEDiC clinics where they may have volunteered during their first and second years of medical school, further appreciating the complexities of serving marginalized populations, and to use their recent clinical experience to contribute as both mentors and collaborators with students from multiple health professional professions. Careful focus on the broad public health issues affecting the patients in MEDiC clinics and how these issues inform their health status, health care and health access. Investigate the role of race in health disparities, as well as the role of socioeconomic status.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

### **MED SC-M 911 – RACIAL HEALTH DISPARITIES IN WISCONSIN**

2 credits.

Uses Wisconsin health disparities data as a tool to address the broader misconceptions about race, biology, and health. Includes an overview of the genetic mechanisms for species variation, human evolutionary history, human adaptation and clinical patterns, and misconceptions about the biological underpinnings of race and health outcomes with an emphasis on the social and environmental determinants of health.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2020

### **MED SC-M 912 – TEACHING IN THE CLASSROOM: LABORATORY-BASED LEARNING IN MEDICAL EDUCATION**

2-4 credits.

Advanced course for medical students interested in teaching, pursuing careers in academic medicine and/or preparing to teach in residency. Develop knowledge and skills in the theory and practice of teaching and learning in laboratory-based environments such as the clinical teaching and assessment center (CTAC) and anatomy lab. Enhance and apply your skills with hands-on experiences observing and teaching classroom-based clinical skills and anatomy.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Create educational materials for teaching laboratory-based sessions using Backward Design principles  
Audience: Graduate

2. Teach in classroom-based learning environments that utilize laboratory-based instruction  
Audience: Graduate

3. Effectively facilitate laboratory-based learning activities, following appropriate guidelines and structure  
Audience: Graduate

4. Use inclusive and effective evidence-based teaching strategies  
Audience: Graduate

5. Provide useful feedback to learners  
Audience: Graduate

6. Navigate classroom dynamics to create a positive, safe and respectful learning environment  
Audience: Graduate

7. Identify strengths as well as opportunities to improve teaching based on self-reflection and feedback  
Audience: Graduate

### **MED SC-M 913 – WISCONSIN ACADEMY FOR RURAL MEDICINE (WARM) INTERNSHIP PREPARATION ELECTIVE**

1 credit.

Review and reinforce baseline skills you will need for internship training in any specialty, using interactive learning methods. Major topics include Radiology, Cardiology/Pulmonary, Urgent and Emergent situations, Procedural skills, Acute Illness, and Communication.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate familiarity with the use and appropriate ordering criteria for various Radiology modalities including xrays, Magnetic Resonance Imaging (MRI), Computed Tomography (CT) Scans, and ultrasound  
Audience: Graduate

2. Demonstrate proper point-of-care ultrasound diagnostic use techniques  
Audience: Graduate

3. Review electrocardiogram (EKG) interpretation and identify common clinical EKG findings  
Audience: Graduate

4. Identify and discuss treatment of clinically significant arrhythmias  
Audience: Graduate

5. Determine appropriate cardiac stress testing  
Audience: Graduate

6. Discuss appropriate use of laboratory studies and interpretation in the clinical setting  
Audience: Graduate

7. Review Advanced Cardiovascular Life Support (ACLS) including situations requiring use, skills, and knowledge  
Audience: Graduate

8. Review diagnosis and treatment of urgent/emergent and acute situations including hypotension, sinus tachycardia, deep venous thrombosis/pulmonary embolism, chest pain, abdominal pain, fever, and dyspnea  
Audience: Graduate

9. Appropriately prescribe antibiotics for certain common infectious diseases  
Audience: Graduate

10. Approach common procedures including, central lines/venous access, chest tubes, dermatologic procedures, suturing/knot tying, lumbar puncture and other appropriate procedures  
Audience: Graduate

11. Appropriately evaluate and treat acute pain  
Audience: Graduate

12. Appropriately approach difficult conversations including delivering bad news, medical errors, death/autopsy request, and other clinically challenging situations  
Audience: Graduate

13. Identify appropriate communication strategies for dealing with conflict, appropriate communication with colleagues and patients, written and

### **MED SC-M 914 – TEACHING IN THE CLASSROOM: CASE-BASED LEARNING IN MEDICAL EDUCATION**

2-4 credits.

Advanced learning for those interested in teaching, pursuing careers in academic medicine and/or preparation for teaching in residency. Develop knowledge and skills in the theory and practice of teaching and learning specific to design, implementation and facilitation of case-based learning. Enhance and apply your skills with hands-on experiences observing and teaching in classroom-based sessions. Teaching opportunities include facilitating Patient Centered Education (PaCE), Integrated Radiology, Anatomy, and Histology (iRAH), simulation, medium/small group case-based learning and large group team-based learning.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Using Backward Design principles, prepare educational materials for teaching case-based sessions  
Audience: Graduate

2. Teach in classroom-based learning environments that utilize case-based instruction  
Audience: Graduate

3. Effectively facilitate case-based learning activities, following appropriate guidelines and structure  
Audience: Graduate

4. Differentiate case-based learning (CBL), problem-based learning (PBL) and team-based learning (TBL)  
Audience: Graduate

5. Use inclusive and effective evidence-based teaching strategies  
Audience: Graduate

6. Provide useful verbal feedback to learners  
Audience: Graduate

7. Navigate classroom dynamics to create a positive, safe and respectful learning environment  
Audience: Graduate

**MED SC-M 918 – INDEPENDENT READING AND RESEARCH IN MEDICAL SCIENCES**

2-8 credits.

Independent research studies under the direct supervision of SMPH faculty. Each project is individualized to meet student learning objectives.

**Requisites:** Declared in Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Formulate appropriate student learning objectives

Audience: Graduate

2. Develop a plan to achieve learning objectives and demonstrate outcomes

Audience: Graduate

3. Demonstrate professionalism in day-to-day activities

Audience: Graduate

4. Demonstrate respect for project stakeholders, collaborators and mentors

Audience: Graduate

5. Communicate effectively and in a timely manner with project stakeholders, collaborators and mentors

Audience: Graduate

6. Incorporate feedback into daily work

Audience: Graduate

**MED SC-M 930 – AMERICAN INDIAN HEALTH, HISTORY & TRIBAL GOVERNANCE**

1 credit.

An inter-professional introduction on foundational knowledge regarding the history, structures and key health priorities of Wisconsin tribal nations delivered by a wide range of faculty and guest experts.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe key elements and events which shape the history of Wisconsin tribes

Audience: Graduate

2. Explain, distinguish, compare and contrast the key health priorities for various Wisconsin tribes

Audience: Graduate

3. Describe the role that upstream determinants of tribal health, including environment and culture play in shaping tribal health outcomes

Audience: Graduate

4. Identify how policies and tribal, state and federal systems impact Wisconsin tribal health

Audience: Graduate

5. Explore the role of trauma-informed care for communities which have experienced trauma, specifically describing how historical trauma affects the health of Wisconsin tribal communities

Audience: Graduate

**MED SC-M 940 – ADVOCATING FOR PATIENTS: GETTING THE RIGHT CARE AT THE RIGHT TIME**

2 credits.

Introduction to some of the core features of the U.S. Health Care System, as experienced by patients and the health care providers caring for them. Build your capacity for advocacy in clinical settings by exploring frameworks and strategies for addressing barriers and inequities, and communication tools to help patients and families better navigate complex systems and access community resources. Advocacy content concentrated on personal advocacy interests.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate understanding of advocacy and what advocates do

Audience: Graduate

2. Match advocacy roles to specific situations

Audience: Graduate

3. Identify value to advocacy of collaborative problem-solving, engaging diverse viewpoints

Audience: Graduate

4. Identify how health care coverage is financed in the U.S., and how this influences patient experiences

Audience: Graduate

5. List core reasons for high costs and current strategies to contain them

Audience: Graduate

6. Examine how cost factors might influence the roles of physician advocates

Audience: Graduate

7. Build communication skills that emphasize deep listening, empathy, and compassion

Audience: Graduate

8. Demonstrate knowledge of how to recognize how to shift one's role and relationship to build patients' and families' capacity to strengthen capacity for self-advocacy

Audience: Graduate

9. Develop "touchpoints" to reinforce your learning and commitment to full presence with patients

Audience: Graduate

10. Demonstrate understanding of the causes and effects of physician burnout

Audience: Graduate

11. Develop self-care and lifelong learning strategies

Audience: Graduate

12. Describe strategies for incorporating advocacy into a busy practice

Audience: Graduate

13. Identify your potential role as change agent within an organization

Audience: Graduate

**MED SC-M 941 – ADVOCATING FOR POPULATIONS: PARTNERING TO IMPROVE COMMUNITY HEALTH**

2 credits.

Introduction to advocacy for population health. Covers determinants of health and the systemic causes that specific populations experience with health and health care in the U.S. Explore a range of strategies and tools for creating productive change with, and on behalf of, groups of patients. Strengthen the ability to see connections between the experiences of individual patients and providers and the organizational, political, social, and economic structures that influence the experiences of all health care stakeholders.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe clinicians' roles in population health advocacy

Audience: Graduate

2. Identify key advocacy skills and approaches

Audience: Graduate

3. Demonstrate understanding of the levels of macro advocacy

Audience: Graduate

4. Define systems thinking as it relates to advocacy for populations

Audience: Graduate

5. Identify systems thinking tools to apply to population health problems

Audience: Graduate

6. Apply tools to a population health case study

Audience: Graduate

7. Demonstrate understanding of health systems participation in community advocacy

Audience: Graduate

8. Describe the role and value of Community Needs Assessments

Audience: Graduate

9. Identify models of community engagement and partnerships

Audience: Graduate

10. Evaluate advocacy orientations uniquely applicable to organizations

Audience: Graduate

11. Demonstrate knowledge of a behavioral science approach to motivate change

Audience: Graduate

12. Describe the role of individual well-being in organizational, sector, and societal change efforts

Audience: Graduate

**MED SC-M 942 – NARRATIVE MEDICINE, STORYTELLING, AND PREPARING FOR RESIDENCY**

2 credits.

Narrative medicine, developing narrative competence, storytelling, and personal reflection. Using medical humanities for personal statement writing, interview preparation and professional identity formation.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Define narrative medicine and storytelling and how they can impact healthcare.

Audience: Graduate

2. Apply the skills of close reading, attentive listening, creative writing, and storytelling to develop your narrative competence.

Audience: Graduate

3. Reflect upon the experiences that have defined your development into a physician and apply this reflection to your residency personal statement and interview preparation.

Audience: Graduate

4. Apply the tools learned from this course to stay grounded in your purpose in medicine as you move on to the next stage in your training.

Audience: Graduate

## MEDICAL SCIENCES - VETERINARY MEDICINE (MED SC-V)

**MED SC-V 570 – ANIMAL HEALTH HISTORY RESTRAINT AND PHYSICAL EXAMINATION**

1 credit.

Introduces use of the problem oriented medical record concepts, history taking, physical examination and basic restraint, and diagnostic and therapeutic techniques in large and small domestic animals.

**Requisites:** Declared in Doctor of Veterinary Medicine with first year standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate appropriate restraint of dogs, cows, and horses.

Audience: Undergraduate

2. Demonstrate safe and appropriate techniques for handling blood collection devices (needles, syringes, vacutainer sample tubes).

Audience: Undergraduate

3. Develop a systematic technique for physical examination of small and large animals.

Audience: Undergraduate

4. Demonstrate knowledge of normal values for temperature, pulse, respiratory rates for dogs, cats, horses, and cows.

Audience: Undergraduate

5. Describe and summarize physical examination findings in a format suitable for use in medical records.

Audience: Undergraduate

6. Collect and organize a comprehensive health history on a canine or feline patient.

Audience: Undergraduate

**MED SC-V 576 – SMALL ANIMAL EMERGENCY AND CRITICAL CARE I**

1 credit.

Introduction to to various topics of emergency and critical care medicine.

**Requisites:** Declared in Doctor of Veterinary Medicine

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize how to triage an ill/injured dog or cat

Audience: Undergraduate

2. Recognize signs of shock in a dog

Audience: Undergraduate

3. Recognize signs of shock in a cat

Audience: Undergraduate

4. Recognize methods of toxin decontamination

Audience: Undergraduate

5. List basic stabilization techniques for unstable patients

Audience: Undergraduate

**MED SC-V 577 – SMALL ANIMAL EMERGENCY AND CRITICAL CARE II**

1 credit.

Cover various topics in emergency and critical care medicine. Several areas of emergency and critical care medicine will be presented.

**Requisites:** MED SC-V 576

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe how to triage an ill/injured dog or cat

Audience: Undergraduate

2. Identify point of care diagnostics and when they should be utilized

Audience: Undergraduate

3. Create a prioritized problem list following a triage exam and initial diagnostics

Audience: Undergraduate

4. Recognize signs of shock in a dog

Audience: Undergraduate

5. Recognize signs of shock in a cat

Audience: Undergraduate

**MED SC-V 625 – VETERINARY DIAGNOSTIC AND THERAPEUTIC TECHNIQUES**

0-1 credits.

Formal laboratory instruction. Detailed examination techniques and diagnostic and therapeutic procedures relevant to veterinary procedures on all species of domestic animals.

**Requisites:** Declared in Doctor of Veterinary Medicine with third year standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply multiple medical techniques and skills necessary for practice.

Audience: Undergraduate

2. Recognize multiple medical tools utilized in practice

Audience: Undergraduate

3. Identify different specialties and specific procedures associated with that specialty.

Audience: Undergraduate

**MED SC-V 629 – VETERINARY NUTRITION**

1 credit.

Presents awareness of the importance of nutrition in the veterinary practice.

**Requisites:** Declared in Doctor of Veterinary Medicine with first year standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain the importance of clinical nutrition in veterinary practice

Audience: Undergraduate

2. Articulate the role of nutrition in maintaining animal health and productivity

Audience: Undergraduate

3. Integrate clinical nutrition information with basic biochemical and physiological information

Audience: Undergraduate

4. Understand nutrient groupings, basic nutrient definitions, and nutrient requirements well enough to have a solid foundation for future clinical nutrition instruction

Audience: Undergraduate

5. Evaluate the basic nutritional adequacy of a diet fed to an animal

Audience: Undergraduate

**MED SC-V 632 – COMPANION ANIMAL AND EQUINE MEDICINE I**  
6 credits.

Basic concepts of well-animal companion animal and equine health care, nutrition, and reproduction will be presented. Discussion of the etiology, pathophysiology, diagnosis, treatment, and prevention of important internal medicine and reproductive diseases in these species will be emphasized.

**Requisites:** Declared in Doctor of Veterinary Medicine with third year standing

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recognize clinical signs, diagnose and treat common diseases in small animals

Audience: Undergraduate

2. Recognize clinical signs for common disease presentations in companion animals

Audience: Undergraduate

3. Describe important clinical features of diseases that aid in recognition in companion animals

Audience: Undergraduate

4. Construct an appropriate diagnostic plan to identify common diseases in companion animals

Audience: Undergraduate

5. Create a refined differential diagnosis list for common diseases in companion animals

Audience: Undergraduate

6. Identify treatment options for common diseases in companion animals based on patient needs, available resources, and client circumstances

Audience: Undergraduate

**MED SC-V 633 – COMPANION ANIMAL AND EQUINE MEDICINE II**  
6 credits.

Basic concepts of well-animal companion animal and equine health care, nutrition, and reproduction will be presented. Discussion of the etiology, pathophysiology, diagnosis, treatment, and prevention of important internal medicine and reproductive diseases in these species will be emphasized.

**Requisites:** Declared in Doctor of Veterinary Medicine with third year standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize clinical signs, diagnose and treat common diseases in small animals and horses.

Audience: Undergraduate

2. Recognize clinical signs for common disease presentations in companion animals and horses.

Audience: Undergraduate

3. Describe important clinical features of diseases that aid in recognition in companion animals and horses.

Audience: Undergraduate

4. Construct an appropriate diagnostic plan to identify common diseases in companion animals and horses.

Audience: Undergraduate

5. Create a refined differential diagnosis list for common diseases in companion animals and horses.

Audience: Undergraduate

6. Identify treatment options for common diseases in companion animals and horses based on patient needs, available resources, and client circumstances.

Audience: Undergraduate

**MED SC-V 634 – FOOD ANIMAL MEDICINE**

5 credits.

Basic principles for food animal species. Integrates food animal medicine, theriogenology, nutrition and preventive medicine concepts.

**Requisites:** Declared in Doctor of Veterinary Medicine with third year standing

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Diagnose and treat medical and surgical conditions of food and fiber animals at the competency level expected of an Upper Midwest mixed animal practitioner

Audience: Undergraduate

2. Recommend protocols for the prevention of major infectious and metabolic diseases that are appropriate for different food and fiber animal production systems

Audience: Undergraduate

3. Design programs that optimize reproductive efficiency in food and fiber animal operations

Audience: Undergraduate

4. Integrate food animal medical and surgical principles with considerations of animal welfare, environmental impact, and public perception of animal agriculture

Audience: Undergraduate

**MED SC-V 635 – SWINE MEDICINE**

1 credit.

Focuses on basic swine medicine clinical skills including diagnosis and treatment of common swine diseases that present in individual pigs and populations. Influences of production practices and farm structure will be introduced as they impact the successful practice of swine medicine. Additionally, regulatory influences unique to swine veterinary medicine and principles of biosecurity/biocontainment and bioexclusion will be discussed.

**Requisites:** Declared in Doctor of Veterinary Medicine with third year standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate knowledge (commensurate with an entry-level mixed animal practitioner in the Upper Midwest) about basic swine medicine principles.

Audience: Undergraduate

2. Apply and integrate knowledge from medicine and epidemiology so that they can investigate disease outbreaks in swine operations.

Audience: Undergraduate

3. Acquire sufficient knowledge to pass the swine medicine questions on the NAVLE licensure exam.

Audience: Undergraduate

4. Define basic swine science terminology, farm structure and expected biological performance.

Audience: Undergraduate

5. Summarize the unique characteristics of swine populations that influence diagnosis and treatment of disease.

Audience: Undergraduate

6. Perform a systematic evaluation of a swine population that identifies the correct individual animals for physical exam or diagnostic testing.

Audience: Undergraduate

7. Describe the parameters, and the normal ranges expected for those parameters, on a physical exam of a healthy pig.

Audience: Undergraduate

8. Identify the correct restraint procedure for a specific age and class of pig.

Audience: Undergraduate

9. Describe the best testing strategy for a population given a common swine disease and diagnostic objective.

Audience: Undergraduate

10. Recommend a vaccination program to a swine farmer.

Audience: Undergraduate

11. Synthesize the following information to determine a case specific treatment plan for common pathogens found in swine: clinical relevance to swine health, zoonotic potential, clinical significance of strain variation in etiology, preferred diagnostic test, usefulness of serology, usefulness of oral fluids, efficacy of vaccination, and availability of legal antimicrobial treatments.

Audience: Undergraduate

### **MED SC-V 667 – SMALL ANIMAL NEUROLOGY**

2 credits.

Provide instruction and guidance in obtaining a complete neurological history, interpreting examinations, diagnostic tests and rationally selecting an appropriate diagnosis and effective management for neurology cases.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Perform a complete neurologic examination to localize neurologic lesions and explain relevant basic neuroanatomical pathways

Audience: Undergraduate

2. Develop a prioritized differential diagnosis and refined problem list for general neurological lesion localizations based on the neurologic exam

Audience: Undergraduate

3. Explain the differences between general neurologic imaging techniques and select appropriate diagnostic imaging for a patient

Audience: Undergraduate

4. Understand the pharmacokinetics, standard dosage, and recommended monitoring of patients treated long-term with antiepileptic drugs

Audience: Undergraduate

5. Administer appropriate drugs to treat status epilepticus and identify and monitor impacts of antiepileptic drugs in long-term patients

Audience: Undergraduate

6. Effectively communicate with clients the appropriate treatment options and medical management for patients with neurologic diseases

Audience: Undergraduate

7. Recognize situational limitations and offer or recommend referrals for a patient as needed

Audience: Undergraduate

### **MED SC-V 668 – CLINICAL DERMATOLOGY ROTATION**

2 credits.

Develop the technical, clinical and knowledge skills to effectively examine, diagnose and manage the dermatology patient.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Perform a client interview and obtain historical data that is necessary and pertinent to establishing the cause of skin disease in a dog or cat

Audience: Undergraduate

2. Identify and describe the major lesion types that may be found during dermatologic examination of a dog or cat

Audience: Undergraduate

3. Demonstrate performance of flea combing, skin scraping, and trichogram procedures as used to assess a patient for parasitic skin disease

Audience: Undergraduate

4. Perform and interpret the results of a skin cytology, combine the results with gross observations on dermatologic examination, and interpret these findings to suggest presence/absence and etiologic diagnosis of either yeast or bacterial skin infection, including providing initial treatment recommendations

Audience: Undergraduate

5. Perform and interpret the results of an ear cytology, using the results to suggest both an etiologic diagnosis of the condition and an appropriate initial treatment regimen

Audience: Undergraduate

6. Outline a logical diagnostic approach sequence (including examinations and tests to be performed) for a dog with a primary owner complaint of pruritic skin disease, aimed at creating a focused list of differential diagnoses specific to the pet's particular condition

Audience: Undergraduate

7. Provide a list of differential diagnoses for a dog with an owner primary complaint of nonpruritic, generalized, noninflammatory hair loss, along with diagnostic tests that would be useful to rule out each of the proposed differential diagnoses

Audience: Undergraduate

8. Describe the role of "foundation" and "accessory" treatments in canine atopic dermatitis; list the main available treatment options for each of these categories of treatments along with their advantages, disadvantages, contraindications, and potential adverse effects

Audience: Undergraduate

9. List the four main reaction patterns in feline skin that are suggestive of a hypersensitivity disorder, and tests that might be used to establish a definitive diagnosis for these patterns

Audience: Undergraduate

**MED SC-V 669 – SMALL ANIMAL CARDIOLOGY ROTATION**

2 credits.

Diagnostic techniques and therapy available for the management of cardiology patients.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Describe and apply appropriate techniques for full physical examinations on small animal cardiology patients

Audience: Undergraduate

2. Observe video recordings to identify techniques and procedures for less commonly seen diseases and abnormalities in cardiology

Audience: Undergraduate

3. Accurately perform a blood pressure measurement on small animal veterinary patients

Audience: Undergraduate

4. Evaluate thoracic radiographs and ECGs using appropriate systematic approaches to identify common abnormalities

Audience: Undergraduate

5. Describe and justify routine therapeutic procedures for arrhythmias and congestive heart failure in small animals

Audience: Undergraduate

**MED SC-V 670 – SENIOR ROTATION IN LARGE ANIMAL MEDICINE SERVICE**

2 credits.

Diagnosis and medical treatment of diseases of horses, cattle, sheep, goats and pigs. Examine, admit and discharge cases in the Veterinary Medical Teaching Hospital.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Obtain a complete and problem-specific medical history and physical exam

Audience: Undergraduate

2. Identify clinical problems from a history and physical examination

Audience: Undergraduate

3. Create ranked problem and differential diagnoses lists for relevant clinical problems

Audience: Undergraduate

4. Design appropriate diagnostic and therapeutic plans for patients

Audience: Undergraduate

5. Effectively and empathetically communicate with clients and colleagues to coordinate patient care

Audience: Undergraduate

### **MED SC-V 674 – SENIOR ROTATION IN AMBULATORY SERVICE**

2 credits.

Diagnosis, treatment, and recommendation of preventive measures for common medical, surgical and management problems on farms. Examine the environmental influences associated with such problems.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Perform comprehensive physical examination of patients to create viable differential diagnoses.

Audience: Undergraduate

2. Create and adjust a diagnostic and treatment plan based on available resources and client needs.

Audience: Undergraduate

3. Perform clinical tasks and procedures that are commonplace in ambulatory practice.

Audience: Undergraduate

4. Develop individual animal and health management plans including vaccination programs, deworming strategies and nutritional management.

Audience: Undergraduate

5. Recognize communicable zoonotic diseases of animals, including management strategies and appropriate reporting at the state and federal level.

Audience: Undergraduate

6. Describe business management of a multiple person veterinary medical practice, including personnel, finance, pharmaceutical and equipment inventories, client relations and charging and billing for services.

Audience: Undergraduate

### **MED SC-V 675 – SPECIAL TOPICS**

1-5 credits.

Topics vary.

**Requisites:** Declared in Doctor of Veterinary Medicine

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Develop competence and professional skills in veterinary medicine

Audience: Undergraduate

2. Explore current topics and trends in veterinary medicine

Audience: Undergraduate

3. Developing breadths of experiences related to veterinary medicine

Audience: Undergraduate

### **MED SC-V 678 – SMALL ANIMAL INTERNAL MEDICINE**

2 credits.

Develop the ability to analyze, organize and integrate information effectively to make clinical decisions relating to the diagnosis, prognosis, management and control of diseases.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Obtain both a complete and a problem-specific medical history and physical examination

Audience: Undergraduate

2. Identify clinical problems from a history and physical examination

Audience: Undergraduate

3. Create ranked problem and differential diagnoses lists for relevant clinical problems

Audience: Undergraduate

4. Design appropriate diagnostic and therapeutic plans for patients

Audience: Undergraduate

5. Effectively and empathetically communicate with clients and colleagues to coordinate patient care

Audience: Undergraduate

6. Understand how to document patient plans, procedures, and treatments

Audience: Undergraduate

7. Use appropriate literature to solve clinical questions or scientific problems

Audience: Undergraduate

**MED SC-V 679 – SMALL ANIMAL ONCOLOGY**

2 credits.

To develop skills in clinical medicine, palpation, interpretation of laboratory data and become acquainted with oncology clientele.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Obtain a complete history and physical exam on oncology patients

Audience: Undergraduate

2. Understand the anatomical location of lymph nodes and basic biology and physical signs of common cancers in dogs and cats

Audience: Undergraduate

3. Demonstrate appropriate use of instrumentation and techniques for measuring masses and general tissue handling and oncological biopsy procedures

Audience: Undergraduate

4. Perform appropriate biopsy fine needle aspirate procedures to determine review cytology of patient samples

Audience: Undergraduate

5. Formulate a diagnostics and therapeutic plan for oncology patients based on available information and abnormal findings on testing and examination

Audience: Undergraduate

6. Model low-stress handling and humane restraint of chemotherapy patients and properly administer therapeutics

Audience: Undergraduate

7. Collaborate with team members to implement effective care for new and recheck oncology patients

Audience: Undergraduate

**MED SC-V 699 – DIRECTED STUDY**

1-5 credits.

Projects in the laboratory and/or through library work in specific subject areas under the direct guidance of a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply foundational veterinary knowledge and critical thinking to identify problems in veterinary medicine

Audience: Undergraduate

2. Develop professional veterinary medicine skills of interest by performing select techniques and procedures

Audience: Undergraduate

3. Communicate in written and/or verbal reports to veterinary colleagues and supervisors

Audience: Undergraduate

### **MED SC-V 701 – PRODUCTION MEDICINE I**

2 credits.

Visit dairy farms, learn to identify production limiting problems, and develop a priority list based upon economic importance. The farm investigation consists of visual evaluations of farmstead and herd, interpretation of DHI records, and computer analysis of herd records.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Evaluate medication and vaccine use in dairy calves and fresh cows

Audience: Graduate

2. Use injury and locomotion scoring to evaluate cow comfort and lameness in adult dairy cattle and assess hoof trimming at the herd level

Audience: Graduate

3. Use Microsoft Excel and free online software to perform statistical analysis on health and production data collected from DHIA and DairyCOMP 305

Audience: Graduate

4. Diagnose pregnancy and identify ovarian structures using transrectal palpation. Incorporate reproductive management strategies to improve fertility in dairy herds

Audience: Graduate

5. Provide obstetric manipulations to safely deliver malpositioned and/or oversized calves.

Audience: Graduate

6. Evaluate fresh cow diagnosis and treatment protocols on dairy farms

Audience: Graduate

7. Deliver written and verbal reports to dairy farmers and veterinary colleagues

Audience: Graduate

### **MED SC-V 703 – PRODUCTION MEDICINE II**

2 credits.

Investigate and analyze farm and laboratory data and evaluate recommendations using benefit/cost analyses. Perform milking system, milking procedure, and environmental management evaluations.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Evaluate transition cow risk factors on dairy farms

Audience: Graduate

2. Utilize transrectal ultrasound to diagnose pregnancy and identify ovarian structures and use reproductive management strategies to identify and re-inseminate non-pregnant cows

Audience: Graduate

3. Evaluate barn ventilation, freestall, and tiestall design

Audience: Graduate

4. Create partial budgets to assist farmers' decision making for on-farm management practices

Audience: Graduate

5. Evaluate milking parlor procedures to ensure timely let-down of milk and improve udder health in dairy cattle

Audience: Graduate

6. Use Food Armor® HACCP principles to promote food safety and proper drug use in food animals

Audience: Graduate

7. Deliver written and verbal reports to dairy farmers and veterinary colleagues

Audience: Graduate

### **MED SC-V 705 – PRODUCTION MEDICINE III-APPLIED DAIRY NUTRITION**

2 credits.

Rotation for applying principles of nutrition to dairy practice.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Investigate calf health management programs including nutrition, growth, sanitation, passive transfer, morbidity and mortality

Audience: Graduate

2. Use lung ultrasound to evaluate respiratory health in young cattle

Audience: Graduate

3. Develop on-farm troubleshooting strategies for adult cow and young calf health and performance problems

Audience: Graduate

4. Evaluate robotic milking systems

Audience: Graduate

5. Identify humane methods of euthanasia and provide euthanasia services using captive bolt

Audience: Graduate

6. Assess bull fertility through breeding soundness examinations

Audience: Graduate

7. Deliver written and verbal reports to dairy farmers and veterinary colleagues

Audience: Graduate

### **MED SC-V 708 – PRE-CLINICAL TOPICS IN VETERINARY MEDICINE**

1-3 credits.

Selected topics in veterinary medicine covering materials such as, but not limited to, innovative trends in veterinary medicine, experimental practices, or trending topics in the field.

**Requisites:** Declared in Doctor of Veterinary Medicine

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 50 number of completions

**Learning Outcomes:** 1. Apply theoretical knowledge to real-world veterinary scenarios and case studies.

Audience: Graduate

2. Demonstrate competence in integrating concepts and skills to solve practical veterinary problems.

Audience: Graduate

3. Enhance practical competency in diverse areas of veterinary medicine through hands-on activities, simulations, or field experiences.

Audience: Graduate

4. Recognize connections and interdependencies between diverse topics within the veterinary profession.

Audience: Graduate

### **MED SC-V 710 – SMALL ANIMAL EMERGENCY MEDICINE ROTATION**

2 credits.

Work jointly with faculty, residents and interns to assess emergent patients, formulate both treatment and diagnostic plans. Under direct supervision, demonstrate basic ER skills and procedures upon patients, as is appropriate.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recognize indicators of emergency and prioritize a plan of action

Audience: Graduate

2. Perform a complete and accurate assessment of emergent patients

Audience: Graduate

3. Describe and apply appropriate basic procedural skills on emergent patients

Audience: Graduate

4. Recognize situational limitations and seek consults as needed

Audience: Graduate

### **MED SC-V 711 – SELECTIVE CLINICAL EXPERIENCES IN VETERINARY MEDICINE**

1 credit.

Selected experiences in veterinary medicine to explore clinical environments and investigate various career paths within the veterinary profession before formal clinical rotations.

**Requisites:** Declared in Doctor of Veterinary Medicine

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 4 number of completions

**Learning Outcomes:** 1. Effectively bridge the gap between classroom learning in foundational sciences and its application in real clinical scenarios.

Audience: Graduate

2. Perform basic veterinary clinical skills, including physical examination techniques, patient handling, and restraint.

Audience: Graduate

3. Practice professional conduct and etiquette in a clinical setting, including interactions with clients, staff, and patients.

Audience: Graduate

4. Explore potential career paths in different areas of the veterinary profession.

Audience: Graduate

### **MED SC-V 714 – SMALL ANIMAL PRIMARY CARE ROTATION**

2 credits.

Provide a practical, clinical experience by determining the diagnosis and treatment of general practice preventative medicine and diseases of dogs and cats. Provide an opportunity to evaluate and treat primary or first opinion cases (medicine, surgery) seen in private practice, to develop proficiency in client communications, and to create a skills base for management of preventive health, new pet and primary medical and surgical cases.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Obtain an oral history and perform a complete physical examination to identify clinical problems and abnormalities

Audience: Graduate

2. Apply foundational veterinary knowledge and critical thinking to create problem lists and prioritized differentials

Audience: Graduate

3. Demonstrate appropriate use of instrumentation and techniques for proper tissue handling and basic surgery on live patients

Audience: Graduate

4. Create a preventative care plan for small animals

Audience: Graduate

5. Create patient discharge instructions and written medical records using appropriate language for effective communication and understanding

Audience: Graduate

**MED SC-V 716 – SMALL ANIMAL WISCARES ROTATION**

2 credits.

Lead cases by determining diagnosis and treatment of general practice preventative medicine and diseases of small animal species. Build clinical diagnostic and surgical skills, communication skills, interdisciplinary teamwork, self-reflection, and cultural humility skills.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 1 number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Incorporates animal welfare, client expectations, and economic considerations into the diagnostic or treatment plan

Audience: Graduate

2. Recognizes zoonotic diseases and responds accordingly

Audience: Graduate

3. Promotes the health and safety of people and the environment

Audience: Graduate

4. Listens attentively and communicates professionally

Audience: Graduate

5. Adapts communication style to colleagues and clients

Audience: Graduate

6. Demonstrates inclusivity and cultural competence

Audience: Graduate

**MED SC-V 731 – FOUNDATIONS OF VETERINARY MEDICINE I**

7 credits.

Develop a comprehensive understanding of the foundational concepts underpinning the normal, healthy animal. Through a structured approach comprising various modules, including foundations of homeostasis, movement and support, and circulation and respiration, delve into essential anatomical and functional elements vital for animal health. Emphasizing the intricate interplay of cells, tissues, organs, and organ systems, gain crucial insights into the mechanisms orchestrating communication and control to uphold homeostasis. Integrating disciplines such as anatomy, physiology, histology, embryology, and radiology, combine foundational knowledge with an emphasis on practical clinical applications and the development of critical thinking essential for navigating the complexities of veterinary practice.

**Requisites:** Declared in Doctor of Veterinary Medicine DVM with first year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Describe the location, organization, development, and main purposes of the structures involved in a body system.

Audience: Graduate

2. Explain the relationship between the structure and function of organs within a system.

Audience: Graduate

3. Analyze the cause-and-effect relationships between different elements within a body system.

Audience: Graduate

4. Evaluate the importance of biochemical, electrical, and mechanical events within a body system.

Audience: Graduate

5. Predict the sequence of events necessary to restore homeostasis after disruption or dysfunction.

Audience: Graduate

6. Compare and contrast the functions of different body systems and describe how their combined actions maintain or restore homeostasis and health.

Audience: Graduate

7. Identify scientific literature from various sources and appraise information based on credibility and applicability.

Audience: Graduate

**MED SC-V 732 – FOUNDATIONS OF VETERINARY MEDICINE II**

7 credits.

Develop a comprehensive understanding of the foundational concepts underpinning the normal, healthy animal. Through a structured approach comprising various modules, including eating and eliminating, and cognition, senses and response, delve into essential anatomical and functional elements vital for animal health. Emphasizing the intricate interplay of cells, tissues, organs, and organ systems, gain crucial insights into the mechanisms orchestrating communication and control to uphold homeostasis. Integrating disciplines such as anatomy, physiology, histology, embryology, and radiology, combine foundational knowledge with an emphasis on practical clinical applications and the development of critical thinking essential for navigating the complexities of veterinary practice.

**Requisites:** Declared in Doctor of Veterinary Medicine DVM with first year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Describe the location, organization, development, and main purposes of the structures involved in a body system.

Audience: Graduate

2. Explain the relationship between the structure and function of organs within a system.

Audience: Graduate

3. Analyze the cause-and-effect relationships between different events within a body system.

Audience: Graduate

4. Evaluate the importance of different biochemical, electrical, and mechanical events within a body system.

Audience: Graduate

5. Predict the sequence of events necessary to restore homeostasis after disruption or malfunction.

Audience: Graduate

6. Compare and contrast the functions of different body systems and describe how their combined actions maintain or restore homeostasis and health.

Audience: Graduate

7. Identify scientific literature from various sources and appraise information based on credibility and applicability.

Audience: Graduate

**MED SC-V 736 – VETERINARY CLINICAL SKILLS I**

2 credits.

Begin development of foundational clinical skills needed by veterinarians to excel in the current, demanding clinical veterinary environment. Emphasizing hands-on training to build a strong foundation in the correct handling, restraint, and physical examination of multiple species. Through a structured approach in various laboratories, move toward performance of these skills at a pre-novice I level.

**Requisites:** Declared in Doctor of Veterinary Medicine DVM with first year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Perform components of a physical examination on multiple veterinary species, using appropriate handling and restraint.

Audience: Graduate

2. Perform diverse clinical skills and procedures from multiple areas of veterinary medicine.

Audience: Graduate

**MED SC-V 737 – VETERINARY CLINICAL SKILLS II**

1 credit.

Advance development of foundational clinical skills needed by veterinarians to excel in the current demanding clinical veterinary environment. Engage in deliberate practice in handling and restraint techniques, as well as in-depth physical examinations of various species, demonstrating sustained performance at a pre-novice I level.

**Requisites:** Declared in Doctor of Veterinary Medicine DVM with first year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Perform components of a physical examination on multiple veterinary species, using appropriate handling and restraint.

Audience: Graduate

2. Perform diverse clinical skills and procedures from multiple areas of veterinary medicine.

Audience: Graduate

**MED SC-V 738 – VETERINARY PROFESSIONAL SKILLS I**

1 credit.

Develop critical, non-medical skills needed to excel in today's demanding clinical veterinary environment. Emphasizing a strong foundation in areas that complement veterinary medical expertise, fostering a more rewarding career, improving patient care, and creating a positive work environment for the veterinary healthcare team. Through a structured approach comprising various modules, including career, communication, ethics, financial, individual and team awareness, leadership, legal, mentorship, practice management, and wellbeing/wellness, delve into essential professional skills for future veterinarians. Emphasizing the following fundamental skills: communication in teams, giving and receiving constructive feedback, and self-reflection to better understand personal goals, needs, and motivations. Core aspects for a veterinary career are introduced: medical records and documentation, legal and ethical considerations, cultural responsiveness, and client communication.

**Requisites:** Declared in Doctor of Veterinary Medicine DVM with first year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Recognize skills and strategies for time-management, team collaboration, communication, and personal wellness that can contribute success as a student and in a veterinary career.

Audience: Graduate

2. Describe and compare skills and strategies for leadership and collaboration in teams.

Audience: Graduate

3. Identify personal values and goals to create a personal-professional mission statement.

Audience: Graduate

4. Identify personal wellness needs and available wellness resources.

Audience: Graduate

5. Explain what feedback is, why it is important and describe the feedback cycle.

Audience: Graduate

6. Define the difference between legal requirements and ethical responsibility, and why ethics are important to veterinary medicine.

Audience: Graduate

7. Define components of legal medical records and the importance of using proper medical terminology in documentation.

Audience: Graduate

**MED SC-V 739 – VETERINARY PROFESSIONAL SKILLS II**

1 credit.

Develop critical, non-medical skills needed to excel in today's demanding clinical veterinary environment. Emphasizing a strong foundation in areas that complement veterinary medical expertise, fostering a more rewarding career, improving patient care, and creating a positive work environment for the veterinary healthcare team. Through a structured approach comprising various modules, including career, communication, ethics, financial, individual and team awareness, leadership, legal, mentorship, practice management, and wellbeing/wellness, delve into essential professional skills for future veterinarians. Develop a deeper grounding into key ethical and legal aspects of a veterinary career, including veterinarian-owner-client confidentiality, animal welfare, owner responsibility and euthanasia. Practice verbal and written communication skills in relation to commonly encountered scenarios. Veterinary career paths will be explored and defined; career planning networks developed.

**Requisites:** Declared in Doctor of Veterinary Medicine DVM with first year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Explain ethical concepts surrounding animal welfare and the ethical basis for veterinarian-owner-patient confidentiality.

Audience: Graduate

2. Reflect on personal, legal, and ethical perspectives and standards on death and euthanasia.

Audience: Graduate

3. Describe legal minimum care standards for owners and ranges of veterinary care perspectives.

Audience: Graduate

4. Describe and demonstrate communication strategies for discussing topics of a healthy pet visit.

Audience: Graduate

5. Demonstrate basic skills and strategies for career planning and compare career options within veterinary medicine.

Audience: Graduate

**MED SC-V 741 – VETERINARY DISEASE AND DYSFUNCTION I**

6 credits.

Explore animal diseases and dysfunction spanning multiple body systems. Through a structured approach comprising various modules, including foundations of disease, and barriers and defense, explore disease etiology, pathophysiology, clinical manifestations, diagnostic methodologies, therapeutic interventions, and preventive strategies. Interdisciplinary perspectives will be employed to develop an understanding of the mechanisms underlying various animal diseases. Apply didactic knowledge to real-world scenarios. Utilize foundational knowledge with an emphasis on practical clinical applications and the development of clinical reasoning essential for navigating the complexities of veterinary practice.

**Requisites:** Declared in Doctor of Veterinary Medicine DVM with first year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Identify clinical presentations through analysis of patient history and physical examination findings.

Audience: Graduate

2. Analyze key pathogenic mechanisms within clinical contexts, integrating patient history and clinical features.

Audience: Graduate

3. Formulate and prioritize a problem list through evaluation of clinical presentations and using knowledge of pathogenic mechanisms.

Audience: Graduate

4. Construct and rank an appropriate differential diagnosis list based on a thorough assessment of the problem list.

Audience: Graduate

5. Develop an initial diagnostic plan based on the problem list and differentials.

Audience: Graduate

6. Continually update ranked problem list, differential diagnosis, and diagnostic plan by integrating clinical, biochemical, pathologic, and imaging data.

Audience: Graduate

7. Apply a variety of therapeutic modalities-pharmacologic, biological, physical, surgical, environmental, and nutritional-to manage or prevent pathophysiologic mechanisms underlying disorders.

Audience: Graduate

8. Describe disease progression or resolution patterns.

Audience: Graduate

9. Assess treatment responses against expected outcomes and adjust management strategies accordingly.

Audience: Graduate

10. Apply principles of extra-label drug use, withdrawal times, and responsible drug administration in accordance with relevant regulations and guidelines.

Audience: Graduate

11. Access, analyze, and apply scientific literature and justify clinical decisions based on credibility and applicability of the information.

Audience: Graduate

**MED SC-V 746 – VETERINARY CLINICAL SKILLS III**

1 credit.

Extend development of foundational clinical skills needed by veterinarians to excel in the current demanding clinical veterinary environment. Engage in dynamic practice and simulations in handling, restraint, and in-depth physical examinations of various species to move towards performance of these skills at a pre-novice II level.

**Requisites:** Declared in Doctor of Veterinary Medicine DVM with first year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Perform components of a physical examination on multiple veterinary species, using appropriate handling and restraint.

Audience: Graduate

2. Perform diverse clinical skills and procedures from multiple areas of veterinary medicine.

Audience: Graduate

**MED SC-V 748 – VETERINARY PROFESSIONAL SKILLS III**

1 credit.

Develop critical, non-medical skills needed to excel in today's demanding clinical veterinary environment. Emphasizing a strong foundation in areas that complement veterinary medical expertise, fostering a more rewarding career, improving patient care, and creating a positive work environment for the veterinary healthcare team. Through a structured approach comprising various modules, including career, communication, ethics, financial, individual and team awareness, leadership, legal, mentorship, practice management, and wellbeing/wellness, delve into essential professional skills for future veterinarians. Explore mental and emotional well-being impacts, including ethical dilemmas, and interpersonal interaction with colleagues and clients. Discuss strategies for finding and building a mentor network. Explore worldview and value differences. Refine and practice communication strategies. Focus on giving and receiving feedback and develop a feedback action plan.

**Requisites:** Declared in Doctor of Veterinary Medicine DVM with first year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Reflect on and respond to factors, including ethical dilemmas in veterinary medicine, that impact wellbeing of veterinarians.

Audience: Graduate

2. Reflect on your worldview and ethical boundaries, how it may differ from others', and how this affects your decision making and interpersonal relationships.

Audience: Graduate

3. Demonstrate strategies for building teams and finding a mentor.

Audience: Graduate

4. Describe and demonstrate strategies for communicating with colleagues and clients.

Audience: Graduate

5. Give, receive, and develop a plan of action based on feedback as part of a team.

Audience: Graduate

**MED SC-V 775 – EXTERNSHIP**

1-24 credits.

Offers opportunities for faculty coordinated experience in the veterinary medical profession outside School of Veterinary Medicine.

**Requisites:** Declared in Doctor of Veterinary Medicine with fourth year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Understand real-world applications of foundational veterinary medical knowledge and skills

Audience: Graduate

2. Apply foundational veterinary knowledge and critical thinking to solve real-world problems

Audience: Graduate

3. Perform select techniques and procedures to develop various skills professional in veterinary medicine

Audience: Graduate

## MEDICINE (MEDICINE)

### **MEDICINE/NURSING/PHM PRAC/SOC WORK 467 – INTERPROFESSIONAL COLLABORATIVE PRACTICE IN HIV CARE** 1 credit.

Gain foundational knowledge and skills in interprofessional collaborative practice and HIV care. Explore the roles of medicine, nursing, pharmacy, and social work in the HIV care continuum. Discuss quality team-based care as a member of an interprofessional student team.

**Requisites:** Declared in Nursing BSN (Traditional, Collaborative, Accelerated), Social Work BSW, Medicine MD, Pharmacy PharmD, or Social Work MSW.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the history and epidemiology of the HIV epidemic.

Audience: Both Grad & Undergrad

2. Define Interprofessional Collaborative Practice (ICP) and describe the characteristics of effective ICP.

Audience: Both Grad & Undergrad

3. Describe the natural history of HIV disease with and without antiretroviral therapy (ART).

Audience: Both Grad & Undergrad

4. Discuss US Dept of Health and Human Services guidelines and recommendations for prevention, screening, diagnosis, treatment, and management of HIV infection and HIV-related diseases in the United States.

Audience: Both Grad & Undergrad

5. Describe the HIV care continuum including testing, entry and retention in care, and treatment including associated stigma and discrimination as barriers.

Audience: Both Grad & Undergrad

6. Discuss dimensions of wellness (emotional, environmental, financial, intellectual, occupational, physical, social and spiritual).

Audience: Both Grad & Undergrad

7. Identify potential co-morbid conditions in the HIV infected population.

Audience: Both Grad & Undergrad

8. Discuss stigma and discrimination as barriers to prevention, care, and treatment.

Audience: Both Grad & Undergrad

9. Discuss the history of the Ryan White Care Act and other federal and state policies and their current importance in HIV prevention and HIV care.

Audience: Both Grad & Undergrad

10. Identify HIV care needs and common health issues among high risk and vulnerable populations.

Audience: Both Grad & Undergrad

11. Develop a plan of care for an HIV positive individual as part of an interprofessional team.

Audience: Both Grad & Undergrad

12. Develop skills working with mixed teams including undergraduate students.

### **MEDICINE 699 – INDEPENDENT STUDY**

0–5 credits.

Self-directed work under the supervision and guidance of an Instructor and often in conjunction with a day-to-day mentor that is a graduate student, postdoc researcher or directly with the faculty. Students normally participate in aspects of ongoing research projects.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Undergraduate

2. Read and effectively search scientific literature

Audience: Undergraduate

3. Develop critical, analytical, and independent thinking skills

Audience: Undergraduate

### **MEDICINE 700 – INTRODUCTION TO CLINICAL AND HEALTH INFORMATICS**

3 credits.

Overview of the field of applied clinical and health informatics will provide foundational knowledge of the core concepts of clinical and health informatics and how those principles are used to improve health and health care delivery.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Describe the foundational principles and challenges of clinical and health informatics

Audience: Graduate

2. Summarize the use of health records in health care delivery, and practical challenges of their use

Audience: Graduate

3. Illustrate focus areas in informatics, such as public health, population medicine, and consumer informatics

Audience: Graduate

4. Identify emerging technologies in clinical and health informatics

Audience: Graduate

5. Apply health equity principles in evaluation of clinical and health information system and their delivery

Audience: Graduate

**MEDICINE/CRB 701 – CELL SIGNALING AND HUMAN DISEASE**

1 credit.

Landmark discoveries, as well as current knowledge and controversies in human health, with an emphasis on cancer biology.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Critically evaluate the primary literature underlying medical knowledge.

Audience: Graduate

2. Practice presentation and leading discussion of primary literature.

Audience: Graduate

3. Read the basic evidence underlying landmark discoveries and controversies in cancer biology.

Audience: Graduate

4. Understand how grant proposals are written and evaluated.

Audience: Graduate

**MEDICINE 702 – CLINICAL AND HEALTH INFORMATION SYSTEMS**

3 credits.

Clinical and health information and communication systems form the backbone of our health care delivery system and public health infrastructure. Overview of the core systems used in health care delivery to explore the processes used to analyze, design, implement and evaluate these systems.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Describe the role of information systems in health and health care delivery

Audience: Graduate

2. Summarize the various needs that information systems fill in health care delivery, including clinical, revenue cycle, and population health uses.

Audience: Graduate

3. Identify the steps for analysis, design, implementation, and evaluation of information and communication systems.

Audience: Graduate

4. Understand barriers to effective utilization of information and communication systems.

Audience: Graduate

5. Illustrate key features of clinical decision support and effective clinical documentation.

Audience: Graduate

**MEDICINE/NURSING/POP HLTH 705 – SEMINAR IN INTERDISCIPLINARY CLINICAL RESEARCH EVIDENCE**

2-3 credits.

Exploration of interdisciplinary clinical research questions including strategies for assessing the evidence and methodology for conducting various types of literature reviews. Emphasizes an interdisciplinary perspective.

**Requisites:** SOC/POP HLTH 797 and STAT/B M I 542

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Develop an answerable clinical research question.

Audience: Graduate

2. Search relevant scientific literature using several electronic databases and other sources of evidence (published and unpublished) across disciplines.

Audience: Graduate

3. Manage sources of evidence with reference management software.

Audience: Graduate

4. Critically review published clinical research on a chosen topic.

Audience: Graduate

5. Develop a search strategy and conduct a systematic review or other form of evidence review.

Audience: Graduate

6. Present a planned or actual evidence review to interdisciplinary peers.

Audience: Graduate

7. Describe the implications for translation of the proposed evidence review from an interdisciplinary perspective.

Audience: Graduate

## MEDICINE 710 – IMPROVISATIONAL THEATRE FOR SCIENTISTS

1 credit.

Improvisers are experts in storytelling, spontaneity, and using observation skills to adjust to their audiences and team members accordingly. Among other skills, this 5-week course will teach you how to (1) effectively communicate your work to different audiences, (2) adjust your behavior in real time to respond to audience feedback, and (3) manipulate your vocal and physical presence to communicate more effectively.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Effectively communicate your work to different audiences

Audience: Graduate

2. Adjust your behavior in real time to respond to audience feedback

Audience: Graduate

3. Manipulate your vocal and physical presence to communicate more effectively

Audience: Graduate

## MEDICINE 720 – ENDOCRINOLOGY AND METABOLISM

3 credits.

Provides a broad grounding in endocrinology and metabolism with an emphasis on human and human-related disorders wherever possible. Explores further the physiological and molecular mechanisms by which the endocrine regulation of metabolism acts to preserve mammalian health, and how dysfunction in these mechanisms leads to disease, with an emphasis on diabetes, obesity and hypertension.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop knowledge of how endocrinology and metabolism act to promote health at the physiological and molecular level, with an emphasis on humans wherever possible.

Audience: Graduate

2. Learn common mechanisms by which endocrine and metabolic dysfunction contribute to the pathophysiology of disease, including diabetes, obesity, and hypertension.

Audience: Graduate

3. Develop knowledge of cutting-edge research findings and common approaches to developing new treatments for metabolic disease and endocrine disorders.

Audience: Graduate

4. Evaluate primary research articles and demonstrate critical reasoning with regards to methods and conclusions.

Audience: Graduate

5. Demonstrate critical thinking with regards to course material through in-class interactive discussion with peers and faculty.

Audience: Graduate

6. Integrate instruction material and personally-researched scientific texts to formulate individual thoughts on topics not directly covered in lecture.

Audience: Graduate

**MEDICINE 725 – PERCEPTIONS OF AGING**

1 credit.

Designed to provide a broad understanding of how aging and the science of aging is perceived by the public, with an emphasis on the critical examination of movies in which aging is a major theme. Discussion topics will include the perception of aging and age-related diseases as a positive or negative theme; the biological plausibility of pro- or anti-aging mechanisms; the accuracy of aging science in media; and the clinical, cultural, and personal perceptions of end-of-life care, death, and bereavement.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Develop knowledge of how aging as well as the science of aging is perceived by the public.

Audience: Graduate

2. Develop knowledge novel techniques and approaches at the cutting edge of aging research.

Audience: Graduate

3. Demonstrate critical reasoning with regards to methods and conclusions drawn in popular media.

Audience: Graduate

4. Demonstrate critical thinking with regards to course material through in-class interactive discussion with peers and faculty.

Audience: Graduate

5. Integrate instruction material and personally-researched scientific texts to formulate individual thoughts on topics not directly covered in lecture.

Audience: Graduate

**MEDICINE 750 – CAPSTONE PROJECT IN CLINICAL AND HEALTH INFORMATICS**

3 credits.

Collective application of all other Clinical and Health Informatics graduate degree coursework. Addresses all ten American Medical Informatics Association (AMIA) competencies through a summative project to demonstrate the knowledge, skills, and attributes necessary for successfully working in health care informatics.

**Requisites:** Declared in Clinical and Health Informatics MS program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Effectively analyze, design, implement and evaluate an information or communication solution for a health care organization.

Audience: Graduate

2. Effectively formulate and communicate a project plan.

Audience: Graduate

3. Understand how the stakeholders, processes and culture of an organization impacts an informatics project.

Audience: Graduate

4. Apply leadership and organizational theories to an informatics project.

Audience: Graduate

5. Understand and navigate the unique aspects of a clinical/health informatics project (ex. security, privacy).

Audience: Graduate

6. Evaluate the success of an informatics project using an analytical approach to outcomes data.

Audience: Graduate

**MEDICINE 809 – INTERSECTION OF HEALTH CARE AND INCARCERATION**

2 credits.

Introduction to mass incarceration, health care systems in carceral settings, incarceration-related health disparities, race-related health disparities, social determinants of health, conducting research within carceral facilities, career pathways in correctional health.

**Requisites:** Declared in Medicine MD, Physical Therapy DPT, Physician Assistant MPAS, Genetic Counselor Studies MGCS, or Public Health MPH

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe how the criminal legal system in Wisconsin and the United States impacts the health of incarcerated people, including mental health and community health concerns.  
Audience: Graduate

2. Identify individual and community health challenges for a person once they are released from incarceration, and propose ways to mitigate these challenges.  
Audience: Graduate

3. Interpret clinical guidelines for ethical care of incarcerated individuals  
Audience: Graduate

4. Recognize ethical conflicts that exist in delivering care in carceral facilities, as well as issues surrounding access or lack of access to relevant research.  
Audience: Graduate

5. Develop concepts/best practices for system-wide improvements in the health care of incarcerated and formerly incarcerated individuals.  
Audience: Graduate

**MEDICINE 880 – THE BODY ELECTRIC: INTERSECTION OF CELLULAR ELECTROPHYSIOLOGY WITH CLINICAL ELECTROCARDIOGRAPHY**

2 credits.

Mapping of cellular and conduction perturbations to observed changes on the surface ECG recording for inherited arrhythmia syndromes (e.g., long QT syndrome, Brugada syndrome), drug toxicities (Class IC and III antiarrhythmics, digoxin excess), cardiac arrest, electrolyte disturbances, and metabolic disturbances; Selection of appropriate therapies, including antiarrhythmics and device therapies, and how they affect cardiac electrophysiology and the clinical ECG.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Interpret and integrate ECG manifestations of metabolic causes of cardiac arrest and the non-shockable rhythms.  
Audience: Graduate

2. Summarize the fundamental mechanisms of cardiac electrophysiology.  
Audience: Graduate

3. Relate electrical signaling and neurohormonal regulation to cardiac function.  
Audience: Graduate

4. Interpret and integrate ECG manifestations of basic mechanisms of cardiac arrhythmias.  
Audience: Graduate

5. Interpret and integrate ECG manifestations of inherited arrhythmia syndromes.  
Audience: Graduate

6. Compare and contrast basic mechanisms and ECG manifestations of inherited arrhythmia syndromes.  
Audience: Graduate

7. Correlate the mechanisms of antiarrhythmic drugs with their effect on cardiac action potential.  
Audience: Graduate

8. Interpret and integrate ECG manifestations of antiarrhythmic toxicity.  
Audience: Graduate

9. Articulate the basic underpinnings and indications for catheter ablation.  
Audience: Graduate

10. Articulate the basic underpinnings, indications for, and ECG manifestations of cardiac pacemakers and implantable cardioverter-defibrillators.  
Audience: Graduate

11. Evaluate arrhythmias and therapeutic modalities of patients in the presenting to electrophysiology clinic.  
Audience: Graduate

12. Research how arrhythmias are studied in the basic science setting.  
Audience: Graduate

13. Categorize antiarrhythmic medications according to their appropriate use.  
Audience: Graduate

## MEDICINE 902 – CLINICAL & TRANSLATIONAL RESEARCH ELECTIVE

2-6 credits.

Unique opportunity for fourth year medical students in the PhD program to integrate clinical work with a clinical or translational research project, thus providing early exposure and hands-on experience with clinically-oriented research and the integrated career of a physician-scientist in the students' chosen clinical specialty. Course components construct the experience of six weeks in the life of a practicing physician-scientist, balancing clinical practice, research on a project relevant to community public health, study design, manuscript preparation, regulatory meetings, and public outreach – all under the guidance of a dedicated physician-scientist mentor. Intended for MSTP students in Phase 3 of ForWard curriculum

**Requisites:** Declared in Doctor of Medicine program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate knowledge of clinical research design

Audience: Graduate

2. Conduct clinical research project

Audience: Graduate

3. Demonstrate ability to integrate clinical medicine and research investigations

Audience: Graduate

4. Apply and adapt knowledge of the research regulatory process

Audience: Graduate

5. Describe the public health needs of the community and state of Wisconsin as they relate to the clinical research project and determine the impact of the research project on those concerns

Audience: Graduate

6. Assess public opinion (community members and constituents) of clinical research

Audience: Graduate

7. Exhibit skills in the analysis of clinical research data

Audience: Graduate

8. Communicate the outcomes and impact of a clinical research project to general public

Audience: Graduate

9. Communicate the results of a clinical research project to an academic audience

Audience: Graduate

## MEDICINE 903 – MSTP LONGITUDINAL CLINICAL CLERKSHIP IN GRADUATE SCHOOL

1-12 credits.

This is a required clinical elective for MSTP students during their graduate years. During PhD training, all students are required to participate in a scholarly continuity clinical experience in their fields of interest. Each student will complete and certify 10 half-day sessions or equivalent with an academic clinical mentor and present in the MSTP seminar.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Take effective patient history

Audience: Graduate

2. Perform appropriate physical exam

Audience: Graduate

3. Synthesize acquired basic science knowledge and clinical skills to create differential diagnoses

Audience: Graduate

4. Generate and manage treatment plan

Audience: Graduate

5. Exhibit knowledge of disease and pathophysiology

Audience: Graduate

6. Demonstrate ability to balance medicine and research efforts

Audience: Graduate

7. Apply evidence-based medicine to clinical practice

Audience: Graduate

8. Analyze clinical/translational research literature in field of interest

Audience: Graduate

**MEDICINE 905 – THE APPLIED PHYSIOLOGY OF MECHANICAL VENTILATION**

2 credits.

Focus on the intersection between the physiology of the respiratory system and the mechanical engineering of ventilators, with particular attention to patient-ventilator interactions. Investigate the important physiologic trade-offs inherent in various strategies of mechanical ventilation. Apply these principles to patients with and without underlying pulmonary disease. Finally, evaluate a landmark study on tidal volume in ARDS, with particular attention to the scientific and ethical controversies that surround the trial. This course involves a modicum of physics and math.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate knowledge of respiratory system physiology and mechanics

Audience: Graduate

2. Demonstrate familiarity with how ventilators have been engineered

Audience: Graduate

3. Compare and contrast how patients and ventilators interact with each other in a variety of modes of mechanical ventilation and in a variety of disease states

Audience: Graduate

4. Apply understanding of mechanical ventilation to appraise lessons from ARDSNet trial

Audience: Graduate

5. Describe ethical and scientific challenges in establishing an appropriate control group for a clinical trial

Audience: Graduate

**MEDICINE 906 – ACE ACUTE CARE FOR ELDERLY CONSULTATION SERVICES ELECTIVE**

2 credits.

Working directly as part of the inpatient consult team at the UW Hospital, an opportunity to practice and improve inpatient care skills for hospitalized elders. Learn to use basic assessment tools to diagnose and care for patients with common geriatric syndromes, such as delirium, cognitive impairment, depression, and falls. Learn to use prescription techniques better suitable for elderly patients, expand understanding of how medical decision-making capacity is assessed, and adopt multi-disciplinary strategies to manage patients' long-term care goals.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Use basic capacity evaluation and diagnostic tools to assess elders for common geriatric syndromes.

Audience: Graduate

2. Practice inpatient management of these syndromes, and strategies for improving care transitions.

Audience: Graduate

3. Recognize and address polypharmacy and learn prescribing techniques that are appropriate for the patient's age.

Audience: Graduate

4. Develop basic strategies for holding goals of care conversations, and how to structure a multi-disciplinary plan of care.

Audience: Graduate

5. Become familiar with how medical decision-making capacity is assessed and the diagnostic tools used to determine capacity.

Audience: Graduate

6. Develop skills to improve the functional trajectory of the older patient through a collaborative, interdisciplinary approach.

Audience: Graduate

### **MEDICINE 907 – INPATIENT ENDOCRINOLOGY/DIABETES CONSULTS ELECTIVE**

2 credits.

Involves patient care in the hospital, working in the role of a consultant. Improve knowledge and inpatient care management skills of common endocrine conditions, diabetes and thyroid disorders. Discusses other, less common, endocrinopathies as they present, including pituitary, adrenal and thyroid disorders.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Improve knowledge of inpatient and diabetes management in the acute care setting.

Audience: Graduate

2. Perform a hypothesis driven history

Audience: Graduate

3. Complete a targeted exam

Audience: Graduate

4. Develop and present a weighted differential diagnosis

Audience: Graduate

5. Using clinical evidence, select a working diagnosis

Audience: Graduate

6. Present diagnostic plan including laboratory and imaging modalities

Audience: Graduate

7. Present initial patient evaluation including assessments and plans

Audience: Graduate

8. Practice communicating effectively with interprofessional team members

Audience: Graduate

### **MEDICINE 908 – MY STORY:TECHNIQUES FOR INTERVIEWING PATIENTS**

2 credits.

Teaches students My Life, My Story interviewing and writing techniques. My Life, My Story is a novel healthcare intervention developed at the Madison VA hospital. Program staff and trained community volunteer interview Veterans about their life stories and write up a short story based on the interview. These stories are then reviewed by the veteran and (with veteran approval) added to the VA medical record to be shared with the veteran's inpatient and primary care teams. The veteran also receives printed copies of the story for his/her family. The goal of the project is to foster a closer connection between VA providers and Veterans in their care.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate patient centered interviewing skills including nonjudgmental verbal and non-verbal communication

Audience: Graduate

2. Translate a patient story into a written summary while respecting human dignity and diversity

Audience: Graduate

3. Demonstrate efficient use of time when interviewing patients, and both writing and presenting patient stories

Audience: Graduate

### **MEDICINE 909 – INFECTIOUS DISEASE TRANSPLANT SERVICE ELECTIVE**

2 credits.

Infectious disease management skills with a focus on transplant patients. Interaction occurs on the inpatient infectious disease transplant consult service at UW Hospital. In addition to extensive knowledge of infectious diseases in transplant patients, there is also an emphasis on major toxicities and drug interactions between antimicrobial agents, understanding the "net state of immunosuppression," and honing skills as a consultant in the hospital.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop and apply knowledge and skills in the practice of inpatient clinical infectious disease management with a focus on transplant patients.

Audience: Graduate

2. Discuss the "net state of immunosuppression."

Audience: Graduate

3. Recognize major toxicities and drug interactions between antimicrobial agents.

Audience: Graduate

4. Demonstrate understanding of the role of consultants in the hospital.

Audience: Graduate

5. Perform a hypothesis driven history.

Audience: Graduate

6. Complete a targeted exam.

Audience: Graduate

7. Develop and present a weighted differential diagnosis.

Audience: Graduate

8. Using clinical evidence, select a working diagnosis.

Audience: Graduate

9. Present diagnostic plan including laboratory and imaging modalities.

Audience: Graduate

10. Interpret imaging and laboratory findings in the context of patient presentation.

Audience: Graduate

### **MEDICINE 910 – PHASE 3 INDEPENDENT READING AND RESEARCH IN MEDICINE**

2-8 credits.

Independent research under the direct supervision of Medicine faculty. Each student's research project is individualized to meet student research goals within the context of faculty research needs.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Engage in clinical research through an apprenticeship-style learning experience with a physician-scientist mentor.

Audience: Graduate

2. Understand clinical research design by writing or contributing to a research proposal.

Audience: Graduate

3. Develop skills in the analysis of clinical research data.

Audience: Graduate

4. Develop a plan for communicating the results of the clinical research project.

Audience: Graduate

5. Improve verbal and written communication skills by preparing findings to be able to present clinical research experience and results.

Audience: Graduate

6. Formulate a hypothesis or specific objective if study does not involve hypothesis generating research.

Audience: Graduate

7. Conduct a thorough literature review of the specific research question.

Audience: Graduate

8. Select and apply statistical methodologies appropriate for the proposed analyses.

Audience: Graduate

9. Interpret results correctly and in context of previous findings from literature review.

Audience: Graduate

### **MEDICINE 911 – ADVANCED APPLIED CLINICAL INFORMATICS (APPLIED CLINICAL INFORMATICS PRACTICUM)**

2 credits.

Clinical Informatics and the role of informaticians. Hands-on experience in Clinical Informatics within UW Health's Information Services and Physician Informatics infrastructure. Population health informatics. The principles of usability, human-computer interaction, and the Five Rights of clinical decision support. The components of implementing novel informatics tools in a large health system. The usability and impact of new Electronic Health Records (EHR) features on various users and populations and the various factors involved in decisions to approve or deny EHR requests.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the field of Clinical Informatics and the skills of an informatician.

Audience: Graduate

2. Appraise new EHR features for their usability and impact on patients, providers, the health system, and entire population.

Audience: Graduate

3. Define population health informatics.

Audience: Graduate

4. Explain to non-informaticist colleagues why certain EHR requests may get approved or denied based on workload, budget, operational considerations, and technical feasibility.

Audience: Graduate

5. Interpret and evaluate clinical informatics literature.

Audience: Graduate

6. Apply principles of usability, human computer interaction, and the "Five Rights" of clinical decision support to promote or refute new EHR requests or features.

Audience: Graduate

7. Discuss the necessary components for implementing novel informatics tools in a large health system.

Audience: Graduate

8. Demonstrate professionalism in evaluating and discussing Clinical Informatics topics and technology.

Audience: Graduate

### **MEDICINE 912 – TRANSPLANTATION, IMMUNOLOGY AND NEPHROLOGY ELECTIVE**

2-4 credits.

Evaluate and treat patients on inpatient and outpatient transplant nephrology services. Common conditions include evaluation of transplant patients with AKI and immunology related problems. Learn the basic principles of immunosuppressant management and rejection management. Review biopsies daily with a pathologist and attend surgical transplant Grand Rounds.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop a differential diagnosis for native and transplanted kidney acute kidney injury (AKI).

Audience: Graduate

2. Describe the renal pathology in a transplanted kidney.

Audience: Graduate

3. Perform a hypothesis driven history.

Audience: Graduate

4. Complete a targeted exam.

Audience: Graduate

5. Develop and present a weighted differential diagnosis.

Audience: Graduate

6. Using clinical evidence, select a working diagnosis.

Audience: Graduate

7. Interpret imaging and laboratory findings in the context of patient presentation.

Audience: Graduate

8. Present current literature to support patient care.

Audience: Graduate

9. Communicate effectively with interprofessional team members.

Audience: Graduate

10. Write daily progress notes including assessments and plans using standard format.

Audience: Graduate

11. Present initial and follow up patient evaluations including assessments and plans.

Audience: Graduate

**MEDICINE 913 – THE SCIENCE OF CLINICAL THERAPEUTICS**

2 credits.

Enhance understanding of clinical therapies and evidence-based best practice in the acute care setting. Apply this knowledge to understand clinical interventions for diseases that are seen commonly in residency: Describe the multiple common diseases and conditions; discuss their molecular biology, physiology, pathophysiology, and pharmacology; choose appropriate pharmacologic and non-pharmacologic therapies; and apply molecular biology, physiology, pathophysiology, and pharmacology to decisions about therapeutic treatment. Appraise published basic science literature and clinical guidelines, and apply knowledge to clinical case scenarios.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Describe multiple common diseases and conditions

Audience: Graduate

2. Discuss molecular biology, physiology, pathophysiology and pharmacology of these diseases

Audience: Graduate

3. Choose appropriate pharmacologic and non-pharmacologic therapies for these diseases

Audience: Graduate

4. Apply molecular biology, physiology, pathophysiology and pharmacology to decisions about therapeutic treatment of these diseases

Audience: Graduate

5. Appraise published basic science literature and clinical guidelines

Audience: Graduate

6. Apply knowledge to clinical case scenarios

Audience: Graduate

**MEDICINE 914 – DATA ANALYTICS FOR POPULATION HEALTH**

2 credits.

The main concepts and challenges in medical data gathering and analysis. Identification of aspects of data gathering and measurement, including emerging data sources. Informatics concepts used in population health. Use of a self-reporting tools in an electronic health record to answer population health questions, including those surrounding health equity. Formulation of a population medicine-based clinical question, and development of a reporting strategy to answer the question. Communication of a population medicine issue, including a potential path for improvement and a description of the measurement of any impact of proposed change.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the main concepts and challenges in data gathering and analysis.

Audience: Graduate

2. Identify aspects of data gathering and measurement, including emerging data sources.

Audience: Graduate

3. Understand the informatics concepts used in population health.

Audience: Graduate

4. Learn to use self-reporting tools in an electronic health record to answer population health questions, including those surrounding health equity.

Audience: Graduate

5. Formulate a population medicine based clinical question and develop a reporting strategy to answer the question.

Audience: Graduate

6. Communicate a population medicine issue, propose a potential path for improvement, and describe how any impact of change could be measured.

Audience: Graduate

**MEDICINE 916 – PALLIATIVE CARE ELECTIVE**

2 credits.

Participating with the care of patients in the Palliative Care Unit, on the Palliative Care Consult Service, and through home visits or outpatient care opportunities, experience and understanding will be gained of fundamental palliative care concepts. Management of common symptoms, such as pain, dyspnea, and anxiety, while practicing and improving specific communication skills, such as delivering bad news, determining goals of care, or running a family meeting. Expand understanding of goals of care and decision-making for patients with serious illness, DNR orders, medical decision-making capacity, surrogate-decision-making, care of the patient at end of life, as well as psychosocial issues related to loss, grief, and bereavement.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Demonstrate understanding of palliative medicine/hospice approach toward patients with serious or life-threatening illness.

Audience: Graduate

2. Experience the consultative and inpatient practice of palliative care and home hospice

Audience: Graduate

3. Improve confidence and skill in the appropriate delivery of bad news and discussing end-of-life issues with patients and families

Audience: Graduate

4. Practice working with interdisciplinary team (physician, nurse, social worker, chaplain) management of patients with serious illness

Audience: Graduate

5. Describe best practice in the appropriate use of opioids and other medical treatment to improve quality of life for palliative care patients

Audience: Graduate

**MEDICINE 917 – SMOKING CESSATION: PUTTING EVIDENCE INTO PRACTICE ELECTIVE**

2 credits.

Training in use of evidence-based smoking cessation treatments and application of smoking cessation research in order to be able to interpret such evidence throughout your career. A special emphasis will be placed on working with underserved and specific subgroups of smokers (e.g., low-income, racial minorities, mental health status) through specific treatment plans, pharmacotherapy, counseling, including motivational interviewing, and community-based interventions such as quit lines. We will also look at how to use health systems, such as electronic health records in conducting community-participatory research in subpopulations of smokers.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Attain proficiency in selecting and delivering evidence-based smoking cessation treatments.

Audience: Graduate

2. Examine the evidence-base for the 2008 Public Health Service recommendations for treating tobacco dependence.

Audience: Graduate

3. Develop an in-depth understanding of tobacco and tobacco dependence treatment in specific sub-populations (e.g., low-income, racial minorities, mental health status).

Audience: Graduate

4. Explore how systems-level changes, such as changes to electronic health records or accreditation standards, can influence health care and delivery of tobacco dependence treatment.

Audience: Graduate

5. Describe strategies for engagement in community participatory research.

Audience: Graduate

**MEDICINE/B M I 918 – HEALTH INFORMATICS FOR MEDICAL STUDENTS ELECTIVE**

2 credits.

Biomedical Informatics is an interdisciplinary field that combines knowledge of information sciences and medical sciences to optimize the use and application of biomedical data across the spectrum from molecules to individuals to populations. Offers an overview of the field of health informatics by providing students with the fundamental knowledge of the concepts of health informatics and how technology can be used in the delivery of health care.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe main concepts and challenges in health informatics.

Audience: Graduate

2. Identify the different aspects of electronic health records.

Audience: Graduate

3. Recognize medical safety issues related to chart maintenance and poor systems.

Audience: Graduate

4. Instruct patients in proper use of a personal health record (PHR).

Audience: Graduate

5. Compare and contrast the concept of learning health systems that is patient-centered, population-based, and promotes learning from data.

Audience: Graduate

6. Define population-based care and the informatics underlying it.

Audience: Graduate

7. Recognize different types of clinical decision support.

Audience: Graduate

8. Describe the area of quality measurement and improvement.

Audience: Graduate

9. Formulate how the area of quality measurement and improvement applies to clinical practice.

Audience: Graduate

10. Recognize the types and limitations of different types of quality measures.

Audience: Graduate

11. Formulate a clinical question as an answerable one, and then be able to select the appropriate resource and make optional use of it.

Audience: Graduate

12. Recognize growing role of genomics and personalized medicine in care.

Audience: Graduate

13. Describe and manage ethical issues in privacy and security.

Audience: Graduate

**MEDICINE 919 – INDIVIDUALIZED PHASE 3 CLINICAL ELECTIVE IN MEDICINE**

2-4 credits.

Care for hospitalized patients on general medicine or hospital medicine services. Admit new patients, round on previously admitted patients, participate in multidisciplinary rounds, and work to transition patients to the next level of care. Evaluate and manage both patients with common inpatient conditions and medically complex patients requiring collaboration with consulting specialties. Complete other patient care related learning activities as assigned by instructors (e.g., literature reviews, presentations on specific topics); these are dependent on the individual student, attending physician, and clinical site.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform a hypothesis driven history and complete a targeted exam.

Audience: Graduate

2. Develop and present a weighted differential diagnosis, diagnostic and treatment plans.

Audience: Graduate

3. Complete written documentation in a comprehensive, concise, accurate and timely manner.

Audience: Graduate

4. Review, interpret and present current literature to support patient care.

Audience: Graduate

5. Develop clinically relevant questions to advance learning.

Audience: Graduate

6. Communicate effectively with patients, families, physicians and non-physician team members.

Audience: Graduate

7. Engage patients in shared decision making regarding tests, orders and procedures.

Audience: Graduate

## MEDICINE 920 – ADVANCED INPATIENT GENERAL MEDICINE ELECTIVE

2-4 credits.

Direct patient care involving a spectrum of acute medical conditions on inpatient hospital units with appropriate supervision from residents and attendings. Generate a weighted differential diagnosis, initial work-up and management for acute medical conditions. Review, interpret, and present current literature pertinent on patient care in primary care setting.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Improve acute inpatient care skills for taking care of adult patients on hospital units.

Audience: Graduate

2. Develop and present a weighted differential diagnosis

Audience: Graduate

3. Review, interpret clinical evidence, and justify the working diagnosis

Audience: Graduate

4. Complete written documentation in a comprehensive, concise, accurate and timely manner

Audience: Graduate

5. Demonstrate techniques of shared decision making with patients about acute medical problems and underlying chronic medical conditions, including possible lifestyle changes to promote improved health.

Audience: Graduate

6. Learn the principles of transitions of care to safely return patients to nursing home or outpatient clinics.

Audience: Graduate

7. Develop clinically relevant questions to advance learning

Audience: Graduate

## MEDICINE 921 – AMBULATORY MEDICINE ELECTIVE-STUDENT HEALTH

2-4 credits.

Learn to care for young adults with general medicine problems on the university campus during the academic year. Participate in history taking, diagnosis and treatment plans for patients. Direct supervision by house staff and attending physicians. Attend regularly scheduled supervisor-student meetings, which involve some or all of the following: participating in scheduled procedures, presenting cases and teaching topics, and discussing patient cases. Complete independent activities including some or all of the following: reading about patient conditions, completing problem sets, and preparing for direct patient care as needed. Complete other patient care related learning activities as assigned by instructors (e.g., literature reviews, presentations on specific topics); these are dependent on the individual student, the patients under the student's care, and the location.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Manage common ambulatory illnesses and injuries among adolescents and young adults.

Audience: Graduate

2. Apply principles of preventive medicine to clinical services in primary care.

Audience: Graduate

3. Integrate developmental and behavioral stages while assessing and managing health risks.

Audience: Graduate

4. Participate collaboratively in a multidisciplinary primary health care system.

Audience: Graduate

**MEDICINE 922 – AMBULATORY GENERAL INTERNAL MEDICINE  
ADVANCED ELECTIVE**

2-4 credits.

Focuses on fundamental aspects of adult patient health important to all physicians in internal medicine. Work with academic faculty in adult patient health in the ambulatory setting to refine clinical knowledge and skills essential for providing excellent health care. Will have the opportunity to provide supervised preventative care to adults of all ages, and includes common diseases such as asthma, migraine headache, dyslipidemia, diabetes mellitus, musculoskeletal concerns and heart disease.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Improve ambulatory care skills for taking care of adult patients.

Audience: Graduate

2. Identify and address common adult health problems and concerns.

Audience: Graduate

3. Build skills as an outpatient practitioner.

Audience: Graduate

4. Develop and present a weighted differential diagnosis.

Audience: Graduate

5. Using clinical evidence, adapt and justify the working diagnosis.

Audience: Graduate

6. Complete written documentation in a comprehensive, concise, accurate and timely manner.

Audience: Graduate

7. Review, interpret and present current literature to support patient care.

Audience: Graduate

8. Develop clinically relevant questions to advance learning.

Audience: Graduate

**MEDICINE 923 – APPLICATIONS OF EPISTEMIC PRINCIPLES IN  
MEDICAL SCIENCE**

2 credits.

Explore the intellectual framework upon which medical science is built. Epistemology is the science and theory of knowing. It asks, "When is belief justified?" Gain an understanding of the foundational principles of epistemology, including rationalism and empiricism, and apply them to the development of medical knowledge. Assess the validity of claims, including the relative value of competing claims in the context of medical controversies. Uncover the epistemic blunders that led to mistaken beliefs in the medical profession and develop habits to resist repeating such mistakes in the present and future. Consider how our epistemological beliefs affected our responses to the Covid-19 pandemic.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Compare and contrast the promises and pitfalls of empiricism and rationalism in the context of medical science.

Audience: Graduate

2. Describe how the Evidence-Based Medicine movement fits in a historical context.

Audience: Graduate

3. Evaluate studies on the grounds of internal and external validity.

Audience: Graduate

4. Judge the validity of competing claims in a scientific controversy.

Audience: Graduate

5. Identify early warning signs of epistemic blunders and build mental habits to protect against them.

Audience: Graduate

6. Anticipate the epistemic challenges posed by novel or rapidly changing circumstances.

Audience: Graduate

### **MEDICINE 924 – CLINICAL TEACHING IN INTERNAL MEDICINE ELECTIVE**

2 credits.

Resident-level experience in clinical teaching. Teach, coach, and provide feedback to Phase 2 medical students in the clinical setting of Acute Care. Assist in case-based learning and present your own didactics. Develop as a future educator and contribute to quality improvement of the Acute Care curriculum.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Hone evidence-based coaching skills when observing and providing feedback.

Audience: Graduate

2. Develop curriculum to teach students about common acute medical conditions.

Audience: Graduate

3. Effectively facilitate small group discussions.

Audience: Graduate

4. Assess feedback given by faculty mentor.

Audience: Graduate

5. Develop goals for future teaching.

Audience: Graduate

6. Evaluate the Acute Care Block activities and recommend changes

Audience: Graduate

### **MEDICINE 927 – COGNITIVE DECLINE IN LATINOS: THE INTERSECTION OF POLICIES, COMMUNITIES, AND HEALTHCARE**

2 credits.

Introduces the diagnosis, treatment and management of cognitive decline in Spanish-Speaking populations, including the socioecological evaluations and coordination of care with community agencies after a diagnosis is made. Explore the intersections of health, culture and environment and delves into how public policies, healthcare processes and organizational factors affect the quality of care delivered to Spanish-Speaking individuals, and the availability and use of resources in the community.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Identify at least three (3) cultural factors, policies, practices and systems that impact healthcare delivery within Latino communities and the potential approaches to incorporate in practice to improve the care.

Audience: Graduate

2. Simulate communication strategies for culturally sensitive interactions with Latino patients and their primary family caregivers.

Audience: Graduate

3. Synthesize the processes and assessments required to diagnose and manage cognitive decline in Spanish-speaking Latino patients.

Audience: Graduate

### **MEDICINE 928 – INTERNAL MEDICINE INTERNSHIP PREP COURSE (IPC) ELECTIVE**

1 credit.

Review and reinforce baseline skills needed for internship training in Internal Medicine. Lead and participate in simulations. Explore the interplay between medical care and communication. Discuss common challenges encountered early in residency and throughout a medical career and develop individualized plans to address these challenges. Major topics include acute illness, mock paging, cardiology/pulmonary, urgent and emergent situations, procedural skills, and communication.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Develop and practice an approach to initial assessment and management of various acute medical problems seen during Internal Medicine residency, with an emphasis on acute decompensation.

Audience: Graduate

2. Lead complex conversations on bad news, adverse events, and continuity of care in supervised simulations.

Audience: Graduate

3. Rapidly interpret diagnostic studies like EKGs, labs, and radiographs through frequent simulation.

Audience: Graduate

**MEDICINE 930 – WOMEN'S HEALTH IN PRIMARY CARE ELECTIVE**

2-4 credits.

Focuses on fundamental aspects of women's health important to all physicians in internal medicine. Work with academic faculty in women's health in the ambulatory setting to refine clinical knowledge and skills essential for providing excellent health care to women. Will have the opportunity to provide supervised preventative care to women of all ages, and includes common diseases such as asthma, migraine headache, dyslipidemia, diabetes mellitus, and heart disease – many have manifestations, risk factors or interventions which are different in women.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2019

**Learning Outcomes:** 1. Improve ambulatory care skills for taking care of women patients.

Audience: Graduate

2. Identify and address common women health problems and concerns.

Audience: Graduate

3. Build skills as an outpatient practitioner.

Audience: Graduate

4. Develop and present a weighted differential diagnosis.

Audience: Graduate

5. Using clinical evidence, adapt and justify the working diagnosis.

Audience: Graduate

6. Complete written documentation in a comprehensive, concise, accurate and timely manner.

Audience: Graduate

7. Review, interpret and present current literature to support patient care.

Audience: Graduate

8. Develop clinically relevant questions to advance learning.

Audience: Graduate

**MEDICINE 932 – BIOLOGY OF AGING AND AGE-RELATED DISEASES**

2 credits.

Examine the biology of aging and related clinical aspects in geriatric care. Designed for medical students interested in understanding the biology of aging and how it relates to translational biomedical and clinical research as well as clinical practice. Aging and age-related diseases are examined via the combined expertise of basic scientists and clinicians in blocks of two lectures. Case studies and clinical research study design workshops provide the means to integrate didactic content in real world application. Additional materials include video vignettes focused on aging biology and on pharmacological interventions for the most common geriatric conditions.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate understanding of biology of aging and age-related diseases and disorders (KP1)

Audience: Graduate

2. Integrate scientific evidence into clinical practice concepts (KP1, KP2)

Audience: Graduate

3. Effectively communicate basic science concepts related to aging and age-related diseases and disorders (PL3, IC3)

Audience: Graduate

4. Demonstrate the ability to critically evaluate both basic science and clinical literature and use them to make decisions (KP2, PL1)

Audience: Graduate

5. Develop basic clinical research design plans utilizing integrated knowledge from modules and scientific literature

Audience: Graduate

6. Demonstrate conceptual proficiency in fundamental biology of aging with translational focus

Audience: Graduate

7. Demonstrate conceptual proficiency in mechanisms of disease or therapeutics in geriatric diseases and disorders

Audience: Graduate

8. Demonstrate basic clinical research design proficiency

Audience: Graduate

9. Show development of critical thinking skills including critical appraisal of medical literature

Audience: Graduate

10. Demonstrate understanding of evolution of clinical medicine with regard to incorporation of aging biology concepts into diagnosis and treatment in a geriatric setting

Audience: Graduate

**MEDICINE 933 – GERIATRIC ELECTIVE**

2-4 credits.

Exposure to patients in outpatient clinic and on the inpatient consult service. Other exposure to patients may occur in a nursing home setting. Learn diagnostic tools to assess elders for common geriatric syndromes including cognitive impairment, depression, and falls. Gain knowledge to recognize and address poly-pharmacy, learn prescribing techniques that are appropriate for the patient's age, and recommend age-appropriate treatment plans. Active role on the inpatient consult team focusing on the care of hospitalized elders.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Improve ambulatory care skills for taking care of older adults.

Audience: Graduate

2. Identify and address common problems for hospitalized elders.

Audience: Graduate

3. Build skill as an inpatient consultant

Audience: Graduate

4. Develop skills to care for older adults in long-term care settings, such as nursing homes.

Audience: Graduate

**MEDICINE 935 – HEMATOLOGY/ONCOLOGY ELECTIVE**

2-4 credits.

Exposure to patients in outpatient hematology and oncology clinics and on the inpatient consultation service. Oncology-focused rotation topics include staging and prognosis of different malignancies, basics of chemotherapy classes, and indications for chemotherapy. Hematology content includes the diagnostic approach to clotting disorders, anemia, and/or abnormal blood counts. Different chemotherapy treatments for hematologic malignancy may be included in this course. Independent reading is expected; didactic conferences are site-specific.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop a diagnostic and therapeutic approach to patients with solid tumors and hematologic disorders.

Audience: Graduate

2. Perform a hypothesis driven history and complete a targeted exam.

Audience: Graduate

3. Develop and present a weighted differential diagnosis.

Audience: Graduate

4. Using clinical evidence, adapt and justify the working diagnosis.

Audience: Graduate

5. Present a diagnostic plan including laboratory and imaging modalities.

Audience: Graduate

6. Correctly interpret imaging and laboratory findings and communicate results to patients and team members.

Audience: Graduate

7. Complete written documentation in a comprehensive, concise, accurate and timely manner.

Audience: Graduate

8. Review, interpret and present current literature to support patient care.

Audience: Graduate

9. Develop clinically relevant questions to advance learning.

Audience: Graduate

10. Communicate effectively with patients, families, physicians and non-physician team members.

Audience: Graduate

11. Communicate and collaborate with consultants and/or primary team and other providers to coordinate care.

Audience: Graduate

12. Engage patients in shared decision making regarding tests, orders and procedures.

Audience: Graduate

13. Avoid medical jargon when communicating with patients and families.

Audience: Graduate

14. Recognize limitations and seek assistance as appropriate.

Audience: Graduate

**MEDICINE 938 – INPATIENT ACTING INTERNSHIP-INTERNAL MEDICINE**

4 credits.

As an inpatient medicine acting intern (AI), you will have primary responsibility for patients actionable in four domains: 1. Management: As an AI, you will develop actionable management and treatment plans based on your history, physical exam and targeted data. 2. Communication: AIs will communicate with colleagues, primary care providers and consultants. AIs will demonstrate thorough patient hand-offs and write concise discharge summaries that will be integral to patient care. 3. Learning: Patient care issues will be the central guide for learning, directing reading, consultation and research. AIs will formulate questions based upon clinical dilemmas, research the appropriate literature and databases to find the answers, and apply findings to the care of individual patients. 4. Organization: As the primary inpatient provider for patients, AIs will develop efficiency in accomplishing the day to day tasks necessary for the coordination and management of patient care.

**Requisites:** MED SC-M 810, 811, 812, and 813**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Perform a hypothesis driven history

Audience: Graduate

2. Complete a targeted exam

Audience: Graduate

3. Develop and present a weighted differential diagnosis (EPA 2)

Audience: Graduate

4. Using clinical evidence, select a working diagnosis (EPA 2)

Audience: Graduate

5. Present diagnostic plan including laboratory and imaging modalities

Audience: Graduate

6. Interpret imaging and laboratory findings in the context of patient presentation

Audience: Graduate

7. Write admitting and daily orders (EPA 4)

Audience: Graduate

8. Justify orders based upon working diagnosis and cost-effectiveness (EPA 4)

Audience: Graduate

9. Complete written patient evaluation using standard format

Audience: Graduate

10. Write daily progress notes including assessments and plans using standard format

Audience: Graduate

11. Present initial patient evaluation including assessments and plans

Audience: Graduate

12. Based on case load, develop clinically relevant questions to further individual and team learning

Audience: Graduate

13. Give and receive patient handovers (EPA 8)

Audience: Graduate

**MEDICINE 940 – ALLERGY AND CLINICAL IMMUNOLOGY ELECTIVE**

2-4 credits.

Exposure to patients in an outpatient clinic setting with an attending physician and staff, to learn how to address common allergic disorders, such as allergic rhinitis, asthma, urticaria, drug and insect allergy. Focuses on skills in allergy-related history-taking, procedures used in the evaluation of allergy, and the importance of patient education and preventive management of allergic conditions.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Improve knowledge of diagnosis and management of allergic and immunologic disorders.

Audience: Graduate

2. Apply basic science knowledge in the clinical setting.

Audience: Graduate

3. Obtain patient's allergy history.

Audience: Graduate

4. Demonstrate understanding of procedures used in the evaluation of allergy.

Audience: Graduate

5. Provide appropriate patient education and preventive management.

Audience: Graduate

**MEDICINE 942 – CLINICAL ELECTROPHYSIOLOGY ELECTIVE**

4 credits.

Develop skills in basic electrocardiogram (EKG) and arrhythmia interpretation, pharmacologic management of arrhythmia, cardiac anatomy and use of electrophysiologic testing. Participate in the evaluation of patients referred for electrophysiology studies, focusing on the diagnosis and management of cardiac rhythm disturbances.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Develop skills in basic electrocardiogram (EKG) and arrhythmia interpretation.

Audience: Graduate

2. Become familiar with pharmacologic management of arrhythmia, cardiac anatomy.

Audience: Graduate

3. Use electrophysiologic testing to diagnose and manage cardiac rhythm disturbances.

Audience: Graduate

## **MEDICINE 943 – CARDIOLOGY CONSULTATION SERVICE ELECTIVE**

2-4 credits.

Opportunities to learn the process involving the evaluation and management of a full spectrum of acute and chronic cardiovascular diseases, as well as preoperative consultation for hospitalized adult patients. Become familiar with the principles of effective consultation and how to operationalize this role, through evaluating patients, presenting relevant data, providing effective cardiac consultation as an integral member of a fast-paced inpatient team. Essential skills are taught, including: interpreting 12-lead electrocardiograms (ECGs) and cardiac rhythm data from telemetry with assistance, observing select cardiac diagnostic tests and reading studies with faculty or fellows. Attendance at weekly Cardiovascular Medicine Grand Rounds is required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Become familiar with the evaluation and management of acute and chronic, often complex, cardiovascular conditions such as arrhythmias, MI, heart failure, valvular disease and shock that occur in adult patients hospitalized for other illnesses, traumatic injuries or surgery.

Audience: Graduate

2. Assess preoperative risk for non-cardiac surgery.

Audience: Graduate

3. Learn the indications for and data provided by common cardiac diagnostic tests including electrocardiogram (ECG), echo, stress tests, and coronary angiography.

Audience: Graduate

4. Learn the principles of consultation and how to function effectively in this role.

Audience: Graduate

5. Demonstrate competency in the performance of cardiovascular history and physical examinations.

Audience: Graduate

6. Accurately read and interpret normal ECGs with common abnormalities.

Audience: Graduate

7. Correlate cardiac laboratory information, such as: diagnostic coronary angiography, hemodynamic monitoring, and results in electrophysiological testing.

Audience: Graduate

8. Recognize the major signs and symptoms of cardiac disease.

Audience: Graduate

9. Evaluate and recommend appropriate diagnostic testing for common cardiovascular conditions.

Audience: Graduate

10. Witness cardiac catheterizations, various types of stress testing, and echocardiograms.

Audience: Graduate

11. Accurately interpret the results of various cardiovascular diagnostic tools.

Audience: Graduate

## **MEDICINE 945 – INPATIENT CARDIOLOGY**

2-4 credits.

Supervised by house staff and attending physicians activities include: rounding on service patients, participating in scheduled procedures, presenting cases and teaching topics, and discussing patient cases. On an inpatient cardiology rotation, evaluate and manage a full spectrum of patients with acute and chronic cardiovascular problems and may provide perioperative consultations for hospitalized adult patients. Care for patients with chest pain, arrhythmias, MI, heart failure, valvular disease and shock. Learn the indications for and data provided by common cardiac diagnostic tests including ECG, echo, stress tests, bedside ultrasound and coronary angiography.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform a hypothesis driven history and complete a targeted exam.

Audience: Graduate

2. Develop and present a weighted differential diagnosis.

Audience: Graduate

3. Using clinical evidence, adapt and justify the working diagnosis.

Audience: Graduate

4. Present a diagnostic plan including laboratory and imaging modalities.

Audience: Graduate

5. Correctly interpret imaging and laboratory findings and communicate results to patients and team members.

Audience: Graduate

6. Complete written documentation in a comprehensive, concise, accurate and timely manner.

Audience: Graduate

7. Review, interpret and present current literature to support patient care.

Audience: Graduate

8. Develop clinically relevant questions to advance learning.

Audience: Graduate

9. Communicate effectively with patients, families, physicians and non-physician team members.

Audience: Graduate

10. Communicate and collaborate with consultants and/or primary team and other providers to coordinate care.

Audience: Graduate

11. Engage patients in shared decision making regarding tests, orders and procedures.

Audience: Graduate

12. Avoid medical jargon when communicating with patients and families.

Audience: Graduate

13. Recognize limitations and seek assistance as appropriate.

Audience: Graduate

**MEDICINE 949 – ADULT INPATIENT/OUTPATIENT  
CARDIOVASCULAR DISEASES ELECTIVE**

2-4 credits.

Exposure to both outpatient and inpatient settings, such as ward rounds, cardiac catheterization and electrophysiology labs, as well as operating rooms, to learn how to obtain an accurate history, perform a thorough cardiovascular examination, interpret patient's treadmill, nuclear, cardiology and echocardiogram performance, formulate an assessment and plan for further evaluation and treatment. Participate in the writing of orders and progress notes on in-patients for whom they are responsible and perform appropriate procedures under the direct supervision of staff. Submit input on patients' management plans, which will be closely supervised by an attending cardiologist.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Develop skills in diagnosis and management of cardiac patients with congenital and acquired cardiac disorders.

Audience: Graduate

2. Develop skills in the combined medical and surgical approach to cardiovascular disease.

Audience: Graduate

3. Use the appropriate technology and laboratory in the evaluation of patients with known or suspected cardiac disease.

Audience: Graduate

**MEDICINE 951 – AMBULATORY CARDIOLOGY ELECTIVE**

2-4 credits.

Provide a broad introduction to the cardiovascular syndromes and diseases that constitute a large part of the practice of adult medicine. This experience has been particularly useful for three groups: those who plan to enter an adult primary care discipline, those entering residency in emergency medicine, and those with an interest in adult cardiology.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Refine skills in obtaining and interpreting the history provided by patients with chest pain, syncope, heart failure, and palpitations.

Audience: Graduate

2. Perform and interpret the cardiovascular physical exam.

Audience: Graduate

3. Improve ability to define, diagnose and begin the initial management of heart failure, acute coronary syndromes, stable ischemic heart disease, resistant hypertension, atrial fibrillation, and hyperlipidemia.

Audience: Graduate

4. Become familiar with resources for self-study for chest X-ray and electrocardiogram (EKG) interpretation.

Audience: Graduate

5. Develop expertise in the prediction of an individual patient's cardiovascular risk as well as guideline directed mitigation of that risk.

Audience: Graduate

6. Become familiar with the use of Baye's Theorem.

Audience: Graduate

**MEDICINE 955 – HEPATOLOGY ELECTIVE**

2 credits.

Exposure to inpatient and outpatient hepatology practice, focusing on functioning effectively as a consultant. The majority time is spent evaluating new and follow-up consultations in the outpatient and inpatient settings. Oral presentations and effective communication with the patient and the primary service are an essential part of this rotation.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the most common causes of chronic hepatitis and cirrhosis seen in the outpatient clinic.

Audience: Graduate

2. List a differential diagnosis, diagnostic and management plans for both new onset liver and decompensated end-liver stage disease.

Audience: Graduate

3. Perform effective and comprehensive evaluation of a patient with liver disease in clinic and the inpatient setting.

Audience: Graduate

4. Perform portions of the role of consulting MD in the inpatient and outpatient settings.

Audience: Graduate

**MEDICINE 962 – ENDOCRINOLOGY ELECTIVE**

2-4 credits.

Evaluation and management of inpatient and outpatient adult endocrine disorders. Common endocrine conditions include diabetes and thyroid disorders. Other endocrinopathies as they present.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the historical and physical exam features of common endocrine disorders.

Audience: Graduate

2. Perform a hypothesis driven history

Audience: Graduate

3. Complete a targeted exam

Audience: Graduate

4. Develop and present a weighted differential diagnosis

Audience: Graduate

5. Using clinical evidence, select a working diagnosis

Audience: Graduate

6. Complete written patient evaluation using standard format

Audience: Graduate

7. Write daily progress notes including assessments and plans using standard format

Audience: Graduate

8. Present initial patient evaluation including assessments and plans

Audience: Graduate

9. Communicate effectively with interprofessional team members

Audience: Graduate

**MEDICINE 965 – GASTROENTEROLOGY CLINICAL ELECTIVE**

2-4 credits.

Observe routine and advanced therapeutic endoscopic procedures in the Ambulatory Procedure Center and potentially in the Intensive Care Unit. Participate in the outpatient gastrointestinal (GI) clinics approximately one half day a week, which will include exposure to Inflammatory Bowel Disease, functional GI disorders, hereditary GI cancers, esophageal disorders, and pancreas and biliary disorders.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform a focused history and exam and develop an assessment and plan for the most common disorders seen in an outpatient gastrointestinal (GI) practice: irritable bowel syndrome (IBS), inflammatory bowel disease (IBD), gastroesophageal reflux disease (GERD).

Audience: Graduate

2. Identify recommendations for colon cancer screening in patients at average risk and those with a family history of colon cancer.

Audience: Graduate

3. Identify the appearance of common gastrointestinal (GI) pathology on endoscopy.

Audience: Graduate

4. Summarize the appropriate risk stratification strategies and appropriate management of gastrointestinal (GI) hemorrhage.

Audience: Graduate

5. Develop a differential diagnosis for acute gastrointestinal (GI) bleeding.

Audience: Graduate

**MEDICINE 970 – INPATIENT-OUTPATIENT****GASTROENTEROLOGY/HEPATOLOGY CONSULT SERVICE ELECTIVE**

2-4 credits.

Inpatient consultative gastroenterology emphasize outpatient evaluation care of pts with gastrointestinal (GI) diseases, providing knowledge that nearly any clinical field can use. Develop the necessary problem solving skills and knowledge to efficiently safely evaluate manage common GI disorders other diseases which may also occur in pts with chronic intestinal diseases. Be able to recall the characteristic sign/symptoms test finding in the common GI syndromes. These disorders include: neoplasms of colon, stomach and esophagus; infectious diarrhea; malabsorption syndromes; viral drug-induced hepatitis; other primary secondary gastrointestinal diseases. Evaluation of inpts admissions, ambulatory outpts consults EM consults of the Sect. of GI. These include consultations in general GI hepatology, assisting in the endoscopic procedures on pts to provide a correlation between symptoms/signs endoscopic findings understanding the appropriate use of endoscopy.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall the characteristic signs/symptoms and test findings in the common gastrointestinal (GI) disorders of acid-peptic disease; inflammatory bowel disease; irritable bowel syndrome; neoplasms of colon, stomach, and esophagus; infectious diarrhea; malabsorption syndrome; viral and drug induced hepatitis; and other common primary and secondary gastrointestinal diseases.

Audience: Graduate

2. Evaluate and develop a diagnostic plan for common gastrointestinal and liver diseases.

Audience: Graduate

3. Correlate symptoms with endoscopic and pathologic findings.

Audience: Graduate

4. Efficiently and safely evaluate and manage common gastrointestinal disorders.

Audience: Graduate

5. Recall the major indications, complications, and relative costs of the common gastroenterologic procedures including esophagogastroduodenoscopy, sigmoidoscopy, colonoscopy, and endoscopic retrograde cholangio-pancreatography (ERCP).

Audience: Graduate

**MEDICINE 971 – INFECTIOUS DISEASE ELECTIVE**

2-4 credits.

Inpatient clinical infectious disease management. Diagnostic approaches to infectious presentations, appropriate use of antimicrobials for treatment and prophylaxis. Role of consultants in the hospital via participation in consult team. Common conditions include cellulitis, line infections, osteomyelitis, septic arthritis, intra-abdominal infections, HIV, neutropenic fever and other infectious conditions.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop diagnostic approaches to patients with common infectious presentations.

Audience: Graduate

2. Identify appropriate use of antimicrobials for treatment and prophylaxis.

Audience: Graduate

3. Identify characteristics of an effective consultant and use these through direct participation in the consult team.

Audience: Graduate

4. Perform a hypothesis driven history.

Audience: Graduate

5. Complete a targeted exam.

Audience: Graduate

6. Develop and present a weighted differential diagnosis.

Audience: Graduate

7. Using clinical evidence, select a working diagnosis.

Audience: Graduate

8. Complete written patient evaluation using standard format.

Audience: Graduate

9. Write daily progress notes including assessments and plans using standard format.

Audience: Graduate

10. Present initial patient evaluation including assessments and plans.

Audience: Graduate

11. Communicate effectively with interprofessional team members.

Audience: Graduate

**MEDICINE 972 – SURGICAL INFECTIOUS DISEASE ELECTIVE**

2-4 credits.

Direct patient care involving a spectrum of surgical infectious diseases on an inpatient consultation service. Applying infectious disease principles in treatment of surgical site infections. Using diagnostic tools available for surgical infectious diseases across different surgical specialties. Reviewing and applying principles of antimicrobial therapy.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Summarize the varied spectrum of surgical infectious diseases across different surgical specialties as well as within the same specialty.

Audience: Graduate

2. Describe infectious disease principles in the context of treatment of surgical site infections.

Audience: Graduate

3. Identify preventive measures of surgical site infections.

Audience: Graduate

4. Recognize the diagnostic tools (microbiologic, radiologic) available for surgical infectious diseases.

Audience: Graduate

5. Review and summarize the principles of outpatient antimicrobial therapy.

Audience: Graduate

6. Identify the practices and values that foster belongingness in partnership with a diverse health care team and patient population (e.g., authenticity, respect, support).

Audience: Graduate

**MEDICINE 976 – CLINICAL NEPHROLOGY ELECTIVE**

2-4 credits.

Evaluation of patients on inpatient and outpatient adult nephrology services. Common conditions include recognizing and diagnosing the cause of acute kidney injury (AKI), assessing factors that can alter the course of chronic kidney disease (CKD), and knowing the steps to hemodialysis initiation. Diagnosis and management of nephrology patients along with opportunities to see patients pre or post renal transplant.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Refine skills in obtaining and interpreting the history provided by patients with acute and chronic kidney diseases.

Audience: Graduate

2. Complete a targeted exam.

Audience: Graduate

3. Define, diagnose and begin initial management for patients with common acute and chronic kidney diseases.

Audience: Graduate

4. Develop and present a weighted differential diagnosis.

Audience: Graduate

5. Using clinical evidence, select a working diagnosis.

Audience: Graduate

6. Interpret imaging and laboratory findings in the context of patient presentation.

Audience: Graduate

7. Present current literature to support patient care.

Audience: Graduate

8. Communicate effectively with interprofessional team members.

Audience: Graduate

9. Write daily progress notes including assessments and plans using standard format.

Audience: Graduate

10. Present initial and follow up patient evaluations including assessments and plans.

Audience: Graduate

**MEDICINE 981 – PULMONARY DISEASE CLINIC / CONSULTS ELECTIVE**

2-4 credits.

Focuses on the evaluation and management of patients with pulmonary complaints and complex pulmonary disorders both in the inpatient and outpatient settings. Common conditions include sarcoidosis, obstructive lung disease, interstitial lung disease, pulmonary infections and pleural disease. Learn the indications for and data derived from common pulmonary tests/diagnostic procedures including, pulmonary function tests, radiographic imaging, thoracentesis and fiberopticbronchoscopy withbronchoalveolar lavage and transbronchial biopsy. Indications and management of both non-invasive and invasive mechanical ventilation will also be a focus of this rotation. Finally, learn the principles of consultation and how to function effectively in this role.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Refine skills in obtaining and interpreting the history provided by patients with acute and chronic pulmonary diseases.

Audience: Graduate

2. Complete a targeted exam.

Audience: Graduate

3. Define, diagnose and begin initial management for patients with common acute and chronic pulmonary diseases.

Audience: Graduate

4. Develop and present a weighted differential diagnosis.

Audience: Graduate

5. Using clinical evidence, select a working diagnosis.

Audience: Graduate

6. Interpret imaging, laboratory and procedure findings in the context of patient presentation.

Audience: Graduate

7. Present current literature to support patient care.

Audience: Graduate

8. Write daily progress notes including assessments and plans using standard format.

Audience: Graduate

9. Present initial and follow up patient evaluations including assessments and plans.

Audience: Graduate

10. Learn the indications for, and data derived from common pulmonary tests/diagnostic procedures.

Audience: Graduate

11. Learn the indications and management of both non-invasive and invasive mechanical ventilation.

Audience: Graduate

12. Communicate effectively with interprofessional team members.

Audience: Graduate

13. Learn the principles of consultation and how to function effectively in this role.

Audience: Graduate

**MEDICINE 985 – CRITICAL CARE MEDICINE ELECTIVE**

2-4 credits.

Perform direct patient care in the ICU with appropriate supervision from residents, fellows, and attendings. Independent and guided evaluation of patient will occur daily; the ability to synthesize, distill and present large amounts of information are a key skill practiced during this course. Furthermore, critical care medicine involves many medical professions; effective inter-professional teamwork is emphasized. Independent reading is expected; didactic conferences are site-specific. Topics commonly addressed in critical care medicine include pulmonary and cardiovascular physiology and pathology, ventilator support, nutritional support, renal failure, fluids and electrolytes in critical illness, and hemodynamic monitoring.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Improved knowledge of diagnostic and therapeutic approach to critically-ill patients with respiratory failure, shock, sepsis, multi-organ failure and/or other life-threatening medical conditions.

Audience: Graduate

2. Perform a hypothesis driven history.

Audience: Graduate

3. Complete a targeted exam.

Audience: Graduate

4. Develop and present a weighted differential diagnosis.

Audience: Graduate

5. Using clinical evidence, select a working diagnosis.

Audience: Graduate

6. Present diagnostic plan including laboratory and imaging modalities.

Audience: Graduate

7. Interpret imaging and laboratory findings in the context of patient presentation.

Audience: Graduate

8. Write admitting and daily orders.

Audience: Graduate

9. Write daily progress notes including assessments and plans using standard format.

Audience: Graduate

10. Present initial patient evaluation including assessments and plans.

Audience: Graduate

11. Summarize patient's hospital course during rounds and manage day to day care.

Audience: Graduate

12. Give and receive patient handovers.

Audience: Graduate

13. Write transfer notes and/or discharge summaries.

Audience: Graduate

14. Communicate effectively with interprofessional team members.

Audience: Graduate

**MEDICINE 988 – CLINICAL RHEUMATOLOGY ELECTIVE**

2-4 credits.

Exposure to patients in both outpatient rheumatology clinics and seeing patient as consultants in the inpatient setting. Commonly encountered rheumatologic conditions include: osteoarthritis, rheumatoid arthritis, lupus, systemic sclerosis, polyarteritis nodosa, ankylosing spondylitis, gout, pseudogout, dermatomyositis, low back pain and shoulder pain. Involves independent evaluation of patients, and then presenting to an attending. Independent reading is expected; didactic conferences are site-specific.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Improved knowledge and interpretation of clinical and laboratory presentations of rheumatic diseases, including differential diagnosis, diagnostic approach and testing, and planning appropriate therapies.

Audience: Graduate

2. Complete a targeted exam.

Audience: Graduate

3. Present diagnostic plan including laboratory and imaging modalities.

Audience: Graduate

4. Present initial patient evaluation including assessments and plans.

Audience: Graduate

5. Present current literature to support patient care.

Audience: Graduate

6. Communicate effectively with interprofessional team members.

Audience: Graduate

MEDICINE 990 – RESEARCH

1-12 credits.

Independent research under the direct supervision of Medicine faculty. Each student's research project is individualized to meet student research goals within the context of faculty research needs.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Engage in clinical research through apprenticeship-style learning experience with a physician-scientist mentor

Audience: Graduate

2. Understand clinical research design by writing or contributing to a research proposal

Audience: Graduate

3. Develop skills in the analysis of clinical research data

Audience: Graduate

4. Develop a plan for communicating the results of the clinical research project

Audience: Graduate

5. Improve verbal and written communication skills by preparing findings to be able to present clinical research experience and results

Audience: Graduate

6. Formulate a hypothesis or specific objective if study does not involve hypothesis generating research

Audience: Graduate

7. Conduct a thorough literature review of the specific research question

Audience: Graduate

8. Select and apply statistical methodologies appropriate for the proposed analyses

Audience: Graduate

9. Interpret results correctly and in context of previous findings from literature review

Audience: Graduate

MEDIEVAL STUDIES (MEDIEVAL)

MEDIEVAL/FOLKLORE/SCAND ST 235 – THE WORLD OF SAGAS  
3 credits.

The Icelandic sagas viewed in their social, cultural, and literary contexts. An introduction to one of the greatest bodies of vernacular literature of the early Middle Ages.

**Requisites:** None

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recognize, describe and analyze shifting geographic, cultural, and ethnic/racial factors in the Northern European region during the Viking Age, and put it into context

Audience: Undergraduate

2. Identify and distinguish between different types of sources used in the study of the Nordic region during the Viking Age

Audience: Undergraduate

3. Demonstrate a general understanding of major scholarly approaches, concepts and current research findings concerning the Nordic region during the Viking Age

Audience: Undergraduate

4. Synthesize information, engage in discussion and research, and argue persuasively about key topics in the Nordic region during the Viking Age

Audience: Undergraduate

5. Analyze the connections between images of the Vikings Age and the wider workings of modern culture

Audience: Undergraduate

6. Guide, mentor and support peers to achieve excellence in practice of the discipline

Audience: Undergraduate

7. Work in multi-disciplinary teams to analyze the cultural material from various disciplinary points of view

Audience: Undergraduate

### **MEDIEVAL/LITTRANS/RELIG ST 253 – OF DEMONS AND ANGELS. DANTE'S DIVINE COMEDY**

3 credits.

Have you ever wondered about human nature? What is our place in this world? Through readings, videos, and original images, explore and discuss Dante's answers from one of the greatest world literary classics, his Divine Comedy. From Hell, through Purgatory to Paradise, we will travel together with Dante in a universal tale of the journey of the human soul. Along the way, learn about Dante, his life and his works, development of literary history, historical and socio-political context of medieval Europe, the Mediterranean and the Middle East. Make connections that cross today's geographic and cultural lines in an exploration of literary topics, the history of ideas, and shared history, pondering universal concepts and patterns in the development of civilization that can still be observed today.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Learn about Dante Alighieri, his life, and works

Audience: Undergraduate

2. Understand medieval civilization and its human culture(s)

Audience: Undergraduate

3. Describe literary, historical, cultural concepts and phenomena

Audience: Undergraduate

4. Analyze from multiple perspectives a text, a situation, a context

Audience: Undergraduate

5. Synthesize information acquired from primary and secondary sources

Audience: Undergraduate

6. Learn the dangers of anachronism

Audience: Undergraduate

### **MEDIEVAL/LITTRANS 255 – BLACK DEATH AND MEDIEVAL LIFE THROUGH BOCCACCIO'S DECAMERON**

3 credits.

Have you ever wondered what it was like to live during the Black Death? Were our medieval and early-modern ancestors different from us, or are we challenged with similar problems? What can we learn from their lives? And, if we could, what could we teach each other? Discuss these topics while reading one of the world's greatest literary classics, Giovanni Boccaccio's Decameron, a text that will make us both laugh and cry. Through reading the Decameron, investigate medicine, art, culture, music, politics, religion, interpersonal and transcultural relations, warfare, fashion, gender and gender roles, as well as everyday life in the Middle Ages and early modernity. Also examines medieval written documents, twentieth-century feminist responses to the Decameron and filmic renditions of it, medieval frescoes, historical descriptions of the plague, and modern descriptions of, and reactions to, the COVID-19 pandemic.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Learn about Giovanni Boccaccio and his

Decameron, medieval civilization and its human culture(s)

Audience: Undergraduate

2. Acquire intercultural knowledge and competence and apply them to past and current issues

Audience: Undergraduate

3. Analyze a text, a situation, a context

Audience: Undergraduate

4. Synthesize information acquired from primary and secondary sources

Audience: Undergraduate

5. Learn the dangers of anachronism

Audience: Undergraduate

6. Engage in problem solving

Audience: Undergraduate

7. Develop critical and creative thinking skills

Audience: Undergraduate

8. Engage in effective teamwork

Audience: Undergraduate

9. Design and construct new content based on skills acquired throughout the semester

Audience: Undergraduate

**MEDIEVAL/HISTORY/RELIG ST 309 – THE CRUSADES:  
CHRISTIANITY AND ISLAM**

3-4 credits.

An examination of the Crusades from both Christian and Islamic perspectives; the historical, social, and religious context and significance of the Crusades for both Christians and Muslims.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Humanities

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MEDIEVAL/FOLKLORE/RELIG ST/SCAND ST 342 – NORDIC  
MYTHOLOGY**

3 credits.

Mythology, literature, ritual, traditions, medieval folklore, and religion from Nordic areas and Scandinavia.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recognize, describe and analyze cultural phenomena, specifically pre-Christian Nordic Religion, and put it into context.

Audience: Undergraduate

2. Demonstrate an understanding of the major theories, approaches, concepts and current research findings concerning medieval Nordic mythology and religion.

Audience: Undergraduate

3. Synthesize the written and material information and use insight and creativity to demonstrate an understanding of the knowledge base from the field.

Audience: Undergraduate

4. Communicate effectively through written essays, oral presentations and discussion.

Audience: Undergraduate

5. Retrieve, analyze, and interpret the professional and lay literature providing information to both professionals and public.

Audience: Undergraduate

6. Guide, mentor and support peers to achieve excellence in practice of the discipline.

Audience: Undergraduate

7. Work in multi-disciplinary teams to analyze the cultural material from various disciplinary points of view

Audience: Undergraduate

### **MEDIEVAL/FOLKLORE/LITTRANS/SCAND ST 345 – THE NORDIC STORYTELLER**

3 credits.

Exploring the oral nature and performance traditions of folklore, ethnography, tales and ballads, literature and culture from Nordic areas and Scandinavia.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize, describe and analyze cultural phenomena, specifically Nordic Narrative, and put it into context.

Audience: Undergraduate

2. Demonstrate an understanding of the major theories, approaches, concepts and current research findings concerning Nordic Narrative and folklore studies.

Audience: Undergraduate

3. Synthesize the written and material information and use insight and creativity to demonstrate an understanding of the knowledge base from the field.

Audience: Undergraduate

4. Communicate effectively through written essays, oral presentations and discussion.

Audience: Undergraduate

5. Retrieve, analyze, and interpret the professional and lay literature providing information to both professionals and public.

Audience: Undergraduate

6. Work in multi-disciplinary teams to analyze the cultural material from various disciplinary points of view.

Audience: Undergraduate

### **MEDIEVAL/SCAND ST 407 – INTRODUCTORY OLD NORSE**

3 credits.

Designed with a linguistic purpose: to obtain a reading knowledge of Old Norse-Icelandic through the study of Old Icelandic grammar and selections of Old Norse-Icelandic texts.

**Requisites:** Sophomore standing

**Course Designation:** Breadth – Humanities

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate a basic understanding of Old Norse-Icelandic phonology and grammar with a focus on nominal and verbal inflection.

Audience: Undergraduate

2. Read and understand basic Old Norse-Icelandic texts in normalized editions and access more challenging texts with the help of a dictionary.

Audience: Undergraduate

3. Identify the characteristic features of the various genres of Old Norse-Icelandic texts.

Audience: Undergraduate

### **MEDIEVAL/SCAND ST 408 – INTERMEDIATE OLD NORSE**

3 credits.

Designed with a linguistic purpose: to obtain a reading knowledge of Old Norse-Icelandic through the study of Old Icelandic grammar and selections of Old Norse-Icelandic texts.

**Requisites:** SCAND ST/MEDIEVAL 407

**Course Designation:** Breadth – Humanities

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate sufficient knowledge of Old Norse-Icelandic grammar and vocabulary to read Old Norse-Icelandic texts.

Audience: Undergraduate

2. Read and understand basic Old Norse-Icelandic texts in normalized editions and access more challenging texts with the help of a dictionary.

Audience: Undergraduate

### **MEDIEVAL/SCAND ST 409 – SURVEY OF OLD NORSE-ICELANDIC LITERATURE**

3 credits.

Eddic and skaldic poetry; homilies and saints' lives, kings' sagas, sagas of the Icelanders; mythical-heroic sagas and romances; rimur.

**Requisites:** MEDIEVAL/SCAND ST 407 or graduate/professional standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

### **MEDIEVAL/SPANISH 414 – LITERATURE OF THE CASTILIAN MIDDLE AGE (XII-XV CENTURIES)**

3 credits.

The study of a particular author, work, topic, or literary genre of the Middle Ages and/or Early Renaissance (through the 15th century): Poema de mio Cid, mester de juglaria, Libro de buen amor, mester de clerecia, El conde Lucanor, La Celestina, etc.

**Requisites:** (CHICLA/SPANISH 222 or SPANISH 223) and SPANISH 224

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Analyze Castilian medieval literary texts (12th to 15th century).

Audience: Undergraduate

2. Describe the historical, political, social, and cultural context of medieval Castile.

Audience: Undergraduate

3. Apply communication skills in reading, speaking, listening, and writing in Spanish to analyze the form and content of Medieval texts.

Audience: Undergraduate

### **MEDIEVAL/ART HIST 415 – TOPICS IN MEDIEVAL ART**

3 credits.

Advanced topics in Medieval art. Topics may include: "Death and the Afterlife in Medieval Art"; "Civic Art and Architecture and Public Space in Medieval Italy"; "Rome in the Middle Ages"; "Pilgrimage the Cult of the Saints in Medieval Byzantine Art."

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MEDIEVAL/ENGL 423 – TOPIC IN MEDIEVAL LITERATURE AND CULTURE**

3 credits.

Study of a topic in medieval literature.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

### **MEDIEVAL/ENGL 424 – MEDIEVAL DRAMA**

3 credits.

Dramatic traditions of medieval England, from early church rituals performed inside quiet monasteries in the tenth century to the elaborate and often raucous urban guild cycles and morality plays of the fifteenth, and with special attention to the significance of spirituality, work, and play in medieval culture.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

### **MEDIEVAL/ENGL 425 – MEDIEVAL ROMANCE**

3 credits.

Important early form of narrative fiction, covering tales of adventure, magic, courtly love, and King Arthur from the twelfth through the fifteenth century.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

### **MEDIEVAL/ENGL 426 – CHAUCERS COURTLY POETRY**

3 credits.

Poetry of the most famous and influential medieval English poet, from his short lyrics on love through his dream visions of talking birds and castles built on ice to the historical romance Troilus and Criseyde. Readings will be in the original Middle English; no prior experience with the language is required.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

### **MEDIEVAL/ENGL 427 – CHAUCER'S CANTERBURY TALES**

3 credits.

Study of the most famous and influential medieval English poet through his best-known work and its playful and profound responses to some of the most pressing literary, social, political, and spiritual issues of his time. Readings will be in the original Middle English; no prior experience with the language is required.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**MEDIEVAL/SCAND ST 430 – THE VIKINGS**

4 credits.

Within a historical framework, a thorough introduction to the culture, literature, and religion of the Vikings.

**Requisites:** Junior standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2022

**MEDIEVAL/ITALIAN/RELIG ST 440 – POVERTY, ECOLOGY AND THE ARTS: ST. FRANCIS OF ASSISI**

3 credits.

Focuses on literature about Francis of Assisi, from medieval accounts to contemporary literature, and related artistic portrayals of St. Francis as a religious symbol and model for economic, political and environmental justice.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Articulate the significance of Francis of Assisi as a multi-faceted historical, literary and symbolic figure, especially in relation to economic and environmental justice and reform.

Audience: Both Grad & Undergrad

2. Read and assess critically a range of literary genres that employ and depict Francis.

Audience: Both Grad & Undergrad

3. Compare interpretive models of Francis in literature and related artistic media over time and contexts.

Audience: Both Grad & Undergrad

4. Craft cogent written analysis of a literary and religious model such as Francis via selected interdisciplinary methods from religious studies, literary and historical scholarship.

Audience: Both Grad & Undergrad

5. Produce a research paper on a critical aspect of the presentation of Francis in selected works, employing one or more disciplinary approaches covered in the course.

Audience: Graduate

**MEDIEVAL/SCAND ST 444 – KALEVALA AND FINNISH FOLK-LORE**

4 credits.

Kalevala - the national epic of Finland - and the oral literature of Finland.

**Requisites:** Junior standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**MEDIEVAL/FOLKLORE/SCAND ST 446 – CELTIC-SCANDINAVIAN CULTURAL INTERRELATIONS**

3 credits.

Examination of shared traditions and historical connections between the North and Northwest of Europe. Readings of medieval and pre-modern Scandinavian, Scottish, Welsh and Irish sagas, histories, tales. Discussion of the role of folklore in modern Celtic and Scandinavian societies.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

## **MEDIEVAL/AFRICAN/JEWISH/RELIG ST 462 – MUSLIMS AND JEWS**

3 credits.

Explores the historical relationship between Muslims and Jews in a variety of contexts from the seventh century to the present. Surveys literary and cultural exchanges against the background of shifting political and social conditions across the Middle East, Europe, and the United States. Considers also the parallel legacies of anti-Semitism, Orientalism, and Islamophobia. Major themes include comparative religion, secularization, migration, and colonialism, as well as the politics of history and cultural memory. Introduces readings in English translation of medieval and modern texts originally written across languages, and especially in Hebrew and Arabic.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate contextual knowledge of major historical events, figures, social conditions, religious communities, and geographies of Muslim Iberia (al-Andalus) from the eighth to sixteenth centuries

Audience: Undergraduate

2. Situate al-Andalus in relation to wider developments in politics, culture, and religion of the Middle East and North Africa, from the eighth century to the present

Audience: Undergraduate

3. Understand the terms and conditions that have shaped Muslim-Jewish relations from the seventh century until the present, including frameworks of theology, lived religious experience, and Orientalist representation

Audience: Undergraduate

4. Integrate relevant theoretical frameworks, debates, and conversations regarding the distinction between historical writing and cultural memory

Audience: Undergraduate

5. Discern divergent and contradictory representations of the history of al-Andalus in contemporary memory culture

Audience: Undergraduate

6. Cultivate skills in textual analysis and evaluate a range of formal and structural elements in written and visual materials across genres (philosophy, literature, religion, film) as well as in primary and secondary historical sources

Audience: Undergraduate

7. Generate original ideas and texts, through coherent writing and compelling argumentation, by experimenting and taking risks, solving problems, and answering questions in a range of media

Audience: Undergraduate

## **MEDIEVAL/SPANISH 503 – SURVEY OF MEDIEVAL LITERATURE**

3 credits.

Introduction to major 13th and 14th-century Castilian works.

**Requisites:** Graduate/professional standing

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2018

## **MEDIEVAL/ENGL 520 – OLD ENGLISH**

3 credits.

The elements of Old English grammar with selected readings.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

Honors - Accelerated Honors (!)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

## **MEDIEVAL/ENGL 521 – ADVANCED OLD ENGLISH LITERATURE**

3 credits.

An intensive study of a major work or works of Old English, usually focusing on either Beowulf or the poems of a single manuscript. Line-by-line translation of the text will be supplemented by discussion of related issues (whether linguistic, thematic, or contextual) as well as by readings from relevant critical literature. Primary texts will be read in Old English.

**Requisites:** MEDIEVAL/ENGL 520

**Course Designation:** Breadth - Literature. Counts toward the Humanities req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

Honors - Accelerated Honors (!)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2020

## **MEDIEVAL/SPANISH 541 – OLD SPANISH**

3 credits.

Historical Spanish phonology, morphology, and syntax, with application to theories of language variation and change.

**Requisites:** Graduate/professional standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2018

**MEDIEVAL/LATIN 563 – MEDIAEVAL LATIN**

3 credits.

Introduction to chronological, geographical, and generic range of post-classical Latin, including not only the "medieval" period but the late antique, Renaissance, and beyond.

**Requisites:** LATIN 306 or graduate/professional standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Analyze ancient classical Latin texts.

Audience: Undergraduate

2. Interpret ancient classical Latin texts.

Audience: Undergraduate

3. Evaluate ancient classical Latin texts.

Audience: Undergraduate

4. Explain and assess the position of the course topic in relation to the classical and near eastern tradition.

Audience: Undergraduate

5. Demonstrate competence in current scholarly approaches to course readings.

Audience: Graduate

**MEDIEVAL/GERMAN 651 – INTRODUCTION TO MIDDLE HIGH GERMAN**

3 credits.

Middle High German grammar and vocabulary with the goals of fluency and accuracy in reading medieval texts. Covers topics in phonology, morphology, syntax, and lexicon.

**Requisites:** (GERMAN 249, 258, and 262), (GERMAN 249 and 285), or graduate/professional standing

**Course Designation:** Breadth – Humanities

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MEDIEVAL/ITALIAN 659 – DANTE'S DIVINA COMMEDIA**

3 credits.

Lectures on Dante's life and times, reading Divine Comedy.

**Requisites:** ITALIAN 321, 322, or graduate/professional standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**MEDIEVAL/ITALIAN 671 – THE 13TH CENTURY**

3 credits.

Systematic study of the earliest literary texts in Italy; the rise of the love lyric among the Sicilian poets; representative narrative works. The development of the lyric from Guittone d'Arezzo to the poets of the Dolce Stil Nuovo.

**Requisites:** ITALIAN 321, 322, or graduate/professional standing

**Course Designation:** Breadth – Literature. Counts toward the Humanities req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**MEDIEVAL 699 – DIRECTED STUDY**

1-3 credits.

Advanced directed study projects as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2012

**MEDIEVAL/FRENCH 704 – LA LITTERATURE FRANCAISE DU XIV ET DU XV SIECLE**

3 credits.

Study of important literary works of the 14th and 15th centuries. Taught in French.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2020

**MEDIEVAL/SPANISH 718 – TOPICS IN MEDIEVAL SPANISH LITERATURE**

3 credits.

An advanced topics course focusing on themes, particular authors, individual works, or literary genres in medieval Spanish literature.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2019

**MEDIEVAL/GERMAN 755 – OLD GERMANIC LANGUAGES**

3 credits.

Old High German, Old Saxon, and Gothic on a rotating basis.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

### MEDIEVAL/ENGL 803 – TOPICS IN MEDIEVAL LITERATURE

3 credits.

Study of a topic in Medieval literature.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2023

### MEDIEVAL/SPANISH 842 – SEMINAR-MEDIEVAL LITERATURE

3 credits.

Seminar focusing on literary, textual criticism or theoretical topics relevant to Medieval Spanish literature.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2022

## MICROBIOLOGY (MICROBIO)

### MICROBIO 100 – THE MICROBIAL WORLD

3 credits.

Primarily for non-science majors. Roles of microorganisms and viruses in nature, health, agriculture, pollution control and ecology. Principles of disease production, epidemiology and body defense mechanisms. Biotechnology and the genetic engineering revolution.

**Requisites:** Not open to students with credit for MICROBIO 101 or 303.

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Understand, analyze, and evaluate information effectively.

Audience: Undergraduate

2. Describe what makes up a microorganism. How is the make up different between a microorganism and a human being?

Audience: Undergraduate

3. Define a disease. Describe how your body, your doctor, and the government fight disease.

Audience: Undergraduate

4. Understand where we came from. Analyze the various theories of how life originated and express an opinion on which is most plausible.

Audience: Undergraduate

5. Articulate the positive impacts microbes have on your health, the well-being of their host organisms, the cycling of important elements, and the environment.

Audience: Undergraduate

### MICROBIO 101 – GENERAL MICROBIOLOGY

3 credits.

Survey of microorganisms and their activities; emphasis on structure, function, ecology, nutrition, physiology, genetics. Survey of applied microbiology--medical, agricultural, food and industrial microbiology. Intended to satisfy any curriculum which requires introductory level microbiology.

**Requisites:** CHEM 103, 108, 109, or 115. Not open to students with credit for MICROBIO 303

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify the three Domains of the phylogenetic tree of life and draw inferences about evolutionary processes based on phylogenetic trees.

Audience: Undergraduate

2. Describe the basic cell structure of cells (bacteria, archaea, eukarya) and the structure of viruses and explain how this affects microbial function.

Audience: Undergraduate

3. Understand the impact of environmental conditions on microbial growth and how this impacts the abundance and distribution of microbes on Earth.

Audience: Undergraduate

4. Describe how microbes obtain nutrients and energy from the environment and how this is important to food production, waste treatment, sustainability and global ecosystems.

Audience: Undergraduate

5. Describe the flow and exchange of information in microbial cells and populations and understand how this affects microbial diversity and evolution.

Audience: Undergraduate

6. Compare different methods of microbial growth control and their impact on microbes.

Audience: Undergraduate

7. Compare and contrast the different ways in which microbes interact with their human hosts and the impacts on global health and disease.

Audience: Undergraduate

8. Describe the human immune response to microbes.

Audience: Undergraduate

**MICROBIO 102 – GENERAL MICROBIOLOGY LABORATORY**

2 credits.

Covers techniques and procedures used in general microbiology, including cultivation, enumeration, aseptic techniques, physiology and selected applications.

**Requisites:** MICROBIO 101, 303 or concurrent enrollment. Not open to students with credit for MICROBIO 304.

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate competencies in microbiological laboratory techniques.

Audience: Undergraduate

2. Isolate and identify bacteria.

Audience: Undergraduate

3. Keep careful records of observations.

Audience: Undergraduate

4. Develop hypotheses, and think critically and make valid conclusions about them.

Audience: Undergraduate

5. Assess the credibility of scientific sources.

Audience: Undergraduate

6. Communicate scientific findings and ideas effectively through writing.

Audience: Undergraduate

**MICROBIO 150 – MICROBIOMES AND MICROBIOLOGY – FIRST-YEAR SEMINAR**

1 credit.

Introduction to major questions related to the study of the microbiome.

Acquire foundational research skills necessary for success as a microbiology or life sciences major. Engage with faculty and their cutting-edge research related to Microbiology. Explore department and campus resources and career options available in the field of microbiology.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe the academic skills and practical steps required to succeed as a microbiology major

Audience: Undergraduate

2. Discuss the research and teaching interests of department faculty

Audience: Undergraduate

3. Describe the variety of career opportunities available to individuals with microbiology and life science backgrounds

Audience: Undergraduate

4. Identify university, college, and department resources that support success at UW-Madison

Audience: Undergraduate

5. Identify credible sources of information related to microbiome research

Audience: Undergraduate

6. Discuss the major research questions in the study of the microbiome

Audience: Undergraduate

### **MICROBIO 299 – INDEPENDENT STUDY**

1-3 credits.

Research work for students under direct guidance of a faculty member in an area encompassing Microbiology. Students are responsible for arranging the work and credits with the supervising instructor.

**Requisites:** Consent of instructor

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Investigate a science topic in conjunction with other investigators to develop a deep understanding of a research problem.

Audience: Undergraduate

2. Identify a research problem and develop a series of experiments to test a hypothesis related to the problem under investigation.

Audience: Undergraduate

3. Carry out designed experiments and collect data related to the research problem under investigation.

Audience: Undergraduate

4. Analyze the results of experiments and use them to test the validity of the developed hypothesis.

Audience: Undergraduate

5. Communicate the results of investigations via written and/or oral means to an appropriate audience.

Audience: Undergraduate

### **MICROBIO 303 – BIOLOGY OF MICROORGANISMS**

3 credits.

Basic biology of microorganisms, including structure, function, physiology, genetics, ecology, diversity, and evolution.

**Requisites:** (ZOOLOGY/BIOLOGY 101, ZOOLOGY/BIOLOGY/BOTANY 151, BIOCORE 383, or BIOLOGY/BOTANY 130) and (CHEM 104 or 109) or graduate/professional standing

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Explain the historical context of microbiology from a human and evolutionary perspective.

Audience: Undergraduate

2. Compare different microbial cell structures and predict behaviors based upon those structures.

Audience: Undergraduate

3. Explain how mutations occur in cells, the mechanisms organisms have to combat these changes, and how these changes relate to the evolution of species.

Audience: Undergraduate

4. Predict the modes of growth of microbes based upon the enzymes they contain and the metabolic breakdown of substrates.

Audience: Undergraduate

5. Describe the regulatory paradigms in microbes and predict the changes in behavior that occur when these pathways are disrupted.

Audience: Undergraduate

6. Explain the symbiotic and dysbiotic state in a host-microbe interaction and list factors that can affect this relationship.

Audience: Undergraduate

7. Compare common virulence factors and explain their effect on symbiotic relationships and how these virulence factors contribute to disease.

Audience: Undergraduate

**MICROBIO 304 – BIOLOGY OF MICROORGANISMS LABORATORY**

2 credits.

Introduction to modern laboratory techniques used to study the distribution and properties of microorganisms.

**Requisites:** MICROBIO 303 or concurrent enrollment

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate proficiency in microscopy, media preparation, aseptic technique, and microbiological measurements.

Audience: Undergraduate

2. Identify representative groups of microorganisms. Those that are important in: antibiotic production, sewage treatment, disease, food manufacturing, and the local environment.

Audience: Undergraduate

3. Characterize microbial isolates from nature and describe their taxonomy.

Audience: Undergraduate

4. Create detailed lab notes that describe accurately the experiments performed.

Audience: Undergraduate

5. Develop hypotheses, design experiments, perform experiments, collect data, analyse data critically, report data to others clearly and accurately, and communicate about scientific topics in a precise manner.

Audience: Undergraduate

**MICROBIO 305 – CRITICAL ANALYSES IN MICROBIOLOGY**

1 credit.

Train students to become scientific problem-solvers, to critically analyze data, and to comprehend the principles of microbiological research via active discussion of a combination of scholarly papers and contemporary, hot topics in our field.

**Requisites:** MICROBIO 303 or concurrent enrollment

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize the breadth of the field of microbiology and nature of the science.

Audience: Undergraduate

2. Describe the scientific method used in presented material.

Audience: Undergraduate

3. Demonstrate critical thinking and problem solving skills through an exploration of seminal papers and cutting-edge research in the field of microbiology.

Audience: Undergraduate

4. Critique primary scientific papers by identifying the hypothesis, analyzing the data being presented, and proposing future experiments or directions for a particular study.

Audience: Undergraduate

5. Communicate analysis of primary literature to others.

Audience: Undergraduate

### **MICROBIO/FOOD SCI 324 – FOOD MICROBIOLOGY LABORATORY**

2 credits.

Lab exercises dealing with food preservation, spoilage, and food poisoning. Isolation, identification and quantification of specific microbes occurring in foods, and food fermentations by bacteria and yeast.

**Requisites:** (MICROBIO 102 or MICROBIO 304) and FOOD SCI/ MICROBIO 325 or concurrent enrollment

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Utilize laboratory techniques to identify microorganisms in food.

Audience: Undergraduate

2. Describe the principles involving food preservation via fermentation processes.

Audience: Undergraduate

3. Demonstrate understanding of the role and significance of microbial inactivation, adaptation, and environmental factors (i.e., water activity, pH, temperature) on growth and response of microorganisms in various environments.

Audience: Undergraduate

4. Identify the conditions, including sanitation practices, under which important pathogens and spoilage microorganisms are commonly inactivated, killed, or made harmless in foods.

Audience: Undergraduate

### **MICROBIO/FOOD SCI 325 – FOOD MICROBIOLOGY**

3 credits.

Principles of food preservation, epidemiology of foodborne illness, agents of foodborne illness, food fermentations and biotechnology.

**Requisites:** MICROBIO 101, 303, or M M & I 301 or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify and summarize the impacts of intrinsic and extrinsic factors on microorganisms.

Audience: Undergraduate

2. Calculate and apply thermal processing parameters to reductions in microbial numbers.

Audience: Undergraduate

3. Apply Hazard Analysis Critical Control Point (HACCP) concepts and principles to food production processes.

Audience: Undergraduate

4. Demonstrate knowledge of foodborne microbial pathogens.

Audience: Undergraduate

5. Describe methods and principles of sampling and testing food for microorganisms.

Audience: Undergraduate

6. Compare and contrast the principles, practices, and pathways of food fermentations.

Audience: Undergraduate

7. Analyze and use microbiological data sets.

Audience: Undergraduate

8. Evaluate the benefits and hazards of modern food production, organic foods, and genetically-engineered foods.

Audience: Undergraduate

### **MICROBIO/AN SCI/BOTANY 335 – THE MICROBIOME OF PLANTS, ANIMALS, AND HUMANS**

3 credits.

Examination of the structure and function of microbial communities that live inside and on host organisms (plants, animals, and humans). Introduction to general concepts of the microbiome and microbiota, and their relationship to host nutrition, health, and disease.

**Requisites:** MICROBIO 101 or 303 or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe how microorganisms interact with plant and animal (including human) hosts in beneficial, neutral or detrimental ways.

Audience: Undergraduate

2. Express how the environment affects these host-microbe interactions.

Audience: Undergraduate

3. Summarize new molecular and bioinformatic methods that allow for the study of microbial communities.

Audience: Undergraduate

4. Describe how microbial communities are essential for life as we know it, and the processes that support life.

Audience: Undergraduate

5. Articulate several ways in which microbial communities are essential to plant and animal (including human) health.

Audience: Undergraduate

6. Explain our current knowledge about the diversity of microbial life and why its effects and potential benefits have not been fully explored.

Audience: Undergraduate

### **MICROBIO 345 – INTRODUCTION TO DISEASE BIOLOGY**

3 credits.

Introduces the rich biology of infectious disease and how it impacts the biology of humans and other organisms, through the lens of global health. Steps beyond a narrow focus on the biological dimensions of disease to also cover the social, political, and cultural factors that shape the spread and persistence of disease in natural populations. Includes a survey of the various types of pathogens and the science behind infection, transmission, evolution, and virulence.

**Requisites:** ZOOLOGY/BIOLOGY 101, BOTANY/BIOLOGY 130, ZOOLOGY/BIOLOGY/BOTANY 151, or BIOCORE 381

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe different types of parasites/pathogens and their modes of transmission

Audience: Undergraduate

2. Summarize the function of the human immune system in protecting against disease and in causing some of the damages associated with disease

Audience: Undergraduate

3. Read and analyze data on the health status of populations

Audience: Undergraduate

4. Assess environmental, medical and political strategies for controlling infectious diseases

Audience: Undergraduate

5. Identify the evolutionary processes that lead to adaptation and biological diversity

Audience: Undergraduate

6. Describe the genetic and behavioral reasons why there are increasing numbers of antibiotic resistant infections

Audience: Undergraduate

7. Evaluate global progress toward reaching MD6—to reduce the burden of HIV, TB, Malaria and other diseases

Audience: Undergraduate

8. Critically evaluate and effectively use textbooks, current research literature, online information, as well as information related to scientific and biological issues in the popular press

Audience: Undergraduate

**MICROBIO 357 – GENERAL BIOINFORMATICS FOR MICROBIOLOGISTS**

3 credits.

Provides foundational introduction to bioinformatics for microbiologists. Emphasis on the basic understanding of bioinformatics tools, analysis, and databases and their applications (e.g. Sequence alignment, Phylogenetic trees, Genome analyses). Topics include: command line manipulation, sequence alignment, file formats, phylogenetic trees, standard genome and protein databases, interpretation of microbial and viral genomes, and basic scientific computer programming.

**Requisites:** MICROBIO 303, BIOCHEM 501, 507, or graduate/professional standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform basic command line operations to navigate through an operating system

Audience: Undergraduate

2. Recognize basic sequence data formats, access them through publicly available datasets, and utilize them in bioinformatics applications

Audience: Undergraduate

3. Use sequence analysis programs by downloading and installing them locally on their own computers

Audience: Undergraduate

4. Use publicly available bioinformatics databases

Audience: Undergraduate

5. Create programs in a scientific programming language to conduct basic bioinformatics analyses

Audience: Undergraduate

6. Demonstrate mastery of basic bioinformatics skills by completing a hands-on final project focused on the recovery and analyses of microbial genomes from public databases

Audience: Undergraduate

**MICROBIO 375 – SPECIAL TOPICS**

1-4 credits.

Specialized subject matter of current interest to undergraduate students.

**Requisites:** None

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2020

**MICROBIO 399 – COORDINATIVE INTERNSHIP/COOPERATIVE EDUCATION**

1-8 credits.

An internship under guidance of a faculty or instructional academic staff member in the Bacteriology department and a internship site supervisor. Students are responsible for arranging the work and credits with the faculty or instructional academic staff member and the internship site supervisor.

**Requisites:** Consent of instructor

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Workplace - Workplace Experience Course

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2013

**Learning Outcomes:** 1. Perform assigned responsibilities in a professional setting for 80 hrs/credit/semester.

Audience: Undergraduate

2. Identify and employ standards of professionalism at work site.

Audience: Undergraduate

3. Articulate through discussion with faculty mentor how concepts learned in microbiology relate to real work situations.

Audience: Undergraduate

4. Synthesize and apply knowledge from the microbiology curriculum and broader coursework to solve problems on the worksite.

Audience: Undergraduate

5. Create and submit a progress report to a faculty mentor, twice during the semester, one at mid-semester and one at the end of the semester.

Audience: Undergraduate

**MICROBIO 400 – STUDY ABROAD IN MICROBIOLOGY**

1-6 credits.

Provides an area equivalency for courses taken on Madison Study Abroad Programs that do not equate to existing UW courses.

**Requisites:** None

**Repeatable for Credit:** Yes, unlimited number of completions

**MICROBIO/SOIL SCI 425 – ENVIRONMENTAL MICROBIOLOGY**

3 credits.

Microbial interactions in soils, water, extreme environments and biofilms. Modern methods for studying microbial ecology. role of microbes in nutrient cycles and biogeochemistry. Use of microbes for mitigating manmade environmental problems of industrial, agricultural, and domestic origin.

**Requisites:** MICROBIO 303 and (CHEM 341 or 343), or graduate/professional standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Build intuition and an ability to predict which kinds of organisms will be found in different ecosystems using quantitative reasoning when possible.

Audience: Undergraduate

2. Gain familiarity with research tools and applications in environmental microbiology, along with an appreciation for their limitations.

Audience: Undergraduate

3. Critically evaluate published research carried out in the field and think creatively about new potential research questions and applications.

Audience: Undergraduate

4. Work collaboratively in a team to enhance learning and solve complex problems.

Audience: Undergraduate

**MICROBIO 450 – DIVERSITY, ECOLOGY AND EVOLUTION OF MICROORGANISMS**

3 credits.

Fundamental concepts relating to the phylogenetic diversity, ecology and evolution of microbes. Active learning methods applying these concepts will promote a deeper understanding of microbiology.

**Requisites:** MICROBIO 303 or graduate/professional standing

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Define the foundational principles of phylogenetics.

Audience: Undergraduate

2. Compare the major phyla within bacteria, archaea and eukaryotic microbes.

Audience: Undergraduate

3. Recognize general properties of viruses and the issues with their phylogenetic classification.

Audience: Undergraduate

4. Define ecology, its domains and distinguish it from other closely related fields.

Audience: Undergraduate

5. Develop a deeper understanding of methods available to characterize microbial communities.

Audience: Undergraduate

6. Explain Darwin's Theory of Natural Selection and the four postulates of natural selection.

Audience: Undergraduate

7. Describe the concept of adaptation and how over the history of science this concept has changed.

Audience: Undergraduate

8. Identify the major events in the history of microbial life.

Audience: Undergraduate

9. Develop an evolutionary understanding of the 3 domains of life.

Audience: Undergraduate

### **MICROBIO 470 – MICROBIAL GENETICS & MOLECULAR MACHINES**

3 credits.

Examines modern microbial genetics and molecular processes. Emphasis on the use of eubacterial and eukaryotic microbes to elucidate cellular function. Discussion of experimental approaches to study microbes and their use in biotechnology, bioremediation, and medicine.

**Requisites:** MICROBIO 303 or concurrent enrollment or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Use correct nomenclature to describe microbial genetic and molecular processes and experimental approaches.

Audience: Undergraduate

2. Recognize and apply concepts of genetics.

Audience: Undergraduate

3. Describe how the molecular machines in bacterial gene expression function and, how they contribute to final gene-encoded activities.

Audience: Undergraduate

4. Explain the mechanisms by which these molecular machines are regulated.

Audience: Undergraduate

5. Interpret molecular and genetic data in regard to specific experimental questions.

Audience: Undergraduate

6. Apply understanding of microbial genetics and molecular machines to design experimental approaches test research hypotheses.

Audience: Undergraduate

### **MICROBIO 520 – PLANETARY MICROBIOLOGY: WHAT LIFE HERE TELLS US ABOUT LIFE OUT THERE**

3 credits.

Connects the molecular underpinnings of life with corresponding planetary scale changes in geochemistry. Focuses on the dynamics between life and environment over planet Earth's history from a microbial and molecular perspective, including the origins of life, and emergence of essential metabolisms and their evolution across billions of years of planetary evolution. Discusses how innovations such as translation machinery and carbon and nitrogen fixation were impacted by significant changes in the environment. Examines how understanding the origins of life on Earth may allow for the recognition of life elsewhere in the universe by exploring, assessing, and discussing various signs of life and the processes that expands life to planetary scale.

**Requisites:** MICROBIO 101 or 303 or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Evaluate the reliability of sources of information about biology

Audience: Both Grad & Undergrad

2. Synthesize key topics/concepts of planetary microbiology, astrobiology, and the molecular history of life

Audience: Both Grad & Undergrad

3. Describe the environments in which life on Earth might have originated, emerged, and persisted over billions of years

Audience: Both Grad & Undergrad

4. Analyze and describe the significant molecular innovations that impacted life on Earth

Audience: Both Grad & Undergrad

5. Describe the current origins of life scenarios on Earth and planetary conditions that may give rise to life elsewhere in the universe

Audience: Both Grad & Undergrad

6. Formulate an original hypothesis to guide future research based on a synthesis of current research into the connections between the origins, evolution, and molecular underpinnings of life and corresponding planetary scale changed

Audience: Graduate

## **MICROBIO/SOIL SCI 523 – SOIL MICROBIOLOGY AND BIOCHEMISTRY**

3 credits.

Transformations of nutrients and contaminants in soils and groundwater by microorganisms: emphasis on enzymatic mechanisms and metabolic pathways. Approaches for analyzing microbial populations and activities including molecular techniques. Applications of microbial activities for bioremediation of contaminated soils and groundwater. Students should have completed one course in either Soil Science or Microbiology to feel comfortable with the course content.

**Requisites:** Senior standing, (CHEM 104, 109, or 116) and (ZOOLOGY/BIOLOGY 102, BOTANY/BIOLOGY 130, or ZOOLOGY/BIOLOGY/BOTANY 151), or graduate/professional standing

**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the soil environment from the perspective of a microbe

Audience: Both Grad & Undergrad

2. Explain the importance of soil microbes for globally important issues such as climate change, nutrient cycling, and biodiversity

Audience: Both Grad & Undergrad

3. Describe key methods used to study soil microbes and explain their limitations

Audience: Both Grad & Undergrad

4. Analyze microbial community data to answer the question, are the organisms in these communities different, and how

Audience: Both Grad & Undergrad

5. Discuss and critically evaluate scientific papers in soil microbiology at an advanced undergraduate level

Audience: Undergraduate

6. Conduct, analyze, and interpret a research project

Audience: Undergraduate

7. Discuss and critically evaluate scientific papers in soil microbiology at a graduate level

Audience: Graduate

8. Design, conduct, analyze, and interpret a research project, drawing on the broader literature

Audience: Graduate

## **MICROBIO 525 – FIELD STUDIES OF PLANETARY MICROBIOLOGY AND LIFE IN THE UNIVERSE**

3 credits.

Explores the origins, early evolution, and most common traces left by our planet's form of microbial life. Discovery and interpretation of microbial biosignatures in the context of a simulated surface lander mission through travel to field sites. Introduction to microbial biosignatures as inferred through satellite and drone imagery interpretation, portable XRF elemental analysis, UV-VIS-IR spectrophotometry, body and trace fossil analysis and interpretation, and metagenome sequencing. Explore evidence and methods of detection of life on other planets.

**Requisites:** MICROBIO 520 or graduate/professional standing

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Define basic categories and modes of biosignature production and preservation.

Audience: Both Grad & Undergrad

2. Describe the environmental and ecological attributes that enable biosignature preservation.

Audience: Both Grad & Undergrad

3. Articulate how different microenvironments can be present in an extreme environment (i.e., a salt flat), and how different instruments are required to explore these microenvironments at different scales of observation.

Audience: Both Grad & Undergrad

4. Explain the basic chemical drivers of life that exist in different microenvironments.

Audience: Both Grad & Undergrad

5. Hypothesize planetary and stellar conditions likely to lead to the long-term persistence of life on a planet.

Audience: Both Grad & Undergrad

6. Operate each of the main instruments that compose the payload package of the simulated spacecraft, organized in order of scale: Drone/imaging data (km-m); Outcrop scale detection/field microscope and hand lens (m-dm); Molecular characterization/spectrophotometer (mm-nm); Atomic characterization/XRD (nm-fm).

Audience: Both Grad & Undergrad

7. Formulate an original hypothesis to guide future research based on a synthesis of findings from the field experience with current understandings of the origins, evolution and molecular underpinnings of life and corresponding planetary scale changes.

Audience: Graduate

### **MICROBIO 526 – PHYSIOLOGY OF MICROORGANISMS**

3 credits.

Biochemistry of microbial processes.

**Requisites:** (BIOCHEM 501 or 507 or concurrent enrollment) or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize the chemical logic and fundamental regulatory principles of central metabolism.

Audience: Undergraduate

2. Describe how the fundamental concepts in metabolism relate to real-world problems in areas such as microbiology, biotechnology, and human health.

Audience: Undergraduate

3. Recognize that the same fundamental principles that help us understand microbial metabolism also apply to higher organisms.

Audience: Undergraduate

4. Describe the interconnected nature of metabolism, where pathways work in concert by feeding, draining, and regulating each other.

Audience: Undergraduate

5. Describe the core mechanisms of energy generation in biology and how they impact the diversity of microbial life.

Audience: Undergraduate

### **MICROBIO 527 – ADVANCED LABORATORY TECHNIQUES IN MICROBIOLOGY**

2 credits.

Provides a foundation in modern methods of research in the biomedical sciences. Coaching and practice in hypothesis-driven scientific questions, critical data analysis, and scientific writing.

**Requisites:** Declared in Microbiology and MICROBIO 304

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain the conceptual design of an experiment.

Audience: Undergraduate

2. Given an experimental question, design and effectively execute an experiment that answers a scientific question.

Audience: Undergraduate

3. Find, and use correctly, information in the primary literature relevant to experiments being carried out.

Audience: Undergraduate

4. Properly and critically interpret data including understanding experimental limitations and controls.

Audience: Undergraduate

5. Effectively communicate their scientific findings through writing as well as present data/results clearly and effectively in a professional manner.

Audience: Undergraduate

6. Take complete, effective and detailed lab notes.

Audience: Undergraduate

**MICROBIO/ONCOLOGY 545 – TOPICS IN BIOTECHNOLOGY**

1 credit.

Seminars on current topics in agricultural, medical, and industrial biotechnology such as: microbiological production of food, drink, biopharmaceuticals; production methods, genetic engineering (vectors, recombination cloning), continuous fermentation; bioconversion processes and production of chemicals from biomass; plant biotechnology; transgenic animals.

**Requisites:** (ZOOLOGY/BIOLOGY 101, ZOOLOGY/BIOLOGY/BOTANY 151, BIOCORE 383, or BIOLOGY/BOTANY 130) and (CHEM 104 or 109) or graduate/professional standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Attend all lectures on a diverse range of speakers from the Biotechnology sector and related topics.

Audience: Undergraduate

2. Demonstrate an understanding of lectures through lecture evaluation sheets.

Audience: Undergraduate

3. Choose a current topic in Biotechnology and formulate an opinion paper on the challenges and potential utility.

Audience: Undergraduate

**MICROBIO 551 – CAPSTONE RESEARCH PROJECT IN MICROBIOLOGY**

2 credits.

Conduct independent research in either a PI's laboratory or in small groups in microbiology teaching laboratories. Discuss progress of projects and research ethics, write a research proposal, and prepare and present a poster with final results for the department Poster Session. The in-class students use microbiological, molecular, and bioinformatic approaches to investigate the microbial ecology of environmental microbial communities. Research-lab students will progress toward goals established by the research mentor / PI.

**Requisites:** MICROBIO 527

**Course Designation:** Gen Ed - Communication Part B

Breadth - Biological Sci. Counts toward the Natural Sci req  
Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate proficiency in bacterial culturing, PCR, gel electrophoresis, Sanger sequencing, DNA quantitation, analytical micropipetting, and BLAST analysis.

Audience: Undergraduate

2. Complete a next-generation or genomics sequencing project on an under-study microbial environment and use bioinformatics tools to analyze large datasets of DNA and/or RNA sequences.

Audience: Undergraduate

3. Design and troubleshoot experiments, isolate targeted microbes, or microbial groups, from a given environment.

Audience: Undergraduate

4. Cultivate the ability to work in teams by designing and troubleshooting a team experiment and presenting their progress and findings throughout the semester.

Audience: Undergraduate

5. Improve scientific writing by preparing and revising drafts of a research proposal.

Audience: Undergraduate

6. Improve oral scientific communication by presenting powerpoint and poster presentations on scientific research.

Audience: Undergraduate

7. Explore ethical dilemmas in science through writing, discussion, and case studies.

Audience: Undergraduate

**MICROBIO/BIOCHEM/GENETICS 612 – PROKARYOTIC MOLECULAR BIOLOGY**

3 credits.

Molecular basis of bacterial physiology and genetics with emphasis on molecular mechanisms; topics include nucleic acid-protein interactions, transcription, translation, replication, recombination, regulation of gene expression.

**Requisites:** (BIOCHEM 501 or 507) and (MICROBIO 470, GENETICS 466 or 468) or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Access and evaluate original research literature.

Audience: Undergraduate

2. Demonstrate problem solving practices.

Audience: Undergraduate

3. Identify enzyme mechanisms responsible for transcription, translation, gene regulation, and replication in bacteria.

Audience: Graduate

4. Compare the structural bases for the mechanisms.

Audience: Graduate

5. Evaluate the experiments that led to our understanding of these mechanisms.

Audience: Graduate

6. Deconstruct how these enzymes respond to nutritional and environmental signals in cells.

Audience: Graduate

7. Outline the evolutionary basis and selection pressure for these mechanisms in vivo.

Audience: Graduate

**MICROBIO 626 – MICROBIAL AND CELLULAR METABOLOMICS**

3 credits.

Provides an in-depth exploration of the use of mass spectrometry-based metabolomic approaches for the quantitative investigation of microbial and mammalian cellular metabolic processes. Using recent examples from primary literature, highlights the application of metabolomics, lipidomics, and metabolic flux analysis to diverse areas, including rational engineering of metabolic pathways, microbial biofuel production, discovery and characterization of new biochemical pathways, metabolic interactions within microbial communities, biochemical capabilities of the human gut microbiome, and mammalian cell metabolism.

**Requisites:** (BIOLOGY/ZOOLOGY 101, BOTANY/BIOLOGY/ZOOLOGY 151, BIOCORE 383, or BOTANY/BIOLOGY 130), (CHEM 341 or 343), and (BIOCHEM 301, 501, or 507), or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe the instrumentation and analytical approaches commonly used in mass spectrometry-based metabolomics, lipidomics, and metabolic flux analysis studies.

Audience: Both Grad & Undergrad

2. Explain how isotope tracers are used to measure metabolic flux, elucidate metabolic network structure, and investigate pathway thermodynamics.

Audience: Both Grad & Undergrad

3. Critically evaluate primary scientific literature that utilizes metabolomics, lipidomics, or isotope tracer studies as a key research component.

Audience: Both Grad & Undergrad

4. Argue how fundamental concepts in cellular metabolism relate to real-world problems in areas such as microbiology, biotechnology, and human health.

Audience: Both Grad & Undergrad

5. Analyze and interpret published or unpublished metabolomics and lipidomics data to generate biological insights on microbial and/or cellular metabolism.

Audience: Both Grad & Undergrad

6. Analyze and interpret published or unpublished data from isotope-tracer studies to make inferences on pathway activity and metabolic network structure in microbial and/or mammalian cellular systems.

Audience: Both Grad & Undergrad

7. Formulate experimental designs that incorporate metabolomics and isotope tracers to test specific hypothesis related to cellular metabolism.

Audience: Graduate

**MICROBIO 657 – BIOINFORMATICS FOR MICROBIOLOGISTS**

3 credits.

Provides a practical and fundamental introduction to sequence-based analysis focused on microbial systems. Emphasis on gaining a basic understanding of the principles of both classical and newer algorithms useful for bioinformatic analysis. Topics include: BLAST; RNA-seq analysis; transcriptional binding prediction; genome sequence assembly, analysis and annotation; and comparative genomics. Note that this course requires that each student have access to a laptop that runs a linux/unix Operating System such as a Mac or a ChromeBook. PC Laptops running a VM are also acceptable. No prior knowledge of computational biology is required.

**Requisites:** MICROBIO 303, BIOCHEM 501, GENETICS 466, or 467 or graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate use of the Unix/Linux-based operating system using command line.

Audience: Both Grad & Undergrad

2. Download and install sequence analysis programs locally on a computer.

Audience: Both Grad & Undergrad

3. Evaluate the outcomes of sequence data analysis and determine if an analysis is statistically relevant and robust.

Audience: Both Grad & Undergrad

4. Code complex and advanced programs in python that not only facilitate pipeline construction, but also more in-depth parsing of tool output.

Audience: Both Grad & Undergrad

5. Utilize bioinformatics tools to enable comparative genomics analysis that extend the standard use of those tools.

Audience: Both Grad & Undergrad

6. Evaluate primary literature and determine what available tools are most appropriate for solving a specific analysis problem.

Audience: Both Grad & Undergrad

7. Utilize advanced parameters in BLAST to facilitate complex comparisons across sequence data types.

Audience: Graduate

8. Demonstrate the ability to compile a program from source code so as to leverage local environmental variables for installation.

Audience: Graduate

**MICROBIO/BMOLCHEM 668 – MICROBIOLOGY AT ATOMIC RESOLUTION**

3 credits.

Three-dimensional protein structures form the basis for discussions of high resolution microbiology; how particular problems are solved with given protein architectures and chemistries and how themes of protein structure are modified and recycled.

**Requisites:** (BIOCHEM 501 or 507) and (MICROBIO 470 or 612) or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate proficient use of PyMol software for visualizing 3D structures.

Audience: Both Grad & Undergrad

2. Evaluate the quality of published structural models for biological macromolecules.

Audience: Both Grad & Undergrad

3. Identify common themes in structural biology which are used when addressing structural biology research questions.

Audience: Both Grad & Undergrad

4. Design and deliver a presentation to communicate scientific results to an audience of their peers.

Audience: Graduate

### **MICROBIO 681 – SENIOR HONORS THESIS**

2-3 credits.

Individual study for majors completing theses for Honors degrees as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Investigate a science topic in conjunction with other investigators to develop a deep understanding of a research problem.

Audience: Undergraduate

2. Identify a research problem and develop a series of experiments to test a hypothesis related to the problem under investigation.

Audience: Undergraduate

3. Carry out designed experiments and collect data related to the research problem under investigation.

Audience: Undergraduate

4. Analyze the results of experiments and use them to test the validity of the developed hypothesis.

Audience: Undergraduate

5. Communicate the results of investigations via written and/or oral means to an appropriate audience.

Audience: Undergraduate

6. Write an honors thesis that contains an abstract, background, a demonstration of research skills, analysis of the research question, and a summary of the impact of the work.

Audience: Undergraduate

### **MICROBIO 682 – SENIOR HONORS THESIS**

2-4 credits.

Second semester of individual study for majors completing theses for Honors degrees as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Investigate a science topic in conjunction with other investigators to develop a deep understanding of a research problem.

Audience: Undergraduate

2. Identify a research problem and develop a series of experiments to test a hypothesis related to the problem under investigation.

Audience: Undergraduate

3. Carry out designed experiments and collect data related to the research problem under investigation.

Audience: Undergraduate

4. Analyze the results of experiments and use them to test the validity of the developed hypothesis.

Audience: Undergraduate

5. Communicate the results of investigations via written and/or oral means to an appropriate audience.

Audience: Undergraduate

6. Write an honors thesis that contains an abstract, background, a demonstration of research skills, analysis of the research question, and a summary of the impact of the work.

Audience: Undergraduate

**MICROBIO 691 – SENIOR THESIS**

2 credits.

Individual study for majors completing theses as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Investigate a science topic in conjunction with other investigators to develop a deep understanding of a research problem.

Audience: Undergraduate

2. Identify a research problem and develop a series of experiments to test a hypothesis related to the problem under investigation.

Audience: Undergraduate

3. Carry out designed experiments and collect data related to the research problem under investigation.

Audience: Undergraduate

4. Analyze the results of experiments and use them to test the validity of the developed hypothesis.

Audience: Undergraduate

5. Communicate the results of investigations via written and/or oral means to an appropriate audience.

Audience: Undergraduate

6. Write a thesis that contextualizes the work, presents the research question, describes the experiments performed to answer the question, and analyzes the results.

Audience: Undergraduate

**MICROBIO 692 – SENIOR THESIS**

2 credits.

Second semester of individual study for majors completing theses as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Investigate a science topic in conjunction with other investigators to develop a deep understanding of a research problem.

Audience: Undergraduate

2. Identify a research problem and develop a series of experiments to test a hypothesis related to the problem under investigation.

Audience: Undergraduate

3. Carry out designed experiments and collect data related to the research problem under investigation.

Audience: Undergraduate

4. Analyze the results of experiments and use them to test the validity of the developed hypothesis.

Audience: Undergraduate

5. Communicate the results of investigations via written and/or oral means to an appropriate audience.

Audience: Undergraduate

6. Write a thesis that contextualizes the work, presents the research question, describes the experiments performed to answer the question, and analyzes the results.

Audience: Undergraduate

### **MICROBIO 699 – SPECIAL PROBLEMS**

1-4 credits.

Individual advanced work in an area of Microbiology under the direct guidance of a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Investigate a science topic in conjunction with other investigators to develop a deep understanding of a research problem.

Audience: Undergraduate

2. Identify a research problem and develop a series of experiments to test a hypothesis related to the problem under investigation.

Audience: Undergraduate

3. Carry out designed experiments and collect data related to the research problem under investigation.

Audience: Undergraduate

4. Analyze the results of experiments and use them to test the validity of the developed hypothesis.

Audience: Undergraduate

5. Communicate the results of investigations via written and/or oral means to an appropriate audience.

Audience: Undergraduate

### **MICROBIO 710 – MICROBIAL SYMBIOSIS**

3 credits.

Covers the themes and diversity of plant and animal associations with microbes with an emphasis on beneficial relationships. Examples will be drawn from recent literature.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MICROBIO 731 – SEMINAR**

1 credit.

Reviews of microbiological subjects, and reports on research work.

**Requisites:** Declared in Microbiology doctoral program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MICROBIO 810 – CURRENT ISSUES IN MICROBIOLOGY**

1 credit.

Explores the diversity of scientific topics comprising the field of contemporary microbiology.

**Requisites:** Declared in Microbiology doctoral program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MICROBIO 811 – ADVANCED PROBLEMS IN MICROBIOLOGY**

1 credit.

Explores the diversity of scientific topics comprising the field of contemporary microbiology.

**Requisites:** Declared in Microbiology doctoral program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MICROBIO 875 – SPECIAL TOPICS**

1-4 credits.

Specialized subject matter of current interest to graduate students.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MICROBIO 899 – INDEPENDENT STUDY**

1-9 credits.

Independent study or research under the direction of a faculty member in the area of biological science.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify a research problem and develop a series of experiments to test a hypothesis related to the problem under investigation.

Audience: Graduate

2. Carry out designed experiments and collect data related to the research problem under investigation.

Audience: Graduate

3. Analyze the results of experiments and use them to test the validity of the developed hypothesis.

Audience: Graduate

4. Communicate the results of investigations via written and/or oral means to an appropriate audience.

Audience: Graduate

### **MICROBIO/BIOCHEM 917 – REGULATION OF GENE EXPRESSION (ADVANCED SEMINAR)**

1 credit.

Analysis of recent literature in topics related to prokaryotic and eukaryotic gene regulation, including regulation of transcription, translation, and genome organization.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Discuss state-of-the-art research in gene expression and regulation

Audience: Graduate

2. Communicate and critically evaluate experimental results

Audience: Graduate

### **MICROBIO 990 – RESEARCH**

1-9 credits.

Full lab and literature review of a problem in microbiology. Leads to preparation of thesis and publication.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

## **MILITARY SCIENCE (MIL SCI)**

### **MIL SCI 101 – FOUNDATIONS OF OFFICERSHIP**

1 credit.

Introduction to life as a commissioned officer. Establishes fundamentals of leadership, Army values and skills required of a successful Army officer.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MIL SCI 102 – BASIC LEADERSHIP**

1 credit.

Establishes foundation of basic leadership fundamentals such as problem solving, communications, briefing and effective writing, goal setting, techniques for improving listening and speaking skills and an introduction to counseling.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MIL SCI 110 – LEADERSHIP LAB 1A**

1 credit.

Develop proficiency with hands-on experience in a field environment. Specific activities include military navigation, employment of communications and weapon systems, rappelling, and small unit tactics.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MIL SCI 111 – LEADERSHIP LAB 1B**

1 credit.

Continuation of MIL SCI 110

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MIL SCI 201 – INDIVIDUAL LEADERSHIP STUDIES**

2 credits.

Identify successful leadership characteristics through observation of others and self through experiential learning exercises. Record observed traits (good and bad) in a dimensional leadership journal and discuss observations in small group settings. Learn map reading and land navigation skills, including conversion of magnetic and grid azimuths and resection.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MIL SCI 202 – LEADERSHIP AND TEAMWORK**

2 credits.

Study examines how to build successful teams, various methods for influencing action, effective communication in setting and achieving goals, the importance of timing the decision, creativity in the problem solving process and obtaining team buy-in through immediate feedback.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MIL SCI 210 – LEADERSHIP LAB 2A**

1 credit.

Implement small unit tactical training, learn Army methods for approaching and reacting to tactical situations. Covers land navigation skills, information processing skills, and Army leadership principles.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MIL SCI 211 – LEADERSHIP LAB 2B**

1 credit.

Army organization and planning methods, and the opportunity to practice and implement these methods in practical exercises.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MIL SCI 301 – LEADERSHIP AND PROBLEM SOLVING**

2 credits.

Conduct self-assessment of leadership style, develop personal fitness regimen, and learn to plan and conduct individual/small unit tactical training while testing reasoning and problem solving techniques. Receive direct feedback on leadership abilities.

**Requisites:** Consent of instructor

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MIL SCI 302 – LEADERSHIP AND ETHICS**

2 credits.

Examines the role communications, values and ethics play in effective leadership. Topics include ethical decision-making, consideration of others and survey Army leadership doctrine. Emphasis is on improving oral and written communication abilities, and increasing small unit tactics skills.

**Requisites:** Consent of instructor**Repeatable for Credit:** No**Last Taught:** Spring 2025**MIL SCI 310 – LEADERSHIP LAB 3A**

1 credit.

Small unit tactical troop leading procedures are taught and practiced. Hand signals, operations orders, and land navigation skills are perfected for preparation for national advanced leadership camp.

**Requisites:** Consent of instructor**Repeatable for Credit:** No**Last Taught:** Fall 2024**MIL SCI 311 – LEADERSHIP LAB 3B**

1 credit.

Learn in-depth leadership procedures, and practice the Army planning process for groups of 30 personnel. Learn how to conduct Army training and classes in order to teach other cadets based on prior knowledge.

**Requisites:** Consent of instructor**Repeatable for Credit:** No**Last Taught:** Spring 2025**MIL SCI 401 – LEADERSHIP AND MANAGEMENT**

2 credits.

Develop proficiency in planning and executing complex operations, functioning as a member of a staff, and mentoring subordinates. Explore training management methods of effective staff collaboration, and developmental counseling techniques.

**Requisites:** Consent of instructor**Repeatable for Credit:** No**Last Taught:** Fall 2024**MIL SCI 402 – OFFICERSHIP**

2 credits.

Includes fundamentals of military law, administrative and logistics procedures and practical exercises on establishing an ethical command climate. Presentations, briefings and leadership positions are used to train and evaluate.

**Requisites:** Consent of instructor**Repeatable for Credit:** No**Last Taught:** Spring 2025**MIL SCI 410 – LEADERSHIP LAB 4A**

1 credit.

Learn how to allocate resources and time to adequately train large groups of people. Practice creating training plans, and bringing together all of the elements necessary to complete training. Opportunities to aid in the evaluation of others leadership, which gives them the ability to better review their own leadership.

**Requisites:** Consent of instructor**Repeatable for Credit:** No**Last Taught:** Fall 2024**MIL SCI 411 – LEADERSHIP LAB 4B**

1 credit.

Learn the final elements of an Army officer's job. Mentor and plan training, as well as monitor the effectiveness of others. Learn fine points of improving others performance and getting the most out of subordinates.

**Requisites:** Consent of instructor**Repeatable for Credit:** No**Last Taught:** Spring 2025

## MOLECULAR AND ENVIRONMENTAL TOXICOLOGY CENTER (M&ENVTOX)

**M&ENVTOX/ONCOLOGY/PHM SCI/PHMCOL-M/POP HLTH 625 – TOXICOLOGY I**

3 credits.

Basic principles of toxicology and biochemical mechanisms of toxicity in mammalian species and man. Correlation between morphological and functional changes caused by toxicants in different organs of the body.

**Requisites:** (BIOCHEM 501 or 508) and (ANAT&PHY 335, 435, or (BIOCORE 485 and 486)) and PATH 404; or graduate/professional standing**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Discuss the physiology and pathology of toxicology, understanding the basic fundamentals of toxicology and toxic agents

Audience: Both Grad &amp; Undergrad

2. Demonstrate metabolism and breakdown of toxicants using a given dataset

Audience: Both Grad &amp; Undergrad

3. Recognize various experimental models to obtain scientific results  
Audience: Both Grad & Undergrad

4. Implement knowledge to design experiments applicable to one's own research

Audience: Both Grad &amp; Undergrad

5. Critique an example of toxicology in media and develop a presentation of this example

Audience: Both Grad &amp; Undergrad

6. Explore new areas to assist in career development via journal club  
Audience: Graduate

### **M&ENVTOX/PATH/PHM SCI/PHMCOL-M/POP HLTH 626 – TOXICOLOGY II**

3 credits.

Survey of the basic methods and fundamental biochemical mechanisms of toxicity. Toxicity in mammalian organ systems, techniques for evaluating toxicity, as well as mechanisms of species specificity, and environmental interactions (with toxicant examples) are presented.

**Requisites:** POP HLTH/M&ENVTOX/ONCOLOGY/PHM SCI/PHMCOL-M 625

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain and identify the effects of toxicants on specific organs within the human body

Audience: Both Grad & Undergrad

2. Demonstrate metabolism and reactions of toxicants within organ systems using a given dataset

Audience: Both Grad & Undergrad

3. Classify different means of risk assessment and the conceptual rationale behind these methods

Audience: Both Grad & Undergrad

4. Implement knowledge to design experiments applicable to one's own research

Audience: Both Grad & Undergrad

5. Relate specific organ concepts with conceptual examples from M&ENVTOX 625 to enhance scientific understanding

Audience: Undergraduate

6. Appraise concepts to research to identify future research concepts.

Audience: Graduate

### **M&ENVTOX/CIV ENGR/SOIL SCI 631 – TOXICANTS IN THE ENVIRONMENT: SOURCES, DISTRIBUTION, FATE, & EFFECTS**

3 credits.

Nature, sources, distribution, and fate of contaminants in air, water, soil, and food and potential for harmful exposure.

**Requisites:** (CHEM 104, 109, or 116) and (MATH 211, 217, or 221) and (PHYSICS 104, 202, 208, or 248), or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe how the physicochemical properties of an organic chemical and equilibrium and kinetic principles influence the distribution of the chemical in the environment

Audience: Both Grad & Undergrad

2. Estimate the physico-chemical properties of organic compounds using linear free energy relationships

Audience: Both Grad & Undergrad

3. Predict the behavior of hazardous organic chemicals in the environment

Audience: Both Grad & Undergrad

4. Derive and use equilibrium and kinetic box models for determining the fate of organic pollutants in the environment

Audience: Graduate

### **M&ENVTOX 699 – SPECIAL PROBLEMS**

1-3 credits.

Directed study projects as arranged with instructor.

**Requisites:** Consent of instructor

**Course Designation:** Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2022

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Undergraduate

2. Read and effectively search scientific literature

Audience: Undergraduate

3. Develop critical, analytical, and independent thinking skills

Audience: Undergraduate

**M&ENVTOX/POP HLTH 789 – PRINCIPLES OF ENVIRONMENTAL HEALTH: A SYSTEMS THINKING APPROACH**

3 credits.

Provides an overview of the field of environmental health, using a systems thinking approach. Systems thinking recognizes that environmental health problem solving is complex and that solutions in one area may have positive or negative impacts on other areas. An introduction to the history of environmental health within the field of public health from the local to the federal and global level. Introduces multiple disciplines, methods and approaches to numerous environmental health topics. Includes introduction to methods and tools necessary for assessing human health risks from a variety of environmental hazards and exposures found in air, land, and water with a focus on physical and chemical risks. Additional details regarding specific hazard, exposure and health outcome data and their relationship to environmental health risk assessment, environmental health decision-making and management form a public health practice perspective will be discussed.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2019**Learning Outcomes:** 1. Summarize the history of environmental health sciences as a crucial aspect of public health and environmental justice.

Audience: Graduate

2. Discuss and predict why a systems thinking approach is appropriate for addressing environmental health problems and environmental justice.

Audience: Graduate

3. Explain differences in types and classes of environmental hazards (e.g., metals), their sources (e.g. air pollution, land use), how people are exposed and health effects.

Audience: Graduate

4. Understand core principles in toxicology (e.g., toxicokinetics, dose-response) pertain to the environmental health sciences.

Audience: Graduate

5. Analyze an environmental health issue using an environmental health sciences and systems thinking framework and make policy recommendations.

Audience: Graduate

**M&ENVTOX 800 – SEMINAR**

1 credit.

Current research in environmental toxicology and pathology and other topics of interest and importance to environmental toxicologists.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Design, develop, and present research to audiences of peers within and outside of research area.

Audience: Graduate

2. Evaluate data and appraise presentations.

Audience: Graduate

3. Recognize opportunities in research tools and professional development to further career trajectory.

Audience: Graduate

4. Synthesize data from others to apply towards own research.

Audience: Graduate

### **M&ENVTOX 801 – SCIENTIFIC COMMUNICATION IN MOLECULAR & ENVIRONMENTAL TOXICOLOGY**

2 credits.

Provides an overview of scientific communication; specifically, students will be exposed to the various methods of communicating their science including articles, proposals, presentations / lectures, and posters. Strategies will demonstrate best practices for each method and enable students to critically define what sets apart good examples from poor. Classroom discussions allow for comprehension of these means. Assignments are designed to familiarize the students with these methods. Students will have classroom instruction and the opportunity to learn from peer mentors as well as laboratory directors on different preferences and approaches to science communication.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify best practices when communicating science in multiple forms

Audience: Graduate

2. Synthesize data to create a coherent hypothesis for research question

Audience: Graduate

3. Analyze sources and approaches necessary for a scientific literature review

Audience: Graduate

4. Integrate knowledge to critique a scientific publication that is under review

Audience: Graduate

5. Produce preliminary sections for use in a scientific manuscript

Audience: Graduate

6. Evaluate how to critique scientific proposals and compose meaningful feedback

Audience: Graduate

7. Produce a document for use as a preliminary exam and / or fellowship proposal

Audience: Graduate

8. Organize preliminary data generated in mentored laboratory into a research poster that is both appealing and informative

Audience: Graduate

9. Create a PowerPoint presentation, which will teach students and classmates about a scientific tool or otherwise professional development topic, whose knowledge will be beneficial to students as they advance their careers

Audience: Graduate

10. Produce a Teaching Philosophy statement to start a professional teaching portfolio

Audience: Graduate

### **M&ENVTOX 990 – RESEARCH**

1-9 credits.

Independent research and writing for graduate students under the supervision of a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Exhibit a broad understanding of general toxicology principles

Audience: Graduate

2. Conduct independent research using a variety of approaches

Audience: Graduate

3. Think critically to address research challenges

Audience: Graduate

4. Exhibit and foster professional and ethical conduct in their research

Audience: Graduate

5. Collaborate with other investigators within or outside of the thesis lab

Audience: Graduate

## **MOLECULAR BIOLOGY (MOL BIOL)**

### **MOL BIOL 681 – SENIOR HONORS THESIS**

3 credits.

Individual mentored study for seniors completing theses for Honors in the Major as arranged with a faculty member. Must be declared in an honors program.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

### **MOL BIOL 682 – SENIOR HONORS THESIS**

3 credits.

Individual mentored study for seniors completing theses for Honors in the Major as arranged with a faculty member. Must have completed MOL BIO 681 and declared in an honors program.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MOL BIOL 686 – SENIOR HONORS SEMINAR IN MOLECULAR BIOLOGY**

1 credit.

A seminar on the origins, present frontiers, and future prospects of molecular biology.

**Requisites:** Senior standing and declared in an Honors program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MOL BIOL 691 – SENIOR THESIS**

3 credits.

Individual mentored study for seniors completing theses, as arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MOL BIOL 692 – SENIOR THESIS**

3 credits.

Individual mentored study for seniors completing theses, as arranged with a faculty member. Must have completed MOL BIOL 691.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MOL BIOL 699 – DIRECTED STUDIES IN MOLECULAR BIOLOGY**

1-4 credits.

Individual research projects conducted under professorial supervision.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC (MUSIC)****MUSIC 34 – STUDY ABROAD: MUSIC PERFORMANCE ENSEMBLE**

1 credit.

A music performing ensemble course taken in a UW-Madison resident study abroad program. Enrollment in a UW-Madison resident study abroad program

**Requisites:** None

**Repeatable for Credit:** Yes, unlimited number of completions

**MUSIC 40 – WIND ENSEMBLE**

1 credit.

Rehearsal and performance of music from wind ensemble and band literature. Audition required.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 41 – CONCERT BAND**

1 credit.

Rehearsal and performance of music from wind ensemble and band literature. Students will audition for placement prior to the beginning of the semester

**Requisites:** Undergraduate students only (excludes Grad, Pharm, Law, Med, Vet Med, Guest, Special students)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 42 – VARSITY BAND**

1 credit.

Rehearsal and performance of music for athletic events. Audition required.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 43 – UNIVERSITY BAND**

1 credit.

Exploration and performance of standard band literature.

**Requisites:** None

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Exhibit accurate individual, sectional, and ensemble skills and advanced instrumental techniques while performing a varied repertoire of music

Audience: Undergraduate

2. Perform expressively a varied repertoire of music

Audience: Undergraduate

3. Utilize standard musical terminology to describe musical elements

Audience: Undergraduate

4. Utilize problem-solving skills to identify and correct problems within a rehearsal setting

Audience: Undergraduate

**MUSIC 50 – CONCERT CHOIR**

1 credit.

Choral vocal training, study and performance of concert literature. Audition required.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 52 – TREBLE CHOIR**

1 credit.

Explore, rehearse, study, and perform choral repertoire for treble voices.

**Requisites:** Consent of instructor**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Demonstrate musicianship through active contribution and participation in rehearsals and performances

Audience: Undergraduate

2. Demonstrate thorough preparation for rehearsals and performances

Audience: Undergraduate

**MUSIC 53 – CHORAL UNION**

1 credit.

Choral vocal training, study and performance. Audition required.

**Requisites:** Consent of instructor**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2023**MUSIC 55 – MASTERS' SINGERS**

1 credit.

Choral vocal training, study and performance of concert literature.

Students will audition for placement prior to the beginning of the semester

**Requisites:** Undergraduate students only (excludes Grad, Pharm, Law, Med, Vet Med, Guest, Special students)**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2020**MUSIC 56 – CHORALE**

1 credit.

Choral vocal training, study and performance of concert literature.

Audition required.

**Requisites:** Consent of instructor**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUSIC 58 – MADRIGAL SINGERS**

1 credit.

Ensemble specializing in 16th- and 17th-century secular music. Audition required.

**Requisites:** Consent of instructor**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2023**MUSIC 59 – UNIVERSITY CHORUS**

1 credit.

Exploration and performance of standard choral literature.

**Requisites:** None**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUSIC 60 – ALL-UNIVERSITY STRING ORCHESTRA**

1 credit.

Rehearsal and study of string orchestra literature at the introductory level.

**Requisites:** None**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUSIC 62 – UNIVERSITY SYMPHONY ORCHESTRA**

1 credit.

Playing and public performance of music from symphonic repertoire.

Audition required.

**Requisites:** Consent of instructor**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUSIC 101 – THE MUSICAL EXPERIENCE**

3 credits.

Musical genres -- songs, opera and musical theater, chamber and orchestral music, and jazz -- in the context of social and cultural history.

**Requisites:** None**Course Designation:** Breadth - Humanities

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025

**MUSIC 102 – JAZZ IN 20TH-CENTURY AMERICA**

3 credits.

Examines cultural influences on the development of jazz. Explores historical and ethnographic works by scholars in ethnomusicology, history, anthropology, and communication in order to understand cultural influences of traditional and contemporary genres of jazz. Major topics include syncretism, nationalism, modernity, ethnicity, gender, colonialism, and globalization of modern America. Emphasis on cross-cultural understanding and interdisciplinarity in jazz performance.

**Requisites:** None**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Humanities

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recognize how past racial, gender and ethnic discrimination have constrained economic and artistic opportunities for jazz musicians. Identify how musicians challenged these discriminations to shape contemporary musical practices.

Audience: Undergraduate

2. Explain how different musical practices developed by different African diasporic communities since 1900 have contributed to shaping the sound of jazz.

Audience: Undergraduate

3. Demonstrate understanding of different musical practices developed by different African diasporic communities since 1900.

Audience: Undergraduate

4. Develop critical listening skills and the ability to evaluate historically significant recordings.

Audience: Undergraduate

5. Explain how political movements in America shaped critical responses to jazz music and how jazz musicians reacted to contemporary political events.

Audience: Undergraduate

6. Identify how race has shaped the political economy of music in the United States.

Audience: Undergraduate

7. Recognize how the evolution of musical technologies have shaped the aesthetic development of music.

Audience: Undergraduate

8. Develop tools to conduct ethnographic research on jazz-influenced musical phenomena.

Audience: Undergraduate

9. Practice forming opinions and creating arguments based on scholarship, and communicating opinions and arguments effectively.

Audience: Undergraduate

**MUSIC/FOLKLORE 103 – INTRODUCTION TO MUSIC CULTURES OF THE WORLD**

3 credits.

An introductory ethnomusicology course providing a variety of ways to approach musics typically not covered in music history courses. Active engagement with these musics within their larger world contexts.

**Requisites:** None**Course Designation:** Breadth - Humanities

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Engage with various musics on students' own terms

Audience: Undergraduate

2. Speak and write clearly about what is heard.

Audience: Undergraduate

3. Recognize and contextualize the several genres of music that represent each cultural area selected for study in the course

Audience: Undergraduate

4. Think rigorously about how positionality, including your own, affects listening and knowledge practices

Audience: Undergraduate

5. Have learned something about yourself -- strengths, weaknesses, biases, desires, tendencies, curiosities

Audience: Undergraduate

**MUSIC 104 – STUDY ABROAD: ELEMENTARY MUSIC APPRECIATION/THEORY/HISTORY**

1-3 credits.

An elementary-level academic course in music taken in a UW-Madison resident study abroad program. Course does not require any previous background in music. Enrollment in a UW-Madison resident study abroad program

**Requisites:** None**Course Designation:** Breadth - Humanities

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions

### **MUSIC 105 – STORYTELLING ON STAGE: INTRODUCTION TO MUSICAL THEATER AND OPERA**

3 credits.

Introduction to musical theater and opera in Europe and America, with emphasis on the ways creators tell their stories through the interaction of music and drama. Topics include the histories and formations of the genres and their relationships to culture and society; principal creators and performers; distinctive features of representative works; relationships to film and other media; and treatments of race, class, gender, and other issues in selected examples of each genre.

**Requisites:** None

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**Learning Outcomes:** 1. observe the interdependent relationship between musical composers, performers, and audiences that has shaped the histories of musical theater and opera

Audience: Undergraduate

2. promote critical thinking skills by linking course content with personal experiences and observations

Audience: Undergraduate

3. strengthen communication skills through written assignments and discussion

Audience: Undergraduate

4. identify representative passages from works studied

Audience: Undergraduate

5. understand the historical and social conditions under which opera and musical theater was produced in different times and places

Audience: Undergraduate

6. acquire vocabulary for identifying and describing features of selected works

Audience: Undergraduate

### **MUSIC 106 – THE SYMPHONY**

3 credits.

Orchestral music from Haydn to present, relation to other arts.

**Requisites:** None

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

### **MUSIC 107 – MUSIC & FILM**

3 credits.

A survey of film music by the major film composers. Will include study of film scores by, among others, Alfred Newman, Max Steiner, Bernard Herrmann, and Ennio Morricone, as well as a discussion of current trends and film composers. In addition, there will be discussion of the contributions of composers such as Aaron Copland, Serge Prokofiev and Leonard Bernstein. The techniques and styles of film music will be explored through lectures, required listening, readings and viewing of relevant films.

**Requisites:** None

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MUSIC 108 – MUSIC AND TECHNOLOGY FROM EDISON TO THE PRESENT**

3 credits.

How has modern technology shaped the composition, performance, and reception of music? In turn, how has music influenced technology? And what sorts of anxieties arose from these cultural currents? Evaluate the changing relationships between music and technology from the late Romantic era to the present day. Considering broader political, cultural, and aesthetic contexts, explore both popular and art music alongside important developments in instrument design, compositional techniques, media, and recording. Consider what it means for something to be considered a "technology" and the social, cultural, and environmental ramifications therein. Musicians to be studied include Bela Bartok, Karlheinz Stockhausen, Gyorgy Ligeti, Donna Summer, Grandmaster Flash, Afrika Bambaataa, Beyonce, and more. Gain a better understanding of the cultural and social constructions of technologies like the wax cylinder, radio, gramophone, microphone, synthesizer, and internet.

**Requisites:** None

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Describe what you hear in music using basic technical terminology.

Audience: Undergraduate

2. Recognize and contextualize several genres of music.

Audience: Undergraduate

3. Discuss musical meaning in relation to its social, political, and cultural contexts.

Audience: Undergraduate

4. Examine your relationship to music and sound in general.

Audience: Undergraduate

5. Express understanding of and appreciation for the ways that music, sound, and technology interact in our daily lives.

Audience: Undergraduate

### **MUSIC 113 – MUSIC IN PERFORMANCE**

1 credit.

Descriptive lectures on chamber music with performances by instructor and others.

**Requisites:** None

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, for 3 number of completions

**Last Taught:** Summer 2025

### **MUSIC 121 – MUSICA PRACTICA 1**

3 credits.

Strategies for composing, understanding, and writing about music.

**Requisites:** Declared in Music, Music: Performance or Music: Education

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MUSIC 122 – MUSICA PRACTICA 2**

3 credits.

Continuation of strategies for composing, understanding, and writing about music.

**Requisites:** MUSIC 121 and 171 and concurrent enrollment in MUSIC 172

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MUSIC 151 – BASIC CONCEPTS OF MUSIC THEORY**

3 credits.

Basic tools of music theory and compositional forms. Explores development of music through general survey of musical styles. Practical application of concepts includes listening maps and simple composition projects. Includes performance opportunities in simulated real world settings.

**Requisites:** None

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

### **MUSIC 171 – MUSICA PRACTICA: AURAL SKILLS 1**

1 credit.

Introductory instruction in aural skills.

**Requisites:** Concurrent enrollment in MUSIC 121

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MUSIC 172 – MUSICA PRACTICA: AURAL SKILLS 2**

1 credit.

Continuation of introductory instruction in aural skills.

**Requisites:** MUSIC 171 and concurrent enrollment in MUSIC 122

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MUSIC 201 – MUSIC AND SOCIETY**

2 credits.

Music during defined historical periods with emphasis on political and social contexts. May concentrate on a specific era or geographical area.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2019

**MUSIC 202 – DELTA BLUES**

3 credits.

Traces the history of the blues in America's racial history. Begins by examining the living conditions that produced the blues in rural Mississippi (sharecropping, the cotton industry, the Great Flood of 1927). Continues by detailing the emergence of blues in the early recording industry (Paramount, Okeh), including the earliest examples (W.C. Handy, Mamie Smith), as well as the singers emerging in the 1920s (Blind Lemon Jefferson, Charley Patton, Robert Johnson). Follows migrations northward to Memphis (jug bands) and Chicago (electric blues), tracing the emerging importance of radio and live performance (King Biscuit Time, WDIA, the Chittlin' Circuit), living conditions in Chicago (Maxwell Street). Tracks early marketing of blues to white audiences (Josh White, Lead Belly). Ends with the reemergence of the blues as '60s folk music (Son House, Sonny Boy Williamson II) and British Invasion (Yardbirds). Supplemented with extensive musical selections, documentary footage of interviews.

**Requisites:** None**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Humanities

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2021**Learning Outcomes:** 1. Identify representative styles, performers, and formal patterns relating to Delta blues.

Audience: Undergraduate

2. Identify major historical developments in the evolution of Delta blues.

Audience: Undergraduate

3. Understand blues performers in terms of their personal and social lives, and distinguish between these individual lives and the mythologizing narratives offered in their place.

Audience: Undergraduate

4. Describe and explain elements of blues and blues history verbally.

Audience: Undergraduate

5. Construct knowledge about musical repertoires by researching them online and directly listening to them.

Audience: Undergraduate

**MUSIC 203 – AMERICAN ETHNICITIES AND POPULAR SONG**

3 credits.

Examination of the role played by popular song in the formation of ethnic and racial identities in the United States with particular emphasis placed on both music's role in the perpetuation of racism and its use as a form of protest and anti-racist activism.

**Requisites:** None**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Humanities

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2022**Learning Outcomes:** 1. define race and ethnicity and commonly used terms and concepts related to them

Audience: Undergraduate

2. recognize ethnic and racial stereotypes and caricatures and analyze the effects of their use in American popular song

Audience: Undergraduate

3. explain the cultural power inherent in names and the act of naming and the use of popular song to amplify or diminish that power with respect to racially defined groups

Audience: Undergraduate

4. identify ways in which popular song contributes to the creation and maintenance of racially defined American spaces and places

Audience: Undergraduate

5. describe and critique the process of cultural appropriation in American popular music

Audience: Undergraduate

6. recall key events in the history of American protest music and apply knowledge of that history to the evaluation of current anti-racism initiatives

Audience: Undergraduate

**MUSIC 204 – STUDY ABROAD: INTERMEDIATE MUSIC THEORY OR HISTORY**

1-3 credits.

An intermediate-level academic course in music taken in a UW-Madison resident study abroad program. Course must be taught at an intermediate level as determined by the School of Music based on prerequisites and/or course syllabus. Enrollment in a UW-Madison resident study abroad program

**Requisites:** None**Course Designation:** Breadth - Humanities

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No

### **MUSIC 205 – THE BIG BANDS**

2 credits.

A study of significant dance orchestras from 1920 to 1950: development of style and influence on popular musical taste.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2018

### **MUSIC 206 – THE LEGENDARY PERFORMERS**

2 credits.

A survey of pioneer performers who influenced popular musical taste from 1920 to 1950.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

### **MUSIC 211 – SURVEY OF THE HISTORY OF WESTERN MUSIC**

3 credits.

Introduction to development of music in the European tradition, before 1750.

**Requisites:** MUSIC 122 and 172

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MUSIC 212 – SURVEY OF THE HISTORY OF WESTERN MUSIC**

3 credits.

Introduction to development of music in the European tradition, 1750 to the present.

**Requisites:** MUSIC 122 and 172

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe principal repertory in the western music canon for the period from 1750 up to about 1960.

Audience: Undergraduate

2. Differentiate the principal musical styles in the western music canon for the period from 1750 up to about 1960.

Audience: Undergraduate

3. Articulate and apply key terms related to the western music canon for the period from 1750 up to about 1960.

Audience: Undergraduate

4. Recognize and identify the large-scale historical trends for the period from 1750 up to about 1960.

Audience: Undergraduate

### **MUSIC 221 – MUSICA PRACTICA 3**

3 credits.

Advanced strategies for composing, understanding, and writing about music.

**Requisites:** MUSIC 122 and 172

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MUSIC 222 – MUSICA PRACTICA 4**

3 credits.

Advanced strategies for composing, understanding, and writing about music.

**Requisites:** MUSIC 221 and concurrent enrollment in MUSIC 272

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUSIC 229 – JAZZ THEORY & COMPOSITION**

3 credits.

Introduction to the applied theory of functional tonal and modal jazz harmony; analysis of song forms from the standard jazz repertoire; study of reharmonization techniques, chord substitution, and types of chord voicings; principles of melodic writing and motivic development, jazz counterpoint, and voice-leading considerations; and writing for common instruments in jazz ensembles. Students will analyze compositions from the standard jazz repertoire and apply the principles studied to create their own compositions for small jazz ensemble.

**Requisites:** MUSIC 122 and 172**Course Designation:** Breadth - Humanities

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**MUSIC 236 – BASCOM COURSE**

3 credits.

A low-enrollment course developing skills in critical reading, logical thinking, use of evidence, and use of library resources. Emphasis on writing in the conventions of specific fields.

**Requisites:** Satisfied Communications A requirement**Course Designation:** Gen Ed - Communication Part B

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2022**MUSIC 240 – INTERPLAY BETWEEN MUSIC, ART, AND SOCIETY**

3 credits.

Explore the relationships between the arts as they intersect with aspects of society, historically and in the present day, through various visual, auditory, and text-based expressive forms. Examine personal life experiences and ideas along with current issues related to music and art, and practice self-expression through the arts. No previous experience in any art form is necessary.

**Requisites:** None**Course Designation:** Breadth - Humanities

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Discover and/or explore individual artistic and musical abilities

Audience: Undergraduate

2. Transform from passive to active music listener and from consumer to creator of art

Audience: Undergraduate

3. Explore societal issues and their relationship to the arts through written reflection assignments

Audience: Undergraduate

4. Examine the roles that the arts play in society and relate that to their own lives and communities.

Audience: Undergraduate

5. Create artistic works individually, and in groups, in order to foster curiosity, empathy, and community

Audience: Undergraduate

**MUSIC 252 – INTRODUCTION TO CONDUCTING AND PEDAGOGY**

2 credits.

Introduction to the basic elements in conducting. Students will learn elementary conducting skills including technique, score study, rehearsal preparation, rehearsal structure, private studio construction, teaching techniques, and professional marketing.

**Requisites:** MUSIC 212, 221, and 271**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025

### **MUSIC 253 – CONDUCTING**

2 credits.

Conducting techniques, emphasis on practical application to vocal and instrumental groups.

**Requisites:** MUSIC 212, 221, and 271

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain the function of conducting and the various roles of the conductor throughout and rehearsal/performance process.

Audience: Undergraduate

2. Demonstrate the basic conducting patterns/gestures associated with the range of musical meters and styles.

Audience: Undergraduate

3. Demonstrate the alterations to the conducting gestures needed to show/change dynamics, tempo, articulations, accents, and phrasing.

Audience: Undergraduate

4. Demonstrate the ability to initiate a proper breath, to start or stop a musical phrase, show internal cues and cut- offs, and choose and conduct the three fermata types.

Audience: Undergraduate

5. Exhibit a developing mastery over use of the left hand (or right hand) in conducting, choosing when and how best to employ it.

Audience: Undergraduate

6. Determine the range of possible conducting choices for any given piece of music.

Audience: Undergraduate

7. Analyze a piece of music, prepare a score study, and determine how this would affect the rehearsing and performance of that piece.

Audience: Undergraduate

### **MUSIC 254 – CONDUCTING**

2 credits.

Continuation of conducting techniques, emphasis on practical application to vocal and instrumental groups.

**Requisites:** MUSIC 253

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop language to communicate musical ideas to an ensemble

Audience: Undergraduate

2. Demonstrate effective use of Cues

Audience: Undergraduate

3. Demonstrate effective use of Dynamics

Audience: Undergraduate

4. Demonstrate effective use of Fermatas & releases

Audience: Undergraduate

5. Demonstrate effective use of Subdivisions

Audience: Undergraduate

6. Demonstrate effective use of Accelerando and ritardando

Audience: Undergraduate

7. Demonstrate effective use of Asymmetrical meter

Audience: Undergraduate

8. Demonstrate effective use of Mixed-meter

Audience: Undergraduate

9. Demonstrate skill with Hand independence

Audience: Undergraduate

### **MUSIC 256 – UNIVERSITY OPERA**

1-2 credits.

Opera role: preparation, rehearsal and performance in University opera production. Contact School of Music for audition information

**Requisites:** Consent of instructor

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 257 – OPERA WORKSHOP**

2 credits.

Performance of scenes from standard operas, including singing, accompanying, and dramatic action; instruction in voice projection, posture, and gesture; problems of staging, lighting, costuming, and scenery. Contact School of Music for audition information

**Requisites:** Consent of instructor

**Course Designation:** Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 260 – GLOBAL HAND DRUMMING ENSEMBLE: SURVEY OF SELECTED GLOBAL HAND DRUMMING TRADITIONS**

1 credit.

Exploration of a variety of global drumming traditions culminating in group performance opportunities. Learn specific techniques and rhythms as well as skills required to facilitate drum circles for all levels of players.

**Requisites:** None

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Study and perform music from various global cultures.

Audience: Undergraduate

2. Learn techniques and information required to facilitate community and school drumming groups.

Audience: Undergraduate

3. Illustrate competency in basic procedures for tuning and maintaining the instruments required for such an ensemble.

Audience: Undergraduate

4. Demonstrate a discerning ear and requisite skills for musical comparisons and analysis.

Audience: Undergraduate

5. Recognize nuances of musical style and rhythm in the context of drumming.

Audience: Undergraduate

**MUSIC 262 – JAZZ ENSEMBLE**

1 credit.

Assignments in performing ensemble literature. Audition and instructor consent required for students enrolling the first time

**Requisites:** MUSIC 262

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 264 – ENSEMBLE: WISCONSIN SINGERS**

1 credit.

The training of singers and musicians for show choir. Audition and instructor consent required for students enrolling the first time

**Requisites:** MUSIC 264

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2019

**MUSIC 265 – ENSEMBLE-WOODWIND**

1 credit.

Assignments in performing ensemble literature. Audition and instructor consent required for students enrolling the first time

**Requisites:** MUSIC 265

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 266 – RESISTANCE MUSIC ENSEMBLE**

1 credit.

Assignments in performing ensemble literature. Explore a variety of musical styles created from social movements and generational and cultural identity, through rehearsals and performance. Styles to be covered, studied, and performed include, but are not limited to Hip Hop, Reggae, Jazz, and Cumbia. Audition and instructor consent required for students enrolling the first time

**Requisites:** MUSIC 266

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Rehearse and competently perform in multiple live settings repertoire composed and recorded by marginalized groups and inspired by resistance to its given hegemony

Audience: Undergraduate

2. Perform music composed and/or recorded by the artist(s) studied with technical accuracy, stylistic authenticity and individual creativity

Audience: Undergraduate

3. Contextualize the repertoire in its culture and history

Audience: Undergraduate

4. Internalize the rhythmic concepts associated by the indicated musical style

Audience: Undergraduate

5. Make continual improvements in the areas of individual tone production, music reading, and improvisation, and develop and enhance ensemble communication and interaction

Audience: Undergraduate

**MUSIC 267 – ENSEMBLE-BRASS**

1 credit.

Assignments in performing ensemble literature. Audition and instructor consent required for students enrolling the first time

**Requisites:** MUSIC 267

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 268 – ENSEMBLE-PERCUSSION**

1 credit.

Assignments in performing ensemble literature. Audition and instructor consent required for students enrolling the first time

**Requisites:** MUSIC 268

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 269 – ENSEMBLE-STRING**

1 credit.

Assignments in performing ensemble literature. Audition and instructor consent required for students enrolling the first time

**Requisites:** MUSIC 269

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 270 – ENSEMBLE-GUITAR**

1 credit.

Rehearsal, coaching and preparing guitar literature for performance of duos, trios, and quartets. Audition and instructor consent required for students enrolling the first time. Musicians other than guitarists are permitted to enroll and be incorporated into the ensembles.

**Requisites:** MUSIC 270

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 271 – MUSICA PRACTICA: AURAL SKILLS 3**

1 credit.

Intermediate aural skills instruction.

**Requisites:** MUSIC 122 and concurrent enrollment in MUSIC 221

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MUSIC 272 – MUSICA PRACTICA: AURAL SKILLS 4**

1 credit.

Intermediate aural skills instruction.

**Requisites:** MUSIC 221 and concurrent enrollment in MUSIC 222

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUSIC 297 – SPECIAL TOPICS IN MUSIC**

1-3 credits.

Exploration of wide-ranging topics in music history, music performance, music theory or music education.

**Requisites:** None

**Course Designation:** Breadth - Humanities

Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop and apply foundational concepts of musical study in performance, theory, history, or pedagogy.

Audience: Undergraduate

2. Develop the ability to learn independently and to integrate knowledge across domains of research and applied studies.

Audience: Undergraduate

3. Communicate musical ideas and concepts verbally, in writing, or through public performance.

Audience: Undergraduate

4. Develop skill in working collaboratively and professionally in applied and academic settings.

Audience: Undergraduate

**MUSIC/CURRIC 300 – PRINCIPLES OF MUSIC EDUCATION**

2 credits.

Principles of music education, including philosophy, history, and current practices and curricular trends. Survey of music education in and out of schools as situated within diverse, pluralistic communities.

**Requisites:** Declared in Music: Education BM and sophomore standing

**Course Designation:** Breadth – Either Humanities or Social Science Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain why music and music education are important, valuable, and meaningful.

Audience: Undergraduate

2. Demonstrate understandings of and dispositions toward music learning and teaching that are mindful, inclusive, respectful, empathic, relevant, and responsive to human difference.

Audience: Undergraduate

3. Develop and demonstrate awareness, sensitivity, and honor for human differences, including gender, sexuality, race, ethnicity, nationality, culture, class, language, religion, and ability.

Audience: Undergraduate

4. Demonstrate developing awareness of the connection between how you think about music learning and teaching and how those beliefs play out in all decisions that you make regarding your music classroom.

Audience: Undergraduate

5. Develop awareness of your own unique musical experiences and personality traits.

Audience: Undergraduate

6. Identify traits of successful music educators and the professional characteristics, expectations, sensitivity, and interpersonal skills required of music educators.

Audience: Undergraduate

**MUSIC/CURRIC 301 – MUSIC LEARNING AND TEACHING 1**

2 credits.

The learning and teaching of music at the elementary and middle school levels.

**Requisites:** MUSIC/CURRIC 300 and concurrently enrolled in MUSIC/CURRIC 337 and declared in Music: Education

**Course Designation:** Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MUSIC/CURRIC 302 – MUSIC LEARNING AND TEACHING 2**

2 credits.

The learning and teaching of music at the high school level.

**Requisites:** MUSIC/CURRIC 301 and MUSIC/CURRIC 337

**Course Designation:** Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUSIC/CURRIC 304 – COMPOSITION, ARRANGEMENT, AND ORCHESTRATION FOR THE MUSIC TEACHER**

2 credits.

Introduction to the teaching of musical composition, arrangement, and orchestration. Special emphasis on how music technologies interact with conceptions of composition, arrangement, and orchestration; implications for music learning and teaching.

**Requisites:** MUS PERF 104

**Course Designation:** Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MUSIC 306 – GREAT COMPOSERS**

3 credits.

Examination of the life, cultural background, and works of a major figure in Western music history.

**Requisites:** MUSIC 101, 105, 106, 201, 205, 206, or MUSIC/FOLKLORE 103

**Course Designation:** Breadth – Humanities

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2019

**MUSIC 317 – MUSICAL WOMEN IN EUROPE AND AMERICA: CREATIVITY, PERFORMANCE, AND IDENTITY**

3 credits.

Explores women's musical activities and issues related to them by focusing on composers, performers, and audiences in a wide range of contexts, from Europe in the Medieval Era through 21st-century America; no reading knowledge of music is required.

**Requisites:** Sophomore standing and declared in an Honors program

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. understand cultural processes that have privileged and rewarded the achievement of certain individuals and groups over that of others throughout history

Audience: Undergraduate

2. observe the interdependent relationship between musical composers, performers, and audiences that has shaped music's history, focusing on gender differences

Audience: Undergraduate

3. promote critical thinking skills by asking students to link course content with personal experiences and observations and understand the interconnectedness of various forms of art and culture through the implications of gender-related concerns on music's development

Audience: Undergraduate

4. strengthen written and oral communication skills through oral and written assignments, discussion, and presentations on related topics

Audience: Undergraduate

**MUSIC/AFROAMER/DANCE 318 – CULTURAL CROSS CURRENTS: WEST AFRICAN DANCE/MUSIC IN THE AMERICAS**

3 credits.

The influence of traditional West African dance/music heritage in historical, artistic, social contexts in the development of new hybrid forms of music/dance created by cross-pollination of cultures of Africans, Europeans and indigenous peoples in the New World.

**Requisites:** Sophomore standing

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**MUSIC 319 – TOPICS IN MUSIC AND ETHNICITY IN THE UNITED STATES**

3 credits.

Explores music of ethnic groups in the U.S., including that of marginalized minorities, in its cultural context. Topics may include the music of African American, Asian American, Native American and Jewish communities.

**Requisites:** None

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**MUSIC 329 – JAZZ ARRANGING**

3 credits.

Survey of standard musical techniques and devices for arranging lead-sheet-based jazz compositions for medium and large jazz ensembles through score study, musical exercises, and arranging projects for live ensembles. Topics include jazz counterpoint and melody writing; preparing arrangements through outlines and condensed scores; chord substitutions and reharmonization; ranges, timbres, notational and technical considerations of standard jazz instruments; motivic development; voicing techniques, including mechanical, spreads, upper structure triads, and voicings in 4ths, 5ths and clusters; and orchestration techniques, including couplings and concerted writing.

**Requisites:** MUSIC 229

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Learning Outcomes:** 1. read, comprehend, and analyze scores for medium and large jazz ensemble

Audience: Undergraduate

2. compose for all common jazz instruments

Audience: Undergraduate

3. compose contrapuntal melodies in a jazz idiom

Audience: Undergraduate

4. arrange for medium and large jazz ensemble using common voicing and orchestration techniques

Audience: Undergraduate

**MUSIC 331 – JAZZ IMPROVISATION**

3 credits.

Theoretical concepts, development of aural skills, and analysis procedures related to the jazz idiom. Audition required.

**Requisites:** Consent of instructor

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MUSIC 332 – JAZZ IMPROVISATION**

3 credits.

More advanced theoretical concepts, development of aural skills, and analysis procedures related to the jazz idiom.

**Requisites:** MUSIC 331

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUSIC/CURRIC 337 – PRACTICUM IN TEACHING MUSIC**

1 credit.

Observation and participation in K-12 music education settings.

**Requisites:** Declared in Music: Education and concurrent enrollment in MUSIC/CURRIC 301 or 302

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Workplace - Workplace Experience Course

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 340 – PEDAGOGY**

1-2 credits.

Pedagogical methods for applied music offered on all instruments and voice by appropriate applied staff. Survey of music, methods, and materials.

**Requisites:** MUS PERF 401, 402, 403, 405, 407, 409, 411, 413, 415, 417, 419, 421, 423, 425, 427, 431, 433, 435, 437, 439, or 440

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC/CURRIC 344 – TEACHING VOCAL STYLES IN THE MUSIC CLASSROOM**

1 credit.

Introduction to the teaching and learning of diverse vocal styles. Special emphasis on what makes each style distinct, as well as the acquisition practices associated with each style.

**Requisites:** None

**Course Designation:** Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

**MUSIC 346 – REPERTOIRE**

1-2 credits.

A comprehensive study of sources, analysis, and style of repertoire for a particular instrument(s) or voice(s).

**Requisites:** MUS PERF 401, 402, 403, 405, 407, 409, 411, 413, 415, 417, 419, 421, 423, 425, 427, 431, 433, 435, 437, 439, or 440

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 405 – SEMINAR: CULTURAL STUDY OF MUSIC**

3 credits.

Explores various topics in music research from the perspective of contemporary cultural theory and history. Develops skills in critical analysis of music and culture, drawing from literatures in postcolonial studies, critical race theory, studies of empire, colonialism, and capitalism.

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance graduate program

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2022

**MUSIC/CURRIC 409 – STUDENT TEACHING IN GENERAL AND VOCAL MUSIC**

6-12 credits.

Supervised student teaching in general and vocal K-12 settings.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Workplace - Workplace Experience Course

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUSIC/CURRIC 410 – STUDENT TEACHING IN GENERAL AND INSTRUMENTAL MUSIC**

6-12 credits.

Supervised student teaching in general and instrumental K-12 settings.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Workplace - Workplace Experience Course

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUSIC 411 – SURVEY OF MUSIC IN THE MIDDLE AGES**

3 credits.

Major genres and composers of monophonic and polyphonic music, sacred and secular in Western Europe and England (ca. 7th-14th centuries).

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance graduate program

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**MUSIC 412 – SURVEY OF MUSIC IN THE RENAISSANCE**

3 credits.

Major genres and composers of sacred and secular music (ca. 15th-16th centuries).

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance graduate program

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUSIC 413 – SURVEY OF MUSIC IN THE BAROQUE ERA**

3 credits.

Major genres and composers of sacred and secular music in Western Europe (ca. 1600-1750).

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance graduate program

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**MUSIC 414 – SURVEY OF MUSIC IN THE CLASSIC ERA**

3 credits.

Major genres and composers in Western Europe (ca. 1750-1827).

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance graduate program

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**MUSIC 415 – SURVEY OF MUSIC IN THE ROMANTIC ERA**

3 credits.

Major genres and composers in Europe (ca. 1820-1910).

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance graduate program

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**MUSIC 416 – SURVEY OF MUSIC IN THE TWENTIETH CENTURY**

3 credits.

Major genres and composers in Europe and the United States.

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance graduate program

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**MUSIC 417 – JAZZ HISTORIES**

3 credits.

Examination of jazz history with an emphasis on scholarship, criticism, and fictional representations of jazz culture especially as they relate to the African American diaspora. Emphasis on relationship between the history of racial inequality in the United States and the development of jazz and jazz scholarship.

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate familiarity with jazz scholarship by scholars and critics

Audience: Undergraduate

2. Describe the historical significance of prominent scholars and jazz figures as they relate to the history of African American communities the United States

Audience: Undergraduate

3. Analyze the role of oral history (especially by African American artists) in disrupting the knowledge base established by written histories

Audience: Undergraduate

4. Engage with a respected jazz artist by engaging with a class guest

Audience: Undergraduate

5. Demonstrate familiarity with key terms and concepts in discussions of jazz and jazz history

Audience: Undergraduate

6. Describe the large-scale historical and cultural trends relating to the performance and discussion of jazz from approximately 1900 to the present

Audience: Undergraduate

7. Communicate informed opinions based on primary source materials and oral histories, based on knowledge from scholarly materials

Audience: Undergraduate

**MUSIC 419 – MUSIC IN THE UNITED STATES**

3 credits.

Explores a variety of genres within their social and historical contexts including folk songs and ballads, the Native American Pow Wow, New England psalmody, popular song repertoires, musical theater and opera, concert music, blues and jazz.

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance graduate program

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**MUSIC/CURRIC 420 – TEACHING POPULAR INSTRUMENTAL MUSIC 1**

1 credit.

Development of critical perspectives, musical knowledge, and pedagogical skills needed to teach instrumental popular music. Focus on popular string instruments, their electronic counterparts, and emerging technologies for the performance and production of popular music.

**Requisites:** Declared in Music: Education BM and sophomore standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Develop basic skills necessary for teaching and learning various popular music styles on the guitar, bass, and drum set.

Audience: Undergraduate

2. Develop a series of instructional strategies for teaching, focusing on lesson plans and curricular units that incorporate instruments commonly used in popular music.

Audience: Undergraduate

3. Develop critical perspectives on popular music by exploring the intersection of popular music with issues of identity, technology, and globalization.

Audience: Undergraduate

**MUSIC/CURRIC 421 – TEACHING POPULAR INSTRUMENTAL MUSIC 2**

1 credit.

Development of critical perspectives, musical knowledge, and pedagogical skills needed to teach instrumental popular music. Focus on popular percussion instruments, their electronic counterparts, and emerging technologies for the performance and production of popular music.

**Requisites:** Declared in Music: Education BM and sophomore standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop skills associated with digital audio workstations (DAWS), including inputting MIDI, manipulating audio files, and recording.

Audience: Undergraduate

2. Examine and implement pedagogies of popular music associated with DAWS.

Audience: Undergraduate

3. Critically interrogate issues of power and identity (including race, gender, class, and ability) in music education and schooling through popular music.

Audience: Undergraduate

**MUSIC 422 – FUNDAMENTALS OF MUSIC PRODUCTION**

3 credits.

Introduction to the theory and practices of digital audio recording and editing. Covers basic background knowledge of signal flow, culminating in hands-on operation of a digital audio workstation. Introduction to industry standard software and hardware. Related equipment, including microphones, virtual instruments, and outboard processors are covered. Ear Training terms and skills, studio definitions and nomenclature for equipment, and terminology used in the current professional environment. Learn how to make music "in the box" using only a computer, then transition to working with real musicians.

**Requisites:** Sophomore standing**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the science of sound, including concepts like the Nyquist Theorem, how we perceive pitch and amplitude, resonance, and how audio becomes digitized.

Audience: Undergraduate

2. Practice all phases of a recording project from pre-production to recording, editing, and mixing.

Audience: Undergraduate

3. Record high-quality audio applying various stereo and mono recording techniques.

Audience: Undergraduate

4. Use recording industry standard software and virtual instruments to create musical compositions.

Audience: Undergraduate

**MUSIC 461 – COLLEGIUM MUSICUM**

1 credit.

Early Music Ensemble specializing in performance of instrumental and vocal early music, using the school's collection of replicas of early instruments. Audition required.

**Requisites:** Consent of instructor**Course Designation:** Breadth - Humanities

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUSIC 463 – ACTING FOR SINGERS**

1 credit.

Acting and stagecraft skills, including text-targeted work, with a focus on the dramatic aspects of the operatic craft. Text work in will involve a step-by-step process designed to facilitate the assimilation of English and foreign-language texts in rehearsal and performance. Work in these areas will be applied to arias and scenes from the operatic and theatrical repertoire.

**Requisites:** MUS PERF 144, 205, 505 or concurrent enrollment in MUS PERF 505, or 705 or concurrent enrollment in MUS PERF 705

**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop stagecraft skills, particularly those specific to opera

Audience: Both Grad &amp; Undergrad

2. Establish a methodological approach to acting operatic material through attention to texts, individual emotional preparation, personalization, and moment-to-moment work

Audience: Both Grad &amp; Undergrad

3. Work fluidly back and forth between foreign-language texts and their English translations (using literal, word-for-word translations as well as vernacular English language paraphrasing) arriving at a sense of "owning the text"

Audience: Both Grad &amp; Undergrad

4. Incorporate the fundamentals of Stanislavsky and/or Chekhov acting technique methodologies into rehearsal and performance

Audience: Both Grad &amp; Undergrad

5. Cultivate a sense of ensemble within both small and large groups, fostering a true understanding of collaboration

Audience: Both Grad &amp; Undergrad

6. Support colleagues' work and receive their support in return

Audience: Undergraduate

7. Develop intermediate-level stagecraft skills, particularly those specific to opera

Audience: Undergraduate

8. Expand the understanding of the symbiotic relationship between acting and singing in operatic performance

Audience: Graduate

9. Integrate other areas of music and voice study (music history, music theory, foreign language diction) into stagework

Audience: Graduate

10. Improve the performer's effectiveness in audition and performance

Audience: Both Grad &amp; Undergrad

11. Communicate verbally and in writing concepts concerning acting techniques for classical singers

Audience: Both Grad &amp; Undergrad

**MUSIC 465 – MARCHING BAND TECHNIQUES**

1 credit.

Exploration of methods and materials related to marching band teaching, philosophy, and performance.

**Requisites:** MUSIC 42 or declared in Music, Music: Education, or Music: Performance

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand methods and materials related to secondary school marching band design and administration

Audience: Undergraduate

2. Design a marching band show, including creating charts with computer-assisted drill-writing software

Audience: Undergraduate

3. Connect fundamental musical knowledge to visual concepts in creating imagery and explain the reasoning behind design choices

Audience: Undergraduate

4. Establish a methodical approach for teaching within a marching band setting

Audience: Undergraduate

5. Identify marching band performance practice trends by exploring a concise history of the art form

Audience: Undergraduate

6. Evaluate, discuss, and support the work of peers

Audience: Undergraduate

7. Communicate verbally and in writing concepts related to Marching Band Techniques

Audience: Undergraduate

**MUSIC 466 – DICTION FOR SINGERS**

2 credits.

Italian, German, and French diction as related to vocal music; transcription into the International Phonetic Alphabet (IPA).

**Requisites:** Junior standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MUSIC 467 – LANGUAGE DICTION FOR SINGING I**

2 credits.

English, German, Italian, and French diction as related to vocal music.

**Requisites:** Junior standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**MUSIC 468 – LANGUAGE DICTION FOR SINGING II**

2 credits.

Continuation of English, German, Italian, and French diction as related to vocal music.

**Requisites:** Junior standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**MUSIC 497 – SPECIAL TOPICS IN MUSIC**

1-3 credits.

Exploration of wide-ranging topics in music history, music theory or music education.

**Requisites:** Sophomore standing

**Course Designation:** Breadth - Humanities

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 499 – DIRECTED STUDY**

1-3 credits.

Individual research and projects with faculty. Students must have project and instructor assignment approved by department

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 502 – FIGURED BASS AND BASSO CONTINUO**

3 credits.

Study of theory and practice of 17th and 18th-century figured bass and basso continuo realization and performance. Participants develop extemporized and written realizations that emulate the discipline, style traits, and musical vitality suggested in historical sources.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

### **MUSIC 511 – HISTORICAL PERFORMANCE PRACTICES**

3 credits.

Examination of historical evidence for performance practice and its relevance to modern performances of the music of earlier eras.

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MUSIC 513 – SURVEY OF OPERA**

3 credits.

Historical development of opera; investigation of main stylistic features of representative masterworks.

**Requisites:** MUSIC 212 or declared in Music, Music: Education, or Music: Performance graduate program

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

### **MUSIC/FOLKLORE 515 – PROSEMINAR IN ETHNOMUSICOLOGY**

3 credits.

Introduction to ethnomusicology, including historical survey of major works in the field, classification of musical instruments, measurement of tuning systems and concepts of scale, mode and rhythm in non-Western music.

**Requisites:** Graduate/professional standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

### **MUSIC/FOLKLORE 516 – ETHNOGRAPHIC METHODS FOR MUSIC AND SOUND**

3 credits.

Focuses on the tools (material, methodological, and ethical) for doing ethnographic fieldwork in musical contexts.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Demonstrate familiarity with a body of (ethno)musicological and anthropological literature on ethnographic methods.

Audience: Graduate

2. Decipher and explicate difficult texts with increased confidence.

Audience: Graduate

3. Design and carry out ethnographic research projects.

Audience: Graduate

4. Demonstrate an awareness of power dynamics and your own position as researcher.

Audience: Graduate

5. Facilitate discussions effectively.

Audience: Graduate

6. Track key terms across (ethno)musicological and anthropological literature, describing how ethnographers' relationships with these have changed over time.

Audience: Graduate

**MUSIC 517 – PROSEMINAR IN MUSIC THEORY**

3 credits.

Consider the meaning of the words "analysis" and "theory," specifically as they have been applied to the study of music. Gain an overview of music theory in higher education: the origin of contemporary analytical praxis, as well as critiques of that model. Take a deeper dive into current trends in analysis, focusing on non-conforming, ecumenical, and otherwise "non-theoretical" ways of talking and writing about music, including narrative, semiotics, hermeneutics, performance-based schemata, and others.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Articulate important trends in music analysis

Audience: Graduate

2. Examine and debate the role of music theory and analysis within academia

Audience: Graduate

3. Hone critical writing and research skills essential for graduate study

Audience: Graduate

4. Actively participate in vibrant seminar discussions

Audience: Graduate

5. Imagine and implement original analytical techniques

Audience: Graduate

**MUSIC 523 – ORCHESTRATION I**

3 credits.

History of orchestration and arranging; study of representative works by means of scores, recordings, and attendance at rehearsals of University organizations; scoring for band, chorus, and orchestra.

**Requisites:** MUSIC 222 or declared in Music, Music: Education, or Music: Performance graduate program**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Fall 2022**MUSIC 529 – JAZZ ARRANGING**

3 credits.

Survey of standard musical techniques and devices for arranging lead-sheet-based jazz compositions for medium and large jazz ensemble through score study, musical exercises, and arranging projects for live ensembles. Topics include jazz counterpoint and melody writing; preparing arrangements through outlines and condensed scores; chord substitutions and reharmonization; ranges, timbres, notational and technical considerations of standard jazz instruments; motivic development; voicing techniques, including mechanical, spreads, upper structure triads, and voicings in 4ths, 5ths and clusters; and orchestration techniques, including couplings and concerted writing.

**Requisites:** Declared in Music: MA, Music: Performance DMA, or Music: Performance MM**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Learning Outcomes:** 1. Read, comprehend, and analyze scores for medium and large jazz ensemble

Audience: Graduate

2. Compose for all common jazz instruments

Audience: Graduate

3. Demonstrate sophisticated skill-level in composing contrapuntal melodies in a jazz idiom

Audience: Graduate

4. Demonstrate mature ability to arrange for medium and large jazz ensemble using an advanced range of voicing and orchestration techniques

Audience: Graduate

**MUSIC 531 – ADVANCED JAZZ IMPROVISATION**

3 credits.

Examine musical improvisation from performers and select repertoire primarily from the Jazz Canon. Explore harmonic, melodic, rhythmic, and cultural expansion into the 20th and 21st centuries of improvisational performance practice. Learn elements needed to transform from a performer into a viable and competent improviser. Emphasis on cross-cultural understanding and interdisciplinarity.

**Requisites:** (MUSIC 331 and 332) or MUS PERF 541

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Learning Outcomes:** 1. Identify (literally and aurally) chord structures, scales and modes in the Major, Harmonic Minor, Melodic Minor, Harmonic Major, and Melodic Minor #5 structures.

Audience: Graduate

2. Formulate and perform spontaneous melodies over song progressions and song forms.

Audience: Graduate

3. Solve rhythmic placement of their improvisation within a steady pulse.

Audience: Graduate

4. Demonstrate understanding of music theory and the application to improvisation.

Audience: Graduate

5. Apply historical and contemporary concepts of musical styles and forms, and research approaches specific to the given instrument.

Audience: Graduate

6. Demonstrate performance practice in real time, processing melodies spontaneously within a consistent pulse over a song form.

Audience: Graduate

7. Demonstrate understanding of melodic, harmonic, and rhythmic devices for improvisation over a chord and song form.

Audience: Graduate

8. Utilize techniques, skills, and modern approaches to performance practice

Audience: Graduate

9. Demonstrate decorum and community responsibility when performing with others

Audience: Graduate

10. Identify, describe, and analyze improvisation of themselves, their peers, and from recordings

Audience: Graduate

11. Examine technical literature and resolve ambiguities in the nomenclature

Audience: Graduate

12. Synthesize knowledge using insights and creativity to better understand themselves and improve their performance practice and improvisation.

Audience: Graduate

**MUSIC 540 – ADVANCED PEDAGOGY**

2 credits.

Advanced pedagogical methods for performance.

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MUSIC 541 – SEMINAR IN CHORAL LITERATURE**

2 credits.

Seminar in Choral Literature from Renaissance to the Present.

**Requisites:** Graduate/professional standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**MUSIC 542 – CHORAL LITERATURE AND PERFORMANCE PRACTICES OF TODAY**

2 credits.

Seminar in Choral Literature from Renaissance to the Present.

**Requisites:** Graduate/professional standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUSIC 543 – ADVANCED STRING PEDAGOGY**

2 credits.

Survey of contemporary and historical string pedagogy with implications for multiple teaching settings and applied research.

**Requisites:** Graduate/professional standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MUSIC 544 – ADVANCED STRING PEDAGOGY**

2 credits.

Survey of contemporary and historical string pedagogy with implications for multiple teaching settings and applied research, with an emphasis on individual projects and applied research.

**Requisites:** MUSIC 543

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUSIC 546 – STRING LITERATURE**

2 credits.

Relationship of string solo, ensemble and orchestral literature to history, style, form, genre, and performance practice. Emphasis on bibliographic sources; research project required.

**Requisites:** Senior standing**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025**MUSIC 550 – PERCUSSION LITERATURE**

2 credits.

Examines a select body of Western art music composed for percussion during the twentieth and twenty-first Centuries. Important compositional styles and repertoire will be presented and discussed with an emphasis on historical perspective and compositional technique.

**Requisites:** Senior standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2023**MUSIC 551 – CLASS PIANO PEDAGOGY**

3 credits.

Techniques for teaching older beginners or adults in class or individual instruction, piano literature sources and references, evaluation of repertoire and analysis of methods and structure.

**Requisites:** Graduate/professional standing**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Fall 2021**MUSIC 553 – ADVANCED CONDUCTING SEMINAR**

2 credits.

Study/analysis of conducting techniques; score reading/interpretation of masterpieces from standard repertoire.

**Requisites:** Declared in Music, Music: Education, or Music: Performance graduate program**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUSIC 554 – ADVANCED CONDUCTING**

2 credits.

Continuation of study and analysis of conducting techniques and score reading.

**Requisites:** MUSIC 553**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2020**MUSIC 556 – UNIVERSITY OPERA**

1-2 credits.

Opera role: preparation, rehearsal and performance in University opera production.

**Requisites:** Graduate/professional standing**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUSIC 557 – OPERA WORKSHOP**

2 credits.

Performance of scenes from standard operas or of whole operas; singing, accompanying, and dramatic action; instruction in voice projection, posture and movement; problems of staging, lighting, costume and scenery. Audition required.

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUSIC 558 – MADRIGAL SINGERS**

1 credit.

Ensemble specializing in 16th and 17th century secular music. Audition required.

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2023**MUSIC 559 – GRADUATE CHORAL UNION**

1 credit.

Weekly rehearsals in preparation of public performance of a masterwork for chorus and orchestra at end of semester. Audition required.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2023**MUSIC 560 – PRACTICUM IN ADVANCED STUDIO TEACHING-PIANO**

1 credit.

Observation and teaching of an advanced undergraduate student under the direct supervision of a studio professor.

**Requisites:** MUSIC 548**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025

**MUSIC 562 – JAZZ ENSEMBLE**

1 credit.

Assignments in performing ensemble literature. Students enrolling for the first time should contact the School of Music for audition information

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 565 – ADVANCED ENSEMBLE-WOODWIND**

1 credit.

Assignments in performing ensemble literature. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 567 – ADVANCED ENSEMBLE-BRASS**

1 credit.

Assignments in performing ensemble literature. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 568 – ADVANCED ENSEMBLE-PERCUSSION**

1 credit.

Assignments in performing ensemble literature. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 569 – ADVANCED ENSEMBLE-STRING**

1 credit.

Assignments in performing ensemble literature. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 570 – UNIVERSITY SYMPHONY ORCHESTRA**

1 credit.

Performance plus additional study of performance practice and orchestral literature. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 572 – ADVANCED ENSEMBLE-CLASSICAL GUITAR**

1 credit.

Rehearsal, coaching and preparing guitar literature for performance of duos, trios, and quartets. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 573 – CONTEMPORARY CHAMBER ENSEMBLE**

1 credit.

Assignments in performing ensemble literature. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2021

**MUSIC 574 – WIND ENSEMBLE**

1 credit.

Limited instrumentation for students having attained exceptional level of performance ability. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 576 – CONCERT BAND**

1 credit.

Rehearsal and performance from band literature; additional study of performance practice. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 577 – CHORALE**

1 credit.

Performance and study of choral chamber music. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 578 – CONCERT CHOIR**

1 credit.

Performance plus additional study of performance practice and choir literature. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 579 – MASTERS SINGERS**

1 credit.

A group of select singers who study varied repertoire conducted by graduate students. Students will audition for placement prior to the beginning of the semester

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2019

**MUSIC 591 – ORGAN LITERATURE AND DESIGN**

2 credits.

Survey of organ literature with parallel study of organ design and construction.

**Requisites:** Senior standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**MUSIC 608 – MUSIC COMMUNITY ENGAGEMENT**

2-3 credits.

Actively participate in a diverse exploration of community. Create collaborative music engagement projects and evaluate the impact of the project's implementation. Opportunity to increase self-awareness, enhance creative capacity, and cultivate music career aspirations.

**Requisites:** Declared in Music, MA, PhD, Music: Performance, MM, DMA, or Music: Education MM

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe current music community engagement initiatives occurring within one's area of expertise.

Audience: Graduate

2. Develop personal and artistic skills through the design, implementation, and evaluation of music community engagement projects.

Audience: Graduate

3. Support the mission of social service agencies and non-profit organizations through music community engagement collaborations.

Audience: Graduate

4. Articulate one's music career vision through a lens of creativity, quality, and a spirit of generosity.

Audience: Graduate

**MUSIC/LIS 619 – MUSIC RESEARCH METHODS AND MATERIALS**

3 credits.

Historical and contemporary bibliography resources for musical scholarship; general reference tools of scholarly work and specific musicological works.

**Requisites:** Graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUSIC 621 – RENAISSANCE POLYPHONY**

3 credits.

Analysis and stylistic composition.

**Requisites:** Senior standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MUSIC 622 – BAROQUE COUNTERPOINT**

3 credits.

Analysis and stylistic composition.

**Requisites:** Senior standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

### **MUSIC 623 – FORM AND ANALYSIS**

2-3 credits.

Study of modern analytical techniques; practice in analysis of representative works.

**Requisites:** Senior standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **MUSIC 624 – FORM AND ANALYSIS II**

2-3 credits.

Continuation of study of modern analytical techniques; practice in analysis of representative works.

**Requisites:** Senior standing

**Course Designation:** Breadth - Humanities

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

### **MUSIC 629 – JAZZ THEORY AND ANALYSIS**

3 credits.

Introduction to contemporary research into jazz theory through analysis of lead sheet jazz compositions, analysis of large ensemble jazz compositions and improvised solos, and critical readings of jazz theory publications.

**Requisites:** Declared in Music MA, Music: Performance DMA, or Music: Performance MM

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. analyze jazz lead sheets, large ensemble compositions, and improvisations with an emphasis on both syntax and music-historical and theoretical contexts

Audience: Graduate

2. develop a critical framework engage contemporary research into jazz theory and analysis

Audience: Graduate

3. critically examine issues of history, culture, authenticity, and law and authorship that inform jazz recordings and performances

Audience: Graduate

### **MUSIC 632 – GRADUATE INSTRUMENTAL CONDUCTING LABORATORY**

1 credit.

Develop conducting skills through experience leading an ad hoc ensemble of 9-20 musicians in rehearsal and performance on a range of orchestral and wind ensemble repertoire.

**Requisites:** Concurrent enrollment in MUS PERF 532, 732, 990, or 999

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate effective and refined gestural vocabulary on the podium

Audience: Graduate

2. Demonstrate knowledge of broad repertoire in instrumental ensemble repertoire

Audience: Graduate

3. Implement score study skills as they apply to conducting a live instrumental ensemble

Audience: Graduate

4. Model rehearsal techniques before live musicians

Audience: Graduate

5. Employ self-reflection in identifying the quality of one's own work

Audience: Graduate

6. Demonstrate skills in a performance setting

Audience: Graduate

7. Assess other colleagues' conducting, creating a safe community for learning and development

Audience: Graduate

### **MUSIC 681 – SENIOR HONORS THESIS**

3 credits.

Mentored individual study and research for students in the major writing an honors thesis.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Fall 2014

### **MUSIC 682 – SENIOR HONORS THESIS**

3 credits.

Mentored individual study and research for students in the major writing an honors thesis.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Spring 2015

### **MUSIC 749 – SEMINAR IN VOCAL TECHNIQUES**

2 credits.

Study and analysis of various vocal techniques: pedagogical and historical viewpoints.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **MUSIC 751 – SEMINAR IN PIANO PEDAGOGY**

3 credits.

Interpretive and technical approaches to advanced keyboard performance.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

### **MUSIC 752 – PIANO PEDAGOGY WORKSHOP**

1 credit.

Designed to assist the DMA student in piano performance and pedagogy in developing a pedagogical workshop for piano teachers. The project will culminate in a public workshop which may address any approved area of keyboard pedagogy.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

### **MUSIC 791 – SEMINAR IN PIANO LITERATURE**

3 credits.

Applied piano literature including representative works from all periods.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2016

**MUSIC 792 – SEMINAR IN VOCAL LITERATURE**

3 credits.

Comprehensive study of vocal literature including representative works from various periods.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**MUSIC 796 – SEMINAR IN DUO SONATA LITERATURE**

3 credits.

Comprehensive study of major works for single instrument and piano with primary focus on interpretive and technical issues for the collaborative musician.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 798 – SEMINAR-INSTRUMENTAL LITERATURE**

2 credits.

Comprehensive study of major works for specific instruments with primary focus on interpretive and technical issues for the advance musician.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 799 – INDEPENDENT WORK**

1-3 credits.

Faculty-mentored individual study and research.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**MUSIC 821 – HISTORICAL MUSIC THEORIES 1**

3 credits.

The development of musical concepts and issues in music-theoretical discourse from antiquity through the 17th century.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2023

**MUSIC 822 – HISTORICAL MUSIC THEORIES 2**

3 credits.

The development of musical concepts and issues in music-theoretical discourse from the 17th century through the present.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**MUSIC 823 – SCHENKERIAN ANALYSIS**

3 credits.

Studies in the theoretical concepts and analytical methods of Heinrich Schenker.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2020

**MUSIC 824 – POST-TONAL ANALYSIS**

3 credits.

Studies in the theoretical concepts and analytical methods, including those of Milton Babbitt, Allen Forte, David Lewin, Robert Morris, and others.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

**MUSIC 911 – SEMINAR IN MUSICOLOGY**

3 credits.

Topics in musicology, dealing primarily with an important aspect or genre or music or segment of a stylistic period.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC/FOLKLORE 915 – SEMINAR IN ETHNOMUSICOLOGY**

3 credits.

Topics in ethnomusicology within a cross-cultural framework; melodic typology, scale and tuning systems, mode, rhythm, ornamentation, improvisation techniques, oral and written traditions of composition, notation systems, and function of music society.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

**MUSIC 921 – CURRENT ISSUES IN MUSICAL THOUGHT 1**

3 credits.

Topics of current theoretical or compositional concern and in-depth discussions of recent publications.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 925 – FORM AND ANALYSIS SEMINAR**

3 credits.

Explore musical analysis, using different techniques to study various types of music. Engage with music's structure and meaning, with an emphasis on performance and listening skills.

**Requisites:** Declared in Music: Performance MM or DMA, Music: Education MM, Music MA, PHD, or doctoral minor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Learning Outcomes:** 1. Explore different ways to analyze and apply these methods to various types of music.

Audience: Graduate

2. Create new ideas based on traditional music theory.

Audience: Graduate

3. Engage in a detailed and thoughtful analysis of music's structure and meaning.

Audience: Graduate

4. Apply insights to making deliberate interpretative choices in performance, using clear and well-argued writing to complement analysis.

Audience: Graduate

**MUSIC 927 – SEMINAR IN COMPOSITION**

3 credits.

Topics directly related to composition, including musical forms, contemporary performance practice, electronic music, intermedia.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC/CURRIC 946 – PAST PERSPECTIVES ON MUSIC EDUCATION**

3 credits.

Focus on analysis of music education in primary and secondary schools via examination of historical, philosophical, and psychological sources. Explore ideas that have shaped the field in the past and investigate the influence of these ideas on current thinking and practice.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Describe the history of music education  
Audience: Graduate

2. Articulate the concept of interest convergence and how it can apply to the history of music education

Audience: Graduate

3. Demonstrate ability to connect theory and practice in music educational approaches

Audience: Graduate

**MUSIC 990 – MASTERS THESIS**

1-4 credits.

Individual research study with faculty mentor for writing thesis.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUSIC 999 – PHD DISS/DMA PROJECT**

1-3 credits.

Individual research study with faculty mentor.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

# MUSIC-PERFORMANCE (MUS PERF)

## MUS PERF 21 – BRASS FUNDAMENTALS

1 credit.

Prepares music educators for teaching brass instruments (horn, trumpet trombone, euphonium, and tuba) in K-12 school settings.

**Requisites:** Declared in Music: Education BM

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain and demonstrate proper care and maintenance of brass instruments.

Audience: Undergraduate

2. Demonstrate fundamental technical playing proficiency on trumpet, horn, trombone, euphonium, and tuba.

Audience: Undergraduate

3. Explain and demonstrate the function of the embouchure, tongue, and oral cavity in tone production.

Audience: Undergraduate

4. Demonstrate proper breathing and explain its impact on brass performance.

Audience: Undergraduate

5. Demonstrate knowledge of intonation issues and fixes.

Audience: Undergraduate

6. Demonstrate an understanding of trumpet and horn transpositions.

Audience: Undergraduate

7. Demonstrate an understanding of the clefs most often used in trombone writing.

Audience: Undergraduate

8. Explain the harmonic series and function of the valves and slide.

Audience: Undergraduate

9. Demonstrate the ability to diagnose and solve the common problems of beginning brass students.

Audience: Undergraduate

10. Demonstrate knowledge of method books, etude books, and appropriate solo repertory.

Audience: Undergraduate

11. Demonstrate knowledge of recommended makes and models of brass instruments and accessories.

Audience: Undergraduate

12. Demonstrate knowledge of relevant and important brass instrument performers in all genres.

Audience: Undergraduate

13. Play each brass instrument with a proper setup and an understanding for how to identify and produce a characteristic sound.

Audience: Undergraduate

## MUS PERF 22 – STRINGS FUNDAMENTALS

1 credit.

Prepares music educators for teaching orchestral string instruments (violin, viola, violoncello, and double bass) in K-12 school settings.

**Requisites:** Declared in Music: Education BM

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain and demonstrate proper care and maintenance of orchestral string instruments.

Audience: Undergraduate

2. Demonstrate fundamental technical playing proficiency on violin, viola, violoncello, and double bass.

Audience: Undergraduate

3. Explain and demonstrate the function of the left hand, bow arm, and vibrato in tone production.

Audience: Undergraduate

4. Demonstrate knowledge of intonation issues and fixes.

Audience: Undergraduate

5. Demonstrate an understanding of strings transpositions.

Audience: Undergraduate

6. Demonstrate an understanding of the clefs most often used in viola, violoncello, and double bass compositions.

Audience: Undergraduate

7. Demonstrate the ability to diagnose and solve the common problems of beginning strings students.

Audience: Undergraduate

8. Demonstrate knowledge of method books, etude books, and appropriate solo repertory.

Audience: Undergraduate

9. Demonstrate knowledge of recommended makes and models of string instruments and accessories, including instrument sizing to match students' physical size.

Audience: Undergraduate

10. Demonstrate knowledge of how to select and replace strings.

Audience: Undergraduate

11. Demonstrate knowledge of relevant and important string instrument performers.

Audience: Undergraduate

12. Play each string instrument with appropriate posture and a characteristic sound.

Audience: Undergraduate

**MUS PERF 23 – WOODWIND FUNDAMENTALS**

1 credit.

Prepares music educators for teaching woodwind instruments (flute, clarinet, saxophone, oboe, and bassoon) in K-12 school settings.

**Requisites:** Declared in Music: Education BM

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain and demonstrate basic care and maintenance of woodwind instruments.

Audience: Undergraduate

2. Demonstrate basic playing proficiency on flute, clarinet, saxophone, oboe, and bassoon.

Audience: Undergraduate

3. Explain and demonstrate the function of the embouchure and proper air support.

Audience: Undergraduate

4. Demonstrate knowledge of most common intonation issues and fixes.

Audience: Undergraduate

5. Demonstrate the ability to diagnose and solve some of the most common problems of beginning woodwind students.

Audience: Undergraduate

6. Demonstrate basic knowledge of method books, etude books, and appropriate solo repertory.

Audience: Undergraduate

7. Demonstrate knowledge of recommended manufacturers and models of woodwind instruments and accessories.

Audience: Undergraduate

**MUS PERF 27 – FUNDAMENTALS-PERCUSSION**

1 credit.

Exploration of the fundamentals of the percussion.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**MUS PERF 44 – STUDY ABROAD: BEGINNING INSTRUCTION IN MUSIC PERFORMANCE**

1 credit.

Beginning class or private music performance instruction taken in a UW-Madison resident study abroad program. Enrollment in a UW-Madison resident study abroad program

**Requisites:** None

**Repeatable for Credit:** Yes, unlimited number of completions

**MUS PERF 49 – BASIC OBOE**

1-2 credits.

Individual instruction in oboe performance at the basic level. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 49

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2019

**MUS PERF 51 – BASIC CLARINET**

1-2 credits.

Individual instruction in clarinet performance at the basic level. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 51

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2022

**MUS PERF 61 – BASIC TROMBONE**

1-2 credits.

Individual instruction in trombone performance at the basic level. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 61

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2019

**MUS PERF 65 – BASIC TUBA**

1-2 credits.

Individual instruction in tuba performance at the basic level. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 65

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2022

**MUS PERF 76 – BASIC GUITAR**

1-2 credits.

Individual instruction in guitar performance at the basic level. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 76

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 77 – BASIC STRING BASS**

1-2 credits.

Individual instruction in string bass performance at the basic level. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 77

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2022

**MUS PERF 79 – BASIC HARP**

1-2 credits.

Private instruction in harp performance at the introductory level. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 79

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2019

**MUS PERF 101 – BEGINNING CLASS PIANO**

2 credits.

Group instruction in beginning piano.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**MUS PERF 102 – BEGINNING CLASS PIANO**

2 credits.

Continuation of group instruction in beginning piano.

**Requisites:** MUS PERF 101 or placement into MUS PERF 102 and declared in Music, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**MUS PERF 103 – ELEMENTARY CLASS PIANO**

2 credits.

Group instruction in elementary piano.

**Requisites:** MUS PERF 102 or placement into MUS PERF 103 and declared in Music, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024**MUS PERF 104 – INTERMEDIATE CLASS PIANO**

2 credits.

Group instruction in intermediate piano.

**Requisites:** MUS PERF 103 or placement into MUS PERF 104 and declared in Music, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**MUS PERF 108 – JAZZ CLASS PIANO**

2 credits.

Development of basic jazz piano skills for solo, accompaniment, and ensemble playing; discussion of the role of the piano in various jazz ensemble formats; introduction to chord symbols, jazz voicings, melodic improvisation, and bass lines; continued development of sound technical skills for the piano. Students will apply these concepts to the performance of lead sheets from the standard jazz repertoire.

**Requisites:** MUS PERF 102 or placement into MUS PERF 103 and declared in Music, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**MUS PERF 143 – INTRODUCTION TO PERFORMANCE: VOICE**

1 credit.

Voice for the non-music major beginning voice student; basic concepts of vocal technique, tone production, breathing, and diction for singing; basic musicianship; singing in class by the student individually and in small groups.

**Requisites:** Consent of instructor**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**MUS PERF 144 – VOCAL INSTRUCTION FOR NON-VOICE MAJORS**

1-2 credits.

Vocal instruction for the non-voice major. Basics of classical vocal technique; however, repertoire may include other musical styles, such as musical theater or jazz, as approved by instructor.

**Requisites:** Consent of instructor**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 146 – MUSIC LESSONS FOR NON-MAJORS**

1-2 credits.

Private applied music performance instruction for non-music majors and for music majors seeking study on a secondary instrument. Not for keyboard or vocal performance study. Opportunity for study with a faculty member may be limited. Audition is required.

**Requisites:** Consent of instructor**Repeatable for Credit:** Yes, for 8 number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Accomplish measurable progress in instrumental performance proficiency

Audience: Undergraduate

2. Growth in understanding of elements of music and application of this understanding to interpretation and performance

Audience: Undergraduate

3. Demonstration of effective learning strategies

Audience: Undergraduate

**MUS PERF 148 – FIRST YEAR COMPOSITION**

3 credits.

Continuation of instruction in music composition at the beginning level.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025

**MUS PERF 200 – ELEMENTARY/INTERMEDIATE PIANO FOR NON-PIANO MAJORS**

2 credits.

Individual piano instruction for non-piano majors.

**Requisites:** Consent of instructor**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Nurture individual creative growth as a pianist.

Audience: Undergraduate

2. Gain musical and technical proficiency in piano performance.

Audience: Undergraduate

3. Develop creative and efficient practice strategies.

Audience: Undergraduate

4. Develop skills in phrasing, stylistic interpretation and musical understanding.

Audience: Undergraduate

5. Enhance critical listening skills and ear-training skills.

Audience: Undergraduate

6. Improve sense of keyboard topography through relevant technical exercises and repertoire study.

Audience: Undergraduate

7. Deepen understanding of keyboard repertoire (duo and/or collaborative works).

Audience: Undergraduate

8. Explore strategies for optimal performance and healthful biomechanics.

Audience: Undergraduate

**MUS PERF 201 – ELEMENTARY/INTERMEDIATE PIANO**

2-4 credits.

Individual piano instruction for piano majors.

**Requisites:** Declared in the undergraduate Music program, Music:

Performance BM, or Music: Education BM

**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 203 – ELEMENTARY/INTERMEDIATE ORGAN**

2-4 credits.

Individual organ instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2022**MUS PERF 205 – ELEMENTARY/INTERMEDIATE VOICE**

2-4 credits.

Individual voice instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 207 – ELEMENTARY/INTERMEDIATE FLUTE**

2-4 credits.

Individual flute instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 209 – ELEMENTARY/INTERMEDIATE OBOE**

2-4 credits.

Individual oboe instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 211 – ELEMENTARY/INTERMEDIATE CLARINET**

2-4 credits.

Individual clarinet instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025

**MUS PERF 213 – ELEMENTARY/INTERMEDIATE SAXOPHONE**

2-4 credits.

Individual saxophone instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 215 – ELEMENTARY/INTERMEDIATE BASSOON**

2-4 credits.

Individual bassoon instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 217 – ELEMENTARY/INTERMEDIATE HORN**

2-4 credits.

Individual horn instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 219 – ELEMENTARY/INTERMEDIATE TRUMPET**

2-4 credits.

Individual trumpet instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 221 – ELEMENTARY/INTERMEDIATE TROMBONE**

2-4 credits.

Individual trombone instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 223 – ELEMENTARY/INTERMEDIATE EUPHONIUM**

2-4 credits.

Individual euphonium instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 225 – ELEMENTARY/INTERMEDIATE TUBA**

2-4 credits.

Individual tuba instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 227 – ELEMENTARY/INTERMEDIATE PERCUSSION**

2-4 credits.

Individual percussion instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 231 – ELEMENTARY/INTERMEDIATE VIOLIN**

2-4 credits.

Individual violin instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 233 – ELEMENTARY/INTERMEDIATE VIOLA**

2-4 credits.

Individual viola instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025

**MUS PERF 235 – ELEMENTARY/INTERMEDIATE CELLO**

2-4 credits.

Individual cello instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 237 – ELEMENTARY/INTERMEDIATE DOUBLE BASS**

2-4 credits.

Individual instruction in double bass performance.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Demonstrate ability to diagnose performance deficiencies

Audience: Undergraduate

2. Employ developing aural skills in investigating sound and intonation

Audience: Undergraduate

3. Show foundational technical performance skills (arco and pizzicato)

Audience: Undergraduate

4. Demonstrate developing strength for stamina and physical longevity

Audience: Undergraduate

5. Demonstrate knowledge of performance practices appropriate to the music studied

Audience: Undergraduate

6. Show basic technical proficiency on the instrument in jury performance

Audience: Undergraduate

7. Describe instruments and musical tone succinctly, both verbally and in writing

Audience: Undergraduate

**MUS PERF 239 – ELEMENTARY/INTERMEDIATE HARP**

2-4 credits.

Individual harp instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 240 – ELEMENTARY/INTERMEDIATE GUITAR**

2-4 credits.

Individual guitar instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 241 – ELEMENTARY/INTERMEDIATE JAZZ STUDIO INSTRUCTION**

2-4 credits.

Individual studio instruction in jazz performance.

**Requisites:** Concurrent enrollment in MUSIC 262 and declared in Music, Music: Education BM, or Music: Performance BM**Course Designation:** Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, for 8 number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Demonstrate technical proficiency with the instrument or voice.

Audience: Undergraduate

2. Show competency and fluency in core improvisation, accompaniment, solo, and ensemble performance techniques common to the jazz genre.

Audience: Undergraduate

3. Interpret and improvise jazz in a performance practice appropriate to the idiom.

Audience: Undergraduate

4. Demonstrate a knowledge of the standard jazz repertoire.

Audience: Undergraduate

5. Contextualize the performance of jazz and related musics in history and culture.

Audience: Undergraduate

**MUS PERF 242 – ACCOMPANYING**

2 credits.

Individual instruction in collaborative musical performance.

**Requisites:** MUS PERF 201 or 203**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 247 – SECOND YEAR COMPOSITION**

3 credits.

Individual instruction in music composition.

**Requisites:** MUS PERF 148**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024

### MUS PERF 248 – SECOND YEAR COMPOSITION

3 credits.

Continuation of individual instruction in music composition.

**Requisites:** MUS PERF 247

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### MUS PERF 249 – ELEMENTARY/INTERMEDIATE COMPOSITION

2-4 credits.

Individual composition instruction for majors.

**Requisites:** Declared in the undergraduate Music program, Music: Performance BM, or Music: Education BM

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Learning Outcomes:** 1. Develop ability to express musical ideas in a coherent and effective manner

Audience: Undergraduate

2. Demonstrate basics of melodic construction, harmonic voicing, counterpoint, and other compositional skills

Audience: Undergraduate

3. Develop ability to express oneself in various musical textures (monophonic, homophonic, heterophonic, contrapuntal)

Audience: Undergraduate

4. Practice composing musical threads that are held together in successful rhythmic composites, using a variety of rhythms

Audience: Undergraduate

### MUS PERF 251 – KEYBOARD SKILLS

2 credits.

Keyboard skills for the piano major.

**Requisites:** Concurrent enrollment in MUS PERF 201 or 203

**Course Designation:** Level - Elementary

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### MUS PERF 311 – ADVANCED TECHNIQUES: CLARINET

1-2 credits.

Performance study topics as assigned for clarinet.

**Requisites:** Consent of instructor

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2018

### MUS PERF 333 – ADVANCED TECHNIQUES: VIOLA

1-2 credits.

Performance study topics as assigned for viola.

**Requisites:** Consent of instructor

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2018

### MUS PERF 339 – ADVANCED TECHNIQUES: HARP

1-2 credits.

Performance study topics as assigned for harp.

**Requisites:** Consent of instructor

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2020

### MUS PERF 342 – PIANO ACCOMPANYING LAB

1 credit.

Laboratory in piano accompanying for piano emphasis majors and doctoral minors.

**Requisites:** MUS PERF 201

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### MUS PERF 347 – THIRD YEAR COMPOSITION

3 credits.

Individual instruction in music composition.

**Requisites:** MUS PERF 248

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

### MUS PERF 348 – THIRD YEAR COMPOSITION

3 credits.

Continuation of individual instruction in music composition.

**Requisites:** MUS PERF 347

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

### MUS PERF 401 – ADVANCED PIANO

2-4 credits.

Individual piano instruction for undergrad piano majors and doctoral minors. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 401

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 402 – ADVANCED HARPSICHORD**

2-4 credits.

Upper-level harpsichord study of advanced repertoire and basso continuo; for harpsichordists who have mastery of basic technique and repertoire. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 402

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2022

**MUS PERF 403 – ADVANCED ORGAN**

2-4 credits.

Advanced individual organ instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 403

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2022

**MUS PERF 405 – ADVANCED VOICE**

2-4 credits.

Advanced individual voice instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 405

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 407 – ADVANCED FLUTE**

2-4 credits.

Advanced individual flute instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 407

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 409 – ADVANCED OBOE**

2-4 credits.

Advanced individual oboe instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 409

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 411 – ADVANCED CLARINET**

2-4 credits.

Advanced individual clarinet instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 411

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 413 – ADVANCED SAXOPHONE**

2-4 credits.

Advanced individual saxophone instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 413

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 415 – ADVANCED BASSOON**

2-4 credits.

Advanced individual bassoon instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 415

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 417 – ADVANCED HORN**

2-4 credits.

Advanced individual horn instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 417

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 419 – ADVANCED TRUMPET**

2-4 credits.

Advanced individual trumpet instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 419

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 421 – ADVANCED TROMBONE**

2-4 credits.

Advanced individual trombone instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 421

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 423 – ADVANCED EUPHONIUM**

2-4 credits.

Advanced individual instruction in euphonium. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 423

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

### **MUS PERF 425 – ADVANCED TUBA**

2-4 credits.

Advanced individual tuba instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 425

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

### **MUS PERF 427 – ADVANCED PERCUSSION**

2-4 credits.

Advanced individual percussion instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 427

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 431 – ADVANCED VIOLIN**

2-4 credits.

Advanced individual violin instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 431

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 433 – ADVANCED VIOLA**

2-4 credits.

Advanced individual viola instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 433

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 435 – ADVANCED CELLO**

2-4 credits.

Advanced individual cello instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 435

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 437 – ADVANCED DOUBLE BASS**

2-4 credits.

Advanced instruction in double bass performance.

**Requisites:** MUS PERF 437

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate ability to identify and strategically address performance deficiencies

Audience: Undergraduate

2. Employ developing aural skills in investigating sound and intonation

Audience: Undergraduate

3. Show technical performance skills (arco and pizzicato)

Audience: Undergraduate

4. Demonstrate developing strength for stamina and physical longevity

Audience: Undergraduate

5. Demonstrate knowledge of performance practices appropriate to the music studied

Audience: Undergraduate

6. Show technical proficiency on the instrument in performance

Audience: Undergraduate

7. Contextualize double bass performance using reference to current and past practices

Audience: Undergraduate

8. Describe instruments and musical tone succinctly, both verbally and in writing

Audience: Undergraduate

**MUS PERF 439 – ADVANCED HARP**

2-4 credits.

Advanced individual harp instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 439

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 440 – ADVANCED GUITAR**

2-4 credits.

Advanced individual classical guitar instruction. Instructor consent is required for students enrolling for the first time.

**Requisites:** MUS PERF 440

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 441 – ADVANCED JAZZ STUDIO INSTRUCTION**

2-4 credits.

Individual applied music performance instruction in jazz.

**Requisites:** MUS PERF 441 and concurrent enrollment in MUSIC 262.

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, for 8 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate high technical proficiency with the instrument or voice.

Audience: Undergraduate

2. Show comprehensive competency and fluency in core improvisation, accompaniment, solo, and ensemble performance techniques common to the jazz genre.

Audience: Undergraduate

3. Interpret and improvise jazz in a performance practice appropriate to the idiom.

Audience: Undergraduate

4. Demonstrate a thorough knowledge of the standard jazz repertoire

Audience: Undergraduate

5. Contextualize the performance of jazz and related musics in history and culture.

Audience: Undergraduate

6. Synthesize musical abilities with skills for leading a jazz ensemble.

Audience: Undergraduate

**MUS PERF 447 – FOURTH YEAR COMPOSITION**

3 credits.

Advanced individual instruction in music composition.

**Requisites:** MUS PERF 348

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**MUS PERF 448 – FOURTH YEAR COMPOSITION**

3 credits.

Continuation of advanced individual instruction in music composition.

**Requisites:** MUS PERF 447**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 449 – ADVANCED COMPOSITION**

2-4 credits.

Individual composition instruction for majors.

**Requisites:** MUS PERF 449**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Learning Outcomes:** 1. Develop ability to express musical ideas in a coherent and effective manner

Audience: Undergraduate

2. Demonstrate grasp of melodic construction, harmonic voicing, counterpoint, and other compositional skills

Audience: Undergraduate

3. Develop ability to express oneself in various musical textures (monophonic, homophonic, heterophonic, contrapuntal)

Audience: Undergraduate

4. Practice composing musical threads that are held together in successful rhythmic composites, using a variety of rhythms

Audience: Undergraduate

5. Demonstrate progressing ambition in the creation of your compositions in length and size of ensemble, focusing on skills needed to compose orchestral compositions and large choral works, or extended digital audio workstation (DAW) works of longer lengths

Audience: Undergraduate

**MUS PERF 457 – JAZZ COMPOSITION AND ARRANGING**

3 credits.

Study of music composition and arranging in the jazz idiom. Requires audition.

**Requisites:** Consent of instructor**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2024**MUS PERF 458 – JAZZ COMPOSITION AND ARRANGING**

3 credits.

Continuation of music composition and arranging in the jazz idiom.

**Requisites:** MUS PERF 457**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Fall 2021**MUS PERF 498 – COMPOSITION CAPSTONE PROJECT**

2 credits.

Individually directed creation and presentation of original musical work.

Requires concurrent enrollment in MUS PERF 449.

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Learning Outcomes:** 1. develop and apply deeper knowledge of compositional techniques

Audience: Undergraduate

2. apply skills for managing the logistics in presentation of their work, including speaking to an audience

Audience: Undergraduate

3. exhibit understanding and expression of their own "voice" in composing

Audience: Undergraduate

**MUS PERF 499 – SENIOR RECITAL**

2 credits.

Preparation and public performance of a senior-level recital.

**Requisites:** 6 credits from: MUS PERF 401, 402, 403, 405, 407, 409, 411, 413, 415, 417, 419, 421, 423, 425, 427, 431, 433, 435, 437, 439, or 440**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025**MUS PERF 501 – MASTERS LEVEL-PIANO**

4 credits.

Masters level individual piano instruction.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Fall 2024

**MUS PERF 505 – MASTERS LEVEL-VOICE**

4 credits.

Masters level individual voice instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 507 – MASTERS LEVEL-FLUTE**

4 credits.

Masters level individual flute instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 509 – MASTERS LEVEL-OBOE**

4 credits.

Masters level individual oboe instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 511 – MASTERS LEVEL-CLARINET**

4 credits.

Masters level individual clarinet instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 513 – MASTERS LEVEL-SAXOPHONE**

4 credits.

Masters level individual saxophone instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 515 – MASTERS LEVEL-BASSOON**

4 credits.

Masters level individual bassoon instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2021

**MUS PERF 517 – MASTERS LEVEL-HORN**

4 credits.

Masters level individual horn instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2023

**MUS PERF 519 – MASTERS LEVEL-TRUMPET**

4 credits.

Masters level individual trumpet instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 521 – MASTERS LEVEL-TROMBONE**

4 credits.

Masters level individual trombone instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 523 – MASTERS LEVEL-EUPHONIUM**

4 credits.

Masters level individual euphonium instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2022

### **MUS PERF 525 – MASTERS LEVEL-TUBA**

4 credits.

Masters level individual tuba instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 527 – MASTERS LEVEL-PERCUSSION**

4 credits.

Masters level individual percussion instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 531 – MASTERS LEVEL-VIOLIN**

4 credits.

Masters level individual violin instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 532 – ADVANCED CONDUCTING**

2 credits.

Master's level individual conducting instruction.

**Requisites:** Declared in Music: Performance MM

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Broaden practical knowledge of standard orchestral repertoire  
Audience: Graduate

2. Develop and integrate score study skills and strategies  
Audience: Graduate

3. Identify and demonstrate off-podium skills necessary as a conductor  
Audience: Graduate

4. Explore conducting techniques in order to acquire an effective and refined gestural vocabulary on the podium  
Audience: Graduate

5. Assess the conducting profession  
Audience: Graduate

### **MUS PERF 533 – MASTERS LEVEL-VIOLA**

4 credits.

Masters level individual viola instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2023

### **MUS PERF 535 – MASTERS LEVEL-CELLO**

4 credits.

Masters level individual cello instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**MUS PERF 537 – MASTER'S LEVEL DOUBLE BASS**

4 credits.

Individual instruction in double bass at the Master's level.

**Requisites:** Declared in Music: Performance MM

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate ability to identify and strategically address performance deficiencies

Audience: Graduate

2. Employ advanced aural skills in investigating sound and intonation

Audience: Graduate

3. Show technical performance skills (arco and pizzicato) across a range of musical styles

Audience: Graduate

4. Use holistic strength for stamina and physical longevity

Audience: Graduate

5. Demonstrate knowledge of performance practices across a range of musical styles

Audience: Graduate

6. Articulate attributes of past and current practitioners of double bass performance

Audience: Graduate

7. Use historical resources in speaking and writing about double bass performance

Audience: Graduate

8. Describe instruments and musical tone succinctly, both verbally and in writing

Audience: Graduate

**MUS PERF 539 – MASTER'S LEVEL HARP**

4 credits.

Individual instruction in harp at the Master's level.

**Requisites:** Declared in Music: Performance MM

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify and strategically address technical issues related to hand and body positioning.

Audience: Graduate

2. Apply technique to achieve evenness, warm tone, rhythmic integrity, facility and clean playing.

Audience: Graduate

3. Interpret and execute accurate fingerings, pedaling, muffling, extended techniques, articulation and dynamic scope.

Audience: Graduate

4. Show contextual understanding of repertoire studied, including composer background, historical context, and musical analysis.

Audience: Graduate

5. Employ a variety of practice techniques to improve creative problem-solving.

Audience: Graduate

6. Mitigate performance anxiety using breath, positive self-talk, mock performances, mindfulness, visualization and thorough preparation.

Audience: Graduate

7. Demonstrate wide ranges of character, atmosphere, and musical phrasing that produce sound appropriate for the emotional content of the music.

Audience: Graduate

**MUS PERF 540 – MASTERS LEVEL-GUITAR**

4 credits.

Masters level individual classical guitar instruction.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2020

### MUS PERF 541 – MASTERS LEVEL JAZZ STUDIO INSTRUCTION

4 credits.

Individual studio instruction in jazz performance.

**Requisites:** Declared in Music: Performance MM or DMA

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate high technical proficiency of instrument performance

Audience: Graduate

2. Show comprehensive competency and fluency in core improvisation, accompaniment, solo, and ensemble performance techniques commonly used in the jazz genre

Audience: Graduate

3. Develop and deepen a personal artistic voice through critical engagement with the jazz idiom

Audience: Graduate

4. Interpret and improvise jazz in a performance practice appropriate to the idiom

Audience: Graduate

5. Develop a personal repertoire based on a thorough knowledge of composition and arranging techniques and familiarity with the standard jazz repertoire

Audience: Graduate

6. Contextualize the performance of jazz and related musics in history and culture

Audience: Graduate

### MUS PERF 542 – MASTERS LEVEL COLLABORATIVE PIANO

2-3 credits.

Individual instruction in collaborative musical performance.

**Requisites:** Declared in Music: Performance MM

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify personal strengths and weaknesses as a collaborative artist and develop strategies to address problems

Audience: Graduate

2. Employ advanced aural skills in investigating sound and balance with musical partners

Audience: Graduate

3. Improve piano technique, stylistic awareness, interpretive decision-making and listening skills.

Audience: Graduate

4. Describe performance practices across a range of musical styles

Audience: Graduate

5. Improve sight-reading proficiency

Audience: Graduate

6. Manage multiple musical assignments simultaneously

Audience: Graduate

7. Demonstrate excellent communication skills in rehearsals, lessons and performance – both verbal and musical – with partners and faculty

Audience: Graduate

### MUS PERF 547 – MASTERS LEVEL COMPOSITION

3 credits.

Private composition at the master's degree level.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### MUS PERF 561 – ORGAN IMPROVISATION AND LITURGY

2 credits.

Development of organ improvisation skills; survey of liturgical practices and styles.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**MUS PERF 562 – ORGAN IMPROVISATION AND LITURGY**

2 credits.

Continued development of organ improvisation skills.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2022**MUS PERF 701 – DOCTORAL LEVEL-PIANO**

4 credits.

Individual piano instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 703 – DOCTORAL LEVEL-ORGAN**

4 credits.

Individual organ instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2021**MUS PERF 705 – DOCTORAL LEVEL-VOICE**

4 credits.

Individual voice instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 707 – DOCTORAL LEVEL-FLUTE**

4 credits.

Individual flute instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 709 – DOCTORAL LEVEL-OBOE**

4 credits.

Individual oboe instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 711 – DOCTORAL LEVEL-CLARINET**

4 credits.

Individual clarinet instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 713 – DOCTORAL LEVEL-SAXOPHONE**

4 credits.

Individual saxophone instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2024**MUS PERF 715 – DOCTORAL LEVEL-BASSOON**

4 credits.

Individual bassoon instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 717 – DOCTORAL LEVEL-HORN**

4 credits.

Individual horn instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 719 – DOCTORAL LEVEL-TRUMPET**

4 credits.

Individual trumpet instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 721 – DOCTORAL LEVEL-TROMBONE**

4 credits.

Individual trombone instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025

### **MUS PERF 723 – DOCTORAL LEVEL EUPHONIUM**

4 credits.

Individual euphonium instruction at the doctoral level.

**Requisites:** Declared in Music: Performance DMA

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate musicianship through solo repertoire, etudes, and orchestral/band excerpts

Audience: Graduate

2. Demonstrate mastery of advanced euphonium techniques

Audience: Graduate

3. Apply advanced practice skills

Audience: Graduate

4. Demonstrate professionalism in performance and/or music education settings

Audience: Graduate

5. Describe and demonstrate diverse styles, periods, and genres of music

Audience: Graduate

6. Apply advanced euphonium pedagogical techniques and approaches

Audience: Graduate

### **MUS PERF 725 – DOCTORAL LEVEL TUBA**

4 credits.

Individual tuba instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2024

### **MUS PERF 727 – DOCTORAL LEVEL PERCUSSION**

4 credits.

Individual percussion instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 731 – DOCTORAL LEVEL-VIOLIN**

4 credits.

Individual violin instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 732 – DOCTORAL LEVEL CONDUCTING**

2 credits.

Individual conducting instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 733 – DOCTORAL LEVEL-VIOLA**

4 credits.

Individual viola instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### **MUS PERF 735 – DOCTORAL LEVEL-CELLO**

4 credits.

Individual cello instruction at the doctoral level.

**Requisites:** Declared in Music: Performance graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**MUS PERF 737 – DOCTORAL LEVEL DOUBLE BASS**

4 credits.

Individual instruction in double bass at the doctoral level.

**Requisites:** Declared in Music: Performance DMA**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Communicate originality, artistry, and creativity through performance

Audience: Graduate

2. Demonstrate ability to identify and strategically address performance deficiencies

Audience: Graduate

3. Employ advanced aural skills in investigating sound and intonation

Audience: Graduate

4. Show technical performance skills (arco and pizzicato) across a range of musical styles

Audience: Graduate

5. Use holistic development of strength for stamina and physical longevity

Audience: Graduate

6. Demonstrate knowledge of performance practices across a range of musical styles

Audience: Graduate

7. Articulate attributes of past and current practitioners of double bass performance

Audience: Graduate

8. Use historical resources in speaking and writing about double bass performance

Audience: Graduate

9. Describe instruments and musical tone succinctly, both verbally and in writing

Audience: Graduate

**MUS PERF 740 – DOCTORAL LEVEL-GUITAR**

4 credits.

Individual guitar instruction at the doctoral level.

**Requisites:** Declared in Music: Performance, DMA and concurrent enrollment in MUSIC 572**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Develop a refined classical guitar technique applicable to a broad range of musical styles.

Audience: Graduate

2. Demonstrate comprehensive knowledge of classical guitar repertoire.

Audience: Graduate

3. Communicate a high level of individual artistry and creativity through performance.

Audience: Graduate

**MUS PERF 742 – DOCTORAL LEVEL COLLABORATIVE PIANO**

2 credits.

Individual instruction in collaborative piano performance. Designed to deepen and continue development as a collaborative artist.

**Requisites:** Declared in Music: Performance DMA**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Identify personal strengths and weaknesses as a collaborative artist and develop strategies to address problems

Audience: Graduate

2. Employ advanced aural skills in investigating sound and balance with musical partners

Audience: Graduate

3. Improve piano technique, stylistic awareness, interpretive decision-making and listening skills

Audience: Graduate

4. Describe performance practices across a range of musical styles

Audience: Graduate

5. Improve sight-reading proficiency

Audience: Graduate

6. Manage multiple musical assignments simultaneously

Audience: Graduate

7. Demonstrate excellent communication skills in rehearsals, lessons and performance – both verbal and musical – with partners and faculty

Audience: Graduate

**MUS PERF 747 – DOCTORAL LEVEL COMPOSITION**

3 credits.

Doctoral level composition.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**MUS PERF 990 – MASTERS RECITAL**

1-4 credits.

Preparation and public performance of a Masters Recital.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**MUS PERF 999 – DMA RECITAL**

1 credit.

Preparation and public performance of a Doctoral Recital that comprises a portion of the degree requirements for all Doctor of Musical Arts degrees.

**Requisites:** Declared in Music: Performance graduate program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025

## NAVAL SCIENCE (NAV SCI)

**NAV SCI 101 – INTRODUCTION TO NAVAL SCIENCE**

2 credits.

Introduction to the naval profession emphasizing the missions, organization, and components of the Navy and Marine Corps. Topics include terminology, military justice, job specialties, seapower, and naval leadership. Includes lab. Intended for first year Naval ROTC students.

**Requisites:** None**Repeatable for Credit:** No**Last Taught:** Fall 2024**NAV SCI 102 – SEAPOW-MARITIME AFFAIRS**

3 credits.

Historical survey of the U.S. Navy and American concepts of seapower from 1775 to the present. Includes the evolution of maritime strategy in support of U.S. National Strategy. Current issues in maritime affairs. Includes lab. Open to non-ROTC students on a space available basis, with consent of instructor.

**Requisites:** None**Course Designation:** Breadth - Social Science

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2023**NAV SCI 175 – INTRODUCTORY NAVAL LABORATORY I**

0-1 credits.

Laboratory class covering officer education in naval orientation and other topics dealing with the professional development of future naval officers. Intended for freshman NROTC students.

**Requisites:** Enrolled in Naval ROTC program**Repeatable for Credit:** No**Last Taught:** Fall 2024**NAV SCI 176 – INTRODUCTORY NAVAL LABORATORY II**

0-1 credits.

Laboratory class covering officer education in naval sea power and other topics dealing with the professional development of future naval officers. Intended for freshman NROTC students.

**Requisites:** Enrolled in Naval ROTC program**Repeatable for Credit:** No**Last Taught:** Spring 2025**NAV SCI 201 – NAVAL LEADERSHIP AND MANAGEMENT**

3 credits.

A study of organizational behavior and management within the context of the naval organization. Topics include a survey of managerial functions and a study of behavioral aspects of organizations with emphasis on motivation and leadership. Includes lab. Open to non-ROTC students on a space available basis, with consent of instructor.

**Requisites:** None**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024**NAV SCI 202 – NAVIGATION**

3 credits.

Introduction to concepts and techniques used to navigate U.S. Navy and civilian ships. Charts and publications, compasses, tides and currents, dead reckoning, piloting, celestial and electronic navigation; day's work in navigation and Nautical Rules of the Road. Includes lab. Open to non-ROTC students on a space available basis, with consent of instructor.

**Requisites:** None**Course Designation:** Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**NAV SCI 275 – ELEMENTARY NAVAL LABORATORY I**

0-1 credits.

Laboratory class covering officer education in naval engineering and other topics dealing with the professional development of future naval officers. Intended for sophomore NROTC students.

**Requisites:** Enrolled in Naval ROTC program**Repeatable for Credit:** No**Last Taught:** Fall 2024

**NAV SCI 276 – ELEMENTARY NAVAL LABORATORY II**

0-1 credits.

Laboratory class covering officer education in naval weapons and other topics dealing with the professional development of future naval officers. Intended for sophomore NROTC students.

**Requisites:** Enrolled in Naval ROTC program**Repeatable for Credit:** No**Last Taught:** Spring 2025**NAV SCI 301 – NAVAL ENGINEERING**

3 credits.

The basic principles and components of ship propulsion systems including steam, diesel, gas turbine, and nuclear power plants. Other topics include ship construction, buoyancy and stability, damage control, electrical distribution, and air conditioning/ refrigeration. Includes lab. Open to non-ROTC students on a space available basis, with consent of instructor.

**Requisites:** None**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024**NAV SCI 302 – NAVAL WEAPONS**

3 credits.

Introduction to the properties and behavior of electronic, electromagnetic, and mechanical systems used in naval weapons systems. Topics and concepts include wide range of academic disciplines, all of which are applied to the maritime uses of radar, sonar, communications, electro-optics, computers, missile, and electronic warfare systems. Open to non-ROTC students on a space available basis, with consent of instructor.

**Requisites:** None**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**NAV SCI 350 – FUNDAMENTALS OF MANEUVER WARFARE**

3 credits.

History of maneuver warfare and the development of the concepts, principles, and doctrine of military operations through study of selected examples from modern history. Open to non-ROTC students on a space available basis, with consent of instructor

**Requisites:** None**Course Designation:** Breadth - Social Science

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2024**NAV SCI 351 – LAND CAMPAIGNS**

3 credits.

Evolution of weapons, strategy, tactics and material; the classic principles of war by study of selected battles and campaigns; survey of military and foreign policy, basic strategic concepts, and principles of warfare. Includes lab. Open to non-ROTC students on a space available basis, with consent of instructor.

**Requisites:** None**Course Designation:** Breadth - Social Science

Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**NAV SCI 375 – INTERMEDIATE NAVAL LABORATORY I**

0-1 credits.

Laboratory class covering officer education in naval navigation and other topics dealing with the professional development of future naval officers. Intended for junior NROTC students.

**Requisites:** Enrolled in Naval ROTC program**Repeatable for Credit:** No**Last Taught:** Fall 2024**NAV SCI 376 – INTERMEDIATE NAVAL LABORATORY II**

0-1 credits.

Laboratory class covering officer education in naval operations and other topics dealing with the professional development of future naval officers. Intended for junior NROTC students.

**Requisites:** Enrolled in Naval ROTC program**Repeatable for Credit:** No**Last Taught:** Spring 2025**NAV SCI 401 – NAVAL OPERATIONS**

3 credits.

In depth study of the professional and efficient operation of U.S. Navy ships. Fleet communications, tactical employment, relative motion plotting, seamanship, and a lecture series on Joint Warfare and the Employment of Naval Forces as an element of National Security Strategy. Open to non-ROTC students on a space available basis, with consent of instructor.

**Requisites:** None**Course Designation:** Breadth - Social Science

Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Fall 2024

**NAV SCI 402 – NAVAL LEADERSHIP AND ETHICS**

3 credits.

Capstone course. Integrates an exploration of Western moral traditions and ethical philosophy with military leadership, professional ethics, and the Uniform Code of Military Justice. Includes lab. Intended for Senior NROTC students. Open to non-ROTC students on a space available basis, with consent of instructor.

**Requisites:** None**Course Designation:** Breadth - Humanities

Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Spring 2025**NAV SCI 475 – ADVANCED NAVAL LABORATORY I**

0-1 credits.

Laboratory class covering officer education in naval management and other topics dealing with the professional development of future naval officers. Intended for senior NROTC students.

**Requisites:** Enrolled in Naval ROTC program**Repeatable for Credit:** No**Last Taught:** Fall 2024**NAV SCI 476 – ADVANCED NAVAL LABORATORY II**

0-1 credits.

Laboratory class covering officer education in naval leadership and other topics dealing with the professional development of future naval officers. Intended for senior NROTC students.

**Requisites:** Enrolled in Naval ROTC program**Repeatable for Credit:** No**Last Taught:** Spring 2025**NAV SCI 575 – PROFESSIONAL NAVAL LABORATORY I**

0-1 credits.

Laboratory class covering officer education in naval orientation and other topics dealing with the professional development of future naval officers. Intended for senior NROTC students.

**Requisites:** Enrolled in Naval ROTC program**Repeatable for Credit:** No**Last Taught:** Fall 2024**NAV SCI 576 – PROFESSIONAL NAVAL LABORATORY II**

0-1 credits.

Laboratory class covering officer education in naval orientation and other topics dealing with the professional development of future naval officers. Intended for senior NROTC students.

**Requisites:** Enrolled in Naval ROTC program**Repeatable for Credit:** No**Last Taught:** Spring 2021

## NEUROLOGICAL SURGERY (NEURSURG)

**NEURSURG 699 – NEUROSURGERY: DIRECTED IN STUDY IN RESEARCH**

1-3 credits.

Offers undergraduates majoring in an area of the biological sciences, and interested in preparing for advanced coursework in graduate or medical school, an opportunity to participate in neurological surgery research.

**Requisites:** Consent of instructor**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025

## NEURSURG 919 – INDIVIDUALIZED NEUROLOGICAL SURGERY ELECTIVE

2-4 credits.

Individually scheduled clinical elective, directly supervised by Neurological Surgery senior residents and attending physicians. Regularly scheduled supervisor-student meetings, which involve some or all of the following: rounding on service patients, participating in scheduled operative procedures, participating in sub-specialty clinics, presenting cases and teaching topics, and discussing patient cases. Independent activities include reading about patient conditions and preparing for direct patient care as needed. Other patient care-related learning activities as assigned by instructors, dependent on the individual student, the patients under the student's care, and the location.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform a hypothesis driven history and complete a targeted exam

Audience: Graduate

2. Develop and present a weighted differential diagnosis for medical and surgical conditions

Audience: Graduate

3. Using clinical evidence, adapt and justify the working diagnosis, and demonstrate an understanding of the surgical anatomy

Audience: Graduate

4. Present a diagnostic plan including laboratory and imaging modalities

Audience: Graduate

5. Correctly interpret imaging and laboratory findings and communicate results to patients and team members

Audience: Graduate

6. Develop and implement effective patient management plans

Audience: Graduate

7. Complete written documentation in a comprehensive, concise, accurate and timely manner

Audience: Graduate

8. Review, interpret, and present current literature to support patient care

Audience: Graduate

9. Communicate effectively with patients, families, physicians and non-physician team members

Audience: Graduate

10. Communicate and collaborate with consultants and/or primary team and other providers to coordinate care

Audience: Graduate

11. Engage patients in shared decision-making regarding tests, orders, and procedures

Audience: Graduate

12. Avoid medical jargon when communicating with patients and families

Audience: Graduate

13. Recognize limitations and seek assistance as appropriate

Audience: Graduate

## NEURSURG 921 – INPATIENT NEURO ICU ELECTIVE

1-12 credits.

Direct supervision by Neurocritical Care attending physicians. Regularly scheduled supervisor-student meetings, which involve some or all of the following: rounding on service patients, observing procedures in the unit, presenting cases and teaching topics, and discussing patient cases. Independent activities, including reading about patient conditions and preparing for direct patient care, as needed. Other patient care related learning activities as assigned by instructors: these are dependent on the individual student and the patients under the student's care.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform a hypothesis driven history and complete a targeted exam

Audience: Graduate

2. Develop and present a weighted differential diagnosis

Audience: Graduate

3. Using clinical evidence, adapt and justify the working diagnosis

Audience: Graduate

4. Present a diagnostic plan including laboratory and imaging modalities

Audience: Graduate

5. Correctly interpret imaging and laboratory findings and communicate results to patients and team members

Audience: Graduate

6. Complete written documentation in a comprehensive, concise, accurate and timely manner

Audience: Graduate

7. Review, interpret and present current literature to support patient care

Audience: Graduate

8. Develop clinically relevant questions to advance learning

Audience: Graduate

9. Communicate effectively with patients, families, physicians and non-physician team members

Audience: Graduate

10. Communicate and collaborate with consultants and/or primary team and other providers to coordinate care

Audience: Graduate

11. Engage patients in shared decision-making regarding tests, orders and procedures

Audience: Graduate

12. Avoid medical jargon when communicating with patients and families

Audience: Graduate

13. Recognize limitations and seek assistance as appropriate

Audience: Graduate

## NEUROLOGY (NEUROL)

### NEUROL 699 – DIRECTED RESEARCH IN NEUROLOGY

1-3 credits.

Offers the undergraduate student majoring in the life sciences (including biology, chemistry psychology, or related fields) and with interest in preparing for advanced coursework in graduate or medical school, an opportunity to participate in basic and translation research in neuroscience and neurological disorders.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Develop a clear research question or problem and formulate a hypothesis.

Audience: Undergraduate

2. Deliver an "elevator pitch" describing your research.

Audience: Undergraduate

3. Conduct research using methods employed by your lab and under the supervision of your PI and senior laboratory personnel.

Audience: Undergraduate

### NEUROL 735 – NEUROBIOLOGY OF DISEASE

2 credits.

Overview of the major categories of human neurological and ophthalmological disease to fundamental topics in neurobiology.

**Requisites:** Graduate/professional standing and NTP/NEURODPT 610

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Recognize the clinical aspects (diagnosis and available treatments) for a number of neurological diseases

Audience: Graduate

2. Critically discuss current papers in the neurobiology of disease literature

Audience: Graduate

3. Demonstrate understanding of the latest findings and treatments for a number of neurological disorders

Audience: Graduate

4. Sharpen communication skills by presenting scientific papers and leading discussions

Audience: Graduate

### NEUROL 910 – INDEPENDENT READING AND RESEARCH FOR FOURTH YEAR MEDICAL STUDENTS

1-12 credits.

Independent research under the direct supervision of Neurology faculty. Each project is individualized to meet the research goals of the student within the context of the faculty's research.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Graduate

2. Read and effectively search scientific literature

Audience: Graduate

3. Develop critical, analytical, and independent thinking skills

Audience: Graduate

### NEUROL 913 – COGNITION AND NEUROANATOMY

2 credits.

Basic science concepts will be integrated to examine the relationship between neuroanatomy and cognition (e.g., learning and memory, executive function, visual perceptual abilities, etc.). Utilize stroke, epilepsy, dementia and other neurodegenerative disorders from clinical practice to demonstrate the connection between brain structure and cognitive function. Hands on experience in neuropsychological test administration and interpretation will be integrated into learning. Brain imaging correlates for clinical cases will be presented by a clinical neurologist.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Differentiate cognitive profiles and neuroanatomical correlates of dementia

Audience: Graduate

2. Differentiate cognitive profiles and neuroanatomical correlates of stroke

Audience: Graduate

3. Differentiate cognitive profiles and neuroanatomical correlates of epilepsy

Audience: Graduate

4. Understand factors needed to determine cognitive capacity

Audience: Graduate

5. Learn to administer and interpret MOCA, SLUMS, and MMSE accurately

Audience: Graduate

**NEUROL 914 – NEUROLOGY, DIET & NEUROLOGICAL DISORDERS**

2 credits.

Gain insight into the role of diet and nutrition in neurological disease while utilizing analytical and evidence-based-medicine research skills. Gain understanding of the role of diet and nutrition in the exacerbation and the treatment of neurological disorders (e.g. Epilepsy, Autism, Fragile X Syndrome, Phenylketonuria (PKU), Multiple Sclerosis).

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the fundamental associations between diet and neurological disorders under study (e.g. Epilepsy, Autism, Fragile X Syndrome, Phenylketonuria (PKU), Multiple Sclerosis).

Audience: Graduate

2. Identify and critically evaluate landmark articles in field.

Audience: Graduate

3. Apply evidence from research, readings, and discussions to interpretation of case studies

Audience: Graduate

4. Identify a question or topic of interest and prepare a written (book review, case report, mini review) or oral presentation (PowerPoint) in the area of diet/nutrition and brain disorders.

Audience: Graduate

5. Demonstrate competency in giving/receiving feedback through a peer review process.

Audience: Graduate

**NEUROL 919 – NEUROLOGY INDIVIDUALIZED CLINICAL ELECTIVE**

1-12 credits.

Individually scheduled clinical elective, directly supervised by Neurology senior residents and attending physicians. Regularly scheduled supervisor-student meetings, which involve some or all of the following: rounding on service patients, observing procedures in the unit or clinic, examination of patients in an ambulatory setting, presenting cases and teaching topics, and discussing patient cases. Independent activities, including reading about patient conditions and preparing for direct patient care, as needed. Other patient care related learning activities as assigned by instructors: these are dependent on the individual student and the patients under the student's care.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform a hypothesis driven history and complete a targeted exam.

Audience: Graduate

2. Develop and present a weighted differential diagnosis.

Audience: Graduate

3. Using clinical evidence, adapt and justify the working diagnosis.

Audience: Graduate

4. Present a diagnostic plan including laboratory and imaging modalities.

Audience: Graduate

5. Correctly interpret imaging and laboratory findings and communicate results to patients and team members.

Audience: Graduate

6. Complete written documentation in a comprehensive, concise, accurate and timely manner.

Audience: Graduate

7. Review, interpret and present current literature to support patient care.

Audience: Graduate

8. Develop clinically relevant questions to advance learning.

Audience: Graduate

9. Communicate effectively with patients, families, physicians and non-physician team members.

Audience: Graduate

10. Communicate and collaborate with consultants and/or primary team and other providers to coordinate care.

Audience: Graduate

11. Engage patients in shared decision-making regarding tests, orders and procedures.

Audience: Graduate

12. Avoid medical jargon when communicating with patients and families.

Audience: Graduate

13. Recognize limitations and seek assistance as appropriate.

Audience: Graduate

**NEUROL 990 – RESEARCH SPECIAL NEUROLOGICAL FIELDS**

1-12 credits.

Independent research under the direct supervision of Neurology faculty. Each student's project is individualized to meet the research goals of the student within the context of the faculty's research.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2015

**Learning Outcomes:** 1. Exhibit a broad understanding of general neurological principles

Audience: Graduate

2. Conduct independent research using a variety of approaches

Audience: Graduate

3. Think critically to address research challenges

Audience: Graduate

4. Exhibit and foster professional and ethical conduct in research

Audience: Graduate

5. Collaborate with other investigators within or outside the thesis lab

Audience: Graduate

6. Complete required regulatory training and certifications (for example, IRB, biosafety, animal, radiation and HIPPA) as pertinent to thesis laboratory.

Audience: Graduate

## NEUROSCIENCE (NEURODPT)

**NEURODPT/NTP 610 – CELLULAR AND MOLECULAR NEUROSCIENCE**

4 credits.

Study of original papers leading to an understanding of the molecular basis of electrical activity in neurons. Topics include voltage-sensitive currents, molecular biology of neuronal receptors, synaptic transmission and sensory transduction.

**Requisites:** ZOOLOGY/PSYCH 523 and (PHYSICS 202, 208, or 248), or graduate/professional standing

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify the major anatomical parts of a neuron and summarize their functions

Audience: Both Grad & Undergrad

2. Name the major classes of voltage-gated ion channels responsible for the resting potential and action potential. Describe their functional roles in generating those potentials, with respect to concepts such as voltage-dependence, activation, inactivation and propagation. Identify the structural motifs in these proteins that permit their function

Audience: Both Grad & Undergrad

3. Summarize the sequence of events in the presynaptic terminal that lead from depolarization to neurotransmitter release, including the role of calcium. Explain the quantal hypothesis of neurotransmitter release and the experimental evidence that supports it. Describe the exocytosis/endocytosis cycle

Audience: Both Grad & Undergrad

4. Summarize basic principles of ligand/receptor interactions. Interpret the meaning of quantities such as the dissociation constant ( $K_d$ ) and the maximum response ( $V_{max}$ ). Explain the experimental evidence that led to the equations (e.g., Hill Equation) that describe these principles

Audience: Both Grad & Undergrad

5. Name the major classes of ligand-gated ion channels that support fast synaptic transmission and differentiate their functions with respect to excitation versus inhibition. Identify the structural motifs in these proteins that permit their specific functions. Solve equations that describe the behavior of simple chemical and electrical systems as a function of time

Audience: Both Grad & Undergrad

6. Explain what second messengers and signaling cascades are and how they participate in regulating neuronal function. Describe the major processes leading from DNA to RNA to the production of proteins and explain how these processes are regulated with respect to the structure of chromatin and the action of transcriptional activators and repressors

Audience: Both Grad & Undergrad

7. Define the concept of sensory transduction. Describe the key components of transduction and their interactions in the following systems: vision, olfaction, touch and hearing. Explain how sensory cells can be "tuned" to respond to specific aspects of a stimulus (e.g., color, frequency, etc)

Audience: Both Grad & Undergrad

**NEURODPT/NTP/PSYCH 611 – SYSTEMS NEUROSCIENCE**

4 credits.

Introduction to the anatomy and physiology of the mammalian nervous system. Lectures will cover the neuroanatomy of the major subdivisions of the human brain, the major sensory and motor systems, and higher order functions. Lab/discussion sections will emphasize readings from the primary literature and hands-on dissections.

**Requisites:** NEURODPT/NTP 610 or graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the organization and structure of mammalian nervous system, including the spinal cord, brainstem, thalamus, cerebral cortex, cerebellum, basal ganglia, limbic system, and their interconnections on a systems level

Audience: Both Grad & Undergrad

2. Demonstrate a solid understanding of the functions of the sensory and motor systems that underlie perception and action

Audience: Both Grad & Undergrad

3. Demonstrate a solid understanding of higher brain functions and behavior, including learning and memory and executive function

Audience: Both Grad & Undergrad

4. Demonstrate knowledge about approaches of modern neuroscience research including neuroanatomy, neurophysiology, functional brain imaging, behavioral assays, and quantitative data analysis methods

Audience: Both Grad & Undergrad

5. Develop and apply critical thinking to evaluate original neuroscience research

Audience: Graduate

6. Develop ability to formulate hypotheses and to apply knowledge learned from the course to design experiments for hypothesis testing

Audience: Graduate

**NEURODPT 629 – MOLECULAR AND CELLULAR MECHANISMS OF MEMORY**

3 credits.

Focuses on the cell signaling and the resulting structural changes that occur at neuronal synapses during memory formation. The aim is to understand how the synaptic changes underlying memory occur.

**Requisites:** Graduate/professional standing or ANAT&PHY 335, 435, PHYSIOL 335, 435 or ZOOLOGY/PSYCH 523

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Describe how the neural activity at the synapse which occurs during a memory-inducing event (a memorable event) leads to the ability to recall that event, when the animal or person does recall that event, either spontaneously or by prompting.

Audience: Both Grad & Undergrad

2. Apply a variety of biological techniques to understand the biochemical processes that are involved in memory. Learn the principles of these advanced techniques and apply them appropriately to work out mechanisms.

Audience: Both Grad & Undergrad

3. Formulate why alterations in synaptic strength between neurons in an autoassociative network lead to the ability to recall an event which involved the activation of neurons in that network. This is the concept of pattern completion, which is the core of memory formation and is an incredibly important overall concept.

Audience: Both Grad & Undergrad

4. Succinctly present research proposals that are students' extensions of work that has been published, including a strong component of originality on the part of the student.

Audience: Both Grad & Undergrad

5. Formulate the basics of synaptic transmission mechanisms including presynaptic release of neurotransmitter and effects of neurotransmitter interactions with the post synaptic membrane on biochemistry and electrophysiology of the dendritic spine. These include unique properties of the dendritic spine including anatomy, biochemical composition.

Audience: Both Grad & Undergrad

6. Formulate the concept of neural plasticity, the strengthening and weakening of transmission between presynaptic terminals and post synaptic dendritic spines. The realization that this occurs as the result of interaction between a large number of proteins. Describe the structure of the synapse in detail that includes the roles played by structural proteins and protein kinases and phosphatases in affecting synaptic strength.

Audience: Both Grad & Undergrad

7. Describe the application of the use of advanced optical approaches such as FRET (fluorescence resonance energy transfer) and several others. Formulate how they reveal detailed information about the movements and alterations in properties of the key macromolecules that comprise the synaptic region. Formulate how information is derived from these measurements to explain events of synaptic plasticity.

Audience: Both Grad & Undergrad

8. Formulate an approach using one or more of these techniques to answer an unresolved question regarding the mechanisms of plasticity.

Audience: Graduate

**NEURODPT/NTP 640 – COMPUTATIONAL NEUROSCIENCE:  
FROM SINGLE CELLS TO WHOLE BRAIN MODELS**

3 credits.

Theory and application of methods in computational neuroscience across various levels of organization from single cells to global brain dynamics and cognition. Computational neuroscience is an approach to understanding the development and function of nervous systems in mechanistic terms at many different structural scales. Topics include biophysical properties of neurons and synapses, neural plasticity, sensory systems, neural circuits, whole brain analysis and modeling, and different views on brain function. Includes primers on relevant computational techniques (ICA, information theoretical approaches, dynamical systems) and a computational problem set. Starts with an introduction to MATLAB (used for problem sets).

**Requisites:** PSYCH/ZOOLOGY 523, PSYCH 454, MATH 221, and (PHYSICS 104, 202, 208, or 248); or graduate/professional standing and NEURODPT/NTP 610 and PSYCH/NEURODPT/NTP 611

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain the basic functioning of a neuron in biophysical terms (including how action potentials are generated, the role of dendrites, and postsynaptic integration).

Audience: Both Grad & Undergrad

2. Summarize the computational properties of sensory neurons reacting to sensory stimuli (tuning curves, receptive fields, feature selectivity).

Audience: Both Grad & Undergrad

3. Demonstrate technical familiarity in evaluating the statistical and information theoretical properties of neuronal activity (basics of signal detection theory, spike train statistics, firing rate models, PCA/ICA analysis).

Audience: Both Grad & Undergrad

4. Name various types of neural circuit models and their areas of application.

Audience: Both Grad & Undergrad

5. List the main differences between artificial neural networks as developed in computer science and computational models of biological neural networks.

Audience: Both Grad & Undergrad

6. Demonstrate how to characterize the dynamical properties of neurons and neural networks.

Audience: Both Grad & Undergrad

7. Summarize the hierarchical organization of the brain in computational terms (canonical microcircuit, mini-columns, functional brain networks).

Audience: Both Grad & Undergrad

8. Distinguish between anatomical, functional, and effective cortical connectivity.

Audience: Both Grad & Undergrad

9. Summarize main theoretical approaches to understanding brain functioning (graph theory, dynamical systems, information processing, decoding, whole-brain computational models).

Audience: Both Grad & Undergrad

10. Run and adapt MATLAB scripts for building and simulating neural

**NEURODPT/PSYCH/ZOOLOGY 674 – BEHAVIORAL  
NEUROENDOCRINOLOGY SEMINAR**

2 credits.

Behavior results from a complex interplay among hormones, the brain, and environmental factors. Behaviors and their underlying neural substrates have evolved in response to specific environmental conditions, resulting in vast species diversity in behavioral and neuroendocrine solutions to environmental problems. Designed to explore the primary literature on the neuroendocrine underpinnings of behavior spanning from feeding to sex differences in complex social behaviors. A range of taxonomic groups will be discussed, including (but not limited to) mammals, birds, and fish.

**Requisites:** ZOOLOGY/BIOLOGY 101, ZOOLOGY/BIOLOGY/BOTANY 151, BIOCORE 383 or graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Identify how behaviors and their underlying neural substrates have evolved in response to specific environmental conditions

Audience: Both Grad & Undergrad

2. Discuss and explore the primary literature on the neuroendocrine underpinnings of behavior spanning from feeding to sex differences in complex social behaviors

Audience: Both Grad & Undergrad

3. Identify and discuss hormones, the brain, and environmental factors as they relate to behavioral evolution and biological diversity

Audience: Both Grad & Undergrad

4. Develop and apply critical thinking to evaluate neuroendocrinological research

Audience: Graduate

5. Communicate effectively about concepts, theories and approaches of neuroendocrinology and behavioral research

Audience: Graduate

**NEURODPT 675 – SELECTED TOPICS IN PHYSIOLOGY**

1-3 credits.

Topics include: advanced cardiovascular physiology, advanced respiratory physiology, advanced endocrinology, membrane transport physiology and neurobiology.

**Requisites:** None

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2019

**Learning Outcomes:** 1. Apply, analyze, or evaluate advanced theories, concepts, or methods in Neuroscience and Physiology, including but not limited to: ion channels, advanced cardiovascular physiology, advanced respiratory physiology, advanced endocrinology, membrane transport physiology and neurobiology

Audience: Both Grad & Undergrad

2. Identify and describe key theories, concepts, and methods in Physiology and Neuroscience, including but not limited to: ion channels, advanced cardiovascular physiology, advanced respiratory physiology, advanced endocrinology, membrane transport physiology and neurobiology and apply the knowledge gained to research in the field

Audience: Graduate

**NEURODPT 699 – DIRECTED STUDY**

1-4 credits.

Independent work.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Undergraduate

2. Read and effectively search scientific literature

Audience: Undergraduate

3. Develop critical, analytical, and independent thinking skills

Audience: Undergraduate

**NEURODPT 747 – SENSORY AND MOTOR SYSTEMS**

2 credits.

Overview of the basic science principles of sensory and motor systems in the central and peripheral nervous system, with clinicians providing complementary presentations on their relevant experiences in the clinic. Topics include Somatosensory pathways in spinal cord, brainstem and cerebrum, Motor neurons in spinal cord and brainstem and the descending systems that control them, Blood Supply of the CNS and affiliated vascular syndromes, Cerebellum, Basal Ganglia and associated pathways, Eye Movement control, Vestibular, Auditory, and Visual systems and organization of Cerebral Cortex.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify and summarize the main sensory and motor structures within the nervous system.

Audience: Graduate

2. Explain how elements in the nervous system interact to enable specific sensory and motor functions.

Audience: Graduate

3. Describe how pathology in specific neural pathways leads to particular clinical neurological signs and symptoms (e.g., ischemic stroke syndromes).

Audience: Graduate

4. Predict the location of damage in the nervous system based on symptoms and signs.

Audience: Graduate

**NEURODPT/ZOOLOGY 765 – DEVELOPMENTAL NEUROSCIENCE**

3 credits.

Analysis of neural development with emphasis on experimental approaches. Combination of lectures and discussions of primary literature. Topics include neural induction, patterning, mechanisms of axon guidance, neural crest cell migration and differentiation, cortical development, and synapse formation and elimination.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Gain an extensive understanding of mechanisms of neural development

Audience: Graduate

2. Acquire the ability to critically analyze current studies in neural development

Audience: Graduate

## NEURODPT 990 – RESEARCH AND THESIS

1-9 credits.

Research supervised by individual faculty members.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Exhibit a broad understanding of general Neuroscience principles

Audience: Graduate

2. Conduct independent research using a variety of approaches

Audience: Graduate

3. Think critically to address research challenges

Audience: Graduate

4. Exhibit and foster professional and ethical conduct in their research

Audience: Graduate

5. Collaborate with other investigators within or outside the thesis lab

Audience: Graduate

# NEUROSCIENCE TRAINING PROGRAM (NTP)

## NTP/NEURODPT 610 – CELLULAR AND MOLECULAR NEUROSCIENCE

4 credits.

Study of original papers leading to an understanding of the molecular basis of electrical activity in neurons. Topics include voltage-sensitive currents, molecular biology of neuronal receptors, synaptic transmission and sensory transduction.

**Requisites:** ZOOLOGY/PSYCH 523 and (PHYSICS 202, 208, or 248), or graduate/professional standing

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify the major anatomical parts of a neuron and summarize their functions

Audience: Both Grad & Undergrad

2. Name the major classes of voltage-gated ion channels responsible for the resting potential and action potential. Describe their functional roles in generating those potentials, with respect to concepts such as voltage-dependence, activation, inactivation and propagation. Identify the structural motifs in these proteins that permit their function

Audience: Both Grad & Undergrad

3. Summarize the sequence of events in the presynaptic terminal that lead from depolarization to neurotransmitter release, including the role of calcium. Explain the quantal hypothesis of neurotransmitter release and the experimental evidence that supports it. Describe the exocytosis/endocytosis cycle

Audience: Both Grad & Undergrad

4. Summarize basic principles of ligand/receptor interactions. Interpret the meaning of quantities such as the dissociation constant ( $K_d$ ) and the maximum response ( $V_{max}$ ). Explain the experimental evidence that led to the equations (e.g., Hill Equation) that describe these principles

Audience: Both Grad & Undergrad

5. Name the major classes of ligand-gated ion channels that support fast synaptic transmission and differentiate their functions with respect to excitation versus inhibition. Identify the structural motifs in these proteins that permit their specific functions. Solve equations that describe the behavior of simple chemical and electrical systems as a function of time

Audience: Both Grad & Undergrad

6. Explain what second messengers and signaling cascades are and how they participate in regulating neuronal function. Describe the major processes leading from DNA to RNA to the production of proteins and explain how these processes are regulated with respect to the structure of chromatin and the action of transcriptional activators and repressors

Audience: Both Grad & Undergrad

7. Define the concept of sensory transduction. Describe the key components of transduction and their interactions in the following systems: vision, olfaction, touch and hearing. Explain how sensory cells can be "tuned" to respond to specific aspects of a stimulus (e.g., color, frequency, etc)

Audience: Both Grad & Undergrad

**NTP/NEURODPT/PSYCH 611 – SYSTEMS NEUROSCIENCE**

4 credits.

Introduction to the anatomy and physiology of the mammalian nervous system. Lectures will cover the neuroanatomy of the major subdivisions of the human brain, the major sensory and motor systems, and higher order functions. Lab/discussion sections will emphasize readings from the primary literature and hands-on dissections.

**Requisites:** NEURODPT/NTP 610 or graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the organization and structure of mammalian nervous system, including the spinal cord, brainstem, thalamus, cerebral cortex, cerebellum, basal ganglia, limbic system, and their interconnections on a systems level

Audience: Both Grad & Undergrad

2. Demonstrate a solid understanding of the functions of the sensory and motor systems that underlie perception and action

Audience: Both Grad & Undergrad

3. Demonstrate a solid understanding of higher brain functions and behavior, including learning and memory and executive function

Audience: Both Grad & Undergrad

4. Demonstrate knowledge about approaches of modern neuroscience research including neuroanatomy, neurophysiology, functional brain imaging, behavioral assays, and quantitative data analysis methods

Audience: Both Grad & Undergrad

5. Develop and apply critical thinking to evaluate original neuroscience research

Audience: Graduate

6. Develop ability to formulate hypotheses and to apply knowledge learned from the course to design experiments for hypothesis testing

Audience: Graduate

**NTP/NEURODPT 640 – COMPUTATIONAL NEUROSCIENCE: FROM SINGLE CELLS TO WHOLE BRAIN MODELS**

3 credits.

Theory and application of methods in computational neuroscience across various levels of organization from single cells to global brain dynamics and cognition. Computational neuroscience is an approach to understanding the development and function of nervous systems in mechanistic terms at many different structural scales. Topics include biophysical properties of neurons and synapses, neural plasticity, sensory systems, neural circuits, whole brain analysis and modeling, and different views on brain function. Includes primers on relevant computational techniques (ICA, information theoretical approaches, dynamical systems) and a computational problem set. Starts with an introduction to MATLAB (used for problem sets).

**Requisites:** PSYCH/ZOOLOGY 523, PSYCH 454, MATH 221, and (PHYSICS 104, 202, 208, or 248); or graduate/professional standing and NEURODPT/NTP 610 and PSYCH/NEURODPT/NTP 611

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain the basic functioning of a neuron in biophysical terms (including how action potentials are generated, the role of dendrites, and postsynaptic integration).

Audience: Both Grad & Undergrad

2. Summarize the computational properties of sensory neurons reacting to sensory stimuli (tuning curves, receptive fields, feature selectivity).

Audience: Both Grad & Undergrad

3. Demonstrate technical familiarity in evaluating the statistical and information theoretical properties of neuronal activity (basics of signal detection theory, spike train statistics, firing rate models, PCA/ICA analysis).

Audience: Both Grad & Undergrad

4. Name various types of neural circuit models and their areas of application.

Audience: Both Grad & Undergrad

5. List the main differences between artificial neural networks as developed in computer science and computational models of biological neural networks.

Audience: Both Grad & Undergrad

6. Demonstrate how to characterize the dynamical properties of neurons and neural networks.

Audience: Both Grad & Undergrad

7. Summarize the hierarchical organization of the brain in computational terms (canonical microcircuit, mini-columns, functional brain networks).

Audience: Both Grad & Undergrad

8. Distinguish between anatomical, functional, and effective cortical connectivity.

Audience: Both Grad & Undergrad

9. Summarize main theoretical approaches to understanding brain functioning (graph theory, dynamical systems, information processing, decoding, whole-brain computational models).

Audience: Both Grad & Undergrad

10. Run and adapt MATLAB scripts for building and simulating neural

## NTP 660 – NEUROSCIENCE & PUBLIC POLICY SEMINAR

1-2 credits.

Covers various topics in neuroscience and in the related sciences that demonstrate the interaction between science and public policy.

**Requisites:** BIOCORE 485, ZOOLOGY/PSYCH 523, PSYCH/NEURODPT/NTP 611, or declared in Neuroscience graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Integrate knowledge from multiple sources and reflect on how science informs policies and society, and how policies impact the conduct of science

Audience: Both Grad & Undergrad

2. Demonstrate ability to consider multiple viewpoints on complex topics and engage in respectful and enriching discussion

Audience: Both Grad & Undergrad

3. Summarize content knowledge on current topics in policy, law, and neuroscience

Audience: Both Grad & Undergrad

4. Develop critical thinking skills to identify and dissect societal issues that are informed by science and reflect on potential solutions and next steps

Audience: Both Grad & Undergrad

5. Demonstrate knowledge of career paths at the intersection of science and policy (e.g. academic, non-profit, industry, government)

Audience: Both Grad & Undergrad

6. Demonstrate ability to lead an inclusive discussion on topics at the intersection of science and policy

Audience: Graduate

## NTP 666 – NEUROSCIENCE OF CONSCIOUSNESS AND ITS DISORDERS

3 credits.

Outlines contemporary strategies to study consciousness and current knowledge of the neural correlates of consciousness and their alterations during sleep, parasomnia, anesthesia, coma, stroke, seizures, meditative and psychedelic states. Reviews recent work studying the neural correlates of conscious contents and their interactions with cognitive processes. Outlines contemporary theories of consciousness, illustrate how they can be empirically tested, and discuss their implications for the presence vs. absence of consciousness in artificial intelligent systems.

**Requisites:** (PSYCH 454 and ZOOLOGY/PSYCH 523) or graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand approaches used to distinguish between consciousness and its pre-requisites or consequences, and the importance of arousal systems for enabling consciousness.

Audience: Both Grad & Undergrad

2. Describe current knowledge about cortical structures involved in specific conscious contents.

Audience: Both Grad & Undergrad

3. Understand the complementarity of animal vs. human models to study consciousness.

Audience: Both Grad & Undergrad

4. Describe the spectrum of alterations of consciousness present during sleep, parasomnia, anesthesia, coma, seizures, stroke, meditative and psychedelic states, and their neural correlates.

Audience: Both Grad & Undergrad

5. Understand possible interactions and dissociations between consciousness, attention and memory.

Audience: Both Grad & Undergrad

6. Describe the variety of current theoretical approaches to consciousness and their relevance to infer the presence of consciousness in artificial intelligent systems.

Audience: Both Grad & Undergrad

7. Discuss a selection of recent studies - identified shortly before class as providing significant advances and/or reflecting current directions in the consciousness research field - and learn to critically analyze the methodological strengths and limitations of these studies.

Audience: Graduate

8. Understand how to design an experiment probing the neural correlates of consciousness while accounting for its pre-requisites and consequences.

Audience: Graduate

**NTP 675 – SPECIAL TOPICS**

1-3 credits.

**Requisites:** None

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply, analyze, or evaluate advanced theories, concepts, or methods in neuroscience and neurobiology

Audience: Both Grad & Undergrad

2. Identify and describe key theories, concepts, and methods in neurobiology

Audience: Both Grad & Undergrad

3. Explore a new phenomenon or modality in the neuroscience area and apply the knowledge gained to research in the field

Audience: Graduate

**NTP 677 – BASIC SLEEP MECHANISMS AND SLEEP DISORDERS: FROM NEUROBIOLOGY TO SLEEP MEDICINE**

3 credits.

Sleep occupies a third of our life, is found in all animal species carefully studied so far, and loss of sleep has both acute and long-term negative consequences on the brain and the body. Still, why we sleep remains unclear, and hypotheses on the role of sleep for synaptic homeostasis, learning and memory are being tested. Focuses on the neurobiology of sleep, with detailed review of the brain structures involved in controlling wake and sleep, as well as the circadian and homeostatic regulation of sleep. Other topics include changes in sleep need with age, animal models to study sleep, sleep disorders, and genetics of sleep.

**Requisites:** PSYCH 454 and ZOOLOGY/PSYCH 523 or graduate/professional standing

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Outline the physiology and definitions used to define sleep and wake

Audience: Both Grad & Undergrad

2. Detail the brain structures and systems involved in the control of sleep and wake

Audience: Both Grad & Undergrad

3. Describe circadian and homeostatic regulation of sleep and wakefulness

Audience: Both Grad & Undergrad

4. Describe recent evidence linking sleep, memory, and synaptic plasticity

Audience: Both Grad & Undergrad

5. Describe animal models used to study sleep

Audience: Both Grad & Undergrad

6. Describe molecular and genetic approaches to the study of sleep

Audience: Both Grad & Undergrad

7. Recognize how sleep changes across the lifespan

Audience: Both Grad & Undergrad

8. Explain how sleep affects endocrine, metabolic, and cognitive functions

Audience: Both Grad & Undergrad

9. Outline the importance of sleep for the individual and society, including negative consequences of sleep deprivation and sleep disorders

Audience: Both Grad & Undergrad

10. List the symptoms, pathological mechanisms, epidemiology, and treatments of sleep disorders (including insomnia, sleep apnea, central nervous system hypersomnias, circadian rhythm disorders, parasomnias, and sleep-related movement disorders)

Audience: Both Grad & Undergrad

11. Discuss additional very recent studies on sleep topics and learn how to recognize strengths and limitations of these studies relative to prior knowledge on sleep research

Audience: Graduate

12. Describe how to design a sleep experiment and recognize the many confounding factors often associated with sleep studies

Audience: Graduate

**NTP 700 – PROFESSIONAL DEVELOPMENT FOR BIOMEDICAL GRADUATE STUDENTS**

1 credit.

Provides graduate students with the skills and knowledge necessary to succeed in science. Topics which are covered include choosing a thesis advisor, grant writing, preparing a seminar presentation, etc.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Define the concepts of mentorship, mentor-mentee relationships and choosing a thesis advisor, mentor, and thesis committee members

Audience: Graduate

2. Write compelling publications for peer-reviewed journals, authorship responsibilities

Audience: Graduate

3. Critically evaluate a peer-reviewed scientific article

Audience: Graduate

4. Demonstrate knowledge of the concepts of grant writing, specific aims, preparing a seminar presentation, etc.

Audience: Graduate

5. Participate in various types of research collaborations, team science

Audience: Graduate

6. Provide instruction in the responsible conduct of research (RCR) for students; animal and human subject research and ethics

Audience: Graduate

**NTP 701 – EXPERIMENTAL DESIGN AND STATISTICAL METHODOLOGY**

1 credit.

Application of the scientific method and experimental design, with a focus on experimental neuroscience. Topics include best practices that underlie robust and unbiased experimental approaches, methods, analyses, data interpretation and transparent reporting of results.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify appropriate experimental designs relevant to contemporary neuroscience research

Audience: Graduate

2. Recognize well-designed, well-controlled experiments

Audience: Graduate

3. Consider experimental design and analysis principles in their own research

Audience: Graduate

4. Describe appropriate quantitative approaches used in a variety of experimental systems

Audience: Graduate

5. Recognize (in)appropriate uses of statistics in neuroscience data analysis, interpreting results, and forming appropriate conclusions

Audience: Graduate

6. Select appropriate application of statistics to neuroscience data in different experimental paradigms

Audience: Graduate

**NTP 900 – NEUROSCIENCE SEMINAR: CURRENT TOPICS IN NEUROBIOLOGY**

1 credit.

Critical review of selected topics in neurobiology.

**Requisites:** Declared in Neuroscience graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the breadth of Neuroscience.

Audience: Graduate

2. Present neuroscience research in a seminar setting.

Audience: Graduate

3. Demonstrate ability to critically analyze specific aspects of the topic area.

Audience: Graduate

**NTP 990 – RESEARCH AND THESIS**

1-12 credits.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**Learning Outcomes:** 1. Exhibit a broad understanding of general Neuroscience principles

Audience: Graduate

2. Conduct independent research using a variety of approaches

Audience: Graduate

3. Demonstrate knowledge by critically addressing research challenges

Audience: Graduate

4. Exhibit and foster professional and ethical conduct in their research

Audience: Graduate

5. Collaborate with other investigators within or outside the thesis lab

Audience: Graduate

## NUCLEAR ENGINEERING (N E)

**N E 1 – COOPERATIVE EDUCATION PROGRAM**

1 credit.

Work experience which combines classroom theory with practical knowledge of operations to provide students with a background upon which to base a professional career.

**Requisites:** Sophomore standing**Course Designation:** Workplace - Workplace Experience Course**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**Learning Outcomes:** 1. Identify and respond appropriately to real-life engineering ethics cases relevant to co-op work

Audience: Undergraduate

2. Synthesize and apply appropriate technical education to real world technical work

Audience: Undergraduate

3. Communicate effectively in writing and speaking with a range of audiences in the workplace, including those without disciplinary expertise

Audience: Undergraduate

4. Develop professional and transferable habits like time management skills, collaborative problem-solving skills, and research skills for learning new information

Audience: Undergraduate

**N E 231 – INTRODUCTION TO NUCLEAR ENGINEERING**

3 credits.

Nuclear fission/fusion, medical applications of radiation, radiation safety. Socio-economic topics including environmental justice, community engagement, nuclear policy. Brief history of and controversies in nuclear engineering. Career paths and ethics in engineering, and introduction to professional communication.

**Requisites:** None**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Describe how nuclear science and technology are used in our world today

Audience: Undergraduate

2. Identify different career paths in nuclear engineering

Audience: Undergraduate

3. Distinguish the technological and socio-economic context and challenges of nuclear engineering

Audience: Undergraduate

4. Analyze problems in nuclear engineering ethics and arrive at defensible actions

Audience: Undergraduate

5. Produce a deliverable relevant to the class curriculum, designed by a team

Audience: Undergraduate

**N E 234 – PRINCIPLES AND PRACTICE OF NUCLEAR REACTOR OPERATIONS**

4 credits.

Presents the theoretical and practical information required to understand operation of nuclear reactors. Content includes all subjects which must be known by a person seeking an operating license for the university reactor. Instructors integrate information on similar operations and systems in a nuclear power plant.

**Requisites:** Declared in Nuclear Engineering**Repeatable for Credit:** No**Last Taught:** Fall 2023**Learning Outcomes:** 1. Solve problems involving radioactive decay, radiation attenuation, neutron activation and the time dependent behavior of reactors

Audience: Undergraduate

2. Describe the units and methods of detecting ionizing radiation, the principles of radiation protection and applicable federal regulations

Audience: Undergraduate

3. Describe reactor components and systems and their relevance to reactor operations

Audience: Undergraduate

4. Manipulate the reactivity controls of a reactor

Audience: Undergraduate

### N E 305 – FUNDAMENTALS OF NUCLEAR ENGINEERING

3 credits.

Properties of nuclei, nuclear structure, radioactivity, nuclear reactions, fission, resonance reactions, moderation of neutrons.

**Requisites:** PHYSICS 205, 241, 244, or 249, or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Solve steady wave mechanics problems beginning from the appropriate form of Schrodinger's equation

Audience: Undergraduate

2. Describe the Semi Empirical Mass Formula as well as the features of the "binding energy/nucleon" curve

Audience: Undergraduate

3. Explain why the "magic numbers" of nuclear physics differ from those of atomic physics

Audience: Undergraduate

4. Explain the correlation between the half-lives for alpha-decay and the Q-value

Audience: Undergraduate

5. Describe the energy spectrum of beta-decay

Audience: Undergraduate

6. List the different absorption mechanism of gamma-rays

Audience: Undergraduate

7. Compare the kinematics of elastic scattering with that of charged particle scattering

Audience: Undergraduate

### N E 405 – NUCLEAR REACTOR THEORY

3 credits.

The neutronics behavior of fission reactors, primarily from a theoretical, one-speed perspective. Criticality, fission product poisoning, reactivity control, reactor stability and introductory concepts in fuel management, followed by slowing down and one-speed diffusion theory.

**Requisites:** N E 305 and (MATH 319, 320, 321, or 375), or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Write neutron balance conditions describing the temporal, spectral and spatial behavior of (neutron) multiplying systems

Audience: Undergraduate

2. Explain how stability issues manifest themselves in choices of reactor design and operation in light water reactors

Audience: Undergraduate

3. Assess whether or not a system containing fissile material is critical

Audience: Undergraduate

4. Estimate the lifetime of a core based on the initial excess reactivity; prescribe control materials for maintaining criticality over the core lifetime

Audience: Undergraduate

5. Solve simple temporal reactor kinetics problems and explain the shape of the reactor power curve

Audience: Undergraduate

6. Solve simple spectral problems and explain the shape of the neutron spectrum in a light water reactor

Audience: Undergraduate

7. Find the spatial neutron distribution and associated power distribution for a given combination of constituent materials using one-group and two-group diffusion theory

Audience: Undergraduate

**N E 408 – IONIZING RADIATION**

3 credits.

Sources, interactions, and detection of ionizing radiation. Biological effects, shielding, standards of radiation protection.

**Requisites:** N E 305, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain the modes by which uncharged radiation (photons and neutrons) interacts with matter

Audience: Undergraduate

2. Describe how heavy and light charged particles interact with matter

Audience: Undergraduate

3. Determine radiological quantities associated with radiation protection (e.g., exposure, absorbed dose, and dose equivalent) for external sources of radiation (unshielded and shielded)

Audience: Undergraduate

4. Determine committed doses for internal sources of radiation

Audience: Undergraduate

5. Design a shield to protect occupational workers from radiation exposure due to simple photon and neutron sources

Audience: Undergraduate

**N E 411 – NUCLEAR REACTOR ENGINEERING**

3 credits.

Reactor heat generation and removal; steady- and unsteady-state conduction in reactor elements; single phase, two-phase, and liquid metal cooling, core thermal design.

**Requisites:** N E 305, M E 361, and (M E 363 and M E 364 or CBE 320) or graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Solve steady-state, coupled conduction and convection heat transfer problems in geometric configurations relevant to nuclear reactors

Audience: Undergraduate

2. Describe the temperature excursion experienced by the fuel during an uncontrolled accident sequence using relevant approximations

Audience: Undergraduate

3. Perform mass, momentum, and energy balances on different reactor components

Audience: Undergraduate

4. Assess the safety margin of different reactor components during normal and off-normal conditions, with reference to the concept of "defense-in-depth"

Audience: Undergraduate

**N E 412 – NUCLEAR REACTOR DESIGN**

5 credits.

Reactor design projects, reactor hazards, economics.

**Requisites:** N E 405 and (E P 271 or COMP SCI 300, 302, or 310), or graduate/professional standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply nuclear engineering technical skills in the context of design

Audience: Undergraduate

2. Apply design thinking methodology within engineering design

Audience: Undergraduate

3. Practice quality assurance and documentation

Audience: Undergraduate

4. Build and work within a team, practicing leadership and project management

Audience: Undergraduate

5. Practice managing uncertainty in decision-making. "How do you take risks?"

Audience: Undergraduate

### **N E/M S & E 423 – NUCLEAR ENGINEERING MATERIALS**

3 credits.

Fundamentals of fuel and cladding behavior in terms of thermal properties, chemical behavior and radiation damage.

**Requisites:** M S & E 350 or 351, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **N E 424 – NUCLEAR MATERIALS LABORATORY**

1 credit.

Practical application of materials issues for nuclear systems including welding, non-destructive examination, optical microscopy, electron microscopy, to understand radiation damage and corrosion.

**Requisites:** M S & E 350 or 351, graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Conduct metallographic sample preparation and follow it up with optical and scanning electron microscopy for microstructural characterization and analysis  
Audience: Undergraduate

2. Perform hardness and tensile and impact toughness testing of materials to assess their mechanical behavior  
Audience: Undergraduate

3. Use the x-ray diffraction technique to determine the crystal structure of materials, identify the phases present, and measure residual stresses  
Audience: Undergraduate

4. Perform simulations of ion-material interaction to determine the penetration depth of ions as a function of ion energy, type, and substrate material  
Audience: Undergraduate

5. Comprehend the various components and work of the ion beam accelerator  
Audience: Undergraduate

6. Describe the operational issues of a nuclear reactor and some of its inner workings  
Audience: Undergraduate

7. Identify and address the challenges of radioactive sample handling and characterization  
Audience: Undergraduate

### **N E 427 – NUCLEAR INSTRUMENTATION LABORATORY**

2 credits.

Experiments on nuclear instrumentation, counting, data analysis.

**Requisites:** N E 305 or graduate/professional standing

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain the operational principles of nuclear radiation detectors in the context of how radiation interacts with matter  
Audience: Undergraduate

2. Identify the best choice of detector for a given type of radiation and its limitations  
Audience: Undergraduate

3. Operate basic nuclear counting instrumentation: gas-ionized and solid-state detectors, nuclear instrumentation module, power supplies, signal amplifiers, oscilloscopes, and single- and multi-channel analyzers  
Audience: Undergraduate

4. Estimate experimental uncertainties in counting measurements and calculate errors associated with quantities derived from such measurements  
Audience: Undergraduate

5. Take laboratory notes and prepare clearly written experimental reports  
Audience: Undergraduate

### **N E 428 – NUCLEAR REACTOR LABORATORY**

2 credits.

Experiments on reactor operation, flux measurement, measurements of reactor parameters, using pool type reactor.

**Requisites:** N E 405 and 427, or graduate/professional standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze, through experiment, the time-dependent behavior of reactors in the subcritical state, the critical state and the supercritical state  
Audience: Undergraduate

2. Analyze, through experiment, the spatial shape and energy spectrum of neutron fluxes  
Audience: Undergraduate

3. Measure neutron and reactor parameters  
Audience: Undergraduate

4. Describe the extent to which theory and experiment agree, and what approximations or uncertainty result in deviations between the two  
Audience: Undergraduate

**N E/M S & E 433 – PRINCIPLES OF CORROSION**

3 credits.

Thermodynamics and kinetics of metallic corrosion. The common forms of corrosion and corrosion susceptibility tests. Electrochemical measurement of corrosion rates. Corrosion prevention, economic considerations. High temperature oxidation and sulphidation. Corrosion case histories.

**Requisites:** M S & E 330, or graduate/professional standing, or member of Engineering Guest Students

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**N E 489 – HONORS IN RESEARCH**

1-3 credits.

Undergraduate research and senior honors thesis in nuclear engineering.

**Requisites:** Declared in Nuclear Engineering Honors in Undergraduate Research program

**Course Designation:** Honors - Honors Only Courses (H)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2014

**N E 505 – NUCLEAR REACTOR ANALYSIS**

3 credits.

The neutronics behavior of fission reactors, both from a theoretical and computational multi-group perspective. Multi-group diffusion theory, finite-difference and nodal methods, core heterogeneous effects, pin power reconstruction, thermal neutron spectra, fine group whole spectrum calculations and coarse group constant generation.

**Requisites:** N E 405, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Analyze the performance of a nuclear fuel assembly throughout its lifetime  
Audience: Both Grad & Undergrad

2. Explain and demonstrate the changes in nuclear fuel assembly performance as operational parameters vary  
Audience: Both Grad & Undergrad

3. Use an industry-relevant software package to perform lattice calculations for analysis and design of a nuclear fuel assembly  
Audience: Both Grad & Undergrad

4. Explain and demonstrate the changes in nuclear fuel assembly performance as design parameters vary  
Audience: Both Grad & Undergrad

5. Compare different forms of analysis for the same application  
Audience: Graduate

**N E/MED PHYS 506 – MONTE CARLO RADIATION TRANSPORT**

3 credits.

Use of Monte Carlo technique for applications in nuclear engineering and medical physics. Major theory of Monte Carlo neutral particle transport is discussed. Standard Monte Carlo transport software is used for exercises and projects. Major emphasis is on analysis of real-world problems.

**Requisites:** N E 305 and (N E 405, N E 408, PHYSICS/B M E/H ONCOL/MED PHYS 501 or N E/MED PHYS 569) or graduate/professional standing

**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Use an industry-relevant software package to perform Monte Carlo radiation transport simulations for analysis of fixed source and/or multiplying systems  
Audience: Both Grad & Undergrad

2. Explain how random processes are used to simulate a single particle transport history through an engineering system, including source, streaming and collisions  
Audience: Both Grad & Undergrad

3. Explain how the paths of many particle transport histories are combined to provide estimates of engineering results  
Audience: Both Grad & Undergrad

4. Analyze the statistical performance of a simulation and suggest ways to improve that performance  
Audience: Both Grad & Undergrad

5. Apply Monte Carlo radiation transport to a problem related to your research  
Audience: Graduate

**N E/M E 520 – TWO-PHASE FLOW AND HEAT TRANSFER**

3 credits.

Two-phase flow and heat transfer in engineering systems. Pool boiling and flow boiling. Phenomenological modeling.

**Requisites:** M E 361 and (M E 364 or CBE 320), or graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**N E/E C E/PHYSICS 525 – INTRODUCTION TO PLASMAS**

3 credits.

Basic description of plasmas: collective phenomena and sheaths, collisional processes, single particle motions, fluid models, equilibria, waves, electromagnetic properties, instabilities, and introduction to kinetic theory and nonlinear processes. Examples from fusion, astrophysical and materials processing plasmas.

**Requisites:** (E C E 320 or PHYSICS 322), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**N E 526 – LABORATORY COURSE IN PLASMAS**

3 credits.

Provides a background in the techniques for creating, exciting, and measuring the properties of lab plasmas and using the associated apparatus.

**Requisites:** PHYSICS/E C E/N E 525 or graduate/professional standing

**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. List the necessary hardware to generate and measure ultra-high vacuum conditions

Audience: Both Grad & Undergrad

2. Describe the plasma formation process when using a biased electrode or wave-heating

Audience: Both Grad & Undergrad

3. Explain the working principle of Langmuir plasma diagnostics

Audience: Both Grad & Undergrad

4. Perform data analysis in the framework of self-driven and independent research

Audience: Both Grad & Undergrad

5. Prepare a clearly written experimental report

Audience: Both Grad & Undergrad

6. Interpret experimental data based on comparisons with theory and modelling results

Audience: Graduate

**N E/E C E/PHYSICS 527 – PLASMA CONFINEMENT AND HEATING**

3 credits.

Principles of magnetic confinement and heating of plasmas for controlled thermonuclear fusion: magnetic field structures, single particle orbits, equilibrium, stability, collisions, transport, heating, modeling and diagnostics. Discussion of current leading confinement concepts: tokamaks, tandem mirrors, stellarators, reversed field pinches, etc.

**Requisites:** E C E/N E/PHYSICS 525, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**N E/E C E 528 – PLASMA PROCESSING AND TECHNOLOGY**

3 credits.

Introduction to basic understanding and techniques. Plasma processing of materials for semiconductors, polymers, plasma spray coatings, ion implantation, etching, arcs, extractive metallurgy and welding. Plasma and materials diagnostics.

**Requisites:** PHYSICS 322 or E C E 320, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**N E 536 – FEASIBILITY OF FUSION POWER PLANTS BASED ON CONTROLLED NUCLEAR FUSION**

3 credits.

Introduction to the main aspects of fusion power plants and the underlying plasma physics. Key design considerations will be summarized related to fusion fuels, resources, plasma physics, plasma-facing materials, magnets, neutronics, shielding, tritium breeding blankets, structural materials, activation, radiation damage, neutral beams, wave heating current drive, safety, and environmental concerns. Focus on magnetic confinement fusion and its near-term and longer-term prospects.

**Requisites:** N E 305, M S & E 331, E C E 330, M E 364, CBE 320, PHYSICS 322, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Evaluate and compare important characteristics of magnetic fusion energy systems under different configurations

Audience: Both Grad & Undergrad

2. Evaluate the technological performance challenges to the key components of a magnetic fusion energy system

Audience: Both Grad & Undergrad

3. Describe the challenges to the feasibility of magnetic fusion energy

Audience: Both Grad & Undergrad

4. Discuss the role of fusion energy as part of future energy systems, including its economic viability

Audience: Both Grad & Undergrad

5. Evaluate and compare the important characteristics of inertial fusion energy and aneutronic fusion

Audience: Graduate

**N E 541 – RADIATION DAMAGE IN METALS**

3 credits.

A survey of the nature of point defects, how these defects are produced, how the defects migrate and cluster, and what effects point defects and defect clusters have on the physical and mechanical properties of metals.

**Requisites:** M S & E 350 or 351, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**N E 545 – MATERIALS DEGRADATION IN ADVANCED NUCLEAR REACTOR ENVIRONMENTS**

3 credits.

Overview of materials (cladding and structural materials) used in advanced reactor systems and the associated degradation. Interactions between the advanced nuclear reactor environment and materials. Surface degradation, corrosion, oxidation, dissolution, vaporization, mass transfer, diffusion, and hands-on examples related to advanced reactors.

**Requisites:** M S & E 350, 351, or 352, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe the effects of environmental degradation on structural integrity of material used in advanced nuclear reactors

Audience: Both Grad & Undergrad

2. Identify and describe the mitigation strategies to prevent such degradation

Audience: Both Grad & Undergrad

3. Solve complex problems related to materials degradation using analytical and numerical techniques

Audience: Graduate

### **N E 550 – ADVANCED NUCLEAR POWER ENGINEERING**

3 credits.

Analysis of nuclear systems for the production of useful power. Emphasis: thermodynamic cycles, reactor types, coupling of reactor and power plant, design synthesis, and plant economics.

**Requisites:** N E 405 and (N E 411 or concurrent enrollment), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify the key features of a range of advanced reactor technologies

Audience: Undergraduate

2. Analyze advanced reactors using theory applicable to multiple technologies

Audience: Undergraduate

3. Describe the design philosophy of advanced reactor technologies and be able to discuss the extent to which each of the reactor design types embodies those principles

Audience: Undergraduate

4. Identify the drivers and goals for advanced reactors and assess critically whether they meet these goals

Audience: Undergraduate

5. Synthesize information from multiple sources to make informed judgements about the relative merits and challenges of the various advanced reactor technologies

Audience: Graduate

### **N E 555 – NUCLEAR REACTOR DYNAMICS**

3 credits.

Basic equations and physical parameters of point reactor kinetics without feedback effects; the nuclear reactor as a total system; reactor excursions, Fuchs-Nordheim and Bethe-Tait models; space-time reactor dynamics; synthesis methods.

**Requisites:** N E 405, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2020

**Learning Outcomes:** 1. Determine the behavior of the reactor power due to control element movement in the PRKE 1 group and 6 group models

Audience: Both Grad & Undergrad

2. Examine the behavior of the reactor in the presence of reactivity feedback effects (Resonance behavior, Doppler Broadening, density effects)

Audience: Both Grad & Undergrad

3. Analyze the power and temperature level behaviors due to the rapid injection and sinusoidal inputs of reactivity using the Nordheim-Fuchs models

Audience: Both Grad & Undergrad

4. Analyze the stability of a reactor using the Routh and Nyquist stability criterion and the single and two temperature models

Audience: Both Grad & Undergrad

5. Examine numerical methods for the solution of the PRKEs and the reactor dynamics equations with feedback

Audience: Both Grad & Undergrad

6. Apply the reactor dynamics equations with feedback to a reactor design

Audience: Graduate

**N E/M E 565 – POWER PLANT TECHNOLOGY**

3 credits.

Design and performance of power plants for the generation of electric power; fossil, solar, wind, hydro and nuclear fuels, cycle analysis, component design and performance, plant operation, control, economics and environmental impact.

**Requisites:** M E 361, CBE 310, 320, or CIV ENGR 324, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe how electricity is produced in a power plant

Audience: Both Grad & Undergrad

2. Apply physical principles to model power plants including power output and efficiency

Audience: Both Grad & Undergrad

3. Observe and collect data on current issues and designs associated to power generation

Audience: Both Grad & Undergrad

4. Describe codes and regulations associated with power production, and how power is sold on the market and transmitted to the customer

Audience: Both Grad & Undergrad

5. Critically review scientific literature pertaining to power plant design

Audience: Both Grad & Undergrad

6. Effectively present detailed information regarding operation and maintenance of power plant components

Audience: Graduate

**N E/MED PHYS 569 – HEALTH PHYSICS AND BIOLOGICAL EFFECTS**

3-4 credits.

Physical and biological aspects of the use of ionizing radiation in industrial and academic institutions; physical principles underlying shielding instrumentation, waste disposal; biological effects of low levels of ionizing radiation.

**Requisites:** MATH 234 and (PHYSICS 241 or 249), graduate/professional standing, or declared in Medical Physics VISP

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Investigate theoretical concepts that are used in radiation safety practice.

Audience: Both Grad & Undergrad

2. Evaluate the effectiveness of radiation safety practice considering theoretical, economic, political, and societal perspectives.

Audience: Both Grad & Undergrad

3. Consider the ethical consequences of radiation safety regulations.

Audience: Both Grad & Undergrad

4. Integrate knowledge into research and/or clinical work

Audience: Graduate

**N E 571 – ECONOMIC AND ENVIRONMENTAL ASPECTS OF NUCLEAR ENERGY**

3 credits.

Economics of the nuclear fuel cycle. Economic and environmental impact of the nuclear fuel cycle. Impact on design, plant siting and regulation.

**Requisites:** N E 405, graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Breadth – Physical Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize and describe the relationships between different sectors of the nuclear energy industry and nuclear fuel cycle

Audience: Both Grad & Undergrad

2. Perform economic and/or environmental analysis of energy systems

Audience: Both Grad & Undergrad

3. Communicate the results of economic and/or environmental analyses to an audience of peers

Audience: Both Grad & Undergrad

4. Describe the social, economic, and environmental dimensions of nuclear energy

Audience: Both Grad & Undergrad

5. Analyze potential tradeoffs and interrelationships among the social, economic, and environmental dimensions of nuclear energy

Audience: Both Grad & Undergrad

6. Communicate the results of economic and/or environmental analyses to policy-makers

Audience: Graduate

**N E/ISYE 574 – METHODS FOR PROBABILISTIC RISK ANALYSIS OF NUCLEAR POWER PLANTS**

3 credits.

Methods for risk and reliability analysis of engineered systems, particularly as applied in the nuclear power industry. Fault trees and event trees, Bayesian data analysis, probabilistic risk management. Some familiarity with nuclear plant safety systems is helpful, but not required.

**Requisites:** (STAT/MATH 309, STAT 311, 224, 324, or STAT/MATH 431), graduate/professional standing, or member of Engineering Guest Students

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Correctly apply methods of fault tree, event-tree, data, and uncertainty analysis to evaluate potential risks of engineering systems

Audience: Both Grad & Undergrad

2. Recognize, formulate, and analyze risks of engineered systems

Audience: Both Grad & Undergrad

3. Explain the results of risk analysis to managers and other non-specialist decision-makers

Audience: Graduate

**N E 602 – SPECIAL TOPICS IN REACTOR ENGINEERING**

0–3 credits.

Special Topics in Reactor Engineering.

**Requisites:** None

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2021

**N E 699 – ADVANCED INDEPENDENT STUDY**

0–3 credits.

Directed study projects as arranged with instructor.

**Requisites:** Consent of instructor

**Course Designation:** Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**N E 705 – ADVANCED REACTOR THEORY**

3 credits.

The neutron transport equation and its application to the analysis of nuclear reactors. Numerical solution methods, including the multi-group model, one-group equations, energy-averaged constants, discrete ordinates, and Monte Carlo methods. Perturbation theory and variational techniques for practical problems. Knowledge of Nuclear Reactor Theory [such as N E 405] required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**N E/C&E SOC/ISY E/SOC 708 – SOCIETAL RISK MANAGEMENT OF TECHNOLOGICAL HAZARDS**

3 credits.

Issues involved in decision-making regarding technological risks and risk management in areas such as nuclear power, hazardous waste disposal, and pollution control. Risk perception and cognitive biases; risk analysis and decision analysis; political issues in risk management; regulatory mechanisms; and risk communication. Selected case studies.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2020**N E/E C E/PHYSICS 724 – WAVES AND INSTABILITIES IN PLASMAS**

3 credits.

Waves in a cold plasma, wave-plasma interactions, waves in a hot plasma, Landau damping, cyclotron damping, magneto-hydrodynamic equilibria and instabilities, microinstabilities, introduction to nonlinear processes, and experimental applications. Basic knowledge of plasmas [such as PHYSICS/E C E/N E 525] and advanced electromagnetics [such as PHYSICS 721 or E C E 740] strongly encouraged.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**N E/E C E/PHYSICS 725 – PLASMA KINETIC THEORY AND RADIATION PROCESSES**

3 credits.

Coulomb Collisions, Boltzmann equation, Fokker-Planck methods, dynamical friction, neoclassical diffusion, collision operators radiation processes and experimental applications. Basic knowledge of plasmas [such as PHYSICS/E C E/N E 525] and advanced electromagnetics [such as PHYSICS 721 or E C E 740] strongly encouraged.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2024**N E/E C E/PHYSICS 726 – PLASMA MAGNETOHYDRODYNAMICS**

3 credits.

MHD equations and validity in hot plasmas; magnetic structure and magnetic flux coordinates; equilibrium in various configurations; stability formulation, energy principle, classification of instabilities; ideal and resistive instability in various configurations, evolution of nonlinear tearing modes; force-free equilibria, helicity, MHD dynamo; experimental applications. Basic knowledge of plasmas [such as PHYSICS/E C E/N E 525] and advanced electromagnetics [such as PHYSICS 721 or E C E 740] strongly encouraged.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**N E/E C E/PHYSICS 749 – COHERENT GENERATION AND PARTICLE BEAMS**

3 credits.

Fundamental theory and recent advances in coherent radiation charged particle beam sources (microwave to X-ray wavelengths) including free electron lasers, wiggler/wave-particle dynamics, Cerenkov masers, gyrotrons, coherent gain and efficiency, spontaneous emission, beam sources and quality, related accelerator concepts experimental results and applications.

**Requisites:** E C E 740**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**N E 790 – MASTER'S RESEARCH AND THESIS**

1-9 credits.

Directed study projects as arranged with instructor.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**N E 890 – PRE-DISSERTATOR'S RESEARCH**

1-9 credits.

Research by the Ph.D. students prior to becoming dissertators.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**N E 903 – SPECIAL TOPICS-PLASMA PHYSICS**

0-3 credits.

Special Topics in Plasma Physics. Knowledge of Plasma Physics [such as PHYSICS/E C E/N E 525] required

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Fall 2024**N E/E C E/PHYSICS 922 – SEMINAR IN PLASMA PHYSICS**

0-1 credits.

Current topics in plasma physics.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025

**N E 990 – RESEARCH AND THESIS**

1-6 credits.

Directed study projects as arranged with instructor.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**N E 999 – ADVANCED INDEPENDENT STUDY**

1-3 credits.

Directed study projects as arranged with instructor.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2024

## NURSING (NURSING)

**NURSING 100 – INTRODUCTION TO THE NURSING PROFESSION**

1 credit.

Introduction to the breadth of careers and educational pathways in the nursing profession. Explore personal interests, capacities, and career goals in relation to nursing career options.

**Requisites:** None**Repeatable for Credit:** No**Last Taught:** Spring 2017**Learning Outcomes:** 1. Identify and use personal and professional resources to transition to college

Audience: Undergraduate

2. Explore the breadth of nursing career options that may include clinical practice, research, teaching, leadership, and/or policy-making

Audience: Undergraduate

3. Gain insights about how personal interests, capacities and career goals might fit with the career options available in nursing

Audience: Undergraduate

4. Understand the varied educational paths in nursing and the relationship of nursing to other health careers

Audience: Undergraduate

**NURSING/S&A PHM/SOC WORK 105 – HEALTH CARE SYSTEMS: INTERDISCIPLINARY APPROACH**

2 credits.

Introduction to health care systems. Factors affecting health and the value placed on health, the delivery of health care in different settings, the roles of various health workers, and the sociological and economic aspects of health care.

**Requisites:** None**Course Designation:** Breadth - Social Science

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Discuss selected contemporary problems, issues, and trends in health care services for individuals, groups, and populations from local, regional, and global perspectives.

Audience: Undergraduate

2. Describe and compare the impact of health and medical services, including environmental, behavioral, genetic, and biological factors, on personal and public health.

Audience: Undergraduate

3. Discuss the influences of technological, social, cultural, economic, and political forces on the organization of health care systems and delivery of health care services.

Audience: Undergraduate

4. Critically evaluate similarities and differences in health care systems and service conceptualization, organization, and delivery from national and international perspectives.

Audience: Undergraduate

**NURSING 125 – INTRODUCTION TO NURSING**

1 credit.

Develop academic and interpersonal skills for success. Introduction to the breadth of careers and educational pathways in the nursing profession.

**Requisites:** Classified as Pre-Nursing BSN

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Identify and use academic, personal, and professional resources to transition to college

Audience: Undergraduate

2. Analyze the multiple dimensions of social identity and how those dimensions impact one's own and others' experience at UW-Madison and within systems

Audience: Undergraduate

3. Assess skills, interests, and values to make the most of the Pre-Nursing experience and further personal and career goals

Audience: Undergraduate

4. Understand the varied educational paths in nursing and the relationship of nursing to other on-campus majors

Audience: Undergraduate

5. Explore the breadth of nursing career options that may include clinical practice, research, teaching, leadership, and/or policy-making

Audience: Undergraduate

**NURSING 299 – INDEPENDENT READING**

1-3 credits.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**NURSING 313 – FOUNDATIONS OF NURSING PRACTICE**

2-3 credits.

Focuses on foundational concepts necessary to provide person-centered, evidence-based nursing care, including the nursing process and health and illness concepts. Active learning is emphasized by gaining confidence with applying the nursing processes and begin to develop clinical judgment and assessment skills. Complements a companion experiential course [NURSING 316].

**Requisites:** Declared in Nursing (Accelerated or Traditional program) BSN

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Explain selected health and illness concepts emphasizing assessment and lifespan considerations.

Audience: Undergraduate

2. Apply components of developmentally and culturally appropriate holistic health assessments.

Audience: Undergraduate

3. Explain the nursing process as a framework to assess, plan, implement, and evaluate care in nursing practice situations.

Audience: Undergraduate

### **NURSING 314 – HEALTH PROMOTION AND DISEASE PREVENTION ACROSS THE LIFESPAN**

3 credits.

Focuses on the role of the baccalaureate generalist nurse in health promotion and disease prevention across the lifespan. Learn about factors that impact health of individuals and families. Active learning is emphasized through applying the nursing process to concepts such as health determinants, health education, self- management, and innate psychological needs related to well-being.

**Requisites:** Declared in Nursing (Accelerated or Traditional program) BSN

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply theories of health promotion and disease prevention in the care of individuals and families in various settings.

Audience: Undergraduate

2. Describe the roles of the baccalaureate nurse in promoting self-management, health, and wellness in a culturally congruent manner that attends to innate psychological needs.

Audience: Undergraduate

3. Use the nursing process to promote health and prevent disease and injury in partnership with individuals and families.

Audience: Undergraduate

4. Explain how health determinants influence human health and wellness.

Audience: Undergraduate

5. Apply evidence-based practice guidelines to health promotion and disease prevention.

Audience: Undergraduate

### **NURSING 315 – PROFESSIONALISM IN NURSING PRACTICE**

1-2 credits.

Focuses on professional nursing attributes and interactions essential to professional competence. Study concepts that allow for providing care unique to an individual, family, community, and systems, and to the context in which they live. Concepts related to the health care delivery system are included to provide a foundation for beginning nursing practice. Knowledge from sciences, social studies, and humanities education is integrated into nursing practice and builds foundational knowledge of the science of nursing.

**Requisites:** Declared in Nursing (Accelerated or Traditional program) BSN

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Discuss foundational nursing concepts including professionalism, communication, scope of practice, ethics, clinical judgment, social justice, and collaboration.

Audience: Undergraduate

2. Develop the foundation for a professional self-concept and role socialization related to elements of leadership, advocacy, ethics, and the use of technology to advance nursing practice.

Audience: Undergraduate

3. Explain best practices when using technology for health informatics.

Audience: Undergraduate

4. Explain how nurses can foster collaborative relationships and care coordination with health care team members and work in partnership with individuals, families, and communities seeking care.

Audience: Undergraduate

5. Recognize the influence of health care policies, laws, and advocacy on nursing practice.

Audience: Undergraduate

6. Discuss quality improvement processes and the nurse's role as a user of evidence to improve health outcomes.

Audience: Undergraduate

### **NURSING 316 – FOUNDATIONS OF NURSING PRACTICE: EXPERIENTIAL LEARNING**

4-5 credits.

Introduces psychomotor and assessment skills necessary to provide person-centered, evidence-based nursing care. Experience opportunities to promote wellness and respond to health problems by participating in direct client care in community and acute-care settings. Develop confidence with the application of skills and clinical judgment in a simulation lab and through concept-based learning experiences in care settings.

**Requisites:** Declared in Nursing (Accelerated or Traditional program) BSN

**Course Designation:** Workplace - Workplace Experience Course

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate therapeutic communication and interviewing skills.

Audience: Undergraduate

2. Demonstrate developmentally and culturally appropriate holistic health assessments.

Audience: Undergraduate

3. Apply nursing concepts central to practice including person and family-centered care, culturally congruent care, health promotion, disease prevention, and health education.

Audience: Undergraduate

4. Practice basic nursing skills and assessments related to health and illness concepts.

Audience: Undergraduate

5. Apply the nursing process in various settings.

Audience: Undergraduate

6. Demonstrate strategies to promote safe therapeutic care across practice settings.

Audience: Undergraduate

7. Demonstrate the values of the nursing profession in experiential settings.

Audience: Undergraduate

### **NURSING 317 – PHARMACOLOGY ESSENTIALS FOR NURSING PRACTICE**

2-3 credits.

Introduces the foundational concepts of pharmacology, drug therapy, actions and interactions, and their therapeutic and adverse effects. Major drug classes are paired with health and illness concepts while considering the appropriate client-centered nursing interventions for disease states as they relate to retaining, attaining, or maintaining patients' health status across the lifespan.

**Requisites:** Declared in Nursing (Accelerated or Traditional program) BSN

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify drug nomenclature, drug classification and their relationship to drug administration and patient safety.

Audience: Undergraduate

2. Demonstrate understanding of the pharmacodynamics, and pharmacokinetics of the of drug classifications used to treat health and illness across the lifespan.

Audience: Undergraduate

3. Identify the legal and ethical guidelines associated with administration of medications in relation to Standards of Nursing Professional Practice.

Audience: Undergraduate

4. Identify relevant assessment data, appropriate goals and plans, and outcome data related to drug therapy for individuals across the lifespan.

Audience: Undergraduate

5. Demonstrate competency in drug dosage calculation and measurement.

Audience: Undergraduate

6. Formulate a teaching plan related to drug administration and desired patient outcomes based on the holistic learning needs of patients, in selected situations.

Audience: Undergraduate

**NURSING 318 – PATHOPHYSIOLOGY ESSENTIALS FOR NURSING PRACTICE**

3 credits.

Promotes the understanding of altered physiological processes underlying illness and disease. General concepts including etiology, pathogenesis, morphologic changes, and clinical significance are explored from the genetic, molecular, cellular, organ, and systems-levels. Connections between patient symptoms, clinical signs, diagnostics, prognosis, and therapeutic considerations will form the basis for early exposure to clinical reasoning for common acute and chronic diseases across the lifespan.

**Requisites:** Declared in Nursing (Accelerated or Traditional program) BSN

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Define and apply a vocabulary of medical terms that are important to the language of health and illness.

Audience: Undergraduate

2. Explain the etiology, pathogenesis, morphology, and clinical significance of selected diseases/ disorders by system across the lifespan.

Audience: Undergraduate

3. Develop a foundation of clinical reasoning for illness and disease management by integrating pathophysiology concepts, physical examination findings and pharmacology principles across the lifespan.

Audience: Undergraduate

4. Identify individual choices and environmental exposures that influence disease.

Audience: Undergraduate

**NURSING 323 – HEALTH AND ILLNESS CONCEPTS WITH INDIVIDUALS AND FAMILIES**

4 credits.

Focuses on health and illness concepts emphasizing care to individuals and families across the lifespan. Gain a fundamental understanding of allostasis, oxygenation and hemostasis, and protection and movement. Gain knowledge of these concepts through exemplars that illustrate common health processes and/or alterations. Frames learning activities that foster understanding of the nursing role in providing care to individuals and families experiencing related health and illness concerns.

**Requisites:** NURSING 313

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Analyze the concepts of allostasis including fluid and electrolyte balance, thermoregulation, glucose regulation, nutrition and elimination.

Audience: Undergraduate

2. Examine the concepts of oxygenation and hemostasis including perfusion, gas exchange and clotting.

Audience: Undergraduate

3. Analyze the concepts of protection and movement including immunity, inflammation, infection, tissue integrity, sensory perception and pain.

Audience: Undergraduate

4. Apply the nursing process to provide effective, evidence-based care to individuals across the lifespan and to families.

Audience: Undergraduate

### **NURSING 324 – MEETING THE PSYCHOSOCIAL HEALTH NEEDS OF INDIVIDUALS, FAMILIES, AND COMMUNITIES**

3 credits.

Prepares to meet the psychosocial health needs of individuals, families, and communities across the lifespan. Explore psychosocial concepts of stress, coping, mood, cognition, and behavior across the health-illness continuum and across practice settings. The human experience of psychosocial health needs is explored in the context of personal attributes, such as genetics, and interpersonal dynamics, such as family and community. Acquire the knowledge, attitudes, and skills needed to collaborate in the treatment and care of client psychosocial health needs.

**Requisites:** NURSING 314

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Assess individual, family and community psychosocial health needs across the lifespan or developmental stage.  
Audience: Undergraduate

2. Assess the impact of stress and coping strategies used by individuals and families across the lifespan in complex care environments and situations.  
Audience: Undergraduate

3. Explain how emotional states can influence behaviors, health and illness conditions across the lifespan.  
Audience: Undergraduate

4. Prioritize care for individuals and families with mental health conditions and cognitive alterations.  
Audience: Undergraduate

5. Analyze maladaptive behavior and its impact on the individual, family and community.  
Audience: Undergraduate

6. Formulate the nurse's role in collaboration with members of the health care team to promote optimal psychosocial health and to prevent diseases in individuals, families and communities.  
Audience: Undergraduate

### **NURSING 325 – PROFESSIONALISM IN HEALTH CARE SETTINGS**

2 credits.

Focuses on advancing knowledge of professional attributes and core competencies in the role of a nurse and how they are used in complex care settings. Gain an understanding of concepts of leadership, ethics, and advocacy. Broaden your understanding of nursing's role in the health care delivery system regarding quality improvement, care coordination, and palliation.

**Requisites:** NURSING 315

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**Learning Outcomes:** 1. Distinguish professional attributes of a nurse including elements of leadership, advocacy, ethics, and use of technology to advance nursing practice.  
Audience: Undergraduate

2. Define ethical principles of professional nursing.  
Audience: Undergraduate

3. Explain best practices when using technology for health informatics.  
Audience: Undergraduate

4. Discuss quality improvement processes to improve health outcomes.  
Audience: Undergraduate

5. Understand the nurse's role in care coordination.  
Audience: Undergraduate

6. Explain the nurse's role in palliation in complex care settings.  
Audience: Undergraduate

7. Discuss how cultural factors influence attitudes and practices of death and dying.  
Audience: Undergraduate

### **NURSING 326 – HEALTH AND ILLNESS CONCEPTS WITH INDIVIDUALS AND FAMILIES: EXPERIENTIAL LEARNING**

4 credits.

Builds on psychomotor and assessment skills necessary to provide direct care to individuals and families across the lifespan. Develop clinical judgment, knowledge, communication skills, and professional behavior while providing nursing care that is safe, evidence-based, and patient centered. Experiential learning takes place in simulated and clinical settings.

**Requisites:** NURSING 313, 314, 315, 316 and 317

**Course Designation:** Workplace - Workplace Experience Course

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Model beginning competencies related to professional nursing practice, including clinical judgment, knowledge, communication skills, and professional behavior.

Audience: Undergraduate

2. Evaluate the nursing process by planning and prioritizing nursing care that is consistent with evidence-based practice, in alignment with the needs, goals, and preferences of individuals and families.

Audience: Undergraduate

3. Demonstrate effective use of technology in the care environment.

Audience: Undergraduate

4. Demonstrate the values of the nursing profession in experiential settings.

Audience: Undergraduate

### **NURSING 400 – STUDY ABROAD IN NURSING**

1-6 credits.

A study abroad equivalency. Enrollment in a UW-Madison resident study abroad program.

**Requisites:** None

**Repeatable for Credit:** Yes, for 2 number of completions

**Learning Outcomes:** 1. Increase independence, adaptability, and flexibility

Audience: Undergraduate

2. Understand and navigate cultural and geographic differences

Audience: Undergraduate

3. Cultivate and reflect on personal values and assumptions

Audience: Undergraduate

4. Learn about and from the community in which you live and study

Audience: Undergraduate

5. Apply all you've learned abroad to your life at UW-Madison and beyond

Audience: Undergraduate

6. Serve as a cultural and academic ambassador of UW-Madison

Audience: Undergraduate

7. Prepare for success in a globalized, interconnected world

Audience: Undergraduate

8. Articulate how your experience abroad enriches your life and help you meet your goals

Audience: Undergraduate

**NURSING 430 – PERINATAL NURSING**

2 credits.

Perinatal period: reproductive health, preconception, pregnancy (antepartum), labor and birth (intrapartum), the first 6 weeks after birth (postpartum), and the newborn. Nursing care will focus on health promotion and management for low and high-risk (those with complications) populations. Emphasis on the application of the nursing process, the clinical judgment model, and related core competencies associated with perinatal nursing.

**Requisites:** NURSING 323 and 326

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Incorporate clinical judgment to identify altered health patterns that could affect reproductive health to determine prioritized nursing care.

Audience: Undergraduate

2. Distinguish between normal and abnormal health findings throughout the perinatal period as well as healthy and high-risk newborns.

Audience: Undergraduate

3. Identify actual or potential health problems during antepartum, intrapartum, postpartum and newborn periods.

Audience: Undergraduate

4. Utilize principles of family-centered care, health promotion, illness and injury prevention, health education, and anticipatory guidance with diverse patients throughout the perinatal phase.

Audience: Undergraduate

5. Explore cultural humility through values and beliefs, concept of time, religious beliefs and practices, family and gender roles and relationships, and beliefs and practices regarding health and illness, including those related to pregnancy and childbirth.

Audience: Undergraduate

6. Utilize evidence-based practice to implement practice changes that will improve perinatal nursing care.

Audience: Undergraduate

7. Examine basic safety design principles used by the interdisciplinary team to reduce the risk of harm to pregnant/birthing persons and newborn patients.

Audience: Undergraduate

8. Recognize the impact of health disparities and social determinants of health on care outcomes for pregnant/birthing persons and newborn patients.

Audience: Undergraduate

**NURSING 431 – NURSING CARE OF CHILDREN & THEIR FAMILIES**

2 credits.

Foundational knowledge needed to provide equitable, evidence-based nursing care for diverse children and their families. For each developmental level, holistically integrate health promotion, illness and injury prevention, health education, and anticipatory guidance and examines potential disparities, as key components of the nursing role. Emphasis on the application of the nursing process, the clinical judgment model, and related core competencies associated with understanding the pathophysiology of altered health patterns affecting children and the related management of nursing care.

**Requisites:** NURSING 323 and 326

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Incorporate developmental theories in the nursing care of children.

Audience: Undergraduate

2. Describe modifications to nursing care for different developmental levels for infants through adolescents, including communication, approaches to the history and physical examination, and pharmacotherapy safety.

Audience: Undergraduate

3. Utilize principles of health promotion, illness and injury prevention, health education, and anticipatory guidance and person-centered care with diverse pediatric populations and their families.

Audience: Undergraduate

4. Incorporate clinical judgment and knowledge of the pathophysiology of altered health patterns affecting children to determine prioritized nursing care.

Audience: Undergraduate

5. Integrate best evidence and principles of person- and family-centered care into the delivery of pediatric nursing care in primary, acute/ in-patient, emergency and community settings.

Audience: Undergraduate

6. Describe the roles of the inter#professional healthcare team that contribute to high quality pediatric outcomes.

Audience: Undergraduate

### **NURSING 432 – POPULATION HEALTH NURSING**

2 credits.

Exploration of population health nursing principles and practices, public health partnerships, population health advocacy, community health assessment, and identification of health patterns in populations in local, national, and global settings.

**Requisites:** (NURSING 323 or concurrent enrollment) and (NURSING 326 or concurrent enrollment)

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe principles and practices used by nurses to manage population health.

Audience: Undergraduate

2. Compare and contrast local, regional, national, and global benchmarks to identify health patterns across populations.

Audience: Undergraduate

3. Define a target population and assess its well-being priorities using population health data.

Audience: Undergraduate

4. Develop an action plan to meet a specific community's population health need.

Audience: Undergraduate

5. Identify socio-culturally responsive interventions that reflect and model relevant ethical principles.

Audience: Undergraduate

6. Develop a population health advocacy strategy that applies the clinical judgment model.

Audience: Undergraduate

### **NURSING 433 – NURSING CARE OF THE OLDER ADULT**

2 credits.

Learn to provide high quality, person-centered nursing care to older adults, using current research, evidenced-based guidelines, and foundational content to assess, form nursing diagnoses, and manage the complex health needs of older adults by being able to differentiate between healthy and unhealthy aging, explore social determinants of health, provide for safety and well-being, and consider ethical clinical-decision making in geriatrics.

**Requisites:** Declared in Nursing or Nursing (Accelerated Program), NURSING 323 or concurrent enrollment, NURSING 326 or concurrent enrollment, and NURSING 327 or concurrent enrollment

**Repeatable for Credit:** No

**Last Taught:** Fall 2017

**Learning Outcomes:** 1. Employ the nursing process to recognize and respond to the complexity of the aging process and its impact on individuals from a biopsychosocial perspective.

Audience: Undergraduate

2. Identify social determinants of health for older adults and resources available to support the health and well-being of special populations that integrate cultural awareness and integrity.

Audience: Undergraduate

3. Synthesize assessment data to recognize and respond to complex geriatric health problems using evidence-based strategies.

Audience: Undergraduate

4. Apply principles of professional nursing ethics and human rights to facilitate shared decision-making based on patient values and goals of care.

Audience: Undergraduate

5. Use current guidelines and valid and reliable assessment tools to prevent problems common in older adults and promote health and well-being.

Audience: Undergraduate

6. Utilize evidence-based strategies to reduce risk and promote safety in the nursing care of older adults.

Audience: Undergraduate

7. Employ best-practices for clear, accurate, and inclusive communication to provide for safe and effective transitions of care across care settings.

Audience: Undergraduate

### **NURSING 434 – HEALTH AND ILLNESS CONCEPTS WITH INDIVIDUALS, FAMILIES, AND COMMUNITIES**

4-5 credits.

Builds on health and illness concepts by focusing on individuals, families, and communities recognizing their unique attributes. Concepts included: acid-base balance, cellular regulation, intracranial regulation, genomics, sexuality and reproduction, and an introduction to the organization of the community/public health system. Other core nursing concepts are revisited as they apply to the community as client or in complex care situations. The nursing process frames learning activities that foster understanding the nursing role in providing evidence-based care to individuals, families across the lifespan, and to communities experiencing related health and illness concerns in collaboration with an interprofessional team.

**Requisites:** Declared in Nursing or Nursing (Accelerated Program), NURSING 323 or concurrent enrollment, NURSING 326 or concurrent enrollment, and NURSING 327 or concurrent enrollment

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Apply the nursing process to care of the client in community and to the client as a community.

Audience: Undergraduate

2. Understand the foundational features of the public and community health systems.

Audience: Undergraduate

3. Understand normal reproductive health across the lifespan.

Audience: Undergraduate

4. Examine the role of the nurse in caring for clients experiencing common complications of pregnancy and barriers to fertility.

Audience: Undergraduate

5. Evaluate the management of complex health alterations in individuals, families and the community for the concepts of allostasis such as acid base balance, cellular regulation, intracranial regulation, and nutrition.

Audience: Undergraduate

6. Examine the management of complex alterations related to oxygenation and hemostasis and protection and movement, integrating distinct client attributes of individuals, families and the community.

Audience: Undergraduate

### **NURSING 435 – EVIDENCE-BASED PRACTICE**

1 credit.

Designed to develop skills in using evidence to improve nursing practice. Learn strategies to evaluate the quality of evidence and effectively integrate evidence into nursing practice. Learn how practice guidelines are developed, interpreted, and implemented in complex care settings. Learn the significance of engaging partners in evidence-based practice and identify processes to partner with others.

**Requisites:** NURSING 315 and 325

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Understand how practice guidelines are developed from various sources.

Audience: Undergraduate

2. Critique evidence-based practice guidelines by analyzing their development and applicability for clinical practice.

Audience: Undergraduate

3. Discuss effective approaches for fostering adoption of an evidence-based practice change in healthcare settings including engaging partners in the process.

Audience: Undergraduate

4. Describe how the strength and relevance of available evidence (a) influence the choice of interventions in the provision of patient-centered care and (b) challenge the rationale for routine approaches to care that result in less-than-desired outcomes or adverse events.

Audience: Undergraduate

### **NURSING 436 – HEALTH AND ILLNESS CONCEPTS WITH INDIVIDUALS, FAMILIES, AND COMMUNITIES: EXPERIENTIAL LEARNING**

1-4 credits.

Spend concentrated time in two settings focusing on care to individuals across the lifespan, families, and communities. The concept-based learning activities are aligned with those taught in the companion didactic courses and build on previous learning and experiences. Provide direct care from an evidenced-based perspective, at an increasingly independent level. The learning activities are guided by nursing preceptors in practice settings and by School of Nursing faculty in simulation and seminar settings.

**Requisites:** NURSING 323, 324, and 327

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Take part in providing care to individuals, families and communities, planning, prioritizing and evaluating nursing care that is consistent with clients' needs, goals, preferences and social identities.

Audience: Undergraduate

2. Utilize strategies to promote social justice in health, and culturally congruent care while developing a global perspective to care-giving.

Audience: Undergraduate

3. Determine collaborative approach to effectively work within nursing and inter-professional teams, fostering open communication, mutual respect and shared decision-making to achieve quality individual, family, community and system care.

Audience: Undergraduate

4. Develop partnerships with individuals, family, community and systems in decision-making about care and planning for care.

Audience: Undergraduate

5. Utilize concepts related to health promotion and disease prevention based on genetics, family history, social ecological factors, and environmental exposure.

Audience: Undergraduate

6. Apply learning related to health and illness concepts, and their interrelationships among individuals, families and communities as encountered in experiential practice setting.

Audience: Undergraduate

### **NURSING 437 – SOCIAL JUSTICE IN LOCAL AND GLOBAL SETTINGS**

2-3 credits.

Learn principles and practices of social justice related to nursing and health in local and global settings. Concepts include health determinants, diverse populations in complex care settings, health outcomes, and interventions for racial and other underrepresented minorities. Expand the understanding of global health by examining global health systems, health and illness concepts on a global level, partnerships enacted in global settings, and the scope of nursing practice in global health. Provides a facilitated forum to critically reflect on their socially constructed identities and the impact these identities have on health care systems. Designed to develop perspective related to global health and nurses as global health actors invested in improving health of the global population as a whole.

**Requisites:** NURSING 323

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Identify their socially constructed identities and how those identities affect their interactions and relationships with individuals, families, and communities across diverse populations.

Audience: Undergraduate

2. Describe and discuss concepts relevant to providing culturally competent and congruent care including health beliefs, social justice, power and privilege, cultural sensitivity, respect, safety, racism and discrimination, cultural conflict, health literacy, worldview, holding knowledge, subculture and vulnerable populations.

Audience: Undergraduate

3. Describe and critique the major constructs of nursing practice models/theories relative to social justice, global health, culturally congruent care, and intersectionality.

Audience: Undergraduate

4. Evaluate the impact of family, cultural, social, educational, economic, environmental, global and determinants on population health using a social ecological model.

Audience: Undergraduate

5. Analyze contemporary local, national, and global health trends and their impact on population health.

Audience: Undergraduate

6. Value principles of partnership when working toward social justice in health in local and global settings.

Audience: Undergraduate

### **NURSING 438 – INFORMATICS AND HEALTH TECHNOLOGIES FOR NURSING PRACTICE**

1 credit.

Broad overview of how digital health, information, and communication technologies and informatics processes are used to provide care, gather data, form information for decision making, and support the expansion of knowledge for professional practice, with an emphasis on key considerations to ensure equitable, safe, high quality and efficient care across the care continuum.

**Requisites:** Declared in Nursing (Accelerated or Traditional program) BSN

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Describe the variety of information and communication technologies used in the care of patients, communities, and populations

Audience: Undergraduate

2. Discuss how nurses can assess literacy and assist individuals and families to effectively use digital health technologies

Audience: Undergraduate

3. Explain how digital health technologies are used to gather data, create information, and generate knowledge for quality and safe nursing care

Audience: Undergraduate

4. Analyze the use of information, communication, and healthcare technologies in accordance with ethical, legal, professional, regulatory, and workplace policies in the delivery of care in an evolving healthcare landscape

Audience: Undergraduate

5. Explain the importance of nursing engagement in the planning, selection, and adoption of healthcare technologies

Audience: Undergraduate

### **NURSING 442 – HEALTH SYSTEMS, POLICY, AND ECONOMICS**

2 credits.

Learning is centered on health systems, policy, and economics. Expand understanding of core nursing competencies such as safe therapeutic care, and health informatics by examining how these concepts operate at a systems-level to influence care and outcomes. Focus is given to emergency preparedness as enacted in a variety of systems. Key conceptual elements of the healthcare system, organization, policy, financing and law and quality improvement and their impact on care and outcomes are examined.

**Requisites:** NURSING 434, 435, 436, and 437

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain the structure and function of the health system at the local, state, national, and global level.

Audience: Undergraduate

2. Understand organizational theories, structures, and processes, and their applicability in the analysis of clinical care services within the healthcare delivery system.

Audience: Undergraduate

3. Explain principles and practices of emergency-preparedness in selected health systems.

Audience: Undergraduate

4. Outline the role of policy in regard to nurses' role and health outcomes and how nurses can affect policy.

Audience: Undergraduate

5. Identify key trends in the financing of healthcare at national and local levels.

Audience: Undergraduate

6. Explain principles and processes of quality improvement.

Audience: Undergraduate

**NURSING 443 – ADVANCED CONCEPTS IN COMPLEX NURSING PRACTICE**

5 credits.

Learn about complex health or health alterations and their management in regard to sexuality, reproduction, protection and movement, cognitive function, and maladaptive behavior. Emphasizes the nurse's role in management of complex health alterations within the health system, the community, and for transitions to home. The nursing process will frame learning activities that foster understanding the nursing role in providing evidence-based care to individuals, families, and communities experiencing related health and illness concerns in collaboration with an interprofessional team.

**Requisites:** NURSING 434 or concurrent enrollment, NURSING 435 or concurrent enrollment, NURSING 436 or concurrent enrollment, and NURSING 437 or concurrent enrollment

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Examine common and collaborative interventions for the complex health experiences related to alterations in sexuality, reproduction, and protection and movement.

Audience: Undergraduate

2. Explain how to use data from clients' cognitive assessment to develop and evaluate the nursing and interprofessional plan of care.

Audience: Undergraduate

3. Evaluate treatment measures and understand the resource needs for those experiencing physical, social, and legal consequences from addiction.

Audience: Undergraduate

4. Apply knowledge to plan and evaluate care related to the dynamics that contribute to interpersonal violence and health consequences related to interpersonal violence, and experienced violence.

Audience: Undergraduate

5. Adapt care planning and evaluation to address alterations in body regulation mechanisms including: fluid and electrolyte, acid base, thermoregulation, cellular, glucose, intracranial, nutrition intake, and elimination.

Audience: Undergraduate

6. Prioritize independent and collaborative interventions for clients with complex health alterations in oxygenation and hemostasis including: perfusion, gas exchange, and clotting.

Audience: Undergraduate

**NURSING 444 – HEALTH SYSTEMS, POLICY, ECONOMICS, AND RESEARCH**

3 credits.

Expand understanding of core nursing competencies such as safe therapeutic care and health informatics by examining how these concepts operate at a systems-level to influence care and outcomes. Focus is given to emergency preparedness as enacted in a variety of systems. Key conceptual elements of the healthcare system, organization, policy, financing and law, and quality improvement and their impact on care and outcomes are examined. Expand your understanding of scholarship and evidence-based practice by delving into the process of nursing research.

**Requisites:** NURSING 434, 435, 436, and 437

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Explain the structure and function of the health system at the local, state, national, and global level.

Audience: Undergraduate

2. Understand organizational theories, structures, and processes, and their applicability in the analysis of clinical care services within the healthcare delivery system.

Audience: Undergraduate

3. Explain principles and practices of emergency-preparedness in selected health systems.

Audience: Undergraduate

4. Outline the role of policy in regard to nurses' role and health outcomes and how nurses can affect policy.

Audience: Undergraduate

5. Identify key trends in the financing of healthcare at national and local levels.

Audience: Undergraduate

6. Explain principles and processes of quality improvement.

Audience: Undergraduate

7. Demonstrate knowledge of protection of human subjects in research, including issues related to subject rights, institutional, state, and federal regulations.

Audience: Undergraduate

8. Demonstrate understanding of the nursing research process.

Audience: Undergraduate

9. Demonstrate an understanding of dissemination and use of research for practice improvement.

Audience: Undergraduate

**NURSING 445 – TRANSFORMATIVE NURSING CAPSTONE**

1 credit.

Integration of learning acquired throughout the nursing program. Learning outcomes integrate concepts associated with five nursing program meta concepts (professionalism; person, family, community, and systems-centered care; health and illness; health care context; and scholarship for evidence-based practice). Using processes of analysis, synthesis, reflection, and application, advance in your transition to becoming a professional nurse. Includes mentoring through co-facilitation by faculty, academic staff, and practice professionals.

**Requisites:** NURSING 434, 435, 436, and 437

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Construct a personal philosophy of care.

Audience: Undergraduate

2. Within one's scope of practice, analyze one's own leadership style and contribution as a member of the healthcare team.

Audience: Undergraduate

3. Critically examine inter-professional collaboration in regard to complex ethical issues.

Audience: Undergraduate

4. Elaborate skills related to communication such as self-awareness, conflict management, and negotiation.

Audience: Undergraduate

5. Imagine possibilities for your career as a nursing leader that improve health outcomes for all in a complex world with enduring social issues.

Audience: Undergraduate

**NURSING 446 – ADVANCED CONCEPTS IN COMPLEX NURSING PRACTICE: EXPERIENTIAL LEARNING**

2-5 credits.

Spend concentrated time in two settings focusing on the complex care of individuals across the lifespan, families, and communities. Demonstrate advanced ability to integrate professional nursing related theory and concepts as they develop and implement the plan of care. Mentoring by clinical nursing preceptors in the clinical setting and by School of Nursing faculty in simulation and seminar settings.

**Requisites:** NURSING 436

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Integrate understanding of health care systems and organizational structure in order to provide optimal care to individuals, families, and communities.

Audience: Undergraduate

2. Apply acquired knowledge of informatics and patient care technology to promote safe therapeutic care.

Audience: Undergraduate

3. Apply understanding of healthcare law, health policy, and economic constraints to complex patient-care situations in order to achieve positive patient outcomes.

Audience: Undergraduate

4. Apply principles of effective leadership to situations of an ethical or legal dilemma.

Audience: Undergraduate

5. Demonstrate advanced ability to apply the nursing process, clinical judgment, and health and illness concepts to providing care in the complex healthcare setting in order to achieve individualized, safe, and therapeutic care.

Audience: Undergraduate

6. Demonstrates professionalism with individuals, families, communities, and systems while modeling collaborative practice with preceptor and inter-professional colleagues.

Audience: Undergraduate

**NURSING 447 – SCHOLARSHIP FOR EVIDENCE-BASED PRACTICE**

2 credits.

Develop skills in using evidence to improve nursing practice. Learn strategies to evaluate the quality of evidence and effectively integrate evidence into nursing practice. Provides knowledge in how practice guidelines are developed, interpreted, and implemented in complex care settings. Understand the significance of engaging partners in evidence-based practice and identify processes to partner with others in order to have an impact on client care outcomes.

**Requisites:** Declared in Nursing (Accelerated Program), NURSING 314, 323, 324, 326, 327, and 434

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand how practice guidelines are developed from various sources.

Audience: Undergraduate

2. Demonstrate knowledge of protection of human subjects in research, including issues related to subject rights, institutional, state, and federal regulations.

Audience: Undergraduate

3. Discuss effective approaches for fostering adoption of an evidence-based practice change in healthcare settings, including engaging partners in the process.

Audience: Undergraduate

4. Evaluate how the strength and relevance of available evidence (a) influence the choice of interventions in the provision of patient-centered care, and (b) challenge the rationale for routine approaches to care that result in less-than-desired outcomes or adverse events.

Audience: Undergraduate

5. Demonstrate understanding the nursing research process.

Audience: Undergraduate

6. Demonstrate an understanding of dissemination and use of research for practice improvement.

Audience: Undergraduate

7. Understand the nurses' role in conducting and collaborating on research.

Audience: Undergraduate

**NURSING 448 – LEADERSHIP IN THE PROFESSION OF NURSING**

2 credits.

Learning is centered on advancing knowledge of professional attributes necessary in healthcare settings. Expand the understanding of core concepts related to ethics, advocacy, safe therapeutic care, technology, and health informatics at a systems-level to influence care and outcomes. Broaden the understanding of nursing's role in the healthcare delivery system regarding quality improvement, emergency preparedness, care coordination, and palliation.

**Requisites:** Declared in Nursing (Accelerated Program), NURSING 314, 323, 324, 326, 327, and 434

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Distinguish professional attributes of a nurse including elements of leadership, advocacy, ethics, and use of technology to advance nursing practice.

Audience: Undergraduate

2. Examine the influence of organization-level mission and vision statements on developing a professional nursing practice.

Audience: Undergraduate

3. Appraise ethical principles of professional nursing.

Audience: Undergraduate

4. Discuss principles and processes of quality improvement to improve health outcomes.

Audience: Undergraduate

5. Examine the nurses' role in care coordination and patient self-management.

Audience: Undergraduate

6. Explain principles and practices of emergency-preparedness in selected health systems.

Audience: Undergraduate

7. Explain the nurses' role in palliation in complex care settings.

Audience: Undergraduate

8. Appraise the structure and function of the health system at the local, state, national, and global level.

Audience: Undergraduate

9. Outline the role of policy in regard to nurses' role and health outcomes and how nurses can affect policy.

Audience: Undergraduate

### **NURSING/MEDICINE/PHM PRAC/SOC WORK 467 – INTERPROFESSIONAL COLLABORATIVE PRACTICE IN HIV CARE**

1 credit.

Gain foundational knowledge and skills in interprofessional collaborative practice and HIV care. Explore the roles of medicine, nursing, pharmacy, and social work in the HIV care continuum. Discuss quality team-based care as a member of an interprofessional student team.

**Requisites:** Declared in Nursing BSN (Traditional, Collaborative, Accelerated), Social Work BSW, Medicine MD, Pharmacy PharmD, or Social Work MSW.

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the history and epidemiology of the HIV epidemic.

Audience: Both Grad & Undergrad

2. Define Interprofessional Collaborative Practice (ICP) and describe the characteristics of effective ICP.

Audience: Both Grad & Undergrad

3. Describe the natural history of HIV disease with and without antiretroviral therapy (ART).

Audience: Both Grad & Undergrad

4. Discuss US Dept of Health and Human Services guidelines and recommendations for prevention, screening, diagnosis, treatment, and management of HIV infection and HIV-related diseases in the United States.

Audience: Both Grad & Undergrad

5. Describe the HIV care continuum including testing, entry and retention in care, and treatment including associated stigma and discrimination as barriers.

Audience: Both Grad & Undergrad

6. Discuss dimensions of wellness (emotional, environmental, financial, intellectual, occupational, physical, social and spiritual).

Audience: Both Grad & Undergrad

7. Identify potential co-morbid conditions in the HIV infected population.

Audience: Both Grad & Undergrad

8. Discuss stigma and discrimination as barriers to prevention, care, and treatment.

Audience: Both Grad & Undergrad

9. Discuss the history of the Ryan White Care Act and other federal and state policies and their current importance in HIV prevention and HIV care.

Audience: Both Grad & Undergrad

10. Identify HIV care needs and common health issues among high risk and vulnerable populations.

Audience: Both Grad & Undergrad

11. Develop a plan of care for an HIV positive individual as part of an interprofessional team.

Audience: Both Grad & Undergrad

12. Develop skills working with mixed teams including undergraduate students

Audience: Graduate

13. Demonstrate higher level skills in identifying and resolving barriers to

### **NURSING 470 – SCHOOL NURSING IN THE CONTEXT OF COMMUNITY HEALTH PRACTICE**

2-3 credits.

Theoretical foundation for community health nursing (CHN) applied to school nurse settings. Acquire the theoretical and practical foundations for establishing and maintaining school health nursing services. Content is drawn from nursing and public health sciences and includes topics of health promotion, disease prevention, epidemiology, evidence based practice, ethics, and the role of the CHN. The nursing process is applied with a focus of providing care at the individual through the population level. The ecological model is used to analyze the influence of socioeconomic, environmental, political, and cultural health determinants.

**Requisites:** Declared in Nursing BSN

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Examine nursing models, roles and responsibilities for community health nurses with school nursing as an exemplar.

Audience: Undergraduate

2. Apply epidemiological principles to describe and analyze population health issues as they occur in school communities.

Audience: Undergraduate

3. Explore models of community and aggregate assessment.

Audience: Undergraduate

4. Describe community health nursing interventions used at systems, community and individual, levels, focusing on individual health and emergency plans for the management of students' health problems in school settings.

Audience: Undergraduate

5. Analyze evidence-based practice guidelines for community health nursing and school settings.

Audience: Undergraduate

6. Articulate the impact of social, cultural, political, and environmental determinants on individual and population health in school settings.

Audience: Undergraduate

7. Describe the organization, financing, and policies affecting the delivery of community health nursing services as they occur in schools.

Audience: Undergraduate

### **NURSING 510 – CULTURALLY CONGRUENT PRACTICE**

3 credits.

Builds self-awareness, increasing knowledge, and advancing clinical skills needed to provide culturally congruent, person-centered care to patients with diverse backgrounds.

**Requisites:** None

**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify their socially constructed identities and how those identities affect their interactions and relationships with patients.

Audience: Undergraduate

2. Describe and discuss concepts relevant to providing culturally competent and congruent care including health beliefs, social justice, power and privilege, cultural sensitivity, respect, safety, racism and discrimination, cultural conflict, health literacy, worldview, holding knowledge, subculture and vulnerable populations.

Audience: Undergraduate

3. Describe and critique the major constructs of nursing practice models/theories relative to culturally congruent care.

Audience: Undergraduate

4. Apply constructs of culturally congruent care to clinical practice.

Audience: Undergraduate

### **NURSING 511 – COMMUNITY SUPPORTS FOR PEOPLE WITH DEMENTIA**

2-3 credits.

Provides an introduction to Alzheimer's disease and other dementias, with a focus on community supports for people living with dementia. Work across disciplines to learn how different areas of society can become dementia friendly and how to integrate relevant approaches in their future careers. Participate in a service-learning opportunity where you will work with local dementia-friendly community groups to strengthen supports for people with dementia and their caregivers.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Summarize normal neurobiological aging and neurobiological changes related to cognitive impairment and dementia.

Audience: Undergraduate

2. Apply appropriate skills for interacting with persons affected by dementia and their families/supports.

Audience: Undergraduate

3. Explain the importance of combatting the stigma surrounding dementia and the isolation often experienced by people with dementia and their family.

Audience: Undergraduate

4. Recommend community approaches to increase supports for persons living with dementia and their families/supports.

Audience: Undergraduate

## **NURSING 512 – FUNCTIONAL HEALTH AND LIFESTYLE PRACTICE** 2 credits.

Introduction to the science behind and strategies for wellness based on a functional health approach. Viewing the body as a complex and integrated system and address the root cause of illness or disease rather than treating only presenting symptoms. Disease manifestation stemming from many factors such as genetics, lifestyle and environment. Lifestyle health practices and health coaching strategies for working with clients or patients. View health through a functional health lens, using several strategies to manage and prevent illness.

**Requisites:** None

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Describe what it means to view health through a "functional" lens and how this model of care differs from or compliments a more conventional approach to health care.

Audience: Both Grad & Undergrad

2. Evaluate how chronic disease and pain can be addressed using a functional approach to care using diet and lifestyle practices.

Audience: Both Grad & Undergrad

3. Identify and address lifestyle factors that impact health outcomes.

Audience: Both Grad & Undergrad

4. Integrate functional health principles and lifestyle practices into one's overall approach to health and wellness.

Audience: Both Grad & Undergrad

5. Explore health coaching strategies and tools used by practitioners to gather health information and create positive behavior change related to lifestyle practices.

Audience: Both Grad & Undergrad

6. Demonstrate the ability to apply knowledge of functional health principles, lifestyle practices, and health coaching strategies during a health coaching session.

Audience: Graduate

## **NURSING 513 – INTRODUCTION TO RELAXATION: MIND, BODY, & SPIRIT** 2 credits.

Introduction to holistic relaxation concepts related to the body, mind spirit. Examination of the physiology of stress and relaxation, strategies for facilitating wellness and evidence for the same. Experience and reflect upon selected strategies for wellness.

**Requisites:** None

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Compare concepts of health promotion, self management, allostasis, and stress.

Audience: Both Grad & Undergrad

2. Describe and recognize common sources for stress, anxiety and anger as well as effective strategies to promote health and maximal function, manage responses to stress, and foster wellbeing: mind, body and spirit.

Audience: Both Grad & Undergrad

3. Implement selected strategies for ones' own wellbeing in body, mind, and spirit.

Audience: Both Grad & Undergrad

4. Appraise whether a change in health status has occurred.

Audience: Graduate

## **NURSING/L I S 517 – DIGITAL HEALTH: INFORMATION AND TECHNOLOGIES SUPPORTING CONSUMERS AND PATIENTS** 3 credits.

Increases student understanding of appropriate and accurate materials for consumer health and family education; the ethical and organizational policy issues that arise when providing consumer and family health information in different settings; the role of the public media in disseminating health information; the health-related information needs and preferences of racial/ethnic minority populations. It also provides an introduction to health information technologies, from search engines to websites to apps, that put people in charge of managing their own health information.

**Requisites:** Junior standing

**Course Designation:** Breadth - Social Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**NURSING 564 – NURSING AND HEALTH INFORMATICS**

3 credits.

Identification of computer and information technologies to support nursing in the diagnosis and treatment of human responses to health, illness, and development challenges. Examination of information systems used in clinical practice, information processing challenges and nurses' roles in the evaluation of informatics solutions. Ethical, legal and social issues related to informatics in patient care.

**Requisites:** None**Repeatable for Credit:** No**Last Taught:** Summer 2022

**Learning Outcomes:** 1. Recognize, analyze, and pose solutions for information processing challenges as faced by nurses and other health professionals managing select patients, populations, or groups.

Audience: Undergraduate

2. Identify the current state of development of major areas within nursing and health informatics.

Audience: Undergraduate

3. Demonstrate the conceptual ability and technical skills to develop and execute an evaluation plan involving data extraction from practice information systems and databases.

Audience: Undergraduate

4. Consistent with ethical, legal, and social considerations, devise and evaluate biomedical informatics solutions to the information processing challenges identified.

Audience: Undergraduate

**NURSING 590 – CONTEMPORARY PRACTICES IN NURSING**

1-4 credits.

Health problems and their nursing management, e.g., critical care nursing, health promotion and prevention of disease, nursing of developmental disabilities.

**Requisites:** None**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**NURSING 601 – ADVANCED HEALTH ASSESSMENT**

3 credits.

Focuses on developing advanced practice competencies in health assessment as relevant to a selected specialty and practice setting. Become grounded in the theoretical perspectives, empirical documentation, and practice skills necessary for advanced biopsychosocial and physical assessment, critical diagnostic reasoning, clinical decision-making, and communication. Interactions of developmental, biopsychosocial, and cultural contexts resulting in health effects. Demonstrate capacity to provide a full spectrum of healthcare services including health promotion, disease prevention, health protection, anticipatory guidance, counseling, and disease management. Provides a foundation for the advanced practice nurse to evaluate and address the health of individuals.

**Requisites:** NURSING 704**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Elicit an accurate focused and/or comprehensive health history with attention to the patient's unique perspective and experience.

Audience: Graduate

2. Perform a comprehensive, evidence-based assessment, incorporating all necessary components of physical evaluation. Assessments should be comprehensive but concise, culturally sensitive, and developmentally guided, while demonstrating compassion and accountability.

Audience: Graduate

3. Select basic laboratory and diagnostic testing options and interpret data to augment evidence-based assessment.

Audience: Graduate

4. Formulate a differential diagnosis, based on advanced clinical judgement and analysis of data collected from the health history and physical exam.

Audience: Graduate

5. Identify a probable primary diagnosis and create a patient-centered, evidence-based plan of care that may include diagnostic testing, collaboration, or referral.

Audience: Graduate

6. Document an accurate account of history, physical examination, differential diagnoses, integrative summary, and evidence-based plan of care using effective communication techniques specific to accepted terminology, format, and technology that adheres to the current standards of medical documentation.

Audience: Graduate

7. Develop an appropriate plan of care consistent with the advanced nurse role in the management of common symptoms seen across care settings. The plan of care for the client should incorporate physical, cultural, ethnic, developmental, and population-appropriate variations.

Audience: Graduate

8. Demonstrate professionalism in the advanced practice nursing role, including accountability, teamwork, initiative, self-appraisal, and integrity.

Audience: Graduate

9. Explore the image and role of advanced practice nursing as it integrates advanced assessment, diagnostic reasoning, primary care, rural healthcare, health promotion, and patient education.

Audience: Graduate

**NURSING/PHM PRAC 605 – PHARMACOTHERAPEUTICS FOR ADVANCED PRACTICE NURSES**

3 credits.

Pharmacotherapeutics content and application for advanced practice nursing. Emphasis on selection of appropriate therapeutics, development of clinical decision-making skills, and examination of legal, ethical, and safety issues in prescribing medications.

**Requisites:** Declared in a School of Nursing graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Select appropriate therapeutics for specific acute and chronic health conditions using an evidenced based approach.

Audience: Graduate

2. Develop the clinical decision making skills necessary to individualize prescribing to meet patient's needs and resources.

Audience: Graduate

3. Examine the appropriate rules for issuing safe prescriptions and minimize errors.

Audience: Graduate

4. Describe the legal and ethical ramifications of prescribing medications.

Audience: Graduate

**NURSING 657 – CLINICAL PSYCHOPHARMACOLOGY**

3 credits.

Examines the history, rationale and mechanism of action of drugs used in the treatment of mental health and behavioral disorders. Emphasis is placed on neurobiological processes underlying psychopathology and clinical application of evidence-based pharmacological interventions across the lifespan. In addition, focus on pharmacokinetics, pharmacodynamics, side-effects, drug interactions, therapeutic monitoring and variations in special populations. Finally, review prescriptive authority, the potential impact of the current mental health care service system and ethical decision making for health care professionals.

**Requisites:** Declared in Doctor of Nursing Practice or Capstone Certificate in Post-Graduate Psychiatric Nursing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate knowledge and apply principles of pharmacokinetics and pharmacodynamics, including mechanism of action, absorption, distribution, metabolism, and excretion across special populations in a cultural context.

Audience: Graduate

2. Analyze knowledge of basic neurobiology, neurotransmission, and targets of psychopharmacology drug action.

Audience: Graduate

3. Demonstrate knowledge in management of side-effects, drug-interactions, and therapeutic monitoring.

Audience: Graduate

4. Evaluate current research in psychopharmacology relevant to strategies for therapeutic intervention.

Audience: Graduate

5. Apply and appreciate complexity of legal and ethical decision making in application of prescribing practices.

Audience: Graduate

6. Discuss the importance of collaboration and psychoeducation between health care professionals, the patient, families, and community support in the management of pharmacological treatment.

Audience: Graduate

**NURSING/PHM PRAC 674 – SEMINARS IN INTERPROFESSIONAL MENTAL HEALTH CARE**

2 credits.

Addresses the team-based and patient-centered care of persons with mental health conditions. A special focus will be put on the management of psychotropic medication regimens. A combination of lecture, discussion, and small group work will be utilized.

**Requisites:** PHM PRAC 555**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Assess an individual person and his/her psychotropic medication regimen to identify potential and actual drug related problems

Audience: Undergraduate

2. Develop and recommend an appropriate therapeutic regimen consisting of both non-drug and drug therapy recommendations to facilitate optimal care and outcomes for an individual person

Audience: Undergraduate

3. Design an appropriate monitoring plan in collaboration with the person you are serving in order to appropriately evaluate the individual person's treatment plan

Audience: Undergraduate

4. Apply evidence-based care to practice by critically reviewing current published clinical research and guidelines

Audience: Undergraduate

5. Support persons in successfully navigating the wider mental health care system

Audience: Undergraduate

6. Apply ethical and legal concepts and processes in the analysis of clinical situations

Audience: Undergraduate

**NURSING 679 – NURSING HONORS RESEARCH SEMINAR**

2 credits.

Provides the opportunity to learn more about the generation of nursing knowledge and about School of Nursing faculty members' research projects. An introduction to the principles, methods, and ethics of nursing research, strategies to evaluate the quality of research, and the importance of research for improving clinical practice.

**Requisites:** Declared in the Nursing Honors program**Repeatable for Credit:** No**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate knowledge of protection of human subjects in research, including issues related to subject rights, institutional, state and federal regulations.

Audience: Undergraduate

2. Understand the implications of diversity of research participants/samples.

Audience: Undergraduate

3. Demonstrate a basic understanding of the processes of conducting nursing research.

Audience: Undergraduate

4. Describe the methodologies used in qualitative and quantitative research.

Audience: Undergraduate

5. Demonstrate knowledge of nursing's role in collaborating and conducting research.

Audience: Undergraduate

6. Demonstrate an understanding of dissemination and use of research for practice improvement.

Audience: Undergraduate

7. Formulate a research question for mentored research project

Audience: Undergraduate

**NURSING 681 – SENIOR HONORS THESIS**

1-2 credits.

The senior honors thesis is directed experience with selected aspects of the research process. Declared in the Nursing Honors Program

**Requisites:** Consent of instructor**Course Designation:** Honors - Honors Only Courses (H)**Repeatable for Credit:** No**Last Taught:** Fall 2024**NURSING 682 – SENIOR HONORS THESIS**

1-2 credits.

The senior honors thesis is a directed experience with selected aspects of the research process. Declared in the Nursing Honors Program

**Requisites:** Consent of instructor**Course Designation:** Honors - Honors Only Courses (H)**Repeatable for Credit:** No**Last Taught:** Spring 2025

**NURSING 698 – DIRECTED STUDY IN NURSING**

1-6 credits.

Directed study offers the student an opportunity to work with a faculty member on an individual study program.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2023

**NURSING 699 – DIRECTED STUDY IN NURSING**

1-4 credits.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**NURSING 702 – HEALTH PROMOTION AND DISEASE PREVENTION IN DIVERSE COMMUNITIES**

3 credits.

Best practice approaches to health promotion and disease prevention are explored from their theoretical foundations to clinical applications in diverse populations. Content focuses on the study and synthesis of epidemiologic evidence with emerging social, psychological, and biological science to critically examine and propose evidence-based strategies to improve health outcomes, mitigate risk, and reduce disparities at the population level. Epidemiological principles, levels of prevention, population health theory, infectious disease control, and considerations specific to health equity and ethical health promotion practice in populations will be addressed.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Describe current responsibilities and practice recommendations for advanced practice nurses and other providers as they relate to disease and injury prevention and health promotion.

Audience: Graduate

2. Interpret epidemiological data as foundational to the assessment of population health, design of interventions, and evaluation of outcomes, services, and care quality.

Audience: Graduate

3. Describe the complex mechanisms by which specific social, cultural, economic, political, and environmental determinants contribute to health outcomes, health-related behaviors, inequities, and disparate outcomes in vulnerable populations.

Audience: Graduate

4. Summarize the theoretical models that inform current understandings of health-related behaviors and health-promotion practice.

Audience: Graduate

5. Critically evaluate health communication for accessibility, accuracy, and cultural relevance.

Audience: Graduate

6. Critically evaluate health promotion and prevention strategies as applied to specific populations for potential effectiveness, unintentional harms or inequities, cultural congruence, and ethical implications.

Audience: Graduate

7. Propose culturally congruent, equitable, and evidence-based strategies to promote or protect the health of specific populations.

Audience: Graduate

**NURSING 703 – HEALTH CARE AND PUBLIC POLICY**

3 credits.

Provides a comprehensive overview of the U.S. healthcare system and policy-making process at the local, state, and federal levels, as well as an analysis of global health policies in other countries. Key policy issues covered include Medicare, Medicaid, the uninsured, public health, and healthcare reform. Addresses the role of key stakeholders, including policy-makers, interest groups, and the media on the development of health policy, as well as key forces involved in policy-making, including economics, innovation, social, ethical, and political factors. Examine the role and responsibility of nurse leaders and the impact of health policy on nursing practice at the individual, community, and population level.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Compare and contrast the U.S. health policy-making process and outcomes to other developed countries.

Audience: Graduate

2. Critically analyze health policies and related issues from the perspective of consumers, nursing, other health professions, and other stakeholders in policy and public forums.

Audience: Graduate

3. Understand how public policies influence healthcare delivery, including the practice of nursing at the individual, community, and population level.

Audience: Graduate

4. Understand how data and research influence policy decisions.

Audience: Graduate

5. Create advocacy materials and tools in order to promote social justice, equity, and ethical health policies.

Audience: Graduate

**NURSING 704 – LEADERSHIP IN ADVANCED PRACTICE NURSING I**

3 credits.

Transition and expansion of leadership role for advanced practice. Emphasis on the development of effective, ethical leadership styles; interpretation of legal and professional requirements and regulations; examination of the ethics, values, beliefs, and norms of decision-making in interdisciplinary, collaborative practice.

**Requisites:** Declared in a Nursing graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Examine the history of Advanced Practice Nursing within the context of the evolution of the United States health care delivery system, and from the perspective of both nursing and non-nursing professions.

Audience: Graduate

2. Compare and contrast current APRN roles and responsibilities.

Audience: Graduate

3. Explore barriers and opportunities associated with enacting present and future APRN roles, including definitions of scope of practice and legal and financial issues.

Audience: Graduate

4. Understand the major elements of moral philosophy and demonstrate skill in applying these lines of reason to professional situations.

Audience: Graduate

5. Articulate the leadership dimensions of vision, collaboration, advocacy, and activism within the APRN role.

Audience: Graduate

6. Explore and present an area of interest that may be explored as a potential Scholarly Project.

Audience: Graduate

### **NURSING/MEDICINE/POP HLTH 705 – SEMINAR IN INTERDISCIPLINARY CLINICAL RESEARCH EVIDENCE**

2-3 credits.

Exploration of interdisciplinary clinical research questions including strategies for assessing the evidence and methodology for conducting various types of literature reviews. Emphasizes an interdisciplinary perspective.

**Requisites:** SOC/POP HLTH 797 and STAT/B M I 542

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Develop an answerable clinical research question.  
Audience: Graduate

2. Search relevant scientific literature using several electronic databases and other sources of evidence (published and unpublished) across disciplines.  
Audience: Graduate

3. Manage sources of evidence with reference management software.  
Audience: Graduate

4. Critically review published clinical research on a chosen topic.  
Audience: Graduate

5. Develop a search strategy and conduct a systematic review or other form of evidence review.  
Audience: Graduate

6. Present a planned or actual evidence review to interdisciplinary peers.  
Audience: Graduate

7. Describe the implications for translation of the proposed evidence review from an interdisciplinary perspective.  
Audience: Graduate

### **NURSING 706 – NURSING RESEARCH**

3 credits.

Examines a variety of research methods available to address health care problems and issues in general, and nursing in particular.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Compare and contrast quantitative and qualitative research methods and their utility in answering particular research questions.  
Audience: Graduate

2. Demonstrate understanding of the interrelationships among theory, research, and practice in nursing and health science.  
Audience: Graduate

3. Understand the research process as developed in both quantitative and qualitative research traditions including: problem identification and definition, review of literature, research methods and design, principles or data collection, issues in sampling, and analysis and interpretation of findings.  
Audience: Graduate

4. Critically evaluate research findings from quantitative and qualitative studies in the health sciences.  
Audience: Graduate

5. Apply ethical criteria for the protection of human subjects in research.  
Audience: Graduate

## **NURSING 708 – ETHICS FOR ADVANCED PRACTICE IN HEALTH CARE**

2 credits.

Emphasis on the exploration of ethical knowledge development with a focus on clarification, analysis and justification relevant to advanced nursing practice; examination and development of learners' moral understanding; and distinguishing between moral and other professional responsibilities.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Critically examine key ethical theories.

Audience: Graduate

2. Compare key assumptions, and engage in reflective thinking about advantages and disadvantages, as well as implications of alternative ethical theories.

Audience: Graduate

3. Apply ethical principles and systematic, sound reasoning to address ethical dilemmas in advanced nursing practice, complex settings, and varied populations.

Audience: Graduate

## **NURSING 709 – LEADERSHIP FOUNDATIONS: THE DISCIPLINE OF NURSING**

2 credits.

Examination of the substantive foundations of the discipline of nursing from a broad range of perspectives and domains of knowledge. The emphasis is on the identification and analysis of phenomena of concern to nursing, scientific and theoretical underpinnings of the discipline, the centrality of health and environment, hallmarks of scholarliness, and nursing leadership and collaboration to actualize the goals of nursing. Provides a foundational knowledge, skills, and attitudes needed for nursing leadership and population health.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Compare and contrast the conceptual/philosophical, scientific, and ethical foundations of the discipline.

Audience: Graduate

2. Identify nursing phenomena of concern relevant to scholarship in advanced nursing practice in systems innovation and leadership or population health.

Audience: Graduate

3. Analyze theoretical foundations of nursing care.

Audience: Graduate

4. Evaluate definitions of scholarship, characteristics of scholars, and strategies for scholarliness in nursing.

Audience: Graduate

5. Identify the relevance of reflection, experience, and nursing leadership in collaboration with other health professions to meet the goals of nursing.

Audience: Graduate

6. Identify opportunities for DNP-educated advanced practice nurses prepared in systems innovations and leadership and population health to develop theoretically-informed practice approaches based on nursing's values and foundations.

Audience: Graduate

**NURSING 711 – BUSINESS CONCEPTS IN HEALTHCARE**

3 credits.

Designed to prepare nurse leaders to recognize, analyze, and respond to current business concepts (e.g., human resources, legal, regulatory, and accreditation), economic, and financial management topics in healthcare systems. Applies key financial and business concepts to healthcare and examines current issues and trends in healthcare finance, including accounting, budgeting, cost analysis, human resource management, and the regulatory environment. Opportunities to analyze and evaluate the revenue and costs associated with a specific healthcare delivery system at the program- or organizational-level. Utilizes case studies including financial and clinical data to effectively balance the administrative and clinical needs of today's healthcare environment.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Understand current and emerging concepts and trends in business, including basic accounting, human resource management (HRM), and legal and regulatory standards within healthcare organizations.

Audience: Graduate

2. Articulate the impact of state and federal laws on healthcare systems.

Audience: Graduate

3. Analyze current legal issues in healthcare.

Audience: Graduate

4. Assess the infrastructure and process to achieve regulatory and accreditation standards for a program, service, or healthcare system in area of students focus.

Audience: Graduate

5. Utilize an ethical framework to balance the administrative (economic) and clinical needs within an organization or program.

Audience: Graduate

**NURSING 712 – HEALTH SYSTEMS LEADERSHIP AND INNOVATION PRACTICUM I**

3 credits.

An opportunity to explore and analyze healthcare systems including practical skills in leading teams. An individualized planned practicum provides an opportunity to explore the leader roles (multiple settings) within the context of an administrative issues. Emphasis is on clinical engagement in management projects requiring critical assessment, design, planning, intervention, and evaluation activities using theoretical models and management tools. The focus is on the advanced systems analysis and design of programs and services within an organization/ community setting.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Assess the culture and infrastructure of complex healthcare systems.

Audience: Graduate

2. Evaluate care delivery approaches that meet current and future needs of patient populations.

Audience: Graduate

3. Participate in an interdisciplinary team improving individual, team, and/or organizational outcomes.

Audience: Graduate

4. Apply knowledge of selected concepts, models, and theories from nursing and management sciences to the management of health care resources.

Audience: Graduate

5. Enhance understanding of healthcare systems and leader roles.

Audience: Graduate

6. Describe the standards of care, staffing and performance, and consumer satisfaction influence on leadership and management practices within an organization.

Audience: Graduate

**NURSING 713 – HEALTH SYSTEMS LEADERSHIP AND INNOVATION PRACTICUM II**

3 credits.

Continue the application of leadership and management skills and role development with a focus on leadership and innovation within complex health settings and across multisector partnerships. Emphasis on clinical engagement in management projects requiring critical assessment, design, planning, intervention, and evaluation activities using theoretical models and management tools to leverage technology and innovation. Focuses on leadership and innovation of programs and services within an organization/community-setting.

**Requisites:** NURSING 712**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Apply knowledge of selected concepts, models, and theories from nursing and management sciences to the management of healthcare resources.

Audience: Graduate

2. Critically analyze contemporary challenges and trends within a practice setting, healthcare organization, community, and/or target population.

Audience: Graduate

3. Apply evidence-based research findings from nursing, behavioral, public health, information, and the natural sciences to the management of health care resources for a selected problem or project.

Audience: Graduate

4. Analyze methods and practices of planning, organizing, and evaluating used by health system leaders.

Audience: Graduate

5. Co-lead an interdisciplinary improvement team.

Audience: Graduate

6. Provide leadership in the evaluation and resolution of ethical and legal issues within healthcare systems relating to the use of information, information technology, communication networks, and patient care technology.

Audience: Graduate

7. Apply financial skills in the management of human resource capital.

Audience: Graduate

**NURSING 714 – ADVANCED HEALTH SYSTEMS LEADERSHIP AND INNOVATION**

3 credits.

Focuses on health innovation and leadership, integrating systems thinking and relevant theories to advance innovation and achieve sustainable change in contemporary health settings. Leaders apply and synthesize theories of leadership, innovation, informatics, and business concepts to complex healthcare issues to improve outcomes. Utilizes current and emerging issues, theories, and case studies to explore attributes of innovative leaders, emerging models of care, innovation models, design and adoption, mergers and affiliations in healthcare, and entrepreneurship.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Understand the importance of evidence-based innovation in healthcare.

Audience: Graduate

2. Compare and contrast leadership theories and models of innovation.

Audience: Graduate

3. Describe characteristics and skills of innovative leaders.

Audience: Graduate

4. Analyze an emerging innovation in healthcare.

Audience: Graduate

5. Analyze the culture and organizational design (infrastructure) of a healthcare system or department to support innovation and quality improvement.

Audience: Graduate

6. Identify strategies to increase the adoption of evidence-based healthcare innovations.

Audience: Graduate

7. Apply the principles of leadership, business, and healthcare economics in the development of a new innovative product, program, or service that will improve the quality of care delivery for a specific population, program, or system.

Audience: Graduate

### NURSING 715 – EVALUATION OF HEALTH INFORMATICS SOLUTIONS

3 credits.

Evaluate and appraise health informatics and information technology in order to develop integrative approaches to the design, implementation and evaluation of health informatics solutions and problems. Application of standards, document architecture, decision support systems and heuristic rules and system life-cycle are key areas of focus. People and organization issues for system implementation and evaluation are applied to real data issues to examine privacy, data protection, and institutional responsibilities.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Develop integrative approaches to design, implementation, and evaluation of health informatics solutions consistent with legal, ethical, and privacy standards.

Audience: Graduate

2. Apply health informatics thinking and problem-solving to analysis, interpretation, and visualization of data.

Audience: Graduate

3. Demonstrate an understanding of how the platform, architecture, and system lifecycle are supported in health informatics and information technology systems.

Audience: Graduate

4. Evaluate decision support systems and tools to improve clinical and organizational outcomes.

Audience: Graduate

5. Assess how data is processed and transformed to usable information and knowledge for informed decision-making to support clinical health care and systems involved in health care.

Audience: Graduate

### NURSING 719 – INDEPENDENT FIELD STUDY IN CLINICAL NURSING

1-6 credits.

Concentrated study and field work in a selected area of clinical nursing.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

### NURSING 720 – POPULATION HEALTH PRACTICUM I: WORKING IN THE AGGREGATE

3 credits.

Experiential learning focused on the application of foundational skills and perspectives of advanced population health nursing practice. Provides an opportunity to synthesize, integrate, and apply new knowledge and skills and gain professional experience in population health. Emphasis is on aggregate assessment and evidence-based planning, including critical appraisal of existent data, generation of primary data, community engagement, participatory solution-finding, and the identification of evidence-based strategies to promote and protect health and well-being.

**Requisites:** NURSING 702 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Define and describe a population, community, or aggregate as related to a specific health issue.

Audience: Graduate

2. Select appropriate conceptual models, theories, and sources of data to better understand select population health issues or assess the health and well-being of aggregate populations.

Audience: Graduate

3. Select appropriate theoretical models and epidemiological, biostatistical, environmental, and socioeconomic data to assess the health and well-being of specific aggregate populations or to more fully understand select population health issues.

Audience: Graduate

4. Conduct a focused health assessment of a community or complex systems-level health issue, incorporating considerations of equity, ethics, history, and culture. Assessments should include upstream determinants and socioecological contexts, including cultural and political dimensions, inequities, historical trends, and other theoretical concepts as applicable.

Audience: Graduate

5. Engage key stakeholders, prioritize issues, and propose solutions to promote health or address gaps in care through employing collaborative processes, assessment findings, and current evidence.

Audience: Graduate

6. Articulate the value and challenges of community engagement and participatory problem-solving in effective health promotion.

Audience: Graduate

7. Use aggregate assessment findings, collaborative processes, theory, and best practice resources to share findings, prioritize issues, and propose solutions that aim to promote health, prevent illness or injury, improve health behaviors, or address gaps in care.

Audience: Graduate

8. Consistently demonstrate professionalism, insight, clear and effective communication skills, curiosity, and respect for different values, beliefs and practices.

Audience: Graduate

**NURSING 721 – POPULATION HEALTH PRACTICUM II: COMMUNITY ACTION AND COLLECTIVE IMPACT**

3 credits.

Fosters advanced practice competencies and deeper understandings of collaborative practice in population health. Employ structured systems thinking, stakeholder engagement, and interdisciplinary leadership to investigate and address complex issues in population health. Advanced practice competencies to be developed include: structured approaches to systems thinking, community engagement, collaborative leadership, responsive communication, teamwork, multidisciplinary program planning, cross-sector collaboration, and collective impact.

**Requisites:** NURSING 720 and 723

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply structured systems thinking processes to complex population health issues and collaborative approaches to practice.

Audience: Graduate

2. Examine current models, frameworks, and principles of interprofessional and crosssector collaboration in population health practice.

Audience: Graduate

3. Employ principles of collaborative leadership, collective goal-setting, teamwork, and responsive communication in interdisciplinary and cross-sector efforts to promote population health.

Audience: Graduate

4. Use participatory planning strategies to prioritize the needs and experience of clients and respect the mission and resources of collaborative partners.

Audience: Graduate

5. Integrate ethical reasoning, empathic perspective-taking, and sensitivity to culture, historical context, and power in all aspects of population health practice.

Audience: Graduate

6. Consistently demonstrate professionalism, insight, clear and effective communication skills, curiosity, and respect for different values, beliefs and practices.

Audience: Graduate

**NURSING 722 – ADVANCED PRACTICE NURSING THEORY: ADULTS AND OLDER ADULTS**

3 credits.

Examine theoretical perspectives and evidence-based approaches to human responses to health and illness during adulthood and old age. Concepts and research from multiple disciplines will be examined as a framework for reflective practice with adults.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Examine diverse theoretical perspectives on health and illness in adulthood and old age.

Audience: Graduate

2. Analyze empirical evidence for selected theoretical perspectives related to health and illness in adults and examine age, gender, and cultural differences.

Audience: Graduate

3. Evaluate the theoretical and empirical underpinnings of nursing assessments and interventions with adults.

Audience: Graduate

4. Determine best evidence for advanced nursing practice in a selected area.

Audience: Graduate

## **NURSING 723 – POPULATION HEALTH THEORY AND METHODS SEMINAR I: CONTEMPORARY ISSUES & POPULATION HEALTH ETHICS**

2 credits.

Introduction to the foundational concepts, core functions, and professional values of advanced population health nursing. Contemporary issues in population health will be used to explore and integrate the epidemiological science, theoretical constructs, ethical considerations, and best practice strategies that underlie sound practice.

**Requisites:** NURSING 702

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain the unique perspectives, priorities, and conceptual frameworks and theories that guide advanced population health practice.

Audience: Graduate

2. Contrast ethical deliberations within biomedical research or individual healthcare practice with ethical decision-making in population health.

Audience: Graduate

3. Appraise the potential impacts, shortcomings, and ethical implications of typical approaches to population-level health promotion (health education, social marketing, clinical intervention, environmental or infrastructure changes, policy development and enforcement).

Audience: Graduate

4. Examine the social, historical, economic, environmental, and political forces, as well as the biological and cognitive processes, that shape individual behaviors and health outcomes, as well as the health and well-being of populations.

Audience: Graduate

5. Apply socioecological, physiological, behavioral, and developmental perspectives to select population health issues.

Audience: Graduate

6. Critically consider individual characteristics, upstream determinants, and other drivers of select population health issues to identify areas of opportunity and propose ethical strategies to mitigate risk, address inequities, and promote health and well-being.

Audience: Graduate

7. Discern common challenges to evidence-based practice and decision-making in population health.

Audience: Graduate

## **NURSING 724 – POP HEALTH THEORY & METHODS SEMINAR II: INTERDIS PRACTICE, COLLECTIVE IMPACT & COALITION BUILDING**

2 credits.

Builds on existing practice knowledge and skills with concepts from systems thinking, complex problem-solving, interdisciplinary collaboration, community engagement, coalition-building, and collective impact. Explorations of "wicked" problems in population health will challenge you to consider novel partnerships, shared decision-making, and innovative, multifaceted approaches to practice.

**Requisites:** NURSING 721 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Appraise the advantages, shortcomings, and ethical implications of targeted, top-down, or bottom-up approaches to address complex problems in population health practice.

Audience: Graduate

2. Evaluate structured systems-thinking methods as strategies to better understand complex population health problems, as well as the diverse perspectives, priorities, and needs of impacted community members and interprofessional stakeholders.

Audience: Graduate

3. Engage in design-thinking with key stakeholders to learn from their perspective and propose community-centered solutions to complex challenges in population health.

Audience: Graduate

4. Identify basic concepts of effective teamwork, interprofessional ethics, and professionalism as an underpinning of collaborative population health practice.

Audience: Graduate

5. Anticipate potential ethical implications and unintended consequences of decision-making, policy-development, or resource allocation in addressing complex population health problems.

Audience: Graduate

6. Differentiate between collaboration, coalition-building, and collective impact as strategies to address complex population health challenges.

Audience: Graduate

**NURSING 725 – POPULATION HEALTH THEORY AND METHODS  
SEMINAR III: EMERGING ISSUES AND SPECIALIZED ROLES**

2 credits.

Explore specialized roles, emerging issues, and current priorities in advanced population health nursing. Analyze novel and emergent population health challenges within context, and consider the unique knowledge, skills, and philosophies that prepared nurses can bring to solution-seeking and interdisciplinary efforts to promote or safeguard population health.

**Requisites:** NURSING 724

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Investigate professional opportunities and organizations for nurses with advanced population health knowledge and skills.

Audience: Graduate

2. Examine socioecological, political, behavioral, environmental, structural, or biological trends that underlie emerging issues in population health and inform potential solutions.

Audience: Graduate

3. Apply an evidence-based and evaluative approach to examine current public health problems and formulate solutions.

Audience: Graduate

4. Explore emerging priorities and novel issues in population health and discuss the unique potential of advanced practice nurses in seeking solutions and promoting health.

Audience: Graduate

5. Appraise the relevance and value of advanced nursing knowledge, experience, and skills in interdisciplinary efforts to promote or safeguard the health of select populations.

Audience: Graduate

6. Propose innovative opportunities for advanced practice nurses to work independently or with others to promote population health across sectors and the health care continuum.

Audience: Graduate

**NURSING 726 – FOUNDATIONS FOR APN CLINICAL PRACTICE I**

3 credits.

Designed to advance knowledge for clinical decision making. Health promotion, illness prevention and common health conditions are emphasized.

**Requisites:** NURSING 601, 605, 811, and concurrent enrollment in NURSING 728

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply advanced assessment skills, risk analysis and reduction, screening, and disease detection strategies into the health management plan.

Audience: Graduate

2. Incorporate primary, secondary and tertiary prevention strategies in the clinical management of a patient's wellness and health care needs.

Audience: Graduate

3. Integrate and evaluate evidence-based interventions and clinical guidelines into patient health promotion, disease prevention, and illness management plans.

Audience: Graduate

4. Identify and use appropriate counseling and education strategies to promote positive lifestyle and behavior changes.

Audience: Graduate

5. Incorporate advanced physiological, pathophysiological, pharmacologic and psychosocial concepts and principles into the clinical management plan of common and complex health problems.

Audience: Graduate

6. Develop clinical management plans that are culturally congruent and reflect patients and family beliefs and value systems across the lifespan.

Audience: Graduate

## **NURSING 727 – FOUNDATIONS FOR APN CLINICAL PRACTICE II** 3 credits.

Designed to advance knowledge for clinical decision-making. Complex and chronic health conditions are emphasized while continuing to promote health maintenance within the context of existing health problems.

**Requisites:** NURSING 726, 728, and concurrent enrollment in NURSING 729

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Evaluate strategies of risk analysis and reduction, screening and disease detection.

Audience: Graduate

2. Refine primary, secondary and tertiary prevention strategies into the clinical management of a patient's wellness and health care needs.

Audience: Graduate

3. Analyze and integrate evidence-based interventions and clinical guidelines in patient health promotion, disease prevention, and illness management plans.

Audience: Graduate

4. Initiate and evaluate appropriate counseling and patient education strategies to assist patients to make positive lifestyle and behavioral changes.

Audience: Graduate

5. Apply advanced physiological, pathophysiological, pharmacologic and psychosocial concepts and principles into the clinical management of common and complex health problems across a variety of settings.

Audience: Graduate

6. Collaborate with individuals and families to implement clinical management plans that are culturally congruent and reflect patient and family beliefs and value systems across the lifespan.

Audience: Graduate

7. Analyze patient data and develop individualized management plans based on current evidence and appropriate resources.

Audience: Graduate

## **NURSING 728 – ADVANCED PRACTICE CLINICAL APPLICATION AND ROLE DEVELOPMENT I** 1-4 credits.

Supervised clinical practicum focuses on the continued development and application of advanced health promotion, assessment and clinical management skills within the context of chronic illness and complex health issues.

**Requisites:** Concurrent enrollment in NURSING 726

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Formulate initial conceptualization of the APN role within the context of clinical practice.

Audience: Graduate

2. Employ a comprehensive and systematic health assessment for common clinical situations, incorporating diverse and culturally congruent approaches.

Audience: Graduate

3. Utilize clinical decision making process to identify and prioritize client health issues.

Audience: Graduate

4. Demonstrate application of health promotion, disease prevention and health behavior change principles to provide education and health counseling to clients.

Audience: Graduate

5. Develop therapeutic relationships with clients and families and formulate inter-professional partnerships to facilitate optimal care and patient outcomes.

Audience: Graduate

6. Select and implement therapeutic interventions based on current evidence and appropriate practice guidelines.

Audience: Graduate

7. Demonstrate accurate documentation of client encounters.

Audience: Graduate

**NURSING 729 – ADVANCED PRACTICE CLINICAL APPLICATION AND ROLE DEVELOPMENT II**

1-4 credits.

Supervised clinical practicum focuses on the continued development and application of advanced health promotion, assessment and clinical management skills within the context of chronic illness and complex health issues.

**Requisites:** Concurrent enrollment in NURSING 727

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate developing Advanced Practice Nursing role within the context of health care systems.

Audience: Graduate

2. Employ a comprehensive and systematic health assessment for complex or chronic health conditions, incorporating diverse/culturally congruent approaches.

Audience: Graduate

3. Utilize clinical decision making process and clinical judgment to identify and prioritize client and population health issues.

Audience: Graduate

4. Tailor application of principles of health promotion, disease prevention, and health behavior change to provide education and health counseling to clients.

Audience: Graduate

5. Develop therapeutic relationships with clients and their families and utilize inter-professional partnerships to facilitate optimal care and patient outcomes.

Audience: Graduate

6. Initiate, evaluate, and modify evidence-based therapeutic interventions based on current evidence, appropriate practice guidelines, and client goals, lifestyle and cultural beliefs.

Audience: Graduate

7. Utilize advanced communication and documentation skills to enhance care delivery.

Audience: Graduate

**NURSING 730 – CRITICAL SOCIAL THEORIES IN POPULATION HEALTH**

2 credits.

Examines the application of critical social theories in population health promotion when intersectionality, bias, and social inequities are social determinants of population health disparities. Intended to provide an opportunity to apply critical social theories to long-standing population health disparities and contemporary social health problems such as despair, homelessness, and loneliness. Emphasis on the appraisal of intersectionality, bias, and inequities in previous, present, or potential population health promotion strategies to eliminate health disparities.

**Requisites:** NURSING 723 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply definitions and descriptions of population, community, and aggregate to specific social health determinants.

Audience: Graduate

2. Explain the value, limitations, and applicability of critical social theories in population health.

Audience: Graduate

3. Select and apply appropriate critical social theories to a specific population, population health promotion program, or population health promotion policy.

Audience: Graduate

4. Write a focused population health assessment of a community that includes the community's social ecology.

Audience: Graduate

5. Apply critical social theory in a policy or program proposal to eliminate a specific population health disparity.

Audience: Graduate

6. Consistently demonstrates professionalism, insight, clear and effective communication skills, curiosity, and respect for different values, beliefs, and practices.

Audience: Graduate

### **NURSING 736 – PEDIATRIC ASSESSMENT FOR MENTAL HEALTH ADVANCED PRACTICE NURSES**

1 credit.

Advance students' knowledge of pediatric development to enhance clinical decision-making with emphasis on applying advanced assessment skills to the child and adolescent population.

**Requisites:** Declared Post-Graduate Psychiatric Mental Health Nursing Capstone Certificate or (NURSING 601, NURSING/PHM PRAC 605, and NURSING 811)

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2023

**Learning Outcomes:** 1. Apply advanced health assessment skills to the child and adolescent population

Audience: Graduate

2. Evaluate varied child development theories

Audience: Graduate

3. Identify how various types of trauma impact normative developmental processes in children and adolescents

Audience: Graduate

### **NURSING 741 – ADVANCED PRACTICE NURSING THEORY: FAMILY PROCESS & CHILD DEVELOPMENT**

3 credits.

Analyzes selected family and child development theories and research that inform advanced practice nursing. Applies these concepts to assess child and family needs, enhance the parent-child relationship, and develop family-centered, culturally responsive interventions in health and illness.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe the nature of a family-centered, culturally responsive approach to health care.

Audience: Graduate

2. Identify changing trends in family structure, parenting practices, and health-illness patterns as well as their implications for practice and research.

Audience: Graduate

3. Gain insights about family dynamics, the bidirectional influence of relationships within families, and the impact of developmental transitions, culture and illness on these relationships.

Audience: Graduate

4. Analyze and apply family theories to practice and inform interventions that enhance the quality of parent-child relationships.

Audience: Graduate

5. Analyze theories of child development and related research, and the relevance of these to providing developmental guidance in the advanced practice of nursing with children/parents.

Audience: Graduate

6. Describe the contribution of individual differences, such as temperament and coping style, to family interactions and functioning.

Audience: Graduate

7. Evaluate specific child development and family research studies.

Audience: Graduate

8. Formulate a framework for child and family assessment for a specific family or population of families managing a normative or situational transition or a health/illness situation.

Audience: Graduate

**NURSING/PHM PRAC/SOC WORK 746 – INTERDISCIPLINARY CARE OF CHILDREN WITH SPECIAL HEALTH CARE NEEDS**

3 credits.

Interdisciplinary team care of children with special health care needs across the trajectory of illness presented within the context of family, culture, social determinants of health, community, and healthcare policy. Students introduced to interdisciplinary, collaborative, family-centered team care.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the interdisciplinary team approach to the care of the child with a chronic illness from the perspective of a child with a chronic illness and their family, community care providers, and each of the disciplines involved, including the student's own.

Audience: Graduate

2. Demonstrate an understanding of issues relating to larger social and cultural context for the care of children with chronic illness.

Audience: Graduate

3. Identify and assess healthcare delivery systems and financing for children with chronic illness.

Audience: Graduate

4. Describe ways to advocate for pediatric patients with chronic disease and their families at an individual level and a policy level.

Audience: Graduate

**NURSING 751 – ADVANCED PRACTICE NURSING THEORY: PSYCHIATRIC MENTAL HEALTH**

3 credits.

Analysis and integration of selected theories and models in psychotherapy, neuroscience, mental health, psychiatric disorders, and advanced psychiatric mental health nursing in complex care settings with diverse patients, communities, and populations.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Effectively analyze and integrate into practice major theories/models of psychotherapy, neuroscience, mental health care, psychiatric disorders, and advanced practice psychiatric mental health nursing.

Audience: Graduate

2. Analyze the implications of how implementation of various theoretical frameworks impact policies, programs, and practices on various populations (e.g. children/adolescents, women, survivors) living with psychiatric mental health disorders and/or psychosocial stress.

Audience: Graduate

3. Apply theory-based frameworks to guide advanced practice psychiatric mental health nursing practice.

Audience: Graduate

## **NURSING/PHARMACY/PHY ASST/PHY THER/PUBLHLTH 758 – INTERPROFESSIONAL PUBLIC HEALTH LEADERSHIP**

1 credit.

Build skills in collaboration, problem solving, and reflection to approach complex community-based public health problems contribute to becoming a public leader. Explore the six levels of public health leadership through the practices of current and past public health leaders, case studies, and personal experience.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2019

**Learning Outcomes:** 1. Describe the roles and responsibilities of their profession with all participating health professional students, while examining the roles and responsibilities of all other health professions.  
Audience: Graduate

2. Compare and contrast the diversity of expertise among participating health professions.  
Audience: Graduate

3. Apply their profession's roles and responsibilities to case studies that address complex public health issues.  
Audience: Graduate

4. Describe what it means to be part of an interprofessional team and illustrate how the different professions and systems can complement and facilitate one another in addressing public health issues.  
Audience: Graduate

5. Apply the principles of public health leadership via reflective exercises, case studies and facilitated discussion.  
Audience: Graduate

6. Promote a public health cause or principle through legislative advocacy.  
Audience: Graduate

7. Elucidate the importance of reflection as a life-long learning and leadership tool.  
Audience: Graduate

## **NURSING 761 – HEALTH PROGRAM PLANNING, EVALUATION, AND QUALITY IMPROVEMENT**

3 credits.

Provides content in theory, concepts, and methods of program planning and evaluation in the context of health care and community health organizations. Provides basic concept related to designing and implementing health services quality improvement projects.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Examine the critical elements of quality process improvement history, methods, and practice.  
Audience: Graduate

2. Apply basic quality improvement methodologies to a process in a health care or community health organization.  
Audience: Graduate

3. Examine the critical elements of health program planning and evaluation models.  
Audience: Graduate

4. Analyze strengths and weaknesses of proposed health programs.  
Audience: Graduate

5. Construct a program plan that demonstrates ability to conduct needs assessment, create measurable objectives, design interventions, develop a budget, and conduct process and outcomes evaluation.  
Audience: Graduate

6. Develop and apply strategies to work collaboratively in small groups.  
Audience: Graduate

### **NURSING 764 – NURSING AND HEALTH INFORMATICS**

3 credits.

Application of computer and information technologies to support nursing in the diagnosis and treatment of human responses to health, illness, and developmental challenges. Identification of information processing challenges and evaluation of informatics solutions. Ethical, legal and social issues related to informatics in patient care.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recognize, analyze, and pose solutions for information processing challenges as faced by nurses and other health professionals managing select patients, populations, or groups.

Audience: Graduate

2. Identify the current state of development of major areas within nursing and health informatics.

Audience: Graduate

3. Demonstrate the conceptual ability and technical skills to develop and execute an evaluation plan involving data extraction from practice information systems and databases.

Audience: Graduate

4. Consistent with ethical, legal, and social considerations, devise and evaluate biomedical informatics solutions to the information processing challenges identified.

Audience: Graduate

### **NURSING/LAW 768 – HEALTH JUSTICE CLINIC**

1-7 credits.

Interdisciplinary health advocacy clinic providing broad individual and system advocacy for patients facing life changing health events. Advocacy topics include: medical decision-making, insurance, medical debt, disability and related policies and laws.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify and describe personal values and beliefs related to patient advocacy.

Audience: Graduate

2. Identify how racism, sexism, homophobia, transphobia, ablism and other forms of oppression impact clients and the delivery of health care in the US.

Audience: Graduate

3. Communicate effectively in writing and in conversation to a range of audiences including patients.

Audience: Graduate

4. Recognize opportunities for advocacy in individual client situations.

Audience: Graduate

5. Design effective advocacy plans to address client needs.

Audience: Graduate

6. Recognize ethical dilemmas and develop informed plans for ethical practice.

Audience: Graduate

## **NURSING 772 – LEADERSHIP AND ORGANIZATIONAL DECISION-MAKING IN HEALTH CARE**

3 credits.

Provides healthcare leaders with the knowledge, skills, and competencies to improve patient, organization and health system outcomes. Effective organizational and systems leadership will help to eliminate health disparities and promote patient safety and excellence in practice. Includes the analysis, integration, and application of principles of leadership and management to healthcare organizations and to population-based efforts across the healthcare delivery system including a basic introduction to finance. Emphasis is placed on the practical skills needed to succeed as leaders in today's complex environments.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Able to formulate and communicate a vision as a leader.

Audience: Graduate

2. Apply leadership and organizational theories to healthcare systems.

Audience: Graduate

3. Assess organizational culture and infrastructure of a healthcare organization or department.

Audience: Graduate

4. Utilize knowledge of organizational culture in planning and delivery of healthcare programs and services.

Audience: Graduate

5. Evaluate healthcare delivery systems to meet current and future needs of specified populations with a focus on process and outcomes.

Audience: Graduate

6. Discuss the principles of team science and team dynamics in healthcare.

Audience: Graduate

7. Demonstrate effective leadership communication incorporating interprofessional communication practices.

Audience: Graduate

8. Employ principles of accounting, finance, and strategic planning in the development of a business plan for a new program or service.

Audience: Graduate

## **NURSING 784 – TEACHING AND LEARNING STRATEGIES FOR CLINICAL AND SIMULATION ENVIRONMENTS IN HEALTHCARE PROFESSIONS**

3 credits.

Integrates teaching and learning theories and evidence-based strategies for educating undergraduate and graduate health professions students in clinical and simulation environments. Provides principles, models, and processes to plan, implement and evaluate teaching and learning experiences through curated readings, activities, and self-reflection. Applies strategies such as the integration of personal attributes and teaching style, use of technology, and a student-centered approach to develop optimal teaching practices.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Demonstrate understanding of selected teaching and learning theories and their applications to a diverse student body.

Audience: Graduate

2. Integrate technology, innovative active learning strategies, and interprofessional education to create student-centered learning activities in the clinical and simulation environment.

Audience: Graduate

3. Construct a plan for assessment of individual student learning outcomes related to clinical and simulation environments.

Audience: Graduate

4. Develop a plan for evaluation of aggregate student and course outcomes related to clinical and simulation-related experiences.

Audience: Graduate

5. Summarize best practices for creating an inclusive and supportive learning environment.

Audience: Graduate

6. Apply strategies to manage the learning environment and support individual student needs.

Audience: Graduate

**NURSING 785 – FOUNDATIONS OF CURRICULUM DEVELOPMENT AND EVALUATION FOR HEALTHCARE PROFESSIONS**

3 credits.

Develop an understanding of higher education curriculum rooted in the healthcare professions. Undergraduate and graduate level program structures are examined, including traditional and innovative designs. Processes of curriculum development, including needs assessment, implementation, evaluation, and outcomes assessment that provide the foundation for course scope and content inclusion. Guiding conceptual frameworks and underlying philosophical, political, and professional issues that impact curriculum development and change are examined. Current issues relevant to curriculum.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Examine the processes of curriculum development.

Audience: Graduate

2. Analyze the components of a curriculum.

Audience: Graduate

3. Assess the impact of current trends and themes in healthcare professions education, including professional and societal issues, and the impact on curriculum development and delivery.

Audience: Graduate

4. Compare and contrast undergraduate and graduate level program structures, both traditional and innovative, in healthcare professions and their implications for practice.

Audience: Graduate

5. Design key elements of a curriculum, including framework and outcomes.

Audience: Graduate

**NURSING 786 – TEACHING AND LEARNING STRATEGIES FOR THE CLASSROOM AND ONLINE ENVIRONMENTS IN HEALTHCARE PROFESSIONS**

3 credits.

Integrates teaching and learning theories and evidence-based strategies for educating undergraduate and graduate health professions students in classroom and online environments. This course provides students with principles, models, and processes to plan, implement and evaluate teaching and learning experiences through curated readings, activities, and self- reflection. Students will apply strategies such as the integration of personal attributes and teaching style, use of technology, and a student- centered approach to develop optimal teaching practices.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Demonstrate understanding of selected teaching and learning theories and their applications to a diverse student body.

Audience: Graduate

2. Integrate technology, innovative active learning strategies, and interprofessional education to create student-centered learning activities in the clinical and simulation environment.

Audience: Graduate

3. Construct a plan for assessment of individual student learning outcomes related to clinical and simulation environments.

Audience: Graduate

4. Develop a plan for evaluation of aggregate student and course outcomes related to clinical and simulation-related experiences.

Audience: Graduate

5. Summarize best practices for creating an inclusive and supportive learning environment.

Audience: Graduate

6. Apply strategies to manage the learning environment and support individual student needs

Audience: Graduate

### **NURSING 787 – TEACHING AND LEARNING IN HEALTHCARE PROFESSIONS PRACTICUM**

3 credits.

Immersive and comprehensive experience designed to prepare healthcare professional students for roles as effective educators. Dynamic blend of theoretical coursework, experiential hands-on teaching, and educational experiences to grow expertise in curriculum development, inclusive instructional design, and assessment strategies. Through collaboration with experienced preceptors, refine pedagogical skills, fostering an understanding of diverse learning styles and effective communication in the healthcare education context. Emphasis will be placed on evidence-based teaching methods, utilization of the latest technologies and innovative approaches to enhance student engagement.

**Requisites:** NURSING 784, 785, or 786

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate innovative teaching strategies based on educational theory to enhance student engagement, motivation, and achieve learning outcomes.

Audience: Graduate

2. Utilize educational technologies and tools to support student learning.

Audience: Graduate

3. Apply evidence-based practices to design engaging learning activities that support various learning styles and student needs.

Audience: Graduate

4. Demonstrate the ability to create and maintain an inclusive and welcoming learning environment.

Audience: Graduate

5. Engage in ongoing professional role development by seeking feedback, participating in reflective practices, and staying informed about current trends and research in higher education teaching.

Audience: Graduate

### **NURSING 798 – MASTER'S RESEARCH PRACTICUM**

3 credits.

Promotes learning of the research process in nursing through direct experience. Work closely with faculty to determine the nature, scope and design of the research experience. NURSING 700 or 701

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2014

### **NURSING 799 – INDEPENDENT STUDY**

1-6 credits.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

### **NURSING 800 – HEALTH EQUITY IN NURSING AND HEALTH RESEARCH**

2 credits.

Examination of key concepts in health disparities and health equity as they apply to nursing and related health research. Identification of structural and social determinants of equity that shape health at multiple levels, across the health and wellness continuum, in all health domains and throughout the life course. Emphasis on implications for the design, conduct, interpretation, and dissemination of nursing and health research.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Evaluate concepts of health, health disparities, and health equity

Audience: Graduate

2. Discuss structural (e.g., laws, policies, systems, institutions), social (e.g., racism, ethnocentrism, sexism, socioeconomic deprivation, geography), and individual and community factors (e.g., resilience) that contribute to health equities / inequities and related implications for health research

Audience: Graduate

3. Appraise relevant theory and methodological approaches used in health equity research

Audience: Graduate

4. Critically analyze published research for social bias

Audience: Graduate

5. Design research that integrates structural and social determinants of health

Audience: Graduate

### **NURSING 801 – THEORY IN NURSING RESEARCH**

2 credits.

Examination of middle-range theory, micro-theory, and conceptual frameworks and their application in nursing science, with emphasis on critique and selection of a theory and/or framework to guide the student's research.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Discuss foundations of nursing theory, their structure and scope, and the importance of theory in nursing science  
Audience: Graduate

2. Evaluate methods of theory development including positivistic and inductive approaches, and examples of extending and refining theory over time  
Audience: Graduate

3. Critically analyze the utility of various theories, including the application and operationalizability of theory in research  
Audience: Graduate

4. Appraise theory from nursing, biological, behavioral, and other sciences  
Audience: Graduate

5. Select or adapt an existing theory or create a beginning conceptual framework to guide the student's early research efforts  
Audience: Graduate

### **NURSING 802 – ETHICS AND THE RESPONSIBLE CONDUCT OF RESEARCH**

1 credit.

Ethical issues in the design, conduct and reporting of research are examined in the context of the nature of the scientific endeavor, the structure of the research community, and professional and federal guidelines for supporting scientific integrity and controlling misconduct.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Understand ethical issues in the conduct of research.  
Audience: Graduate

2. Recognize one's own ethical/moral biases in ethical decisions.  
Audience: Graduate

3. Develop the conceptual tools to recognize ethical dilemmas.  
Audience: Graduate

4. Identify and analyze options for action, and make appropriate decisions.  
Audience: Graduate

**NURSING 803 – QUANTITATIVE DESIGN AND METHODS**

4 credits.

Focuses on the conduct of research primarily from empirical, analytical traditions. Address the integration of research paradigms, questions, designs, and methods for such research. Compare details, characteristics, strengths and limitations of alternative research designs and methods. Discuss issues and standards for preparing research proposals for different purposes (e.g., institutional review boards for human subjects, NIH) to advance the nursing discipline.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Gain understanding and skills in selected quantitative research designs and methods.

Audience: Graduate

2. Analyze advantages and limitations of different quantitative methods for studying phenomena relevant to nursing and/or health care broadly defined.

Audience: Graduate

3. Substantively critique published quantitative research and funding proposals on multiple dimensions (e.g., conceptual, theoretical, methodological, ethical, analytical, historical, practical).

Audience: Graduate

4. Demonstrate skills in integrating knowledge from empirical literature, logical arguments, theory, and research methods for writing quantitative research proposals to advance knowledge relevant to nursing and/or health care.

Audience: Graduate

**NURSING 804 – QUALITATIVE DESIGN AND METHODS**

3 credits.

Focuses on how to conduct qualitative research. Content addresses the philosophical underpinnings of various interpretive qualitative methodologies to assist in matching the best method to particular research questions. Engage in research procedures associated with various qualitative traditions.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Gain an understanding and skills in a range of qualitative research designs and methods.

Audience: Graduate

2. Analyze the relationship between underlying philosophies and assumptions and the different qualitative approaches to nursing research.

Audience: Graduate

3. Critically examine the advantages, and limitations of different qualitative research methods in the context of clinical nursing phenomena.

Audience: Graduate

4. Demonstrate an ability to select the most appropriate qualitative approach for a specific research question.

Audience: Graduate

5. Critique published qualitative research and grant proposals, integrating the above knowledge.

Audience: Graduate

### **NURSING 805 – MEASUREMENT IN HEALTH RESEARCH**

3 credits.

Major issues in developing, testing, and using research instruments, including links between concepts, variables, and measures; theories of measurement and scaling, including reliability and validity testing; and using measures in research.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explore theories of measurement and scaling and their application to instrument development.

Audience: Graduate

2. Identify and define the various properties of measurement tools in science and critique their application.

Audience: Graduate

3. Demonstrate skill in testing various forms of reliability of health research instruments.

Audience: Graduate

4. Demonstrate skill in testing various forms of validity of health research instruments.

Audience: Graduate

5. Demonstrate skill in evaluating health research instruments for practical feasibility, appropriateness for intended populations, generalizability, and sensitivity in detecting differences among groups or change over time.

Audience: Graduate

### **NURSING 806 – EVALUATION AND APPLICATION OF EVIDENCE-BASED PRACTICE**

3 credits.

Evaluate collective evidence and apply it, as appropriate, as a basis for improving nursing practice, health care, and healthcare outcomes.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Use principles of evidence-based practice (EBP) in understanding research, analyzing practice, and evaluating practice change.

Audience: Graduate

2. Describe how the hierarchy of evidence varies depending upon the type of clinical questions posed or areas of practice for which evidence is being sought.

Audience: Graduate

3. Evaluate the quality of evidence using established criteria, as indicated by the categories of recommendations.

Audience: Graduate

4. Synthesize collective evidence in their area of interest.

Audience: Graduate

5. Address issues related to applying EBP to their area of interest.

Audience: Graduate

6. Apply concepts of risk in evaluating patient outcomes.

Audience: Graduate

**NURSING 807 – GROUNDED THEORY RESEARCH**

3 credits.

A comprehensive understanding of the intellectual traditions that informed the development of grounded theory, variations of grounded theory (second generation), and to provide an opportunity for active participation in grounded theory research. Requires hands-on participation in a field-research project of the student's choice, engaging in data-collection and analysis, and in-depth readings in symbolic interaction and grounded theory method.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2024

**Learning Outcomes:** 1. Describe the conceptual underpinning of grounded theory.

Audience: Graduate

2. Identify the cannon and procedures for conducting a grounded theory study.

Audience: Graduate

3. Participate in data collection and analysis using grounded theory methodology.

Audience: Graduate

4. Describe approach and methods for publishing qualitative research.

Audience: Graduate

5. Describe various 2nd generation grounded theory approaches.

Audience: Graduate

**NURSING 811 – ADVANCED PATHOPHYSIOLOGY**

3 credits.

In-depth study of selected physiological and pathophysiological concepts with application to advanced clinical practice across the lifespan.

**Requisites:** Declared in a Nursing graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Examine selected comprehensive physiological phenomena.

Audience: Graduate

2. Apply pathophysiological and physiological principles to selected clinical problems.

Audience: Graduate

3. Critique recent literature relevant to selected clinical problems.

Audience: Graduate

**NURSING 815 – KNOWLEDGE DEVELOPMENT IN NURSING**

3 credits.

Examination of the history of the discipline of nursing, with emphasis on the evolution of debates regarding what is known and how it is known.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze critically the development of scientific thinking.

Audience: Graduate

2. Debate about the nature, sources, and development of knowledge in nursing.

Audience: Graduate

3. Ability to analyze critically debates about the syntax (methodology) of the discipline.

Audience: Graduate

4. Conduct a systematic, written concept analysis relevant to nursing or healthcare.

Audience: Graduate

**NURSING 816 – PROSEMINAR IN NURSING RESEARCH**

1 credit.

Focus on professional development and socialization to the role of nurse scientist. Discussion emphasizes career development planning including traditional and alternative roles for PhD-prepared nurses, and current and emerging topics of importance to nursing science. The planned and ongoing research of graduate students and faculty in nursing will be featured as relevant.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Engage in individual development planning and socialization to the role of doctoral student and evolving role as nurse scholar / scientist.

Audience: Graduate

2. Analyze current and emerging topics of importance to nursing science, including relevance to the student's own program of research.

Audience: Graduate

3. Examine professional development issues including pre- and post-doc training goals, professional mentorship, funding, academic and alternative career paths, models of leadership in nursing, and nursing education.

Audience: Graduate

**NURSING 818 – PATIENT-CENTERED RESEARCH**

3 credits.

Addresses conceptual and methodological perspectives in how patient-centered research and family-centered care research is conducted, from the development through the testing and implementation of interventions. Attention is given to various conceptualizations of patient-centeredness, to the behavioral and physiological origins of patient-centered interventions, family-centered care interventions, and to the trajectory of testing such interventions, from descriptive studies to experimental trials.

**Requisites:** NURSING 815**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Discuss the differences between patient-centered research and terms with similar concepts such as patient-centered care, patient-focused care, motivational interviewing.

Audience: Graduate

2. Discuss family-centered care research, and difference between similar concepts including family-centered research.

Audience: Graduate

3. Analyze one program of patient-centered research and one program of family-centered care research.

Audience: Graduate

4. Synthesize the issues involved in tailoring an intervention and research methodology to test feasibility, acceptability, and effectiveness of the tailored intervention.

Audience: Graduate

**NURSING 819 – CLINICAL FIELD PRACTICUM - RESEARCH IN HEALTH CARE SETTINGS**

3 credits.

A field experience in preparation for conducting clinical research in the health care setting that corresponds to the a chosen health problem, phenomenon, or population of interest. Engage as participants and observers in the care setting to deepen your knowledge of the selected health problem and to examine the application of theory and research in the care setting. Negotiate a field experience with a selected agency or institution. Includes discussion of instructional experiences and issues.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Fall 2024**Learning Outcomes:** 1. Synthesize the state of the science regarding the selected health problem or phenomenon as experienced in the care setting, including practice issues and research questions that could improve the health or patients/clients.

Audience: Graduate

2. Critically evaluate the application of relevant theories or physiologic models to the health problem as experienced in the selected care setting.

Audience: Graduate

3. Identify and analyze patient, provider, and system factors present in the care setting that may influence the formulation of research questions, study design and conduct, interpretation of findings and translation into practice.

Audience: Graduate

4. Describe operational procedures and issues for conducting research in the selected care setting.

Audience: Graduate

5. Demonstrate the ability to synthesize and communicate relevant research findings to practitioners and potential research collaborators in the care setting.

Audience: Graduate

**NURSING 826 – FOUNDATIONS FOR APN CLINICAL PRACTICE III**

3 credits.

Advance knowledge for clinical decision-making. Coordination of complex care across systems and settings will be emphasized.

**Requisites:** NURSING 727 and 729

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Refine clinical decision-making skills related to the care of patients with complex and co-existing health care needs.

Audience: Graduate

2. Coordinate care for patients or populations across settings.

Audience: Graduate

3. Collaborate with other healthcare professionals to improve the care of patients with complex or co-existing health problems.

Audience: Graduate

4. Utilize technology to facilitate care across systems and settings.

Audience: Graduate

5. Utilize integrative strategies to assist individuals and families in achieving optimal health and wellness.

Audience: Graduate

6. Evaluate models of care designed to reduce health disparities across systems and settings.

Audience: Graduate

7. Analyze and evaluate the links between clinical practice, organizational goals, and fiscal and policy issues.

Audience: Graduate

**NURSING 828 – CLINICAL LEADERSHIP III**

1-4 credits.

A supervised clinical practice to enhance clinical leadership skills within the role of an Advanced Practice Nurse. Collaborate with a faculty course professor and clinical preceptor to meet individualized learning objectives.

**Requisites:** NURSING 729

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate and maintain an advanced level of independent clinical judgment and systems thinking.

Audience: Graduate

2. Engage in the evaluation and translation of research into evidence-based care that improves patient/population outcomes.

Audience: Graduate

3. Support an active role in the mentorship and guidance of nurses in the clinical setting to promote excellence in nursing practice.

Audience: Graduate

4. Employ effective inter-professional communication and collaborative leadership skills in the application and evaluation of practice models.

Audience: Graduate

5. Assess the use of evidence-based practice guidelines and standards of care in the organizational setting and formulate recommendations for improvements.

Audience: Graduate

### **NURSING 829 – CLINICAL LEADERSHIP IV**

1-4 credits.

A supervised clinical practice to enhance clinical leadership skills within the role of an Advanced Practice Nurse. Collaborate with a faculty course professor and clinical preceptor to meet individualized learning objectives.

**Requisites:** NURSING 828

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate increased independence in and integration of advanced levels of clinical judgment, systems thinking, and engagement in the evaluation and translation of research into evidence-based care that improves patient/population outcomes.

Audience: Graduate

2. Expand their leadership role to mentor and support members of the inter-professional patient care team to achieve excellence in and accountability for quality in care of patients or populations.

Audience: Graduate

3. Demonstrate the ability to implement, revise or improve inter-professional practice models in the clinical setting.

Audience: Graduate

4. Critically appraise the use of evidence-based practice guidelines and standards of care in the clinical setting, recommend improvements, and evaluate the outcome of recommended improvements.

Audience: Graduate

### **NURSING 830 – LEADERSHIP, ROLE DEVELOPMENT, AND RESOURCE STEWARDSHIP PRACTICUM**

3 credits.

Expand and strengthen leadership skills, enhance understanding of specialized advanced practice role including strategic planning and resource stewardship. Collaborate with course faculty and designated preceptors to establish and achieve individualized learning goals that directly pertain to specialty roles in advanced nursing practice.

**Requisites:** NURSING 712, 713, and 847

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate advanced leadership skills, systems thinking, and strategic engagement.

Audience: Graduate

2. Mentor members of the interprofessional team to achieve excellence and accountability for quality management of populations and/or programs.

Audience: Graduate

3. Engage in strategic planning, partnership, resource development and stewardship.

Audience: Graduate

4. Analyze ethical and legal issues associated with health systems management practice.

Audience: Graduate

5. Engage in the structural, political and economic issues integral in the leadership role and system wide implications of decision making.

Audience: Graduate

6. Create a professional development plan for future role.

Audience: Graduate

**NURSING 847 – HEALTH POLICY PRACTICUM**

3 credits.

Provides a policy field experience that corresponds to a targeted focus area, phenomenon, or population of interest. Negotiate a policy experience with a selected agency or institution. Analyze relevant policies to your population of interest and actively influence the design, development, and implementation of a policy. Examine strategies to accelerate policy adoption and implementation.

**Requisites:** Declared in a Nursing graduate program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Examine the role and translation of research and other types of evidence in developing and revising policies in the selected agency or institution.

Audience: Graduate

2. Critically appraise research and identify gaps related to the policies influencing the health problem, phenomenon, or population of interest.

Audience: Graduate

3. Demonstrate the ability to synthesize and communicate relevant research findings to individuals involved in policy-making, including key stakeholders.

Audience: Graduate

4. Effectively Influence policy-makers through active participation at the program level on committees, boards, and/or task forces, and at the institutional, local, state, regional, national, and/or international levels to improve healthcare delivery and outcomes.

Audience: Graduate

5. Demonstrate leadership in the design, development, implementation, and/or evaluation of program, institutional, local, state, federal, and/or international health policy as demonstrated in student practicum activities and deliverables.

Audience: Graduate

**NURSING/ED PSYCH/HDFS/SOC WORK 880 – PREVENTION SCIENCE**

3 credits.

Theoretical, empirical and practical foundation for prevention science as it relates to the prevention of human social problems. Research and evaluation methods, program design strategies, best practices and policy as they relate to the field of prevention are also examined.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**NURSING/ED PSYCH/HDFS/SOC WORK 881 – CAPSTONE SEMINAR IN PREVENTION SCIENCE**

1 credit.

An opportunity to meet with prevention professionals and scholars from across campus and the community to explore current and emerging issues of prevention research and professional practice. Students must complete HDFS/ED PSYCH/NURSING/SOC WORK 880 before taking this course.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**NURSING 906 – SCHOLARLY PROJECT**

1-4 credits.

Independent scholarly project involves a systematic, evidence-based approach to enhance health-related outcomes.

**Requisites:** NURSING 706 and 806

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 3 number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Articulate the state of the science in identified area of inquiry.

Audience: Graduate

2. Apply methods of scholarly inquiry consistent with identified area of interest.

Audience: Graduate

3. Synthesize and disseminate results of inquiry in an oral presentation as well as a peer reviewed journal, book, government report, or other written venue.

Audience: Graduate

**NURSING 990 – THESIS RESEARCH**

1-9 credits.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**NURSING 999 – ADVANCED INDEPENDENT STUDY**

1-9 credits.

Directed study as arranged with instructor.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Engage in directed study based on the student's research needs as arranged with the instructor.

Audience: Graduate

# NUTRITIONAL SCIENCES (NUTR SCI)

## NUTR SCI 100 – FUELING YOUR FUTURE WITH CAREERS IN NUTRITION

1 credit.

Overview of career paths related to human nutrition, a multidisciplinary domain that explores the complex relationship between dietary intake and health, encompassing diverse areas from scientific research, healthcare, education, product development, to policy and intervention.

**Requisites:** None

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Identify and describe various career paths within the field of nutrition

Audience: Undergraduate

2. Explain the educational and professional requirements for different nutrition-related careers

Audience: Undergraduate

3. Discuss nutrition science literature

Audience: Undergraduate

4. Identify professional organizations, resources, and networking opportunities within the field of nutrition

Audience: Undergraduate

5. Locate resources available to students pursuing a degree in Nutritional Sciences at the UW – Madison

Audience: Undergraduate

## NUTR SCI 132 – NUTRITION TODAY

3 credits.

Nutrition and its relationship to humans and their biological, social, and physical environment; current issues and concerns that affect the nutritional status of various population groups.

**Requisites:** Not open to students with credit for NUTR SCI 332

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Discuss the development of nutritional sciences knowledge and critically assess research findings.

Audience: Undergraduate

2. Describe the scientific method as it applies to nutritional sciences and analyze research methods in the field.

Audience: Undergraduate

3. Evaluate scientific research reports and apply findings to personal dietary choices, considering equity and inclusion in accessing and acquiring food.

Audience: Undergraduate

4. Investigate changes in human eating patterns over time and their impact on health, sustainability, diversity, and cultural traditions.

Audience: Undergraduate

5. Apply tools for assessing balanced eating patterns to personal food choices, specific populations or case studies while considering traditional and cultural dietary practices.

Audience: Undergraduate

6. Explain the mechanisms of digestive physiology and how they pertain to nutrient absorption and the generation and utilization of energy.

Audience: Undergraduate

7. Demonstrate a comprehensive understanding of basic nutritional concepts, including macronutrients, micronutrients, energy, and their sources, as well as their effects on health, while emphasizing diversity and an “all foods fit” approach.

Audience: Undergraduate

**NUTR SCI 200 – PROFESSIONAL SKILLS IN DIETETICS**

1 credit.

An overview of the nutrition and dietetics professions: career options; professional development; professional references and resources; credentialing; professional issues.

**Requisites:** Declared in Nutritional Sciences BS or BS-Nutrition and Dietetics and (NUTR SCI 631 or concurrent enrollment)

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify career options available to individuals with a degree in nutrition and dietetics.

Audience: Undergraduate

2. Summarize the requirements and skills for becoming a Registered Dietitian.

Audience: Undergraduate

3. Describe individual skills, strengths, knowledge, and experience relevant to career goals.

Audience: Undergraduate

4. Discuss the importance and expectations of a professional in the workplace.

Audience: Undergraduate

5. Evaluate effective professional oral and written communication pertaining to the field of dietetics.

Audience: Undergraduate

**NUTR SCI/ENTOM 203 – INTRODUCTION TO GLOBAL HEALTH**

3 credits.

Introduces students to global health concepts through multidisciplinary speakers dedicated to improving health through their unique training. It targets students with an interest in public health and those who wish to learn how their field impacts their global issues.

**Requisites:** None

**Course Designation:** Breadth – Social Science

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Define global health and identify major global health trends and metrics

Audience: Undergraduate

2. Recognize the “determinants of health” that contribute to health disparities/inequities

Audience: Undergraduate

3. Examine global health through the lens of agriculture, food, and nutrition

Audience: Undergraduate

4. Describe the role of ecology and the changing environment in global health

Audience: Undergraduate

5. Explain the importance of collaborative and interdisciplinary approaches in global health

Audience: Undergraduate

6. Discuss a variety of global health careers and areas of specialty through guest speakers and connections with their area of interest

Audience: Undergraduate

**NUTR SCI 289 – HONORS INDEPENDENT STUDY**

1-2 credits.

Research work under direct guidance of a Nutritional Sciences faculty or instructional academic staff member. Students are responsible for arranging the work and credits with the supervising instructor. Intended for students in the CALS Honors Program.

**Requisites:** Consent of instructor

**Course Designation:** Honors – Honors Only Courses (H)

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2006

**Learning Outcomes:** 1. Develop critical, analytical and independent thinking skills through a scientific research project

Audience: Undergraduate

2. Apply the scientific method and engage in constructive problem solving in a scientific research project

Audience: Undergraduate

3. Demonstrate application of research skills and methodologies through a research project

Audience: Undergraduate

4. Effectively communicate scientific findings in an oral and/or written format

Audience: Undergraduate

**NUTR SCI 299 – INDEPENDENT STUDY**

1-3 credits.

Research work under direct guidance of a Nutritional Sciences faculty or instructional academic staff member. Students are responsible for arranging the work and credits with the supervising instructor.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Articulate a clear research question or problem and formulate a hypothesis

Audience: Undergraduate

2. Identify appropriate research methodologies and collect sound scientific data

Audience: Undergraduate

3. Apply critical thinking skills to interpret laboratory data and apply problem solving skills to constructively address research setbacks

Audience: Undergraduate

4. Practice research ethics and responsible conduct in research

Audience: Undergraduate

5. Communicate scientific ideas and results verbally and in written form effectively

Audience: Undergraduate

**NUTR SCI/AN SCI/DY SCI 311 – COMPARATIVE ANIMAL NUTRITION**

3 credits.

Nutrients and their assimilation, function, and interactions that affect metabolism in mammals. Differences among species will be used to emphasize unique digestive and physiological functions and how these differences affect metabolism of nutrients. Humans will be used in some comparisons. Follows physiological progression of nutrients, starting with an overview of the digestive tract followed by water and builds on specific roles of nutrients and substrates needed to provide basic processes required for maintenance, tissue accretion, and homeostatic regulation of nutrients.

**Requisites:** CHEM 341, 343, (BIOCHEM 301 or concurrent enrollment), or (BIOCHEM 501 or concurrent enrollment)

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recall and summarize the cellular, tissue, and whole-body metabolism and function of nutrients

Audience: Undergraduate

2. Identify key elements of digestive anatomy that enable digestion and absorption of consumed nutrients

Audience: Undergraduate

3. Explain the physiological processes required for assimilation of consumed macro- and micro-nutrients

Audience: Undergraduate

4. Compare the similarities and differences in nutritional and metabolic strategies across species

Audience: Undergraduate

5. Evaluate the interactions between nutrients, animals, environment, physiological status, and functions and integrate these interactions to understand whole-animal nutrition

Audience: Undergraduate

**NUTR SCI 332 – HUMAN NUTRITIONAL NEEDS**

3 credits.

Biochemical and physiological basis of the nutritional requirements of humans.

**Requisites:** (CHEM 103, 109, or 115) and (ZOOLOGY/BIOLOGY/BOTANY 151, ZOOLOGY/BIOLOGY 101, or BIOCORE 381)

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Define and apply major principles and concepts of nutritional sciences.

Audience: Undergraduate

2. Compare and contrast common approaches used in biomedical research.

Audience: Undergraduate

3. Demonstrate knowledge of essential nutrients on their absorption, metabolism, functions/mechanisms of actions, and physiological manifestations of nutritional status.

Audience: Undergraduate

4. Describe key biochemical and physiological pathways that integrate the metabolism of energy-yielding nutrients.

Audience: Undergraduate

5. Demonstrate quantitative literacy relevant to nutritional sciences and dietetics.

Audience: Undergraduate

**NUTR SCI/A A E 350 – WORLD HUNGER AND MALNUTRITION**

3 credits.

Hunger and poverty in developing countries and the United States. Topics include: nutrition and health, population, food production and availability, and income distribution and employment.

**Requisites:** None

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate a basic understanding of the complex links between nutrition and malnutrition.

Audience: Undergraduate

2. Learn and apply the economic tools of supply and demand to solving/analyzing issues including income and population growth, income and population policies, and agricultural supply topics.

Audience: Undergraduate

3. Synthesize knowledge about the economics and nutritional aspects of world hunger to better understand solutions.

Audience: Undergraduate

4. Communicate effectively through written reports and online discussions.

Audience: Undergraduate

5. Apply sustainability principles and/or frameworks to addressing the challenge of addressing issues of population growth, hunger and poverty.

Audience: Undergraduate

6. Describe the social, economic, and environmental dimensions of food, hunger and malnutrition. Identify potential tradeoffs and interrelationships among these dimensions at a level appropriate to the course.

Audience: Undergraduate

**NUTR SCI 375 – SPECIAL TOPICS**

1-4 credits.

Special topics on contemporary issues relevant to undergraduate students studying health and nutrition.

**Requisites:** None

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2020

**NUTR SCI 377 – CULTURAL ASPECTS OF FOOD AND NUTRITION**

3 credits.

Exploration of cultural competency and humility as a factor in reducing nutrition-related health disparities, and an opportunity to foster community resilience within the United States. Analysis of how personal cultural perspectives can shape biases and stereotypes that can widen the health disparity gap. Principles of food and culture utilized to compare cultural perspectives of health and well-being, including influences of spirituality and religiosity on food choice and dietary patterns. Includes content collaborators and guest speakers from a variety of communities, and identities.

**Requisites:** None**Course Designation:** Ethnic St - Counts toward Ethnic Studies requirement

Breadth - Social Science

Level - Elementary

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Describe the concept and significance of cultural competency and cultural humility in the context of food, health and well-being.

Audience: Undergraduate

2. Identify worldview and traditional and contemporary foodways common across ethnic communities in the U.S. disproportionately burdened by nutrition-related chronic disease.

Audience: Undergraduate

3. Interpret dietary laws and customs in the context of the U.S. health care delivery system.

Audience: Undergraduate

4. Critically examine how U.S. food policies can influence dietary choices at multiple levels, and how those dietary choices may influence the culture around food.

Audience: Undergraduate

**NUTR SCI 379 – INTRODUCTION TO EPIDEMIOLOGY**

3 credits.

Provides undergraduate students of all disciplines with an introduction to the field of epidemiology. As the "detectives of public health," epidemiologists investigate the causes of disease, track outbreaks, screen and monitor the health of populations, and design studies to track health over time. Epidemiological research is used to identify groups at-risk for disease, guide public health programs and policies and generate hypotheses about the causes of diseases which can inform further research. Also examines association and causality, study design, and limitations to epidemiological evidence, drawing from real examples, both current and historical.

**Requisites:** Satisfied Quantitative Reasoning (QR) A requirement**Course Designation:** Breadth - Either Social Science or Natural Science Level - Intermediate

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. Describe principles of epidemiology and its tools and methods

Audience: Undergraduate

2. Calculate and interpret basic epidemiological measures

Audience: Undergraduate

3. Understand major exposures, related health outcomes and the burden of disease

Audience: Undergraduate

4. Identify types of epidemiological studies and assess strengths and weaknesses of different study designs

Audience: Undergraduate

5. Interpret epidemiological evidence and identify threats to validity of epidemiology studies

Audience: Undergraduate

6. Connect epidemiology with its use in public and global health

Audience: Undergraduate

7. Explore how epidemiology is related to their field of interest or career path

Audience: Undergraduate

**NUTR SCI 399 – COORDINATIVE INTERNSHIP/COOPERATIVE EDUCATION**

1-8 credits.

Internship under guidance of a Nutritional Sciences faculty or instructional academic staff member and internship site supervisor. Students are responsible for arranging the work and credits with the Nutritional Sciences faculty or instructional academic staff member and the internship site supervisor.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply concepts learned in coursework to authentic professional situations

Audience: Undergraduate

2. Demonstrate professional skills appropriate for the industry

Audience: Undergraduate

3. Identify and reflect on how concepts learned in coursework apply to specific work settings and situations

Audience: Undergraduate

**NUTR SCI 400 – STUDY ABROAD IN NUTRITIONAL SCIENCES**

1-6 credits.

Provides an area equivalency for courses taken on Madison Study Abroad Programs that do not equate to existing UW courses. Enrollment in a UW-Madison resident study abroad program.

**Requisites:** None

**Repeatable for Credit:** Yes, unlimited number of completions

**NUTR SCI/INTER-AG 421 – GLOBAL HEALTH FIELD EXPERIENCE**

1-4 credits.

Specialized educational experiences that address a broad range of global health topics through interdisciplinary approaches to health and include participation in applied public health activities or service learning projects with communities and partner organizations.

**Requisites:** None

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Collaborate and communicate effectively with diverse colleagues and local partners.

Audience: Undergraduate

2. Respectfully engage with different cultures or populations.

Audience: Undergraduate

3. Articulate the importance of interdisciplinary approaches to global health and/or sustainable development.

Audience: Undergraduate

4. Demonstrate knowledge on a specific global health issue, community, and location.

Audience: Undergraduate

**NUTR SCI 431 – NUTRITION IN THE LIFE SPAN**

3 credits.

Influence of nutrition on growth and development; physiological basis of nutritional requirements throughout the life span, including the relationship of food habits and nutrition to selected chronic diseases; principles of nutritional intervention in community programs.

**Requisites:** Junior standing, grade of C in ANAT&PHY 335 and grade of C in NUTR SCI 332

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Utilize nutrient requirements and dietary standards in dietary assessment and planning

Audience: Undergraduate

2. Describe the physiological basis of nutritional requirements throughout the life cycle

Audience: Undergraduate

3. Describe eating patterns, nutritional problems, and their relationships to health conditions throughout the life cycle

Audience: Undergraduate

4. Apply appropriate nutrient and food recommendations to individuals based on the stage of the life cycle

Audience: Undergraduate

5. Explain the delivery of nutrition care in community programs

Audience: Undergraduate

### **NUTR SCI 500 – UNDERGRADUATE CAPSTONE SEMINAR LABORATORY**

1 credit.

Current topics in Nutritional Sciences and undergraduate research presentations.

**Requisites:** NUTR SCI 431 or concurrent enrollment and NUTR SCI/ BIOCHEM 510 or concurrent enrollment

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Use database search techniques to identify research articles

Audience: Undergraduate

2. Describe requirements of rigorous and ethical research and publication

Audience: Undergraduate

3. Critically evaluate components of nutritional science research publications

Audience: Undergraduate

4. Prepare and submit an abstract for oral research presentations

Audience: Undergraduate

5. Prepare and present oral research presentations

Audience: Undergraduate

### **NUTR SCI/BIOCHEM 510 – NUTRITIONAL BIOCHEMISTRY AND METABOLISM**

3 credits.

Lectures in nutrition with a substantial background in biochemistry.

Emphasis on biochemical and physiological fundamentals of nutrition.

Discussion of protein, fat, carbohydrate, energy, minerals and vitamins and their roles and interrelationships in nutrition and metabolism.

**Requisites:** BIOCHEM 301, 501, 507, BMOLCHEM 503, or graduate/ professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand nutrient metabolism in normal and disease states

Audience: Both Grad & Undergrad

2. Integrate the regulation of metabolism of nutrients under normal and disease state conditions.

Audience: Both Grad & Undergrad

3. Understand the biochemical and molecular functions of nutrients we consume

Audience: Both Grad & Undergrad

4. Apply how nutrients affect pathogenesis and health

Audience: Graduate

5. Think critically about nutrient claims and fads using your knowledge of nutritional biochemistry.

Audience: Both Grad & Undergrad

6. Integrate current research in the area of metabolism and micronutrient function into existing knowledge and formulate new hypotheses to guide future research

Audience: Graduate

**NUTR SCI/KINES 525 – NUTRITION IN PHYSICAL ACTIVITY AND HEALTH**

3 credits.

Provides both scientific knowledge and application of nutrition related to exercise, health, and sports.

**Requisites:** ANAT&PHY 335

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify how nutritional and hydration demands vary by physical activity frequency, intensity, type, and time

Audience: Undergraduate

2. Outline dietary assessment techniques and common dietary strategies for both the healthy population and populations with additional dietary needs

Audience: Undergraduate

3. Apply the potential benefits of nutrient timing strategies to optimize performance and to promote tissue growth, recovery, and repair

Audience: Undergraduate

4. Synthesize and discuss nutrition research related physical activity and health

Audience: Undergraduate

5. Evaluate the safety and efficacy of common nutritional strategies, supplements, and ergogenic aids

Audience: Undergraduate

**NUTR SCI 540 – COMMUNITY NUTRITION AND HEALTH EQUITY**

3 credits.

The foundations and practice of community nutrition and health equity. Factors and resources affecting community nutrition programs and delivery of nutrition and education programs to diverse communities and vulnerable populations.

**Requisites:** NUTR SCI 431 or concurrent enrollment

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Discuss the impact of health care policy and different health care delivery systems on food and nutrition services.

Audience: Undergraduate

2. Demonstrate cultural humility, an awareness of personal bias, social inequities, health disparities and discrimination.

Audience: Undergraduate

3. Describe contributing factors to health equity in nutrition and dietetics including structural bias, social inequities, health disparities and discrimination.

Audience: Undergraduate

4. Develop an education session or program/educational strategy for a target population.

Audience: Undergraduate

5. Demonstrate counseling and education methods to facilitate behavior change and enhance wellness for diverse individuals and groups.

Audience: Undergraduate

**NUTR SCI 550 – NUTRITION AND COUNSELING FOR ATHLETIC PERFORMANCE**

2 credits.

Presents foundational principles and evidenced based recommendations for fueling active bodies and how proper nutrition relates to weight management, muscle development, recovery and performance. Integrates counseling methods and techniques used for working with active populations through readings, learning activities and expert guest lecturers. Features reading and interpreting scientific studies related to sports nutrition and interdisciplinary guest speakers representing sport performance and wellness programs.

**Requisites:** NUTR SCI 332**Repeatable for Credit:** No**Last Taught:** Fall 2022**Learning Outcomes:** 1. Discuss what sports nutrition is in the field of nutrition and dietetics.

Audience: Undergraduate

2. Understand nutrient requirements during the various types of exercise and sport, along with rationale for those requirements.

Audience: Undergraduate

3. Develop the ability to communicate information to athletes/active individuals or groups.

Audience: Undergraduate

4. Develop and apply counseling skills when communicating nutrition with athletes/active individuals to promote behavior change.

Audience: Undergraduate

5. Apply learned concepts to actual athletic situations and varied conditions and special populations.

Audience: Undergraduate

**NUTR SCI/BIOCHEM 560 – PRINCIPLES OF HUMAN DISEASE AND BIOTECHNOLOGY**

2 credits.

Covers basic and applied biochemical principles related to human disease. Topics such as: cancer, including cell cycle regulation, oncogenes and tumor suppressors, and cellular metabolism; metabolic disorders, including cardiovascular disease, metabolic syndrome, and diabetes; biotechnology, including metabolomics, CRISPR-based genetic screens, and experimental models of human disease.

**Requisites:** BIOCHEM 501, 507, or graduate/professional standing**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&amp;S Credit – Counts as Liberal Arts and Science credit in L&amp;S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Critically evaluate, and accurately describe findings from primary research publications

Audience: Both Grad &amp; Undergrad

2. Analyze how genetic and cell cycle perturbations contribute to cancer progression

Audience: Both Grad &amp; Undergrad

3. Identify how genetic and environmental factors impact altered cellular metabolism in cancer

Audience: Both Grad &amp; Undergrad

4. Describe biochemical mechanisms that contribute to cardiovascular disease, metabolic syndrome, and diabetes

Audience: Both Grad &amp; Undergrad

5. Explain biochemical techniques, engineering strategies, and state-of-the-art technologies used in biomedical research

Audience: Both Grad &amp; Undergrad

6. Collaborate with peers in a small group

Audience: Both Grad &amp; Undergrad

7. Apply knowledge of biochemical principles and biotechnology to solve research and disease treatment related problems

Audience: Both Grad &amp; Undergrad

8. Execute written critical evaluation of primary research literature related to the molecular basis of human diseases and advances in biotechnology.

Audience: Graduate

**NUTR SCI 600 – INTRODUCTORY SEMINAR IN NUTRITION**

1 credit.

Presentation of reports from current journals of nutritional sciences.

**Requisites:** Graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**NUTR SCI 618 – RESEARCH APPROACHES IN THE ERA OF PRECISION NUTRITION**

3 credits.

Exploration of current challenges and research approaches related to the progress of nutritional sciences in the era of precision nutrition. Topics include limitations of population-based approaches to establishing dietary guidelines, hurdles to developing biomarkers for determining individual nutritional status, the impact of genetics, epigenetics, the microbiome, diet interactions, and other factors on nutritional and metabolic variability among people, and the ways in which precision nutrition can revolutionize how nutrition recommendations are devised and delivered to the public.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Critically evaluate current primary research literature in nutrition and metabolism  
Audience: Graduate

2. Identify the limitations of population-based nutrition recommendations and the challenges facing development of biomarkers of individual status  
Audience: Graduate

3. Distinguish the multitude of factors that create different nutritional needs among individuals and their metabolic heterogeneity  
Audience: Graduate

4. Analyze how nutritional guidance is communicated to the public now and predict how it will be communicated in the future  
Audience: Graduate

5. Explain state-of-the-art approaches to nutrition research and devise experiments, in the form of specific aims, for future research  
Audience: Graduate

**NUTR SCI/BIOCHEM 619 – ADVANCED NUTRITION: INTERMEDIARY METABOLISM OF MACRONUTRIENTS**

3 credits.

Principles underlying the control of metabolism as it applies to macronutrients. Discusses advanced aspects of metabolic control. Metabolism of protein and amino acids, fat, and carbohydrate. Discusses fuel sensing and metabolism in disease.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe regulatory mechanisms at the organ, cellular and biochemical level controlling intermediary metabolism of carbohydrates, lipids and proteins  
Audience: Graduate

2. Identify regulatory points in metabolic pathways and explain how they may change with metabolic state  
Audience: Graduate

3. Detail the changes and mechanisms underlying such changes in protein, carbohydrate and fat metabolism in changing physiological state and also in health vs disease state  
Audience: Graduate

4. Evaluate modern experimental approaches for studying metabolism  
Audience: Graduate

**NUTR SCI/POP HLTH 621 – INTRODUCTION TO NUTRITIONAL EPIDEMIOLOGY**

1 credit.

Techniques used to evaluate relationships of diet to health and disease in human populations; integration of knowledge gained with results of animal and clinical studies toward understanding dietary risk or protective factors for disease. Includes advanced diet assessment and basic epidemiologic approaches.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**NUTR SCI 623 – ADVANCED NUTRITION: MINERALS**

1 credit.

Topics discussed in regard to minerals are: metabolic roles; absorption, excretion, transport and cellular metabolism; nutritional and toxicological standards for humans and animal models; bioavailability; genetic interactions; and research methodologies.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2022

**NUTR SCI 625 – ADVANCED NUTRITION: OBESITY AND DIABETES**  
1 credit.

Physiology, biochemistry and genetics of human obesity and diabetes. Critical review of current research on their etiology and treatment.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**NUTR SCI/AN SCI 626 – EXPERIMENTAL DIET DESIGN**  
1 credit.

Discuss nutrient requirements, composition of ingredients used to meet requirements and the mathematical steps involved in diet formulation with emphasis on research animals and human subjects.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Develop an understanding of nutrient requirements, ingredients used to meet requirements, and the mathematical steps involved in diet formulation, with emphasis on research animals.

Audience: Both Grad & Undergrad

2. Develop skills required to formulate and prepare research diets

Audience: Both Grad & Undergrad

3. Develop an appreciation of nutrient requirements and the nutrient content of foods in development of healthy human diets.

Audience: Graduate

**NUTR SCI 627 – ADVANCED NUTRITION: VITAMINS**  
1 credit.

Scientific knowledge of the metabolic functions, metabolism and nutritional requirements for some of the water soluble vitamins and all of the fat soluble vitamins.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

**NUTR SCI 631 – CLINICAL NUTRITION I**  
3 credits.

Introduction to the nutrition care process, including pathology, medical nutrition therapy, and nutrition support in relation to alterations in nutrition and metabolism that accompany disease states. Research related to therapeutic nutrition.

**Requisites:** NUTR SCI 332, 431, and (BIOCHEM 301 or 501)

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recognize aspects of professional practice as a registered dietitian nutritionist

Audience: Undergraduate

2. Demonstrate understanding of the pathophysiology, as it relates to nutrition, for selected disease states/conditions

Audience: Undergraduate

3. Describe the medical nutrition therapy for selected disease states/conditions

Audience: Undergraduate

4. Translate nutrient recommendations into food recommendations

Audience: Undergraduate

5. Utilize the nutrition care process when providing medical nutrition therapy

Audience: Undergraduate

**NUTR SCI 632 – CLINICAL NUTRITION II**

3 credits.

Advanced topics surrounding pathology, medical nutrition therapy, and nutrition support in relation to alterations in nutrition and metabolism that accompany disease states. Research related to therapeutic nutrition.

**Requisites:** NUTR SCI 631

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Recognize aspects of professional practice as a registered dietitian nutritionist

Audience: Undergraduate

2. Demonstrate understanding of the pathophysiology, as it relates to nutrition, for selected disease states/conditions

Audience: Undergraduate

3. Describe the medical nutrition therapy for selected disease states/conditions

Audience: Undergraduate

4. Translate nutrient recommendations into food recommendations

Audience: Undergraduate

5. Utilize the nutrition care process when providing medical nutrition therapy

Audience: Undergraduate

**NUTR SCI 641 – APPLICATIONS IN CLINICAL NUTRITION I**

1 credit.

Clinical problem solving, assessing medical record data, evaluating food intake, planning modified diets, and reviewing medical and research literature related to certain diseases/conditions. Develops critical thinking, teamwork and communication skills needed by the dietetic intern and dietitian.

**Requisites:** Declared in Nutritional Science BS or BS-Dietetics and Nutrition and NUTR SCI 631 or concurrent enrollment

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Solve clinical case problems and case studies as part of a team using evidenced-based practice

Audience: Undergraduate

2. Summarize clinical cases for medical record using established documentation methods

Audience: Undergraduate

3. Use current information technologies to locate and apply evidence-based guidelines and protocols (KRDN 1.2)

Audience: Undergraduate

4. Demonstrate effective and professional oral and written communication and documentation (KRDN 2.1)

Audience: Undergraduate

5. Describe the regulation system related to billing and coding, what services are reimbursed by third party payers and how reimbursement may be obtained (KRDN 4.3)

Audience: Undergraduate

**NUTR SCI 642 – APPLICATIONS IN CLINICAL NUTRITION II**

1 credit.

Clinical problem solving, assessing medical record data, evaluating food intake, planning modified diets, and reviewing medical and research literature related to certain disease states/conditions. Develops critical thinking, teamwork and communication skills needed by the dietetic intern and dietitian.

**Requisites:** Declared in Nutritional Science BS or BS-Dietetics and Nutrition and NUTR SCI 631 or concurrent enrollment

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Solve clinical case problems and case studies as part of a team using evidenced-based practice

Audience: Undergraduate

2. Summarize clinical cases for medical record using established documentation methods

Audience: Undergraduate

3. Develop an educational session or program/educational strategy for a target population (KRDN 3.2)

Audience: Undergraduate

4. Demonstrate counseling and education methods to facilitate behavior change for and enhance wellness for diverse individuals and groups (KRDN 3.3)

Audience: Undergraduate

5. Analyze data for assessment and evaluate data to be used in decision-making for continuous quality improvement (KRDN 4.6)

Audience: Undergraduate

**NUTR SCI/BIOCHEM 645 – MOLECULAR CONTROL OF METABOLISM AND METABOLIC DISEASE**

3 credits.

Examination of various physiological states and how they affect metabolic pathways. Discussion of a number of special topics related to the unique roles of various tissues and to metabolic pathways in disease states, including adipocyte biology, beta-cell biology, epigenetics, inflammation, and aging related diseases.

**Requisites:** BIOCHEM 501, 508 or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify the mechanisms by which tissues maintain metabolic flexibility.

Audience: Undergraduate

2. Differentiate between how lipid metabolism regulates carbohydrate metabolism and vice versa.

Audience: Undergraduate

3. Describe the regulation of lipogenesis.

Audience: Undergraduate

4. Discuss how hormone secreting endocrine cells in the pancreas sense nutrients to regulate blood glucose.

Audience: Undergraduate

5. Explain the importance of intracellular lipid cycling for body temperature regulation.

Audience: Undergraduate

6. Discuss the manner in which mitochondrial metabolism is assessed.

Audience: Undergraduate

7. Examine hormonal regulation of circadian rhythms.

Audience: Undergraduate

8. Describe the basis for thermogenesis.

Audience: Undergraduate

9. Explain the pathways leading to inflammation.

Audience: Undergraduate

### **NUTR SCI 650 – ADVANCED CLINICAL NUTRITION: CRITICAL CARE AND NUTRITION SUPPORT**

3 credits.

Advanced study of the metabolic demands of critical illness and how these alterations influence the nutritional needs of critical care patients in various disease states. Using an evidence-based medical approach, students will assess nutrient requirements and determine best methods of nutrient delivery in various disease states. Anthropometric measures and hematological indices will be incorporated to assess nutritional status and monitor response to nutritional therapies.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **NUTR SCI 651 – ADVANCED CLINICAL NUTRITION - PEDIATRICS**

3 credits.

Pediatric nutritional requirements with emphasis on issues related to evidence-based medical nutrition therapy.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

### **NUTR SCI 652 – ADVANCED NUTRITION COUNSELING AND EDUCATION**

3 credits.

Application of current theories and techniques of counseling and education to the field of nutrition and dietetics. Practical application of communication techniques, client-centered counseling methods, motivational interviewing, learning theories and behavior change techniques, and factors affecting eating patterns. Nutrition psychology and the psychoanalytic approach to nutrition counseling will be emphasized in the class. Principles of group counseling/facilitation and instructional material/media design.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

### **NUTR SCI 653 – CLINICAL NUTRITION RESEARCH**

3 credits.

Research use and development as it applies to clinical nutrition practice: effective use of the literature in evidence based practice and research development, problem development, methodology, analysis and reporting of results and conclusions.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

### **NUTR SCI 655 – NUTRITION IN AGING**

3 credits.

Interpret research relating to nutrition during the aging process. Gain an understanding of acute and chronic conditions in older persons, both in hospital and the community. Examine the impact of aging on organ systems and address the relationship among physiologic aging, nutrition, and disease.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2023

**Learning Outcomes:** 1. Articulate how the physiologic changes of aging impact nutrition, distinguishing between natural physiologic changes of aging and those occurring from disease.

Audience: Graduate

2. List characteristics representative of the aging population.

Audience: Graduate

3. Describe how dietary recommendations for older adults differ from younger adults.

Audience: Graduate

4. Identify physiologic changes of aging that impact exercise capacity and describe the benefits of exercise for older adults.

Audience: Graduate

5. Examine, investigate, and summarize the essential components of a nutritional assessment for an older adult, including anthropometric, biochemical, clinical, and dietary factors.

Audience: Graduate

6. Describe the nutritional impact of diseases and conditions common in older adults.

Audience: Graduate

7. Explain the significance of nutrition in prevention and management of diseases frequently impacting older adults.

Audience: Graduate

8. Implement appropriate dietary and lifestyle interventions for the prevention of disease and conditions common among older adults.

Audience: Graduate

**NUTR SCI 657 – MANAGEMENT IN DIETETICS**

3 credits.

Evaluate research and apply management principles in dietetics practice. Enhance leadership and management skills for settings such as hospitals, long-term care facilities, schools, universities, prisons, and other locations where food and nutrition services are administered.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply professionalism and related topics to career development.

Audience: Graduate

2. Enhance critical thinking and decision-making skills.

Audience: Graduate

3. Apply leadership and management theories, especially useful for managing a professional staff.

Audience: Graduate

4. Develop a business plan for an area of advanced practice, including a logic model, marketing plan, implementation plan, budgeting system, and outcomes measurement.

Audience: Graduate

5. Apply a framework to assess, develop, implement and evaluate products, programs and services.

Audience: Graduate

6. Demonstrate leadership skills to guide practice

Audience: Graduate

7. Apply principles of organization management

Audience: Graduate

8. Apply project management principles to achieve project goals and objectives.

Audience: Graduate

9. Lead quality and performance improvement activities to measure, evaluate and improve a program's services, products and initiatives.

Audience: Graduate

10. Develop and lead implementation of risk management strategies and programs.

Audience: Graduate

**NUTR SCI 670 – NUTRITION AND DIETETICS PRACTICUM I**

3 credits.

The first of two supervised practice experiences in nutrition and dietetics at University of Wisconsin Hospital and Clinics and affiliated sites. Dietetic interns apply their academic training, furthering their competency in: clinical nutrition, food systems management, research, and community experiences.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**NUTR SCI 671 – NUTRITION AND DIETETICS PRACTICUM II**

3 credits.

The second of two supervised practice experiences in nutrition and dietetics at University of Wisconsin Hospital and Clinics and affiliated sites. Dietetic interns apply their academic training, furthering their competency in: clinical nutrition, food systems management, research, and community experiences.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

## NUTR SCI 675 – NUTRACEUTICALS FOR HEALTHCARE PROFESSIONALS

1 credit.

Overview of the principles and processes necessary to evaluate and utilize bioactive food components and dietary supplements in practice, including federal regulations. Current scientific evidence supporting or refuting the biochemical and physiological efficacy of select bioactive food components and dietary supplements will be addressed.

**Requisites:** ANAT&PHY 335 and (BIOCHEM 301 or 501) or declared in the Capstone Certificate in Clinical Nutrition or Clinical Nutrition MS

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Discuss current regulation of bioactive food components and dietary supplements

Audience: Both Grad & Undergrad

2. Assess quality, purity and identity of dietary supplements

Audience: Both Grad & Undergrad

3. Explain basic principles of functional nutrition and how bioactive food components and dietary supplements relate

Audience: Both Grad & Undergrad

4. Utilize appropriate resources to obtain current information on bioactive food components and dietary supplements

Audience: Both Grad & Undergrad

5. Critically evaluate the research to support or refute the use of selected bioactive food components and dietary supplements

Audience: Both Grad & Undergrad

6. Summarize current knowledge on popular bioactive food components and dietary supplements used in various health conditions

Audience: Both Grad & Undergrad

7. Apply knowledge of bioactive food components and dietary supplements to working with patients/clients

Audience: Both Grad & Undergrad

8. Apply an understanding of environmental, molecular factors (e.g. genes, proteins, metabolites) and food in the development and management of disease (ACEND Competency [1.1])

Audience: Both Grad & Undergrad

9. Apply an understanding of anatomy, physiology, and biochemistry (ACEND Competency [1.2])

Audience: Both Grad & Undergrad

10. Integrate knowledge of chemistry and food science as it pertains to food and nutrition product development and when making modifications to food (ACEND Competency [1.4])

Audience: Both Grad & Undergrad

11. Apply knowledge of pathophysiology and nutritional biochemistry to physiology, health and disease (ACEND Competency [1.5])

Audience: Both Grad & Undergrad

12. Apply knowledge of social, psychological and environmental aspects of eating and food (ACEND Competency [1.6])

Audience: Both Grad & Undergrad

13. Integrate the principles of cultural competence within own practice and when directing services (ACEND Competency [1.7])

## NUTR SCI 681 – SENIOR HONORS THESIS

2-4 credits.

Individual study and research for students completing theses under direct guidance of a Nutritional Science faculty or instructional academic staff member.

**Requisites:** Consent of instructor

**Course Designation:** Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Fall 2016

**Learning Outcomes:** 1. Review and analyze scientific literature.

Audience: Undergraduate

2. Identify and use appropriate research methodologies to address a research question.

Audience: Undergraduate

3. Begin structuring and writing a thesis based on original research.

Audience: Undergraduate

4. Effectively communicate scientific findings in an oral and/or written format.

Audience: Undergraduate

## NUTR SCI 682 – SENIOR HONORS THESIS

2-4 credits.

Individual study and research for students completing theses under direct guidance of a Nutritional Science faculty or instructional academic staff member.

**Requisites:** Consent of instructor

**Course Designation:** Honors - Honors Only Courses (H)

**Repeatable for Credit:** No

**Last Taught:** Spring 2017

**Learning Outcomes:** 1. Review and analyze scientific literature.

Audience: Undergraduate

2. Identify and use appropriate research methodologies to address a research question.

Audience: Undergraduate

3. Write a thesis based on original research.

Audience: Undergraduate

4. Effectively communicate scientific findings in an oral and/or written format.

Audience: Undergraduate

### **NUTR SCI 691 – SENIOR THESIS-NUTRITION**

1-4 credits.

Individual study and research for students completing theses under direct guidance of a Nutritional Science faculty or instructional academic staff member.

**Requisites:** Consent of instructor

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**Learning Outcomes:** 1. Review and analyze scientific literature.

Audience: Undergraduate

2. Identify and use appropriate research methodologies to address a research question.

Audience: Undergraduate

3. Begin structuring and writing a thesis based on original research.

Audience: Undergraduate

4. Effectively communicate scientific findings in an oral and/or written format.

Audience: Undergraduate

### **NUTR SCI 692 – SENIOR THESIS**

1-4 credits.

Individual study and research for students completing theses under direct guidance of a Nutritional Science faculty or instructional academic staff member.

**Requisites:** Consent of instructor

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Review and analyze scientific literature.

Audience: Undergraduate

2. Identify and use appropriate research methodologies to address a research question.

Audience: Undergraduate

3. Write a thesis based on original research

Audience: Undergraduate

4. Effectively communicate scientific findings in an oral and/or written format.

Audience: Undergraduate

### **NUTR SCI 699 – SPECIAL PROBLEMS**

1-3 credits.

Directed study under direct guidance of a Nutritional Science faculty member or instructional academic staff member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Articulate a clear research question or problem and formulate a hypothesis.

Audience: Undergraduate

2. Identify appropriate research methodologies and collect sound scientific data.

Audience: Undergraduate

3. Apply critical thinking skills to interpret laboratory data and apply problem solving skills to constructively address research setbacks.

Audience: Undergraduate

4. Practice research ethics and responsible conduct in research.

Audience: Undergraduate

5. Communicate scientific ideas and results verbally and in written form effectively

Audience: Undergraduate

### **NUTR SCI 710 – HUMAN ENERGY METABOLISM**

2 credits.

Fundamentals in human macronutrient metabolism and its role in health and disease. Biochemistry and physiology of macronutrient digestion, anabolism, and catabolism. Disorders of energy metabolism (obesity, type 1 and type 2 diabetes, starvation). Metabolic effects of fiber and the microbiota. Body composition and energy assessment. Taught in an online format using lectures, guided readings, and projects.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**NUTR SCI 711 – PERSONALIZED NUTRITION: GENETICS, GENOMICS, AND METAGENOMICS**

1 credit.

Genetic factors that modulate the relationships between diet, health, and disease risks, including the effects of differences in our genetic makeup (Nutrigenetics), the regulation of gene expression by nutrients and dietary patterns (Nutrigenomics), and the interactions between diet, gut microbiome, and human hosts (Metagenomics).

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**NUTR SCI 715 – MICRONUTRIENTS: HUMAN PHYSIOLOGY AND DISEASE**

3 credits.

Micronutrients explores the function of vitamins and essential mineral nutrients from the biochemical and nutritional perspective with emphasis on issues essential for clinical nutrition.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**NUTR SCI 720 – ADVANCED NUTRITION ASSESSMENT**

1 credit.

Advanced skills and evolving methods of nutritional assessment. Measurement and interpretation of physical examination and laboratory parameters. Diagnosing malnutrition and nutrient deficiencies, including clinical characteristics used to identify and label the degree of malnutrition.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**NUTR SCI 721 – NUTRITION INFORMATICS**

1 credit.

The emerging role of the electronic storage, retrieval and dissemination of food and nutrition related data and the effective use of information for problem solving and decision-making for the dietetics professional.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**NUTR SCI 725 – ADVANCED COMMUNITY NUTRITION**

1 credit.

Community nutrition as it applies to clinical nutrition practice: programs, resources and issues supporting clinical nutrition practice in the community.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**NUTR SCI 726 – NUTRITIONAL MANAGEMENT OF GASTROINTESTINAL DISORDERS**

3 credits.

Highlights the important interaction between nutrition and the human gastrointestinal tract (GI). Includes exploration of various gastrointestinal related disorders and diseases, and covers contemporary issues, current research, and real-life examples applicable to the field of nutrition, and nutrition providers. Includes instruction from content collaborators and GI nutrition experts. Apply the pathophysiology of GI disorders and disease, deconstruct differential diagnoses; and describe current medical management and dietary requirements of an individual and translate this into appropriate medical nutritional therapy.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Articulate the importance of the interaction between nutrition and the human gastrointestinal tract.

Audience: Graduate

2. Examine, investigate, and summarize the role, current trends and research of the gut microbiome, functional medicine, popular/fad diets and efficacy for treatment of common GI disorders and diseases.

Audience: Graduate

3. Apply the pathophysiology of GI disorders/diseases, deconstruct differential diagnosis, describe current medical management and dietary requirements of an individual-and translate this into appropriate medical nutritional therapy.

Audience: Graduate

4. Reflect on external and internal environment forces that can impact your nutritional recommendations to an individual or family, assess the effectiveness of recommendations, and be able to modify or adjust accordingly.

Audience: Graduate

### **NUTR SCI 731 – RESEARCH IN PROGRESS SEMINAR**

1 credit.

Seminars on topics in nutritional sciences of interest to Nutritional Sciences dissertators and reports on doctoral student research.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Construct and deliver more effective presentations on their research to their peers and other researchers in their general field

Audience: Graduate

2. Evaluate and provide constructive feedback and criticism of their peers' seminar presentations

Audience: Graduate

3. Interact constructively with peers and other researchers in the field

Audience: Graduate

4. Relate personal research interests to topics in the larger field of Nutritional Sciences

Audience: Graduate

### **NUTR SCI 745 – GRANT WRITING FOR NUTRITIONAL SCIENCES RESEARCH**

2 credits.

Interactively address the knowledge, approach, and professional skills (conceptual, technical, and writing) required to create a successful grant proposal and initiate a career in research. Format is focused on the planning and completion of NIH-style grant proposals. Lectures and workshops will address the development of long term goals, hypotheses, and specific aims, as well as research design and methodology. Basic guidelines and approaches to proposal review and scoring are also covered. Several key components of a grant proposal will be generated using an iterative and peer-supported process.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the components of an NIH grant and the content expected within each section during the review process.

Audience: Graduate

2. Succinctly analyze the current literature on a significant topic and identify gaps in knowledge that are worthy of further investigation.

Audience: Graduate

3. Generate overall objectives, hypotheses, and specific aims for projects that fill knowledge gaps.

Audience: Graduate

4. Construct a compelling research plan that describes the significance of completing a project's objectives, the methods to be used in the research, and potential problems and alternative strategies.

Audience: Graduate

5. Give and receive critical constructive feedback and revise research ideas in response.

Audience: Graduate

**NUTR SCI 750 – ADVANCED SPORTS NUTRITION**

2 credits.

Integration of foundational nutrition and exercise physiology principles with sports nutrition concepts from a clinical perspective. Evaluation of the unique nutritional requirements for athletes/active individuals on body composition, performance, and timing of nutrients and hydration related to pre-activity, during activity, and post-activity recovery. Application of these concepts with clinical conditions requiring specialized sports nutrition approaches such as diabetes, gastrointestinal disorders, eating disorders, micronutrients deficiencies and life cycle populations (youth/adolescent, pregnant and masters' athletes). Analysis of sports nutrition research to utilize evidenced-based practice and recommendations around ergogenic aids/supplements and other sports nutrition topics.

**Requisites:** Declared in Clinical Nutrition MS or the Capstone Certificate in Clinical Nutrition

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Expand and adapt foundational knowledge of macronutrient, micronutrient and fluid needs for exercise and activity along with rationale for requirements.

Audience: Graduate

2. Evaluate sports nutrition research on ergogenic aids/supplementation and translate research to practice.

Audience: Graduate

3. Integrate current knowledge of sports nutrition into individual's goals for performance.

Audience: Graduate

4. Apply sports nutrition and medical nutrition therapy concepts to unique athletic situations and varied conditions and special populations.

Audience: Graduate

**NUTR SCI 799 – PRACTICUM IN NUTRITIONAL SCIENCES TEACHING**

1-3 credits.

Instructional orientation to teaching at the higher education level in the agricultural and life sciences, direct teaching experience under faculty supervision, experience in testing and evaluation of students, and the analysis of teaching performance.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**NUTR SCI 875 – SPECIAL TOPICS**

1-4 credits.

Special topics on contemporary issues relevant to graduate students studying health and nutrition.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**NUTR SCI 881 – SEMINAR-TOPICS IN HUMAN AND CLINICAL NUTRITION**

1 credit.

Varied topics in clinical and human nutrition.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**NUTR SCI/BIOCHEM 901 – SEMINAR-NUTRITION AND METABOLISM (ADVANCED)**

1 credit.

Presentation of original research results; discussion of recent articles in animal metabolism and nutrition.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Discuss state-of-the-art research in nutrients and genetic regulation of metabolism

Audience: Graduate

2. Communicate scientific research and critically evaluate experimental results

Audience: Graduate

**NUTR SCI 931 – SEMINAR-NUTRITION**

1 credit.

Seminar features expert presentations of current research and issue-based applications that represent the breadth of nutritional sciences; topics investigate problems "from molecules to communities".

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**NUTR SCI 991 – RESEARCH NUTRITION**

1-12 credits.

Independent research with assigned instructor. Research projects determined by agreement between instructor and student.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

# OBSTETRICS AND GYNECOLOGY (OBS&GYN)

## OBS&GYN 699 – DIRECTED STUDY

1-5 credits.

Directed study projects as arranged with faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Undergraduate

2. Read and effectively search scientific literature

Audience: Undergraduate

3. Develop critical, analytical, and independent thinking skills

Audience: Undergraduate

## OBS&GYN 710 – REPRODUCTIVE ENDOCRINE PHYSIOLOGY

3 credits.

A broad grounding in reproductive endocrine physiology at the graduate level, with an emphasis on human and human reproductive health wherever possible. Encompasses an overview of fundamental concepts in endocrinology, the hypothalamic-pituitary axis, steroidogenesis, early embryonic development, pregnancy and maternal-fetal adaptations, and pathologies associated with endocrine disruption and dysregulation. Provides more focus on pathologic pregnancies because such pregnancies lead to a higher risk of adult onset diseases including hypertension, obesity, and metabolic syndrome. Covers pregnancy and pathologic pregnancy in detail.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recall and summarize fundamental concepts in reproductive endocrinology and physiology, with an emphasis on human and human reproductive health.

Audience: Graduate

2. Gain insights into clinical perspectives of pathologies associated with reproductive endocrinology and physiology. Integrate fundamental concepts with clinical perspectives and apply to case studies.

Audience: Graduate

3. Evaluate primary research articles and demonstrate critical reasoning with regards to methods and conclusions.

Audience: Graduate

4. Demonstrate critical thinking with regards to course material through in-class interactive discussion with peers and faculty.

Audience: Graduate

5. Integrate instruction material and personally-researched scientific texts to formulate individual thoughts on topics not directly covered in lecture.

Audience: Graduate

### **OBS&GYN 711 – ADVANCED REPRODUCTIVE ENDOCRINE PHYSIOLOGY**

2 credits.

Advanced learning opportunities in Endocrinology and Reproductive Physiology (ERP) areas, particularly reproduction, with an emphasis on human health whenever possible. Explore scientific questions core to the ERP graduate training program at research level with further in-depth instruction and a focus on cutting-edge knowledge and developments. Topics include pregnancy (ovulation through parturition); embryonic growth and development; lactation biology; and neuroendocrinology. Continuation of OBS&GYN 710. Intended for second- or third-year graduate students.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Develop deep understanding of a reproduction topic.

Audience: Graduate

2. Evaluate primary research articles and demonstrate critical reasoning with regard to methods and conclusions.

Audience: Graduate

3. Demonstrate critical thinking with regard to course material through in-class interactive discussion with peers and faculty.

Audience: Graduate

4. Integrate instruction material and personally-researched scientific texts to formulate individual thoughts on topics not directly covered in lecture.

Audience: Graduate

### **OBS&GYN 712 – CRITICAL THINKING IN REPRODUCTIVE ENDOCRINE PHYSIOLOGY**

2 credits.

Provides advanced learning opportunities in Endocrinology and Reproductive Physiology areas, particularly reproduction, emphasizing human health whenever possible. Explores scientific questions core to the ERP graduate training program and teaches how to communicate research findings as presentations. Skills developed include information discovery; organization of papers and identification of argument(s); and creation of documents/reports. Students are the driving force behind achievement of the learning objectives by undertaking learning activities, actively engaging in their peers' activities, and providing constructive feedback to their peers. Prior completion of OBS&GYN 710 recommended but not required.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Incorporate knowledge of cutting-edge research in and related to one's research area to a specific research question.

Audience: Graduate

2. Effectively communicate scientific information to course participants through learning activities.

Audience: Graduate

3. Evaluate peer presentations and provide constructive feedback.

Audience: Graduate

4. Distill research knowledge and activities into a variety of scientific outputs.

Audience: Graduate

5. Develop and deliver effective scientific conference-style presentations.

Audience: Graduate

### **OBS&GYN 800 – CONCEPTS IN ENDOCRINOLOGY AND REPRODUCTIVE PHYSIOLOGY**

1-3 credits.

Special topics in endocrinology and/or reproductive physiology. Topics may vary.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Learning Outcomes:** 1. Identify and describe key theories, concepts, or methods in endocrinology and/or reproductive physiology.

Audience: Graduate

2. Apply, analyze, or evaluate key theories, concepts, or methods in endocrinology and/or reproductive physiology.

Audience: Graduate

**OBS&GYN 909 – OBSTETRICS & GYNECOLOGY INTERNSHIP  
PREP COURSE**

1 credit.

Designed to highlight, review, and allow practice of key concepts in Obstetrics Gynecology. Practice with case simulation, case discussion, didactics, panel discussions, and procedural skills to prepare for success in the first few weeks of an Ob/Gyn residency. Participate in simulations and explore critical interplay between medical care and communication. Discuss common challenges encountered early in residency and throughout an Obstetrics Gynecology career. Taught by a team of faculty, inter-professional staff, residents, fellows, and course directors.

**Requisites:** MED SC-M 810, 811, 812, and 813**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Diagnose and manage common and critical medical conditions

Audience: Graduate

2. Practice initial orders for acute medical/surgical situations

Audience: Graduate

3. Perform duties as first responder to urgent or emergent patient care situations

Audience: Graduate

4. Accurately interpret and apply laboratory information to clinical scenarios

Audience: Graduate

5. Demonstrate performing informed consent procedures

Audience: Graduate

6. Communicate effectively with patients, families and all members of the healthcare team

Audience: Graduate

7. Describe effective transitions of care and demonstrate in simulated environment

Audience: Graduate

8. Describe the essential role of each member of the healthcare team and strategies for maximizing teamwork

Audience: Graduate

9. Demonstrate self-awareness and recognize the importance of adaptability

Audience: Graduate

10. Identify strategies to address stress inherent in transitioning to internship, during residency, and throughout medical career

Audience: Graduate

**OBS&GYN 910 – INDEPENDENT READING AND RESEARCH IN OB/  
GYN**

2-8 credits.

Independent research under the direct supervision of Obstetric/ Gynecology faculty. Each student's research project is individualized to meet student research goals within context of faculty research needs.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Formulate a hypothesis or specific objective if study does not involve hypothesis generating research.

Audience: Graduate

2. Conduct a thorough literature review of the specific research question.

Audience: Graduate

3. Select and apply statistical methodologies appropriate for the proposed analyses.

Audience: Graduate

4. Interpret results correctly and in context of previous findings from literature review.

Audience: Graduate

**OBS&GYN 916 – ABORTION IN WISCONSIN AND BEYOND:  
EXPLORING MEDICAL, PUBLIC HEALTH, AND SOCIAL SCIENCE  
PERSPECTIVES**

2 credits.

Contemporary issues surrounding abortion in the United States with an emphasis on the state of Wisconsin. Abortion-related terminology and clinical practice. Legal and structural barriers that shape inequities in access to abortion care. The relationships between access to abortion care and health and wellbeing, using multidisciplinary approaches. The evolution of pro-choice and reproductive justice movements in the United States and Wisconsin.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Summarize contemporary abortion-related terminology and medical practice.

Audience: Graduate

2. Describe the evolution of abortion care in the United States and Wisconsin from the 19th-21st centuries.

Audience: Graduate

3. Identify legal and structural barriers to abortion care both before and after the Dobbs v. Jackson Women's Health U.S. Supreme Court decision.

Audience: Graduate

4. Describe racial/ethnic-, SES, nativity-, disability, and sexual/gender identity-based inequities in access to abortion care.

Audience: Graduate

5. Identify how population health and social scientists establish linkages between barriers to abortion care access and population health and wellbeing.

Audience: Graduate

6. Analyze the contemporary landscape of pro-choice and reproductive justice movements.

Audience: Graduate

**OBS&GYN 917 – RACE IN AMERICAN OBSTETRICS &  
GYNECOLOGY**

2 credits.

Survey the history of race in American obstetrics and gynecology. Gain understanding of how race and theories of racial difference informed the development of the field and justified the treatment of Black, indigenous and immigrant patients. Understand the vital contributions of Black enslaved women, other women of color, and Irish immigrants to obstetrics and gynecology. Make connections between racialized historical practices and contemporary norms in reproductive healthcare.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate understanding of how race informed the evolution of obstetrics and gynecology as a discipline

Audience: Graduate

2. Describe the symbiotic relationship between slavery and obstetrics and gynecology and the contributions of enslaved women to key advances in the discipline

Audience: Graduate

3. Discuss the contradictions between physicians' beliefs in racial inferiority of Black and Irish women and the use of their bodies as medical exemplars

Audience: Graduate

4. Describe how structural racism impacted disparities in reproductive health during the antebellum era and late 19th century

Audience: Graduate

5. Demonstrate understanding of how historical stereotyping and treatment of Black women has led to institutionalized stereotyping in present-day obstetrics and gynecology

Audience: Graduate

6. Describe the progression of racial/ethnic disparities in reproductive health from the antebellum era to the present day

Audience: Graduate

**OBS&GYN 919 – INDIVIDUALIZED OBSTETRICS & GYNECOLOGY ELECTIVE**

2-4 credits.

In-depth exposure to ambulatory gynecology, operative gynecology, normal and high-risk obstetrics and subspecialty clinics, working under the direct supervision of Obstetric/Gynecology faculty, residents, fellows, certified midwives, and advanced practice practitioners. Individualized to meet each location's capacity and student preference.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform a hypothesis driven history and complete a targeted exam

Audience: Graduate

2. Develop and present a weighted differential diagnosis for medical and surgical conditions

Audience: Graduate

3. Using clinical evidence, adapt and justify the working diagnosis

Audience: Graduate

4. Present a diagnostic plan including laboratory and imaging modalities

Audience: Graduate

5. Correctly interpret imaging and laboratory findings and communicate results to patients and team members

Audience: Graduate

6. Develop and implement effective patient management plans

Audience: Graduate

7. Complete written documentation in a comprehensive, concise, accurate and timely manner

Audience: Graduate

8. Review, interpret, and present current literature to support patient care

Audience: Graduate

9. Communicate effectively with patients, families, physicians and non-physician team members

Audience: Graduate

10. Communicate and collaborate with consultants and/or primary team and other providers to coordinate care

Audience: Graduate

11. Engage patients in shared decision-making regarding tests, orders, and procedures

Audience: Graduate

12. Avoid medical jargon when communicating with patients and families

Audience: Graduate

13. Recognize limitations and seek assistance as appropriate

Audience: Graduate

14. Understand the process of obtaining informed consent prior to surgical intervention

Audience: Graduate

15. Recognize perioperative conditions that determine patient level of care and interpret physiologic changes that require changing that level of care

**OBS&GYN 921 – GYNECOLOGIC ONCOLOGY**

2-4 credits.

In-depth exposure to outpatient care of the patient with gynecologic cancer. Occasional opportunities to provide inpatient care to patients students have examined or consulted with in clinic. Work under the direct supervision of the gynecologic oncology faculty, fellows, residents, and APPs. Function at the intern level and play an active role in the care of gynecologic oncology patients.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform a hypothesis driven history and complete a targeted exam.

Audience: Graduate

2. Develop and present a weighted differential diagnosis for medical and surgical conditions

Audience: Graduate

3. Using clinical evidence, adapt and justify the working diagnosis.

Audience: Graduate

4. Present a diagnostic plan including laboratory and imaging modalities.

Audience: Graduate

5. Correctly interpret imaging and laboratory findings and communicate results to patients and team members.

Audience: Graduate

6. Develop and implement effective patient management plans.

Audience: Graduate

7. Complete written documentation in a comprehensive, concise, accurate and timely manner.

Audience: Graduate

8. Review, interpret, and present current literature to support patient care.

Audience: Graduate

9. Communicate effectively with patients, families, physicians and non-physician team members.

Audience: Graduate

10. Communicate and collaborate with consultants and/or primary team and other providers to coordinate care.

Audience: Graduate

11. Engage patients in shared decision-making regarding tests, orders, and procedures.

Audience: Graduate

12. Avoid medical jargon when communicating with patients and families.

Audience: Graduate

13. Recognize limitations and seek assistance as appropriate.

Audience: Graduate

14. Understand the process of obtaining informed consent prior to surgical intervention.

Audience: Graduate

15. Recognize perioperative conditions that determine patient level of care

**OBS&GYN 934 – OBSTETRIC HOSPITALIST**

4 credits.

In-depth exposure to inpatient care of patients on Labor and Delivery. Work under the direct supervision of the Obstetrics Hospitalist whose primary role is the general medical care of hospitalized patients. Help manage laboring patients, see patients in labor and delivery, triage, and assist with cesarean sections. Round on all patients for whom you are involved in care once patients are post-partum. Function as the residents do at night and assist with cross coverage of inpatient gynecology patients as well as see patients who arrive in the emergency department with obstetric or gynecologic concerns. You may assist in the operating room if the patients who present to the emergency room require immediate surgery.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2021**Learning Outcomes:** 1. Perform a hypothesis driven history and complete a targeted exam

Audience: Graduate

2. Develop and present a weighted differential diagnosis for medical and surgical conditions

Audience: Graduate

3. Using clinical evidence, adapt and justify the working diagnosis

Audience: Graduate

4. Present a diagnostic plan including laboratory and imaging modalities

Audience: Graduate

5. Correctly interpret imaging and laboratory findings and communicate results to patients and team members

Audience: Graduate

6. Develop and implement effective patient management plans

Audience: Graduate

7. Complete written documentation in a comprehensive, concise, accurate and timely manner

Audience: Graduate

8. Review, interpret, and present current literature to support patient care

Audience: Graduate

9. Communicate effectively with patients, families, physicians and non-physician team members

Audience: Graduate

10. Communicate and collaborate with consultants and/or primary team and other providers to coordinate care

Audience: Graduate

11. Engage patients in shared decision-making regarding tests, orders, and procedures

Audience: Graduate

12. Avoid medical jargon when communicating with patients and families

Audience: Graduate

13. Recognize limitations and seek assistance as appropriate

Audience: Graduate

14. Understand the process of obtaining informed consent prior to surgical

**OBS&GYN 935 – TEACHING IN THE CLINICAL SETTING**

2 credits.

As Phase 3 students, apply teaching theories to the pursuit of improving the clinical learning environment for Phase 2 students. Unique opportunity for Phase 3 medical students to gain experience with clinical teaching in a capacity similar to how they will function as an intern without the demands and responsibilities of residency, with a focus on establishing good teaching practices. Spend time in the clinical setting advising and mentoring Phase 2 students. No direct participation in patient care. Prepare and deliver short teaching sessions for Phase 2 students from a standard curriculum of learning topics to help Phase 2 students achieve success on Labor Delivery. Develop innovative ways to guide Phase 2 students to effectively utilize clinical resources, navigate the basics of patient assessment, and engage with the patient care team.

**Requisites:** MED SC-M 810, 811, 812, and 813**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Explain the basic tenets of adult learning theory and how this applies to teaching medical students.

Audience: Graduate

2. Describe the difference between formative and summative feedback and be able to provide this feedback to Phase 2 students for both their written clinical documentation and their oral clinical presentations.

Audience: Graduate

3. Compare/contrast the different types of instructional methods available and be able to apply these in the clinical setting.

Audience: Graduate

4. Demonstrate how to give an effective presentation on at least 1 topic per week, chosen from a list of central concepts about labor and delivery.

Audience: Graduate

5. Utilize strategies to create a positive learning environment on labor and delivery.

Audience: Graduate

**OBS&GYN 938 – OBSTETRICS & GYNECOLOGY INPATIENT ACTING INTERNSHIP**

4 credits.

Provides an in-depth exposure to inpatient and operative management of complicated obstetric and gynecologic patients. Work under the direct supervision of a senior resident, fellows and the obstetrician-gynecology faculty. Provides an opportunity to function at the intern level and play an active role in inpatient management of obstetric and gynecologic patients.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain the physiology of the female pelvic anatomy including arterial blood supply, venous and lymphatic drainage, neurologic innervation and anatomic relationship between the reproductive organs and the non-gynecologic abdominal viscera.

Audience: Graduate

2. Develop an evidenced-based understanding of the pathophysiology and appropriate management options for common gynecological disorders

Audience: Graduate

3. Explain the indications for and limitations of commonly used gynecological screening tests.

Audience: Graduate

4. Demonstrate basic knowledge regarding common post-operative complications (e.g. wound infection, urinary tract infection, thromboembolism, bleeding) and the appropriate management of each.

Audience: Graduate

5. Demonstrates an understanding of common non-reproductive medical disorders.

Audience: Graduate

6. Identify and explain common gynecological surgical procedures in terms of patient selection and the risks and benefits for each procedure .

Audience: Graduate

7. Describe indications and list the appropriate preoperative evaluations including lab tests, radiographic imaging, and ECG.

Audience: Graduate

8. Identify and describe use of common instruments used in gynecologic surgery.

Audience: Graduate

9. Discuss common intraoperative complications associated with common gynecologic procedures and the appropriate management of each.

Audience: Graduate

10. Discuss the surgical anatomy, common procedural indications, comorbidities, and prophylactic strategies to reduce post-operative complications with common gynecological surgeries.

Audience: Graduate

**OBS&GYN/AN SCI/ZOOLOGY 954 – SEMINAR IN ENDOCRINOLOGY-REPRODUCTIVE PHYSIOLOGY**

0-1 credits.

Promotes scientific and professional development. Presenters develop and deliver research presentations to a scientific audience, field questions, and receive critiques about their presentation style and scientific approach. Additional presentations include professional development, career advancement opportunities, and topics of interest to the endocrinology and reproduction community at large.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate knowledge of cutting-edge research in and related to one's research area through the development and delivery of research presentations

Audience: Graduate

2. Communicate complex ideas in research presentations and questions in a clear and understandable manner

Audience: Graduate

3. Evaluate presentations and providing effective feedback

Audience: Graduate

### **OBS&GYN 955 – RESPONSIBLE CONDUCT OF RESEARCH FOR BIOMEDICAL GRADUATE STUDENTS**

2 credits.

Meets the NIH Institutional Training Grant requirements of repeat/further instruction in the nine recommended areas (1) conflict of interest – personal, professional, and financial; (2) policies regarding human subjects, live vertebrate animal subjects in research, and safe laboratory practices; (3) mentor/mentee responsibilities and relationships; (4) collaborative research including collaborations with industry; (5) peer review; (6) data acquisition and laboratory tools, and management, sharing and ownership; (7) research misconduct and policies for handling misconduct; (8) responsible authorship and publication; (9) the scientist as a responsible member of society, contemporary ethical issues in biomedical research, and the environmental and societal impacts of scientific research.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Be knowledgeable of the ethics and philosophies that shape our understandings of the responsible conduct of biomedical research

Audience: Graduate

2. Recognize and apply principles of ethical and professional conduct

Audience: Graduate

3. Be aware of mechanisms and processes available to UW-Madison graduate students to help ensure the practice of the responsible conduct of biomedical research

Audience: Graduate

### **OBS&GYN 956 – ADVANCED RESPONSIBLE CONDUCT OF RESEARCH FOR BIOMEDICAL STUDENTS**

1 credit.

Meets the NIH Institutional Training Grant requirements of repeat/further instruction in the nine recommended areas (1) conflict of interest – personal, professional, and financial; (2) policies regarding human subjects, live vertebrate animal subjects in research, and safe laboratory practices; (3) mentor/mentee responsibilities and relationships; (4) collaborative research including collaborations with industry; (5) peer review; (6) data acquisition and laboratory tools, and management, sharing and ownership; (7) research misconduct and policies for handling misconduct; (8) responsible authorship and publication; (9) the scientist as a responsible member of society, contemporary ethical issues in biomedical research, and the environmental and societal impacts of scientific research. Provides advanced consideration of these topics and illustrates how to implement these responsible conduct and ethical considerations into actual grant- and career-related documents.

**Requisites:** OBS&GYN 955, PHARMACY 800, NURSING 802, MICROBIO 901, or COMP BIO/PATH-BIO 812 (or SURG SCI 812 prior to Spring 2025)

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Be knowledgeable of the ethics and philosophies that shape our understandings of the responsible conduct of biomedical research

Audience: Graduate

2. Understand and utilize some best practices in the responsible conduct of biomedical research

Audience: Graduate

3. Be aware of mechanisms and processes available to UW-Madison graduate students to help ensure the practice of the responsible conduct of biomedical research

Audience: Graduate

4. Obtain a more comprehensive understanding of the responsibilities, requirements, monitoring, and reassurances involved in successful contemporary biomedical scientific research and how they are used in planning for or applying for grant support, as well as in reporting the progress made in grant-funded studies

Audience: Graduate

### **OBS&GYN 990 – RESEARCH**

1-10 credits.

Research supervised by individual faculty members.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Exhibit a broad understanding of endocrinology and reproduction

Audience: Graduate

2. Conduct thesis-related research projects using a variety of approaches under the guidance of the primary faculty advisor

Audience: Graduate

3. Think critically to address research challenges

Audience: Graduate

4. Exhibit and foster professional and ethical conduct in their research

Audience: Graduate

## **OCCUPATIONAL THERAPY (DEPARTMENT OF KINESIOLOGY) (OCC THER)**

### **OCC THER 100 – ORIENTATION TO OCCUPATIONAL THERAPY**

1 credit.

An opportunity to explore occupational therapy as a potential career; introduction to the general concepts of human occupation and adaptation; survey of OT practice settings and clinical groups.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the philosophical base of the profession of Occupational Therapy

Audience: Undergraduate

2. Define Occupational Therapy

Audience: Undergraduate

3. Identify the unique non-clinical and clinical roles of an occupational therapist

Audience: Undergraduate

4. Interpret meaning of occupation and its value to health and well-being

Audience: Undergraduate

5. Identify the domain and process of occupational therapy

Audience: Undergraduate

6. Identify professional behaviors essential to the practice of occupational therapy

Audience: Undergraduate

7. Describe the educational requirements and applicable national and state credentialing involved in becoming an occupational therapist

Audience: Undergraduate

8. Identify how evidence based research impacts occupational therapy

Audience: Undergraduate

9. Evaluate whether your personal goals and values align with the core tenets of occupational therapy and evaluate occupational therapy as a personal career choice

Audience: Undergraduate

### **OCC THER 630 – CLINICAL AND FUNCTIONAL ANATOMY FOR OCCUPATIONAL THERAPISTS**

6 credits.

Highlights anatomical structures and biomechanical principles most relevant to the practice of occupational therapy. Areas of the body deemed most significant to the practice of Occupational Therapy (OT) will be given greater time and explored with greater depth. As critical thinking is an essential component of clinical practice, focus learning on function and thinking through how anatomy influences clinical care, daily occupations, and pathology.

**Requisites:** Declared in Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Find and name anatomical structures, regions, and systems critical in clinical practice.

Audience: Graduate

2. Integrate anatomical and biomechanical principles to explain occupational function and dysfunction.

Audience: Graduate

3. Predict symptomatic presentation given atypical anatomy.

Audience: Graduate

4. Assess signs and symptoms related to clinical presentations commonly observed by occupational therapists.

Audience: Graduate

5. Critically appraise clinical cases with the goal of forming and defending your opinion about function, pathology and occupational performance.

Audience: Graduate

6. Create a representation of anatomical structures, functions and networks that further the understanding of lay individuals

Audience: Graduate

### **OCC THER 640 – APPLIED NEUROANATOMY FOR ALLIED HEALTH PROFESSIONALS**

3 credits.

Overview of neuroanatomical structures relevant for students in allied health professional training who work with clinical populations. The anatomical regions deemed most significant to practice, given current understandings of the brain and its function, will be explored. The primary focus is on the anatomical regions, neurophysiology, and resultant observable phenomenology related to human function as well as practical clinical application and current research findings.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

### **OCC THER 650 – ENABLING OCCUPATIONS: INTRODUCTION**

2 credits.

Provides an introduction to theory development in occupational therapy, activity analysis, functional mobility and one model of occupational therapy practice. Application of knowledge of gross human anatomy to assess movement in the context of occupation.

**Requisites:** Declared in Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Explain the process of theory development in occupational therapy and its desired impact and influence on society  
Audience: Graduate

2. Provide recommendations and training in techniques to enhance functional mobility, including physical transfers, wheelchair management, and mobility devices  
Audience: Graduate

3. Recall primary characteristics of the Person-Environment-Occupation (PEO) model of occupational therapy  
Audience: Graduate

4. Discuss activity analysis in the context of personal occupations.  
Audience: Graduate

5. Identify how various functional movements relate to occupational performance.  
Audience: Graduate

6. Recall various anatomical structures and medical terminology.  
Audience: Graduate

7. Demonstrate introductory assessment, including palpatory skills, related to anatomical movements and structures.  
Audience: Graduate

8. Appreciate the physical body as a diverse, self-healing mechanism and value the power of physical contact as a tool for healing  
Audience: Graduate

### **OCC THER 651 – CLINICAL CONDITIONS I**

1 credit.

An in-depth look at the most common clinical diagnoses relevant to occupational therapy practice with an adolescent and adult population. Covers diagnoses particularly found in physical disability contexts.

**Requisites:** Declared in Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Recognize primary characteristics of various medical and surgical conditions relative to occupational therapy practice.

Audience: Graduate

2. Identify how different medical conditions impact occupational performance.

Audience: Graduate

3. Demonstrate sound judgment in regard to safety of self and others and adhere to safety regulations throughout the occupational therapy process as appropriate to the setting and scope of practice. This must include the ability to assess and monitor vital signs (e.g., blood pressure, heart rate, respiratory status, and temperature) to ensure that the client is stable for intervention.

Audience: Graduate

### **OCC THER 652 – CLINICAL CONDITIONS II**

1 credit.

An in-depth look at the most common clinical diagnoses relevant to occupational therapy practice with a focus on pediatric and mental health practice settings.

**Requisites:** OCC THER 651

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recognize primary characteristics of various clinical and surgical conditions relative to occupational therapy practice in mental health and pediatric practice settings.

Audience: Graduate

2. Identify how different pediatric and mental health clinical conditions impact occupational performance.

Audience: Graduate

3. Demonstrate sound judgment in regard to safety of self and others and adhere to safety regulations throughout the occupational therapy process as appropriate to the setting and scope of practice. This must include the ability to assess and monitor vital signs (e.g., blood pressure, heart rate, respiratory status, and temperature) to ensure that the client is stable for intervention.

Audience: Graduate

### **OCC THER 662 – LEVEL II FIELDWORK A**

6 credits.

Conduct evaluations and provide treatment under supervision for an assigned caseload in an approved practice setting to meet minimal competencies for independent practice.

**Requisites:** Declared in Occupational Therapy MS or Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate entry-level clinical reasoning, provide service that reflects the values and ethical beliefs of the profession, and perform professionally, safely and competently for general occupational therapy practice as evidenced by passing the AOTA Fieldwork Performance Evaluation for the Occupational Therapy Student (AOTA FWPE) by final

Audience: Graduate

2. Understand the influence of psychosocial factors on participation in occupation and therefore integrate client-centered, meaningful, occupation-based activities that provide optimal outcomes.

Audience: Graduate

3. Demonstrate understanding of health literacy while engaging with clients and stakeholders.

Audience: Graduate

4. Demonstrate ability to plan for discharge, in collaboration with the client, by reviewing the needs of the client, caregiver, family, and significant others; available resources, and discharge environment.

Audience: Graduate

5. Prepare, administer, and terminate appropriate evaluations and occupation-based treatment using appropriate safety regulations while providing appropriate documentation (progress note, evaluation, etc.) according to specific facility standards

Audience: Graduate

**OCC THER 664 – LEVEL II FIELDWORK B**

6 credits.

Conduct evaluations and provide treatment under supervision for an assigned caseload in an approved practice setting to meet minimal competencies for independent practice.

**Requisites:** Declared in Occupational Therapy MS or Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate entry-level clinical reasoning, provide service that reflects the values and ethical beliefs of the profession, and perform professionally, safely and competently for general occupational therapy practice.

Audience: Graduate

2. Understand the influence of psychosocial factors on participation in occupation and therefore integrate client-centered, meaningful, occupation-based activities that provide optimal outcomes.

Audience: Graduate

3. Demonstrate understanding of health literacy while engaging with clients and stakeholders.

Audience: Graduate

4. Demonstrate ability to plan for discharge, in collaboration with the client, by reviewing the needs of the client, caregiver, family, and significant others; available resources, and discharge environment.

Audience: Graduate

5. Prepare, administer, and terminate appropriate evaluations and occupation-based treatment using appropriate safety regulations while providing appropriate documentation (progress note, evaluation, etc.) according to specific facility standards.

Audience: Graduate

**OCC THER 710 – PROFESSIONAL AND LEADERSHIP SKILLS 1: FOUNDATIONS**

2 credits.

Addresses the foundations and basic tenets of occupational therapy; and explores the process, domain and parameters of practice. Topics include the history and development of the profession; occupational therapy organizations; certification and licensing; behaviors and responsibilities of occupational therapists; professional ethics; liability; and guidelines and laws governing practice. The Occupational Therapy Practice Framework and selected models, approaches and theoretical frames of reference are explored.

**Requisites:** Declared in Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain the process of theory development in occupational therapy and its desired impact and influence on society.

Audience: Graduate

2. Apply, analyze, and evaluate the interaction of occupation and activity, including areas of occupation, performance skills, performance patterns, context(s) and environments, and client factors.

Audience: Graduate

3. Demonstrate activity analysis in areas of occupation, performance skills, performance patterns, context(s) and environments, and client factors to formulate the intervention plan.

Audience: Graduate

4. Demonstrate knowledge of the use of technology in practice, which must include, electronic documentation systems, virtual environments, and Telehealth technology.

Audience: Graduate

5. Demonstrate knowledge of the American Occupational Therapy Association (AOTA) Occupational Therapy Code of Ethics and AOTA Standards of Practice and use them as a guide for ethical decision making in professional interactions, client interventions, employment settings, and when confronted with personal and organizational ethical conflicts.

Audience: Graduate

6. Promote occupational therapy by educating other professionals, service providers, consumers, third-party payers, regulatory bodies, and the public.

Audience: Graduate

7. Apply, analyze, and evaluate scientific evidence, theories, models of practice, and frames of reference that underlie the practice of occupational therapy to guide and inform interventions for persons, groups, and populations in a variety of practice contexts and environments.

Audience: Graduate

8. Demonstrate clinical reasoning to evaluate, analyze, diagnose, and provide occupation-based interventions to address client factors, performance patterns, and performance skills.

Audience: Graduate

9. Analyze and evaluate occupational therapy history, philosophical base, theory, and sociopolitical climate and their importance in meeting society's current and future occupational needs as well as how these factors influence and are influenced by practice.

Audience: Graduate

## **OCC THER 711 – PROFESSIONAL AND LEADERSHIP SKILLS 2: EFFECTIVE INTERPROFESSIONAL RELATIONSHIPS**

2 credits.

Covers respectful and effective communication with all stakeholders for occupational therapy service provision, including clients, caregivers, colleagues, community members and third party payers. Introduces team and group dynamics

**Requisites:** OCC THER 710

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Demonstrate knowledge of various reimbursement systems and funding mechanisms (e.g., federal, state, third party, private payer), appeals mechanisms, treatment/diagnosis codes (e.g., CPT®, ICD, DSM® codes), and coding and documentation requirements that affect consumers and the practice of occupational therapy. Documentation must effectively communicate the need and rationale for occupational therapy services.

Audience: Graduate

2. Demonstrate therapeutic use of self, including one's personality, insights, perceptions, and judgments, as part of the therapeutic process in both individual and group interaction.

Audience: Graduate

3. Identify occupational needs through effective communication with patients, families, communities, and members of the interprofessional team in a responsive and responsible manner that supports a team approach to the promotion of health and wellness.

Audience: Graduate

4. Demonstrate, evaluate, and utilize the principles of the teaching-learning process using educational methods and health literacy education approaches; to design activities and clinical training for persons, groups, and populations and to instruct and train the client, caregiver, family, significant others, and communities at the level of the audience.

Audience: Graduate

5. Demonstrate knowledge of the principles of interprofessional team dynamics to perform effectively in different team roles to plan, deliver, and evaluate patient- and population- centered care as well as population health programs and policies that are safe, timely, efficient, effective, and equitable.

Audience: Graduate

6. Demonstrate effective intraprofessional OT/OTA collaboration to identify the role of the occupational therapist and occupational therapy assistant in the screening and evaluation process and to demonstrate and identify techniques in skills of supervision and collaboration with occupational therapy assistants.

Audience: Graduate

7. Develop strategies for effective, competency-based legal and ethical supervision of occupational therapy and non-occupational therapy personnel. Analyze staff development and professional abilities and competencies of supervised staff as they relate to job responsibilities.

Audience: Graduate

## **OCC THER 712 – PROFESSIONAL AND LEADERSHIP SKILLS 3: MANAGEMENT**

2 credits.

Covers business and management aspects of occupational therapy practice, including leadership skills needed for administrative roles and interprofessional leadership in a variety of settings.

**Requisites:** OCC THER 711

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate knowledge of and evaluate the business aspects of practice including, but not limited to, the development of business plans, financial management, program evaluation models, and strategic planning.

Audience: Graduate

2. Demonstrate leadership skills in the ability to plan, develop, organize, and market the delivery of services to include the determination of programmatic needs and service delivery options, and formulation and management of staffing for effective service provision.

Audience: Graduate

3. Demonstrate leadership skills in the ability to design ongoing processes for quality management and improvement (e.g., outcome studies analysis and client engagement surveys) and develop program changes as needed to demonstrate quality of services and direct administrative changes.

Audience: Graduate

4. Demonstrate knowledge of personal and professional responsibilities related to liability issues under current models of service provision and varied roles of the occupational therapist providing service on a contractual basis.

Audience: Graduate

**OCC THER 722 – ENABLING OCCUPATIONS 1: ADULT FOCUS**

4 credits.

Introduce clinical assessment and therapeutic intervention strategies to promote occupational participation and health among adult clients with a focus on orthopedics and medical considerations. Application of skills learned in real-world settings.

**Requisites:** Declared in Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe the unique nature of adult occupations and the physical, mental, temporal and sociocultural factors that influence occupational participation for the person across settings.

Audience: Graduate

2. Assess clients' occupational performance and analyze results to create meaningful, measurable, occupation-based goals, evidence-based treatment strategies, and discharge plans.

Audience: Graduate

3. Demonstrate safe, relevant occupation-based treatment techniques and ability to grade or modify those techniques to accommodate changes in client functional performance as necessary to progress client toward goals.

Audience: Graduate

4. Demonstrate entry-level skill in oral and written communication necessary for effective occupational therapy practice in medical, educational or community-based settings.

Audience: Graduate

5. Develop resilience as a clinician and come to see oneself as a competent member of an interdisciplinary team supporting holistic wellness in the community.

Audience: Graduate

6. Utilize effective interpersonal communication to promote inclusivity of diverse perspectives and provision of culturally-relevant treatment

Audience: Graduate

**OCC THER 723 – ENABLING OCCUPATIONS 2: ADULT FOCUS**

4 credits.

Advance practice skills across the continuum of care among adult clients. Focus on clinical assessment, therapeutic intervention, and discharge planning to promote occupational participation and health. Application of skills learned in real-world settings.

**Requisites:** OCC THER 722

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the unique nature of adult occupations and the physical, mental, temporal and sociocultural factors that influence occupational participation for the person across settings

Audience: Graduate

2. Assess clients' occupational performance and analyze results to create meaningful, measurable, occupation-based goals, evidence-based treatment strategies, and discharge plans.

Audience: Graduate

3. Assess environmental and contextual factors for capacity to promote or restrict client participation, and advocate for relevant accessibility options

Audience: Graduate

4. Demonstrate safe, relevant occupation-based treatment techniques and ability to grade or modify those techniques to accommodate changes in client functional performance as necessary to progress client toward goals.

Audience: Graduate

5. Demonstrate entry-level skill in oral and written communication necessary for effective occupational therapy practice in medical, educational or community-based settings

Audience: Graduate

6. Develop resilience as a clinician and come to see oneself as a competent member of an interdisciplinary team supporting holistic wellness in the community

Audience: Graduate

7. Utilize effective interpersonal communication to promote inclusivity of diverse perspectives and provision of culturally-relevant treatment.

Audience: Graduate

**OCC THER 724 – ENABLING OCCUPATIONS 3: MENTAL HEALTH ACROSS THE LIFE SPAN**

3 credits.

Learn foundational skills necessary to promote, prevent and treat the mental health and psychosocial needs of clients, groups and populations. Topics include: Recovery, mental health and psychosocial assessments and treatments of common mental health disorders and health and wellness promotion.

**Requisites:** OCC THER 723

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Analyze and evaluate the effects of disease processes including heritable diseases, genetic conditions, mental illness, disability, trauma, and injury on occupational performance.

Audience: Graduate

2. Utilize clinical reasoning to facilitate occupation-based interventions that address client factors. This must include interventions focused on promotion, compensation, adaptation, and prevention.

Audience: Graduate

3. Evaluate client(s)' occupational performance, including occupational profile, by analyzing and selecting standardized and non-standardized screenings and assessment tools to determine the need for occupational therapy intervention(s). Assessment methods must take into consideration cultural and contextual factors of the client. Interpret evaluation findings of occupational performance and participation deficits to develop occupation-based intervention plans and strategies. Intervention plans and strategies must be client centered, culturally relevant, reflective of current occupational therapy practice, and based on available evidence.

Audience: Graduate

4. Demonstrate, evaluate, and plan the consultative process with persons, groups, programs, organizations, or communities in collaboration with inter- and intra-professional colleagues

Audience: Graduate

5. Evaluate and discuss mechanisms for referring clients to specialists both internal and external to the profession, including community agencies

Audience: Graduate

6. Demonstrate activity analysis in areas of occupation, performance skills, performance patterns, context(s) and environments, and client factors to formulate the intervention plan.

Audience: Graduate

7. Demonstrate clinical reasoning to evaluate, analyze, diagnose, and provide occupation-based interventions to address client factors, performance patterns, and performance skills.

Audience: Graduate

8. Select and apply assessment tools, considering client needs, and cultural and contextual factors. Administer selected standardized and non-standardized assessments using appropriate procedures and protocols. Interpret the results based on psychometric properties of tests considering factors that might bias assessment results (e.g., culture and disability status related to the person and context).

Audience: Graduate

9. Recommend and provide direct interventions and procedures to persons, groups, and populations to enhance safety, health and wellness, and performance in occupations. This must include the ability to select

**OCC THER 725 – ENABLING OCCUPATIONS 4: PEDIATRICS**

5 credits.

Foundations of pediatric occupational therapy practice including theory and core concepts; models of practice and service delivery; the assessment and treatment process; and alterations in performance components, skills, and participation for children and adolescents with various conditions will be discussed

**Requisites:** OCC THER 724

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze and evaluate the effects of disease processes including heritable diseases, genetic conditions, mental illness, disability, trauma, and injury on occupational performance.

Audience: Graduate

2. Evaluate client(s)' occupational performance, including occupational profile, by analyzing and selecting standardized and non-standardized screenings and assessment tools to determine the need for occupational therapy intervention(s). Assessment methods must take into consideration cultural and contextual factors of the client. Interpret evaluation findings of occupational performance and participation deficits to develop occupation-based intervention plans and strategies. Intervention plans and strategies must be client centered, culturally relevant, reflective of current occupational therapy practice, and based on available evidence

Audience: Graduate

3. Select and apply assessment tools, considering client needs, and cultural and contextual factors. Administer selected standardized and non-standardized assessments using appropriate procedures and protocols. Interpret the results based on psychometric properties of tests considering factors that might bias assessment results (e.g., culture and disability status related to the person and context)

Audience: Graduate

4. Evaluate and provide interventions for dysphagia and disorders of feeding and eating to enable performance, and train others in precautions and techniques while considering client and contextual factors

Audience: Graduate

5. Demonstrate, evaluate, and plan care coordination, case management, and transition services in traditional and emerging practice environments.

Audience: Graduate

6. Demonstrate activity analysis in areas of occupation, performance skills, performance patterns, context(s) and environments, and client factors to formulate the intervention plan.

Audience: Graduate

7. Demonstrate clinical reasoning to evaluate, analyze, diagnose, and provide occupation-based interventions to address client factors, performance patterns, and performance skills

Audience: Graduate

8. Utilize clinical reasoning to facilitate occupation-based interventions that address client factors. This must include interventions focused on promotion, compensation, adaptation, and prevention

Audience: Graduate

9. Recommend and provide direct interventions and procedures to persons, groups, and populations to enhance safety, health and wellness, and performance in occupations. This must include the ability to select and deliver occupations and activities, preparatory methods and tasks (including therapeutic exercise), education and training, and advocacy

### **OCC THER 726 – LEVEL 1 FIELDWORK A: ADULT PHYSICAL DISABILITIES**

1 credit.

Exposure to clinical occupational therapy practice through observation, participation in guided evaluation and treatment procedures, data collection and organization, and communication with clients and other professionals while working in clinical setting under supervision of licensed occupational therapist.

**Requisites:** Concurrent enrollment in OCC THER 723 is required

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Interpret the evaluation data in relation to accepted terminology of the profession and explain the findings to the interprofessional team.

Audience: Graduate

2. Demonstrate activity analysis in areas of occupation, performance skills, performance patterns, context(s) and environments, and client factors to formulate the intervention plan.

Audience: Graduate

3. Monitor and reassess, in collaboration with the client, caregiver, family, and significant others, the effect of occupational therapy intervention and the need for continued or modified intervention.

Audience: Graduate

### **OCC THER 727 – LEVEL 1 FIELDWORK B: COMMUNITY-BASED MENTAL HEALTH**

1 credit.

Exposure to community-based mental health OT practice through observation, participation in guided evaluation and treatment procedures, data collection and organization, and communication with clients and other professionals.

**Requisites:** OCC THER 726 and concurrent enrollment in OCC THER 724

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Provide care and programs that demonstrate knowledge of applicable national requirements for credentialing and requirements for licensure, certification, or registration consistent with federal and state laws.

Audience: Graduate

2. Demonstrate activity analysis in areas of occupation, performance skills, performance patterns, context(s) and environments, and client factors to formulate the intervention plan.

Audience: Graduate

3. Evaluate access to community resources, and design community or primary care programs to support occupational performance for persons, groups, and populations.

Audience: Graduate

### **OCC THER 728 – LEVEL 1 FIELDWORK C: PEDIATRICS**

1 credit.

Exposure to pediatric OT practice through observation, participation in guided evaluation and treatment procedures, data collection and organization, and communication with clients and other professionals.

**Requisites:** OCC THER 727 and concurrent enrollment in OCC THER 725

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate professional work habits as indicated by receiving passing rating on the AOTA Level I FW Competency Evaluation.

Audience: Graduate

2. Demonstrate ability to establish therapeutic relationships with clients.

Audience: Graduate

3. Establish positive working relationships with individuals from other disciplines and develop an increased awareness of OT's role on an interprofessional team.

Audience: Graduate

4. Demonstrate mature judgment in seeking assistance and responding to feedback in an ethical and courteous manner with both clients and professions.

Audience: Graduate

5. Prepare and administer an evaluation or treatment intervention, formulate therapeutic goals, and develop proposed occupation-based treatment plan.

Audience: Graduate

6. Assist in the therapeutic process safely and effectively, if and when appropriate.

Audience: Graduate

7. Demonstrate activity analysis in areas of occupation, performance skills, performance patterns, context(s) and environments, and client factors to formulate the intervention plan.

Audience: Graduate

8. Demonstrate knowledge of various reimbursement systems and funding mechanisms (e.g., federal, state, third party, private payer), appeals mechanisms, treatment/diagnosis codes (e.g., CPT®, ICD, DSM® codes), and coding and documentation requirements that affect consumers and the practice of occupational therapy. Documentation must effectively communicate the need and rationale for occupational therapy services.

Audience: Graduate

**OCC THER 731 – LIVING WELL: WELLNESS PROMOTION FOR GRADUATE STUDENTS**

1 credit.

Promote students' wellness as they manage graduate school and its demands. Examines health and well-being related to students' time-use patterns; balance among daily activities; daily routines and habits; circadian rhythms; meaningful moments; sleep; and social connections.

**Requisites:** Declared in Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Describe wellness strategies for health and well being in student life

Audience: Graduate

2. Apply wellness concepts to a particular situation of graduate school

Audience: Graduate

3. Discuss the role of occupational therapy in health and wellness promotion.

Audience: Graduate

4. Identify and explain the role of outcome measures in assuring quality of OT services and efficacy of OT interventions across settings, populations and programs.

Audience: Graduate

**OCC THER 732 – LIVING WELL: DESIGNING OCCUPATION-BASED WELLNESS PROMOTION**

2 credits.

Gain a complex understanding of the form, function and meaning of daily occupations and the role they play in lifestyle change for wellness promotion. Learn the architecture of daily life including its biological and sociocultural foundations for patterning occupational rounds in order to promote and sustain motivation to change.

**Requisites:** Declared in Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the four occupation-based threshold concepts for lifestyle change.

Audience: Graduate

2. Articulate how the framework and core concepts of the Do/Live/Well framework apply as a theoretical foundation for wellness promotion

Audience: Graduate

3. Critically assess current theory and research examining occupational complexity

Audience: Graduate

4. Identify and explain the effectiveness of strategies for fostering and sustaining lifestyle change for wellness promotion.

Audience: Graduate

5. Apply motivational interviewing skills to coach a peer in lifestyle change.

Audience: Graduate

### **OCC THER 733 – PROMOTING HEALTH AND WELLNESS FOR POPULATIONS**

3 credits.

Explores population-based intervention for occupational justice, health and wellness. Provides a basic set of competencies in the domains central to the field of public health including systems thinking, social determinants of health, and health care reform policy.

**Requisites:** Declared in Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Describe a systems thinking approach to guide occupational therapy's contribution to public health

Audience: Graduate

2. Explain the relationship between social determinants of health and health equity/inequity

Audience: Graduate

3. Identify public health concerns relevant to occupational therapy practice

Audience: Graduate

4. Investigate how your own health has been shaped by social determinants of health across the lifespan

Audience: Graduate

5. Synthesize evidence-based information using a systems thinking approach to support policy and program development and/or evaluation

Audience: Graduate

### **OCC THER 734 – LIVING WELL: OCCUPATION-BASED INTERVENTIONS PROMOTING HEALTH AND WELLNESS**

2 credits.

Critically analyze the rigor and evidence supporting current occupation-based interventions for populations served by occupational therapists, create a professional presentation based on this research, and create materials to translate this information for consumer use. Understand key issues and current occupational science trends in fostering access to and equitable participation in occupations.

**Requisites:** Declared in Occupational Therapy: Entry-Level, OTD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Describe and critically analyze the research supporting current cutting-edge occupation-based interventions for clients/populations served by occupational therapy.

Audience: Graduate

2. Create professional presentations, and client-friendly materials describing these occupation-based interventions and the evidence supporting their use.

Audience: Graduate

3. Describe and critically analyze how our client's access to occupations and equitable participation in occupations are shaped, limited, and/or supported cultural, social and ecological factors

Audience: Graduate

4. Recognize and critically analyze key characteristics of collaborative relationship-focused practice in Lifestyle Change Interventions.

Audience: Graduate

5. Achieve competency in motivational interviewing skills for independent use with clients and partners in capstone projects

Audience: Graduate

### OCC THER 770 – EVIDENCE BASED PRACTICE LAB PRACTICUM

2 credits.

Designed to provide an overview of the research happening within the OT program at UW-Madison and to provide hands-on, mentored experience with generating evidence for practice.

**Requisites:** OCC THER 771 or concurrent enrollment

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 3 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand the research programs of UW OT faculty and how these relate to occupation and occupational therapy  
Audience: Graduate

2. Gain hands-on research lab experience in one UW OT faculty's lab  
Audience: Graduate

3. Critique quantitative and qualitative research in order to analyze and evaluate scholarly activities, which contribute to the development of a body of knowledge including level of evidence, validity of research studies, strength of the methodology, relevance to the profession of occupational therapy.  
Audience: Graduate

4. Locate, select, analyze, and evaluate scholarly literature to make evidence-based decisions.  
Audience: Graduate

5. Design and implement a scholarly study that aligns with current research priorities and advances knowledge translation, professional practice, service delivery, or professional issues (e.g., Scholarship of Integration, Scholarship of Application, Scholarship of Teaching and Learning).  
Audience: Graduate

### OCC THER 771 – EVIDENCE BASED PRACTICE 1: BASICS

3 credits.

Provides the opportunity to establish or advance understanding of evidence-based practice through critical exploration of research ethics and approaches. Critically review literature relevant to occupational therapy and determine how research findings can inform practice. First in the evidence-based practice sequence leading to the development of a proposal and completion of a scholarly study.

**Requisites:** Declared in Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate an understanding of how to design a scholarly proposal in regards to ethical policies and procedures necessary to conduct human-subject research, educational research, or research related to population health.  
Audience: Graduate

2. Demonstrate the ability to use quantitative statistics and qualitative analysis to interpret tests and measurements for the purpose of establishing and delivering evidence-based practice.  
Audience: Graduate

3. Collect, analyze, and report data in a systematic manner for evaluation of client and practice outcomes. Report evaluation results and modify practice as needed.  
Audience: Graduate

4. Interpret criterion-referenced and norm-referenced standardized test scores on the basis of an understanding of sampling, normative data, standard and criterion scores, reliability, and validity.  
Audience: Graduate

5. Critique quantitative and qualitative research in order to analyze and evaluate scholarly activities, which contribute to the development of a body of knowledge. This includes, level of evidence, validity of research studies, strength of the methodology, and relevance to the profession of occupational therapy  
Audience: Graduate

6. Locate, select, analyze, and evaluate scholarly literature to make evidence based decisions.  
Audience: Graduate

7. Design and implement a scholarly study that aligns with current research priorities and advances knowledge translation, professional practice, service delivery, or professional issues (e.g., Scholarship of Integration, Scholarship of Application, Scholarship of Teaching and Learning).  
Audience: Graduate

## OCC THER 772 – EVIDENCE BASED PRACTICE 2: RESEARCH DESIGN, METHODS, AND ANALYSIS

3 credits.

Supports the development of a research proposal and the skills needed to implement a research project. Develop a research proposal and analyze data to inform practice in occupational therapy. Second in the evidence-based practice sequence leading to the development of a proposal and completion of a scholarly study.

**Requisites:** OCC THER 771

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Select, apply, and interpret quantitative and qualitative methods for data analysis to include basic descriptive, correlational, and inferential quantitative statistics and analysis and synthesis of qualitative data.

Audience: Graduate

2. Critique quantitative and qualitative research in order to analyze and evaluate scholarly activities, which contribute to the development of a body of knowledge including level of evidence, validity of research studies, strength of the methodology, and relevance to the profession of occupational therapy.

Audience: Graduate

3. Locate, select, analyze, and evaluate scholarly literature to make evidence-based decisions.

Audience: Graduate

4. Design and implement a scholarly study that aligns with current research priorities and advances knowledge translation, professional practice, service delivery, or professional issues (e.g., Scholarship of Integration, Scholarship of Application, Scholarship of Teaching and Learning).

Audience: Graduate

5. Create scholarly reports appropriate for presentation or for publication in a peer reviewed journal that support skills of clinical practice. The reports must be made available to professional or public audiences.

Audience: Graduate

## OCC THER 773 – EVIDENCE BASED PRACTICE 3: RESEARCH TRANSLATION

3 credits.

Supports the completion of a scholarly study and the skills needed to translate research to practice. Through a series of lectures, statistics/writing consultations, and mentored research, students complete and publicly present their scholarly work.

**Requisites:** OCC THER 772

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Critique quantitative and qualitative research in order to analyze and evaluate scholarly activities, which contribute to the development of a body of knowledge including the level of evidence, validity of research studies, strength of the methodology, relevance to the profession of occupational therapy.

Audience: Graduate

2. Locate, select, analyze, and evaluate scholarly literature to make evidence-based decisions.

Audience: Graduate

3. Design and implement a scholarly study that aligns with current research priorities and advances knowledge translation, professional practice, service delivery, or professional issues (e.g., Scholarship of Integration, Scholarship of Application, Scholarship of Teaching and Learning).

Audience: Graduate

4. Create scholarly reports appropriate for presentation or for publication in a peer reviewed journal that support skills of clinical practice. The reports must be made available to professional or public audiences.

Audience: Graduate

5. Select, apply, and interpret quantitative and qualitative methods for data analysis to include basic descriptive, correlational, and inferential quantitative statistics and analysis and synthesis of qualitative data.

Audience: Graduate

6. Demonstrate an understanding of the process of locating and securing grants and how grants can serve as a fiscal resource for scholarly activities and program development. Create grant proposals to support scholarly activities and program development

Audience: Graduate

**OCC THER 811 – APPLIED LEADERSHIP AND MANAGEMENT IN OT**  
3 credits.

Overview of the historical, theoretical and current practices of leadership, management and advocacy in health care, education and social service settings. Includes a reflective analysis of the student's own leadership and management style. Apply key principles of effective networking, collaboration and interdisciplinary practice to further develop leadership competencies.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**OCC THER 812 – CURRENT TRENDS SHAPING OCCUPATIONAL THERAPY PRACTICE**  
3 credits.

Occupational therapy's role in the history and continuing evolution of health care, education, and social welfare. Discussion of the theoretical, evidence, and policy trends influencing occupational therapy practice across settings. Emphasizes development of leadership skills for shaping, advocating and guiding occupational therapy through a continually evolving practice landscape.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**OCC THER 813 – ADVANCED PRACTICE IN INTERPROFESSIONAL CONTEXTS**  
3 credits.

Differentiate and define the role of occupational therapy, other professions, and the client in inter-professional practice (IP). Describe models of IP collaborative practice, evaluate evidence supporting effective IP interventions, generate and implement strategies for an IP team to improve quality of services.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**OCC THER 814 – COMMUNICATING OT TO INTERPROFESSIONAL AUDIENCES**  
2 credits.

Learn the necessary skills for effectively designing and implementing professional presentations in a variety of interprofessional contexts including educational settings, professional conferences, practice workshops, and scholarly contributions. Review and critique communication from various media.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Compare and contrast adult learning theories and their application in various interprofessional learning situations.

Audience: Graduate

2. State and apply key principles of effective communication to the presentation of information through oral, written, and interactive media.

Audience: Graduate

3. Choose effective communication tools and techniques, including information systems and communication technologies, to facilitate discussions and interactions that enhance effective communication in interprofessional settings.

Audience: Graduate

4. Prepare a professional manuscript for a relevant professional publication of academic journal on a topic related to current practice or capstone project using professional language and writing style to communicate information incorporating the specific publication format.

Audience: Graduate

5. Prepare and present a presentation using appropriate technology and style for targeted audience and demonstrate modifications necessary to the presentation for a different interprofessional audience.

Audience: Graduate

6. Critique the work of peers, providing constructive feedback on their interprofessional presentations and writing.

Audience: Graduate

**OCC THER 821 – CASE SYNTHESIS 1**

1 credit.

Synthesize learning from previous coursework and apply to cases in a comprehensive way using problem-based learning strategies with an assigned learning group.

**Requisites:** Declared in Occupational Therapy OTD: Entry Level

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply, analyze, and evaluate scientific evidence, theories, models of practice, and frames of reference that underlie the practice of occupational therapy to guide and inform interventions for persons, groups, and populations in a variety of practice contexts and environments.

Audience: Graduate

2. Demonstrate clinical reasoning to evaluate, analyze, diagnose, and provide occupation-based interventions to address client factors, performance patterns, and performance skills

Audience: Graduate

3. Utilize clinical reasoning to facilitate occupation-based interventions that address client factors. This must include interventions focused on promotion, compensation, adaptation, and prevention.

Audience: Graduate

4. Monitor and reassess, in collaboration with the client, caregiver, family, and significant others, the effect of occupational therapy intervention and the need for continued or modified intervention.

Audience: Graduate

5. Design and implement intervention strategies to remediate and/or compensate for functional cognitive deficits, visual deficits, and psychosocial and behavioral health deficits that affect occupational performance.

Audience: Graduate

6. Develop a plan for discharge from occupational therapy services in collaboration with the client and members of the interprofessional team by reviewing the needs of the client, caregiver, family, and significant others; available resources; and discharge environment.

Audience: Graduate

**OCC THER 822 – CASE SYNTHESIS 2**

2 credits.

Facilitate learning for peers around cases. Develop a learning case based on fieldwork experience. Synthesize learning from previous coursework with an emphasis on advocacy and population health and apply to cases in a comprehensive way using problem-based learning strategies with an assigned learning group.

**Requisites:** OCC THER 821

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply, analyze, and evaluate scientific evidence, theories, models of practice, and frames of reference that underlie the practice of occupational therapy to guide and inform interventions for persons, groups, and populations in a variety of practice contexts and environments.

Audience: Graduate

2. Demonstrate clinical reasoning to evaluate, analyze, diagnose, and provide occupation-based interventions to address client factors, performance patterns, and performance skills

Audience: Graduate

3. Utilize clinical reasoning to facilitate occupation-based interventions that address client factors. This must include interventions focused on promotion, compensation, adaptation, and prevention.

Audience: Graduate

4. Monitor and reassess, in collaboration with the client, caregiver, family, and significant others, the effect of occupational therapy intervention and the need for continued or modified intervention.

Audience: Graduate

5. Design and implement intervention strategies to remediate and/or compensate for functional cognitive deficits, visual deficits, and psychosocial and behavioral health deficits that affect occupational performance

Audience: Graduate

6. Develop a plan for discharge from occupational therapy services in collaboration with the client and members of the interprofessional team by reviewing the needs of the client, caregiver, family, and significant others; available resources; and discharge environment.

Audience: Graduate

7. Apply teaching methods to facilitation of group case-based learning process

Audience: Graduate

8. Identify opportunities for advocacy and population health interventions based on individual level cases.

Audience: Graduate

**OCC THER 871 – APPLICATION OF OCCUPATIONAL THERAPY EVIDENCE IN THE PRACTICE ENVIRONMENT**

2 credits.

Examine and apply to a specific intervention or topic that is relevant to professional development goals and/or capstone project. Leverage appropriate methodologies, analytic tools and procedural reasoning in support of recommendations regarding the application of the intervention or approach in the practice environment.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**OCC THER 872 – USING INFORMATION TO OPTIMIZE PRACTICE**

3 credits.

An introduction to application of informatics in practice including appropriate design, data management procedures and statistical analysis tools. Pursue a practice-relevant question which can be answered using available data.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**OCC THER 873 – ADVANCED OUTCOME MEASUREMENT IN OCCUPATIONAL THERAPY**

3 credits.

Explore quality assurance in OT service delivery (including consumer satisfaction) and objective and subjective functional and occupational performance measures of OT interventions. Includes review of principles of measurement (reliability, validity and clinical utility). Examines general themes and trends in healthcare outcomes measurement and research as well as issues germane to specific areas of OT practice. Learn strategies and skills for assessing the psychometric properties and clinical utility of a variety of outcomes measures.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2022

**Learning Outcomes:** 1. Identify and explain the role of outcome measures in assuring quality of OT services and efficacy of OT interventions across settings, populations and programs.

Audience: Graduate

2. Identify the domains of the World Health Organization ICF (International Classification of Function) most relevant for evaluating Occupational Therapy practice in context.

Audience: Graduate

3. Describe the conceptual similarities and differences in efficiency, effectiveness and efficacy.

Audience: Graduate

4. Describe the measurement properties of objective and subjective measures of learning outcomes, service provision, function, occupational performance and quality of life.

Audience: Graduate

5. Evaluate the reliability, validity and utility of objective and subjective measures of service provision, learning outcomes, function, occupational performance and quality of life.

Audience: Graduate

6. Develop an outcome measurement plan for a specific area of practice.

Audience: Graduate

7. Apply appropriate outcome measures for evaluating service quality and effectiveness of interventions in a specific area of practice.

Audience: Graduate

**OCC THER 880 – INTRODUCTION TO CAPSTONE**

1 credit.

Introduces capstone experience and project including providing a step-by-step guide for the development, planning, implementation and dissemination of the entry-level and post-professional occupational therapy doctoral capstone experience and project.

**Requisites:** Declared in Occupational Therapy

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Differentiate between various scholarly projects including capstone project, thesis, and dissertation.

Audience: Graduate

2. Identify a relevant clinical problem, gap in practice or specific need in the student's area of occupational therapy practice or desired professional development

Audience: Graduate

3. Develop a timeline for completion of the doctoral capstone project.

Audience: Graduate

4. Identify and initiate with potential sites to support a capstone project.

Audience: Graduate

**OCC THER 881 – CAPSTONE PROJECT I**

3 credits.

Prepares for Capstone Project Proposal and learning plan for experiential setting connected to proposed project. Complete a problem statement, needs assessment, literature review and plans and implementation methods.

**Requisites:** OCC THER 880

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify a relevant clinical problem, gap in practice or specific need in the student's area of occupational therapy practice or desired professional development

Audience: Graduate

2. Complete a SWOT analysis and draft a preliminary conceptual model

Audience: Graduate

3. Conduct and summarize a comprehensive needs assessment, including literature review and collection of information from stakeholders

Audience: Graduate

4. Draft and defend a written proposal for an innovative project, program, intervention or approach to the identified problem

Audience: Graduate

5. Develop an evaluation plan for assessing outcomes

Audience: Graduate

**OCC THER 882 – CAPSTONE PROJECT II**

3 credits.

Complete implementation of individual Capstone Project, analyze the findings and prepare a written and oral presentation of the Capstone Project, as described and approved by the Primary Mentoring Committee.

**Requisites:** OCC THER 881

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Formulate systems to gather, analyze and interpret data from a practice setting.

Audience: Graduate

2. Translate evidence into best practice for the continued development of the profession.

Audience: Graduate

3. Demonstrate an understanding of the process for locating and securing grants and how grants can serve as a fiscal resource for scholarly and programmatic activities.

Audience: Graduate

4. Develop and implement an inter-professional, scholarly capstone project that addresses an identified service system, intervention or programmatic problem, relates theory to practice and demonstrates synthesis of advanced knowledge in a practice area.

Audience: Graduate

5. Evaluate the outcomes of the capstone project and communicate findings to an inter-professional audience in a clear, understandable manner through a peer-reviewed report or presentation.

Audience: Graduate

6. Empirically monitor client progress and treatment efficacy in practice.

Audience: Graduate

7. Identify and apply appropriate tools for measuring practice outcomes at the individual and systems level.

Audience: Graduate

8. Synthesize current knowledge, available evidence and responses to interventions to inform new approaches to practice problems.

Audience: Graduate

9. Demonstrate the skills necessary to lead and manage an inter-professional team.

Audience: Graduate

**OCC THER 883 – DOCTORAL EXPERIENTIAL COMPONENT**

6 credits.

An advanced placement that provides an opportunity for applied experiences within their concentration area.

**Requisites:** OCC THER 664

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Demonstrate advanced synthesis of knowledge gained in a chosen area including research, policy, leadership, administration, entrepreneurship, program development or advocacy through successful achieving of individually customized learning goals.  
Audience: Graduate

2. Model professional and leadership skills needed to work with multiple stakeholders successfully  
Audience: Graduate

3. Communicate effectively with others in a professional setting: a. Interact effectively with clients, colleagues, other professionals, and community members from diverse cultural and ethnic backgrounds on a one-on-one basis and within the context of groups and b. Communicate effectively with varied audiences for varied purposes  
Audience: Graduate

4. Complete a Capstone Project connected to the DEC site which meets both the site needs as well as the student learning goals  
Audience: Graduate

**ONCOLOGY (ONCOLOGY)****ONCOLOGY 401 – INTRODUCTION TO EXPERIMENTAL ONCOLOGY**

2 credits.

Biological processes associated with and characteristic of neoplasia.

**Requisites:** ZOOLOGY/BIOLOGY 101, BOTANY/BIOLOGY 130, ZOOLOGY/BIOLOGY/BOTANY 151, BIOCORE 383, or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate fundamental knowledge and understanding of foundational concepts in the areas of cancer etiology, cancer biology, and cancer prevention and cancer treatment.  
Audience: Undergraduate

2. Read and critically evaluate scientific literature.  
Audience: Undergraduate

3. Synthesize scientific ideas based upon knowledge gained in the course  
Audience: Undergraduate

4. Demonstrate breadth within their learning experiences.  
Audience: Undergraduate

5. Communicate complex ideas in a clear and understandable manner.  
Audience: Undergraduate

**ONCOLOGY/MICROBIO 545 – TOPICS IN BIOTECHNOLOGY**

1 credit.

Seminars on current topics in agricultural, medical, and industrial biotechnology such as: microbiological production of food, drink, biopharmaceuticals; production methods, genetic engineering (vectors, recombination cloning), continuous fermentation; bioconversion processes and production of chemicals from biomass; plant biotechnology; transgenic animals.

**Requisites:** (ZOOLOGY/BIOLOGY 101, ZOOLOGY/BIOLOGY/BOTANY 151, BIOCORE 383, or BIOLOGY/BOTANY 130) and (CHEM 104 or 109) or graduate/professional standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Attend all lectures on a diverse range of speakers from the Biotechnology sector and related topics.

Audience: Undergraduate

2. Demonstrate an understanding of lectures through lecture evaluation sheets.

Audience: Undergraduate

3. Choose a current topic in Biotechnology and formulate an opinion paper on the challenges and potential utility.

Audience: Undergraduate

**ONCOLOGY/M&ENVTOX/PHM SCI/PHMCOL-M/POP HLTH 625 – TOXICOLOGY I**

3 credits.

Basic principles of toxicology and biochemical mechanisms of toxicity in mammalian species and man. Correlation between morphological and functional changes caused by toxicants in different organs of the body.

**Requisites:** (BIOCHEM 501 or 508) and (ANAT&PHY 335, 435, or (BIOCORE 485 and 486)) and PATH 404; or graduate/professional standing

**Course Designation:** Breadth - Biological Sci. Counts toward the Natural Sci req

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Discuss the physiology and pathology of toxicology, understanding the basic fundamentals of toxicology and toxic agents

Audience: Both Grad & Undergrad

2. Demonstrate metabolism and breakdown of toxicants using a given dataset

Audience: Both Grad & Undergrad

3. Recognize various experimental models to obtain scientific results

Audience: Both Grad & Undergrad

4. Implement knowledge to design experiments applicable to one's own research

Audience: Both Grad & Undergrad

5. Critique an example of toxicology in media and develop a presentation of this example

Audience: Both Grad & Undergrad

6. Explore new areas to assist in career development via journal club

Audience: Graduate

**ONCOLOGY/M M & I/PL PATH 640 – GENERAL VIROLOGY-MULTIPLICATION OF VIRUSES**

3 credits.

The structure, multiplication, genetics, pathology and control of animal and plant viruses.

**Requisites:** (GENETICS 466 or 467) and (BIOCHEM 501 or 508) or graduate/professional standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Advanced

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify the major classes of viruses infecting animals and plants, and summarize their basic replication strategies.

Audience: Both Grad & Undergrad

2. Identify the major innate and adaptive antiviral immunity mechanisms of animals and plants, and examples of viral countermeasures against these.

Audience: Both Grad & Undergrad

3. Summarize the burdens and threats of viruses to public health, agriculture, etc.

Audience: Both Grad & Undergrad

4. Identify the major approaches and challenges to virus control at the single organism and host population levels, including why viruses are generally harder to control than bacteria, and major steps in developing new antiviral agents.

Audience: Both Grad & Undergrad

5. Illustrate beneficial uses of viruses and their genes in research, biotechnology and medicine.

Audience: Both Grad & Undergrad

6. Design and evaluate basic experiments to address specific questions in virology.

Audience: Both Grad & Undergrad

7. Read and evaluate primary literature papers in virology.

Audience: Graduate

**ONCOLOGY 673 – PURIFICATION AND CHARACTERIZATION OF PROTEIN AND PROTEIN COMPLEXES**

2 credits.

The theory and practice of protein purification. Topics covered include conventional and recent protein fractionation techniques; enzyme assays, handling, and characterization; purification strategy; and overproduction of cloned gene products. The emphasis is on micro and laboratory scale purifications.

**Requisites:** BIOCHEM 508, CHEM 511 or graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Demonstrate fundamental knowledge and understanding foundational concepts in the areas of protein purification, purification of recombinant proteins, and protein characterization and use.

Audience: Both Grad & Undergrad

2. Read and effectively evaluate current literature.

Audience: Both Grad & Undergrad

3. Actively engage in the latest scholarly research discussions.

Audience: Graduate

**ONCOLOGY 675 – ADVANCED OR SPECIAL TOPICS IN CANCER RESEARCH**

1-3 credits.

Examines special topics in cancer research. Topics and content will vary each semester and by section of the course.

**Requisites:** Consent of instructor

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Apply, analyze, or evaluate advanced theories, concepts, or methods in Cancer Biology.

Audience: Both Grad & Undergrad

2. Identify and describe key theories, concepts, and methods in Cancer Biology.

Audience: Both Grad & Undergrad

3. Explore a new phenomenon or modality in the Cancer Biology area and apply the knowledge gained to research in the field (graduate student).

Audience: Graduate

**ONCOLOGY 699 – SPECIAL RESEARCH PROBLEMS**

1-3 credits.

Directed study projects as arranged with instructor.

**Requisites:** Consent of instructor**Course Designation:** Level - Advanced

L&amp;S Credit - Counts as Liberal Arts and Science credit in L&amp;S

**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Summer 2025**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations.

Audience: Undergraduate

2. Read and effectively search scientific literature.

Audience: Undergraduate

3. Develop critical, analytical, and independent thinking skills.

Audience: Undergraduate

**ONCOLOGY 703 – CARCINOGENESIS AND TUMOR CELL BIOLOGY**

3 credits.

Viral, chemical, and physical factors involved in tumor formation in humans and experimental animals; biology and biochemistry of neoplasia, both in vivo and in vitro.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Explore new conceptional and technological advancements in Cancer Biology and apply the knowledge gained to research in the field.

Audience: Graduate

2. Demonstrate fundamental knowledge and understanding of foundational concepts in Carcinogenesis and Tumor Cell Biology.

Audience: Graduate

3. Articulate research problems, potentials, and limits with respect to theory, knowledge, or practice within the field of Carcinogenesis and Tumor Cell Biology.

Audience: Graduate

4. Communicate complex ideas in a clear and understandable manner.

Audience: Graduate

5. Read and effectively search scientific literature.

Audience: Graduate

**ONCOLOGY 715 – ETHICS IN SCIENCE**

1 credit.

A review and discussion of the fundamentals of ethical issues in science.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** Yes, unlimited number of completions**Last Taught:** Spring 2025**Learning Outcomes:** 1. Articulate research problems, potentials, and limits with respect to theory, knowledge, or practice within the field of Cancer Biology.

Audience: Graduate

2. Formulate ideas, concepts, designs, and/or techniques beyond the current boundaries of knowledge within the field of Cancer Biology.

Audience: Graduate

3. Demonstrate breadth within their learning experiences.

Audience: Graduate

4. Communicate complex ideas in a clear and understandable manner.

Audience: Graduate

5. Foster ethical and professional conduct.

Audience: Graduate

**ONCOLOGY 725 – READINGS IN CANCER BIOLOGY**

2 credits.

A review and discussion of the current literature on topics related to cancer biology. The emphasis is on the development of skills in data analysis, critical interpretation, and clear writing.

**Requisites:** Consent of instructor**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Articulate research problems, potentials, and limits with respect to theory, knowledge, or practice within the field of Cancer Biology.

Audience: Graduate

2. Formulate ideas, concepts, designs, and/or techniques beyond the current boundaries of knowledge within the field of Cancer Biology.

Audience: Graduate

3. Demonstrate breadth within their learning experiences.

Audience: Graduate

4. Communicate complex ideas in a clear and understandable manner.

Audience: Graduate

5. Foster ethical and professional conduct.

Audience: Graduate

**ONCOLOGY 735 – CURRENT PROBLEMS IN CANCER BIOLOGY**

2 credits.

Emphasis is on the development of skills in data analysis and interpretation, grant proposal writing, and oral presentation to help prepare students for their Preliminary Exam.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Articulate research problems, potentials, and limits with respect to theory, knowledge, or practice within the field of Cancer Biology.

Audience: Graduate

2. Formulate ideas, concepts, designs, and/or techniques beyond the current boundaries of knowledge within the field of Cancer Biology.

Audience: Graduate

3. Demonstrate breadth within their learning experiences.

Audience: Graduate

4. Communicate complex ideas in a clear and understandable manner.

Audience: Graduate

5. Foster ethical and professional conduct.

Audience: Graduate

**ONCOLOGY 745 – MODELING HUMAN DISEASE IN ANIMALS**

1 credit.

Provides a background in the use of animals in the study of human disease and hands-on exposure to common techniques such as tissue collection and processing, surgeries, imaging, and other manipulations. Lectures by basic scientists and clinicians will provide background about each of the organ systems or diseases and the ethics of animal research. Prior to start of course, completion of online animal safety training. Instructions will be provided after enrollment.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Describe the rationale for choosing a model system for their research

Audience: Graduate

2. Perform procedures or dissections to collect tissues or organs for further investigation

Audience: Graduate

**ONCOLOGY 778 – BIOINFORMATICS FOR BIOLOGISTS**

3 credits.

Become familiar with bioinformatics theory and principles. Provides real-world experience that can be applied to your own work. Provides a foundation of knowledge that can be used to critically evaluate existing bioinformatics tools that can be used in your work, and in the absence of an appropriate tool, identify the analyses that demand the development of novel tools.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the appropriate analysis tools for common bioinformatics problems, format data, execute the analysis, and adjust necessary parameters.

Audience: Graduate

2. Interpret results of common bioinformatic analysis including their own results as well as the published works of others.

Audience: Graduate

3. Demonstrate competence in bioinformatic analysis by conducting an original analysis of primary data from their own lab or publicly available databases.

Audience: Graduate

4. Understand the assumptions and principles of bioinformatic pipelines and their implications for validity and statistical significance.

Audience: Graduate

**ONCOLOGY 901 – SEMINAR**

1 credit.

Critical review of selected topics in cancer research.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Organize and present a research presentation, which includes background information, data slides, conclusions, and future directions.

Audience: Graduate

2. Offer constructive feedback to peers on research presentation style and information delivery.

Audience: Graduate

**ONCOLOGY 990 – RESEARCH**

1-12 credits.

Independent research and writing for graduate students under the supervision of a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Conduct independent research using a variety of approaches.

Audience: Graduate

2. Think critically and independently to address research challenges.

Audience: Graduate

3. Exhibit and foster professional and ethical conduct in their research.

Audience: Graduate

4. Collaborate with other investigators within or outside the thesis lab.

Audience: Graduate

## OPERATIONS AND TECHNOLOGY MANAGEMENT (OTM)

**OTM 300 – OPERATIONS AND SUPPLY CHAIN MANAGEMENT**

3 credits.

Managing operations and supply chains is about people, information, equipment, and materials and how these are combined to produce and/or deliver goods and services to customers. Emphasis is on how systems and processes can be designed, managed, and improved to achieve operations excellence and competitive advantage.

**Requisites:** Not open to graduate/professional students

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify the basics of firm strategy and determine how to align operational and strategic decisions.

Audience: Undergraduate

2. Analyze a manufacturing or service process quantitatively and generate opportunities for improvement.

Audience: Undergraduate

3. Manage quality statistically and describe strategies for maintaining and improving quality.

Audience: Undergraduate

4. Determine effective inventory policies for various product and customer demand characteristics.

Audience: Undergraduate

5. Develop sourcing and design strategies to mitigate risk in supply chains.

Audience: Undergraduate

### OTM 351 – BUSINESS PROCESS IMPROVEMENT

3 credits.

Introduction to the terminology, concepts, principles, and techniques for managing and improving business processes.

**Requisites:** OTM 300

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Explain how to use root cause analysis to deconstruct a complex problem.

Audience: Undergraduate

2. Identify and apply continuous improvement tools and techniques to production, administrative, distribution, and service-related functions.

Audience: Undergraduate

3. Demonstrate strategic thinking and project management methodologies to establish and measure multi-year improvement strategies to reach a desired future state.

Audience: Undergraduate

4. Create improvement loops to maximize value, eliminate waste and reach an ideal future state for cross-functional organizational activities.

Audience: Undergraduate

5. Analyze large and complex data sets to find patterns, identify key improvements, and substantiate improvement choices in process improvement projects.

Audience: Undergraduate

### OTM 365 – CONTEMPORARY TOPICS

1-3 credits.

An exploration of subject areas possibly to be introduced into the business curriculum.

**Requisites:** Sophomore standing and OTM 300

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

### OTM 370 – SUSTAINABLE APPROACHES TO SYSTEM IMPROVEMENT

3 credits.

Organizations employ a variety of improvement approaches to develop sustainable practices. Sustainability concerns such as natural capital, emission buildup, and base of the pyramid are directly addressed by examining innovative system-improvement concepts, while simultaneously strengthening mission-central concerns such as cost, quality, customer, market, revenue, profit, brand, reputation sourcing, and quality of work life.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Identify the forces in an organization's ecosystem that drive sustainability

Audience: Undergraduate

2. Determine the capabilities needed to utilize forces that drive sustainability

Audience: Undergraduate

3. Recommend sustainability improvements that strengthen the organization's core mission

Audience: Undergraduate

4. Apply sustainability principles and/or frameworks to address the challenge of improving an organization's core mission

Audience: Undergraduate

5. Analyze sustainability issues and/or practices using a systems-based approach to support organizational or societal sustainability strategies

Audience: Undergraduate

### OTM 399 – READING AND RESEARCH-OPERATIONS AND INFORMATION MANAGEMENT

1-6 credits.

Individual work suited to the needs of undergraduate students may be arranged with a faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2022

## OTM/MARKETNG 421 – FUNDAMENTALS OF SUPPLY CHAIN MANAGEMENT

3 credits.

Supply chain management (SCM) is a dynamic, cross-functional discipline that encompasses the areas of strategy, product development/innovation, marketing, finance, sourcing, production, logistics, and technology in both product and service industries. The supply chain is responsible for the sustainable and efficient movement of products, services, funds, and data along the value chain. Companies must effectively coordinate these functions not only within the firm, but with business partners and customers around the world. SCM is a critical, strategic component of any business or organization, from high-tech to healthcare, and it is a fundamental knowledge base for any student of business.

**Requisites:** Sophomore standing and (MARKETNG 300 or OTM 300) or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the business purpose and primary functions of supply chain management and their cross-functional linkages/interdependencies across an organization

Audience: Undergraduate

2. Apply supply chain management in strategic and tactical frameworks to optimize financial, operational, and customer objectives

Audience: Undergraduate

3. Analyze the influence of supply chain management on business performance and its role in delivering competitive advantage to an organization

Audience: Undergraduate

4. Identify and apply the economic, political, and business issues that impact how companies develop and execute supply chain strategy including globalization, sustainability, risk management, and ethics/society

Audience: Undergraduate

## OTM/MARKETNG 422 – LOGISTICS MANAGEMENT

3 credits.

Provides a management perspective on the fundamental activities, concepts, and current practices in logistics. Transportation management, order fulfillment, warehousing, global logistics, key performance indicators, outsourcing, and introduction to radio frequency identification and barcoding. Use of case studies and industry speakers.

**Requisites:** MARKETNG 300, OTM 300, and sophomore standing, or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate understanding of fundamental logistics principles and fluency in the language of logistics.

Audience: Undergraduate

2. Articulate key activities performed by the logistics function including distribution, transportation, global logistics and inventory control.

Audience: Undergraduate

3. Demonstrate understanding of order fulfillment processes and best practices utilized in supply chain operations.

Audience: Undergraduate

4. Analyze and utilize supply chain data to make business decisions and expand applied data analysis skills.

Audience: Undergraduate

**OTM/MARKETNG 423 – PROCUREMENT AND SUPPLY MANAGEMENT**

3 credits.

Procurement and supply management is the business function concerned with an organization's acquisition of required materials, services, and equipment. Explores the key aspects of modern supply management including the purchasing process, cost management, negotiation, sourcing strategies, supplier management, category management, acquisition methods for materials and services, and outsourcing.

**Requisites:** Sophomore standing and (MARKETNG 300 or OTM 300) or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the importance of supply management, its functions and impact within firms, and the managerial strategies and operational tactics required of entry-level professionals in supply change management.

Audience: Undergraduate

2. Analyze a scenario to determine the appropriate sourcing strategy, [and] propose the most effective supplier management processes.

Audience: Undergraduate

3. Apply, at a foundational level, the necessary legal and ethical considerations to the examination and implementation of supply management.

Audience: Undergraduate

4. Apply a proper process in evaluating a decision to outsource and utilize a rigorous approach to the development of service contracts.

Audience: Undergraduate

5. Assess which of the generic purchasing and P2P process steps add value, explain the basis for that assessment, and suggest possible improvement methods.

Audience: Undergraduate

6. Demonstrate how to operationalize cost management and use it to make decisions.

Audience: Undergraduate

7. Prepare a risk assessment utilizing the knowledge and tools acquired in class.

Audience: Undergraduate

**OTM/MARKETNG 427 – INFORMATION TECHNOLOGY IN SUPPLY CHAINS**

3 credits.

Explores the concepts and practices of using information technology to effectively manage and operate supply chains of businesses and other organizations. Topics include supply chain processes, enterprise resource planning (ERP) system implementation, and supply chain simulations using SAP software.

**Requisites:** MARKETNG 300, OTM 300, and sophomore standing, or declared in undergraduate Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe key business processes related to supply chain management

Audience: Undergraduate

2. Effectively utilize an ERP system to execute key business processes related to supply chain management and have an intermediate level of ability to navigate within an ERP system

Audience: Undergraduate

3. Identify and analyze appropriate data and information from an ERP system as a means to making measurable improvements in the performance of a business

Audience: Undergraduate

4. Understand and recognize principles and best practices of implementing enterprise systems and have the ability to articulate common implementation mistakes

Audience: Undergraduate

**OTM/MARKETNG 428 – SUPPLY CHAIN CAPITAL MANAGEMENT**

3 credits.

Introduce the set of activities and solutions available to finance an organization's supply chain infrastructure. Define and study the related influencers. Investigate risks and mitigation techniques relative to associated metrics and strategies. Analyze multiple cases in group study work. Identify and recommend improvement opportunities.

**Requisites:** Junior standing and (MARKETNG 300 or OTM 300), or declared in the Business Exchange program

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze multiple aspects of a supply chain network and provide recommendations on how to improve operations and efficiency of a business.

Audience: Undergraduate

2. Recognize and compose appropriate business contract language.

Audience: Undergraduate

3. Recognize and interpret financial statements to understand the current financial state of the organization; identify improvement opportunities and develop solutions to improve the entity's performance.

Audience: Undergraduate

4. Construct specific actions to take to improve working capital efficiency and release.

Audience: Undergraduate

5. Articulate the impact of geopolitical and international issues on supply chains.

Audience: Undergraduate

**OTM/MARKETNG 429 – GLOBAL EXPERIENCE: SUPPLY CHAIN MANAGEMENT**

1-2 credits.

Companies and organizations operate globally – sourcing, producing, and distributing to/from markets around the world. For business leaders in this environment, political, economic, historical, and cultural frameworks are critical to understand and navigate. Learn and explore these themes via classroom and applied experiences in global supply chain management.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply supply chain management theory and practice in a global and industry-specific context

Audience: Undergraduate

2. Analyze how cultural, political, economic, and historical factors impact global business generally and industry-specific

Audience: Undergraduate

3. Develop cultural awareness and appreciation through interactions with students, faculty, and business professionals in the host country

Audience: Undergraduate

**OTM 451 – SERVICE OPERATIONS MANAGEMENT**

3 credits.

Application of operations management principles to the analysis of service-delivery systems in profit and nonprofit organizations. Topics include designing service-delivery systems, location and layout, operations planning and control, yield management, technology and information systems, and service quality management.

**Requisites:** OTM 300

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Utilize qualitative frameworks and quantitative tools to explain the tradeoffs involved in achieving a timely, high-quality, profitable service operations.

Audience: Undergraduate

2. Describe the function and importance of each element in the design of a service utilizing the Service Design Framework: Service Act, Strategic Priorities, Delivery System, Funding Mechanism.

Audience: Undergraduate

3. Evaluate service strategies and delivery systems in real companies utilizing the Service Design Framework, including identification of the service strategy being applied and explaining how facets of the service delivery system support or weaken this strategy.

Audience: Undergraduate

4. Recognize how to manage variability and uncertainty in delivery systems through appropriate capacity planning, queue design, and revenue management.

Audience: Undergraduate

**OTM 452 – PROJECT MANAGEMENT**

3 credits.

During their careers, managers spend a significant amount of time either participating in or leading projects. While every project is unique, some concepts and tools in project management apply to a wide range of projects. The aim of this course is to equip students with these concepts and tools, and to develop them into successful project managers (and team members). With that aim in mind, the course will emphasize quantitative aspects of project management while also discussing more qualitative aspects. Key topics include Project Initiation, Scheduling, Resource Management, Monitoring, Valuation, Rework, Agile Project Management, Project Management Analytics and Contracting.

**Requisites:** Sophomore standing**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Evaluate a project's benefits utilizing net present value and other analysis tools.

Audience: Undergraduate

2. Initiate a project including task breakdown and estimation, stakeholder analysis, resource allocation, and creating a project schedule.

Audience: Undergraduate

3. Monitor and track projects utilizing Earned Value Analysis and other project management tracking tools.

Audience: Undergraduate

4. Utilize and compare Agile and Waterfall project management methodologies.

Audience: Undergraduate

5. Demonstrate use of collaborative project management tools such as GANTT charts and related software tools (i.e. SmartSheet), and others for project tracking and resource planning.

Audience: Undergraduate

6. Collaborate in a team environment while applying various project management techniques to a real-world project.

Audience: Undergraduate

**OTM 453 – OPERATIONS ANALYTICS**

3 credits.

Focuses on the application of analytical methodologies to problems that arise in the context of a company's operations and supply chains. Touches on all three dimensions of analytics (descriptive, predictive, and prescriptive). Emphasis on data and real industry data collected from the university, alumni, and executive board members when possible. Explore, analyze, and utilize such data in a hands-on way, using a variety of software tools. Significantly driven by a set of case problems as opposed to systematic coverage of methodologies.

**Requisites:** OTM 300 and (GEN BUS 306, ECON 310, MATH 331, STAT/ MATH 309, or 431), or declared in undergraduate Business Exchange program**Repeatable for Credit:** No**Last Taught:** Spring 2025**Learning Outcomes:** 1. Recognize patterns and relationships that provide insights into business problems.

Audience: Undergraduate

2. Choose and apply data-based forecasting methods, and evaluate the performance of such methods to inform operations decisions.

Audience: Undergraduate

3. Engineer spreadsheet models for decision-support leveraging optimization and simulation tools.

Audience: Undergraduate

4. Apply critical thinking to complex real-world problems by formulating appropriate questions, making implementable assumptions, and interpreting results of analyses.

Audience: Undergraduate

5. Work effectively in teams on analytics projects.

Audience: Undergraduate

6. Communicate analytics and insights through presentations and written reports.

Audience: Undergraduate

7. Develop basic skills using Tableau visualization software and the statistical software R.

Audience: Undergraduate

8. Develop intermediate skills using Excel.

Audience: Undergraduate

**OTM/ISYE/MATH/STAT 632 – INTRODUCTION TO STOCHASTIC PROCESSES**

3 credits.

Topics include discrete-time Markov chains, Poisson point processes, continuous-time Markov chains, and renewal processes. Applications to queueing, branching, and other models in science, engineering and business.

**Requisites:** (STAT/MATH 431, 309, STAT 311 or MATH 531) and (MATH 320, 340, 341, 375, 421 or 531) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

**Course Designation:** Breadth - Natural Science

Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2025

**Learning Outcomes:** 1. Recall and state the formal definitions of the mathematical objects and their properties for stochastic processes (e.g., discrete space Markov chains, Poisson processes, renewal processes, branching processes, etc.).

Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., irreducibility, aperiodicity, recurrence, transience, the Markov property, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of stochastic processes. (e.g., laws of large numbers for Markov chains, existence of limiting/stationary distributions, law of large numbers for renewal processes, etc.) and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Construct mathematical arguments related to the above definitions, properties, and theorems, including the construction of examples and counterexamples.

Audience: Both Grad & Undergrad

5. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar.

Audience: Both Grad & Undergrad

6. Model simple real life situations by means of discrete-space stochastic processes and calculate probabilities associated with those processes.

Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research.

Audience: Graduate

**OTM 654 – PRODUCTION PLANNING AND CONTROL**

2-3 credits.

The role of materials and capacity planning and control in business operations. Manufacturing Resource Planning Systems: aggregate planning, material requirements planning, capacity planning, operations scheduling. Procedures for cellular manufacturing systems. Costing issues in modern planning and control systems.

**Requisites:** Sophomore standing and OTM 300

**Repeatable for Credit:** No

**Last Taught:** Spring 2022

**Learning Outcomes:** 1. Recognize how inventory planning and replenishment, materials requirements planning, sales & operations planning, master scheduling, capacity resource planning and management, and scheduling execution activities work within a Supply Chain Management framework.

Audience: Undergraduate

2. Apply world class ERP software (SAP) to conduct Supply Chain Management.

Audience: Undergraduate

3. Identify the dynamics of Enterprise Resource Planning (ERP) systems that interface within a Supply Chain Management (SCM) framework.

Audience: Undergraduate

4. Explain MA5 ERP implementation methodology (visioning, planning, design, construction and delivery).

Audience: Undergraduate

5. Explain how to integrate various methodologies for replenishment planning.

Audience: Undergraduate

6. Analyze complex operations projects as a means to understand the strategic thinking framework for Supply Chain Management (SCM).

Audience: Undergraduate

7. Demonstrate how real Supply Chain Management is variable.

Audience: Undergraduate

**OTM 700 – OPERATIONS AND SUPPLY CHAIN MANAGEMENT**

2-3 credits.

Management of operations throughout an organization or supply chain. Emphasizes the coordination of resources to improve cost, quality, and customer service. Topics include capacity and materials management, operations strategy, and process improvement.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Assess the alignment of operational capabilities with firm strategy and decisions made in other parts of the organization, and articulate how operations can deliver value to customers and the firm.  
Audience: Graduate

2. Understand key operations principles and tools, and how they can be used to support process improvement.  
Audience: Graduate

3. Evaluate an organization's work processes to assess system capacity and responsiveness.  
Audience: Graduate

4. Understand the impact that variability has on process performance, and choose appropriate capacity levels to manage this impact.  
Audience: Graduate

5. Utilize appropriate models to identify good inventory ordering policies, and identify forces that drive inventory management decisions.  
Audience: Graduate

6. Work effectively in a team to solve complex operational problems.  
Audience: Graduate

**OTM 701 – PRODUCT MANAGEMENT**

2-3 credits.

Introduction to both the technical and interpersonal sides of developing and managing a product, from ideation to application and revision and launch. Key tools and frameworks including agile software development, product road mapping and design thinking are included.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe the roles and responsibilities of product managers in high-tech businesses  
Audience: Graduate

2. Apply key skills for managing all aspects of the product management life cycle  
Audience: Graduate

3. Articulate key principles and concepts for comparative analysis of different product management strategies  
Audience: Graduate

4. Apply concepts in decision-theoretic frameworks to enhance business efficacy  
Audience: Graduate

5. Demonstrate how to effectively communicate product management strategies and plans to various stakeholders across a business enterprise  
Audience: Graduate

**OTM 702 – DIGITAL STRATEGY**

2 credits.

Helps develop the critical thinking skills necessary to assess how digitization shapes business strategy, innovation, and operations in firms. Prepares students to analyze and evaluate business challenges for maximizing the impact of digitization on products, processes, and services in different settings.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Define the digital economy and identify current and emerging technologies

Audience: Graduate

2. Summarize digitization and illustrate its influence on innovation, transformation, and disruption

Audience: Graduate

3. Describe the emerging models of competition and entrepreneurship in the digital economy

Audience: Graduate

4. Analyze digital investments and integrate them with other business processes and activities

Audience: Graduate

5. Apply managerial practices to leverage digital platforms effectively in organizations

Audience: Graduate

**OTM 703 – COMPETING THROUGH ANALYTICS**

2 credits.

Introduction to business analytics, machine learning and artificial intelligence from a managerial perspective. Covers identifying opportunities to capture data, learning about the current trends in and possibilities with data mining, converting analytics insights into action and evaluating your organization's readiness to compete with analytics.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Describe different types of analytics and their uses in relation to their industries: descriptive, predictive and prescriptive.

Audience: Graduate

2. Articulate the value of different types of structured and unstructured data from varying sources such as social media, CRM systems, IoT sensors, etc.

Audience: Graduate

3. Identify the strategic opportunities for improving efficiency, growth, and innovation using data and analytics.

Audience: Graduate

4. Explain the new-found challenges related to Ethical AI and Algorithmic Bias.

Audience: Graduate

**OTM 714 – SUPPLY CHAIN ANALYTICS**

2–3 credits.

The ability to extract information from data has become essential for companies that want to remain competitive – and therefore essential for students aspiring to become successful managers. Provides an understanding of various analytics methodologies and concepts, and the ability to apply these to business problems related to supply chain management and operations management. Key topics include Data Visualization, Time Series Forecasting, Linear Regression, Classification Methods, Association Rules, Cluster Analysis and Text Mining.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Examine data sets to recognize patterns and relationships in the data that provide insights into business problems

Audience: Graduate

2. Apply principles of data visualization and presentation to real business problems

Audience: Graduate

3. Develop basic skills using Tableau visualization software

Audience: Graduate

4. Apply methods of forecasting product demand and measure the performance of such methods

Audience: Graduate

5. Apply a variety of machine learning techniques (such as logistic regression, K nearest neighbors classification, association rules, cluster analysis, text mining) to perform analysis and/or make predictions and help solve business problems

Audience: Graduate

6. Develop basic skills using the statistical analysis language R

Audience: Graduate

**OTM/MARKETNG 722 – LOGISTICS MANAGEMENT**

2–3 credits.

A foundation in transportation, order fulfillment, warehousing, materials planning including MRP, demand planning, import/export fundamentals, ERP systems, supply chain metrics, and leading supply chain technologies such as RFID.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Demonstrate an understanding of fundamental logistics principles and fluency in the language of logistics.

Audience: Graduate

2. Recognize the key activities performed by the logistics function including distribution, transportation, global logistics, and inventory control.

Audience: Graduate

3. Demonstrate an introductory level of understanding of information technology used in logistics operations.

Audience: Graduate

4. Analyze and use supply chain data to make business decisions in order to expand their applied data analysis skills.

Audience: Graduate

**OTM/MARKETNG 724 – STRATEGIC GLOBAL SOURCING**

3 credits.

Supply management (procurement) is widely recognized as one of the most critical elements in global supply chain management. The function plays a major role in maximizing the value and the integration of supply chain operations. Explores the key aspects of modern supply management including functional responsibilities and exemplary practices for major industry sectors.

**Requisites:** Graduate/professional standing and (MARKETNG 300 and OTM 300) or (MARKETNG 700 and OTM 700)

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Identify the importance of supply management, its functions and impact within firms.

Audience: Graduate

2. Assess which of the generic purchasing process steps add value, explain the basis for that assessment, and suggest possible improvement methods.

Audience: Graduate

3. Demonstrate how to operationalize cost management techniques and use them to make decisions.

Audience: Graduate

4. Apply a proper process in evaluating a decision to outsource and utilize a rigorous approach to the development of service contracts.

Audience: Graduate

5. Apply, at a foundational level, the necessary legal considerations to the examination and implementation of supply management.

Audience: Graduate

6. Identify and define the primary elements of a commercial negotiation process applicable in both domestic U.S. and international venues.

Audience: Graduate

7. Identify and define the major ethical considerations in global supply management.

Audience: Graduate

8. Demonstrate an understanding of the political, economic, social, technological, legal, and environmental (PESTLE) factors that influence sourcing strategies and decision-making.

Audience: Graduate

9. Analyze a supply management scenario to determine the appropriate sourcing strategy, and propose the most effective supplier management processes.

Audience: Graduate

10. Prepare a risk assessment utilizing the knowledge and tools acquired in class.

Audience: Graduate

**OTM/MARKETNG 726 – SUPPLY CHAIN STRATEGY**

3 credits.

Focuses on strategic issues and current theory and practice in supply chain management. Effective design and management of supply chain resources is a key source of competitive advantage for organizations. Supply chain management is a cross-functional discipline that concentrates on the management of goods, services, and information among all links in the value chain.

**Requisites:** (MARKETNG 300 and OTM 300) or (MARKETNG 700 and OTM 700) and graduate/professional standing, or declared in graduate Business Exchange program

**Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Summarize the current theory and practice of supply chain management (SCM)

Audience: Graduate

2. Describe the emergence of SCM as a management function and academic discipline in a global economy

Audience: Graduate

3. Recognize the role of supply chain management in emerging business models

Audience: Graduate

4. Identify supply chain networks and the drivers of supply chain design

Audience: Graduate

5. Describe the impact of product design and innovation on supply chain design and costs

Audience: Graduate

6. Apply the importance of internal coordination and external collaboration to firm performance

Audience: Graduate

7. Demonstrate understanding of the critical and integrative role of supply chain management in business and society

Audience: Graduate

**OTM/MARKETNG 727 – INFORMATION TECHNOLOGY IN SUPPLY CHAINS**

3 credits.

Explores the concepts and practices of using information technology to effectively manage and operate supply chains of businesses and other organizations. Topics include supply chain processes, enterprise resource planning (ERP) system implementation, and supply chain simulations using SAP software.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe key business processes related to supply chain management.

Audience: Graduate

2. Effectively utilize an ERP system to execute key business processes related to supply chain management and have an intermediate level of ability to navigate within an ERP system

Audience: Graduate

3. Identify and analyze appropriate data and information from an ERP system as a means to making measurable improvements in the performance of a business

Audience: Graduate

4. Understand and recognize principles and best practices of implementing enterprise systems and have the ability to articulate common implementation mistakes

Audience: Graduate

**OTM/MARKETNG 728 – SUPPLY CHAIN CAPITAL MANAGEMENT**

3 credits.

Supply chain capital management refers to the set of activities and solutions available to finance an organization's supply chain infrastructure. As supply chains become more extended and complicated a need has developed to both manage and fund the supply network. Define and study the various influencers on the supply chain capital structure. Investigate risks, mitigation techniques, metrics and themes relating to the topic.

**Requisites:** Graduate Students Only

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Analyze multiple aspects of a supply chain network and provide recommendations on how to improve operations and efficiency of a business.

Audience: Graduate

2. Recognize and compose appropriate business contract language.

Audience: Graduate

3. Recognize and interpret financial statements to understand the current financial state of the organization; identify improvement opportunities and develop solutions to improve the entity's performance.

Audience: Graduate

4. Construct specific actions to take to improve working capital efficiency and release.

Audience: Graduate

5. Articulate the impact of geopolitical and international issues on supply chains.

Audience: Graduate

**OTM 737 – GLOBAL SUPPLY CHAIN**

2 credits.

Strategies, techniques, and best practices of global supply chain management through the lens of recent supply chain disruptions. Topics include global logistics strategy, supply chain risk management, international transportation methods, international terms of commerce, outsourcing strategy, and supply chain IT systems.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Demonstrate understanding of fundamental global supply chain principles and fluency in the language of supply chain management.

Audience: Graduate

2. Articulate business challenges related to recent supply chain disruptions and relate strategies and frameworks from the course to address these challenges.

Audience: Graduate

3. Describe key management functions performed by supply chain practitioners including establishing a global logistics strategy, setting supply chain metrics, assessing and building supplier resilience, managing global transportation systems, and establishing outsourcing relationships.

Audience: Graduate

4. Utilize an enterprise resource planning (ERP) system to execute global supply chain business processes while analyzing appropriate data and information as a means to make measurable improvements in the performance of a business.

Audience: Graduate

5. Identify country-specific aspects of this country's supply chain infrastructure and logistics service providers.

Audience: Graduate

**OTM 751 – SERVICE OPERATIONS MANAGEMENT**

3 credits.

Application of operations management principles to the analysis of service-delivery systems in profit and nonprofit organizations. Topics include designing service-delivery systems, location and layout, operations planning and control, yield management, technology and information systems, and service quality management.

**Requisites:** OTM 700 and GEN BUS 704

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Utilize qualitative frameworks and quantitative tools to explain the tradeoffs involved in achieving a timely, high-quality, profitable service operations.

Audience: Graduate

2. Describe the function and importance of each element in the design of a service utilizing the Service Design Framework: Service Act, Strategic Priorities, Delivery System, Funding Mechanism.

Audience: Graduate

3. Evaluate service strategies and delivery systems in real companies utilizing the Service Design Framework, including identification of the service strategy being applied and explaining how facets of the service delivery system support or weaken this strategy.

Audience: Graduate

4. Recognize how to manage variability and uncertainty in delivery systems through appropriate capacity planning, queue design, and revenue management.

Audience: Graduate

**OTM 752 – PROJECT MANAGEMENT**

1-3 credits.

During their careers, managers spend a significant amount of time either participating in or leading projects. While every project is unique, some concepts and tools in project management apply to a wide range of projects. Equips students with these concepts and tools, and to develop them into successful project managers (and team members). Focuses on broadly applicable concepts and methods and will cover both qualitative and quantitative aspects of project management. Key topics include Project Initiation, Scheduling, Resource Management, Monitoring, Valuation, Risk Management, Agile Project Management, Project Portfolio Management and Contracting.

**Requisites:** Graduate/professional standing**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Summer 2025**Learning Outcomes:** 1. How to manage time and resources in a project.

Audience: Graduate

2. How to develop a project charter.

Audience: Graduate

3. How to deal with risk and uncertainty in a project.

Audience: Graduate

4. How to monitor and control a schedule and budget.

Audience: Graduate

5. Differentiate between traditional and agile project management approaches.

Audience: Graduate

6. Understand the complexity and strategic nature of project portfolio decisions.

Audience: Graduate

7. Understand details of contracting in a project.

Audience: Graduate

**OTM 753 – HEALTHCARE OPERATIONS MANAGEMENT**

2-3 credits.

Healthcare delivery systems around the world struggle with three fundamental issues: patient access to care, quality and safety in the care process (including patient and staff satisfaction), and cost of care. These issues will be examined along with selected analysis and improvement approaches that the discipline of Operations Management can offer. Different types of both clinical and non-clinical processes in hospital settings are illustrated.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement**Repeatable for Credit:** No**Last Taught:** Fall 2024**Learning Outcomes:** 1. Apply common terminology and concepts as used in various healthcare delivery environments.

Audience: Graduate

2. Describe commonly recognized operational and financial problems with healthcare delivery systems.

Audience: Graduate

3. Explain different ways to design, organize, and manage healthcare delivery systems.

Audience: Graduate

4. Identify various key measures used to assess healthcare system performance.

Audience: Graduate

5. Explain various process types in healthcare delivery systems.

Audience: Graduate

6. Understand how to improve the success of sustaining and spreading healthcare system performance and practices.

Audience: Graduate

7. Map patient and information flows, analyze system capacity, and apply operational performance metrics.

Audience: Graduate

8. Analyze problems in healthcare delivery systems and apply A3 Thinking and selected operations management/Lean Tools in developing proposals for solution.

Audience: Graduate

9. Analyze delivery systems from an operational perspective, while also considering patient experience and staff satisfaction.

Audience: Graduate

10. Recognize managerial issues surrounding attempts to resolve problems in healthcare delivery and adapt solution implementations accordingly.

Audience: Graduate

### OTM 758 – MANAGING TECHNOLOGICAL AND ORGANIZATIONAL CHANGE

3 credits.

Issues surrounding strategic decisions to adopt new technologies and modern improvement philosophies, the impact these will have on the organization and its members, obstacles preventing successful implementations, and the effective management of change processes. Change triggered by process technologies, and models of change management, form the core of the course.

**Requisites:** OTM 700

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2023

### OTM 760 – MANAGING BY DESIGN

2-3 credits.

Exploration of design as a new practice in management that serves the need for identifying innovation opportunities in all types of organizations. Includes readings and cases in design/management and a set of creative projects that advance design skills in the context of management.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Explain the relevance of design ideas to management practice – how to do more with less, to align and lead teams through a lean, efficient and vetted process for creative innovation.  
Audience: Graduate

2. Describe the role and potential of digital technologies in delivering novel experiences.  
Audience: Graduate

3. Describe how synthetic thinking complements analytic thinking.  
Audience: Graduate

4. Practice considering the human experience of products, services, and systems.  
Audience: Graduate

5. Explain how design can operate at all levels in an organization and is not limited to obvious domains, such as product development or communications department.  
Audience: Graduate

6. Apply creative ideas and methods of design that develop management skills and techniques, i.e., make small bets fast, evaluate failure intelligently and harness breakthroughs to propel company growth or social good.  
Audience: Graduate

7. Develop skills and perspectives on in-market experiments that save time and resources while revealing smarter outcomes.  
Audience: Graduate

8. Reflect on how you can become a more innovative thinker and leader.  
Audience: Graduate

### OTM 765 – CONTEMPORARY TOPICS

1-4 credits.

Exploration of advanced subject areas possibly to be introduced into the business curriculum.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

**OTM 770 – SUSTAINABLE APPROACHES TO SYSTEM IMPROVEMENT**

4 credits.

Innovative system-improvement concepts and approaches that sustainably strengthen mission-central concerns such as quality, cost, customers, markets, revenue, profit, brand, reputation, sourcing, quality of work life, natural capital, buildup of concentrations and base of the pyramid.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2021

**OTM 777 – TECHNOLOGY STRATEGY AND PRODUCT MANAGEMENT APPLIED LEARNING**

1 credit.

Exposure to emerging and current topics in Technology Strategy and Product Management (TSPM) through applied learning experiences that may include case studies, guest speakers, industry meetings, and career and leadership development exercises and workshops.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, for 2 number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Expand professional network and reflect on interactions with industry professionals

Audience: Graduate

2. Identify career pathways and roles within TSPM (Technology Strategy and Product Management)

Audience: Graduate

3. Demonstrate professional skills, both written and verbal

Audience: Graduate

**OTM/E P D/GEN BUS 784 – PROJECT MANAGEMENT ESSENTIALS**

1 credit.

Techniques that will help to plan, execute, and deliver projects with desired scope on time and on budget. Learn to document clear project objectives and goals, accurately estimate project time and costs, schedule and allocate time-critical resources, and establish feedback systems for optimal project control.

**Requisites:** Graduate/professional standing or declared in graduate Business Exchange program

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Summer 2023

**Learning Outcomes:** 1. Plan and manage successful engineering projects using appropriate methods, tools, and techniques

Audience: Graduate

2. Estimate project costs, resources, and schedules

Audience: Graduate

3. Immediately apply project management principles regarding the five major project stages: initiate, plan, execute, control, and close

Audience: Graduate

4. Apply or customize the project management framework to engineering organizational needs

Audience: Graduate

5. Assess and improve the current project management system

Audience: Graduate

**OTM 799 – READING AND RESEARCH-OPERATIONS AND INFORMATION MANAGEMENT**

1-6 credits.

Individual work suited to the needs of graduate students.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**OTM 990 – OPERATIONS AND INFORMATION MANAGEMENT-INDEPENDENT RESEARCH PH.D. THESIS**

1-12 credits.

Individual work to complete dissertation requirement of Ph.D. program.

**Requisites:** Consent of instructor

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Summer 2025

### OTM 999 – READING AND RESEARCH-OPERATIONS AND INFORMATION MANAGEMENT PHD

1-6 credits.

Individual work suited to the needs of Ph.D. students may be arranged both during regular sessions and during the intersession periods.

**Requisites:** Declared in Business PHD

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Fall 2024

## OPHTHALMOLOGY AND VISUAL SCIENCES (OPHTHALM)

### OPHTHALM 699 – DIRECTED STUDY

1-5 credits.

Directed study projects as arranged with faculty member.

**Requisites:** Consent of instructor

**Course Designation:** Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Apply concepts learned in coursework to real life situations

Audience: Undergraduate

2. Read and effectively search scientific literature

Audience: Undergraduate

3. Develop critical, analytical, and independent thinking skills

Audience: Undergraduate

4. Gain research experience in an area of interest

Audience: Undergraduate

5. Develop/improve scientific writing skills.

Audience: Undergraduate

### OPHTHALM 750 – OCULAR DISEASES OF THE MAMMALIAN VISION SYSTEM

3 credits.

An integrated approach to basic aspects of the mammalian visual system from anatomy and molecular/cellular biology to current and future therapeutic treatments of common ocular disorders. Seven general areas being covered include development and anatomy of the eye, physiology of the visual system, immunology and ocular surface diseases, retinal diseases, glaucoma, and translational approaches to vision research.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Understand the basic elements of ocular development, anatomy, and visual processing in mammals

Audience: Graduate

2. Apply basic knowledge of the visual system to understand pathologic mechanisms of common ocular diseases

Audience: Graduate

3. Understand how modern therapeutic interventions work

Audience: Graduate

4. Use the foundational knowledge in the first 3 outcomes to analyze and evaluate new therapeutic strategies

Audience: Graduate

### OPHTHALM 910 – INDEPENDENT READING AND RESEARCH FOR FOURTH YEAR MEDICAL STUDENTS

2-8 credits.

Independent research under the direct supervision of Ophthalmology faculty. Each student's research project is individualized to meet student research goals within context of faculty research needs.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Formulate a hypothesis or specific objective if study does not involve hypothesis generating research

Audience: Graduate

2. Conduct a thorough literature review of the specific research question

Audience: Graduate

3. Select and apply statistical methodologies appropriate for the proposed research plan

Audience: Graduate

4. Interpret results correctly and in context of previous findings from literature review

Audience: Graduate

**OPHTHALM 911 – INTRODUCTION TO THE VISUAL SYSTEM**

4 credits.

Become familiar with the basic science within ophthalmology.

Comprehensive analysis of four common ophthalmic diseases, including ocular surface infections and immunology, glaucoma, diabetic retinopathy, and age-related macular degeneration.

**Requisites:** MED SC-M 810, 811, 812, and 813

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Describe fundamental principles of diabetic retinopathy.

Audience: Graduate

2. Demonstrate knowledge of fundamental principles of glaucoma.

Audience: Graduate

3. Demonstrate knowledge of fundamental principles age related macular degeneration.

Audience: Graduate

4. Demonstrate knowledge of ocular surface disease including corneal disease and uveitis.

Audience: Graduate

5. Be able to critically analyze and discuss research papers.

Audience: Graduate

6. Be able to complete one research project per week with a research mentor.

Audience: Graduate

**OPHTHALM 919 – INDIVIDUALIZED PHASE 3 CLINICAL ELECTIVE IN OPHTHALMOLOGY**

2-4 credits.

In-depth exposure to ambulatory ophthalmology, operative ophthalmology, subspecialty clinics, working under the direct supervision of Ophthalmology faculty, residents, fellows. Complete other patient care related learning activities as assigned by instructors (e.g., literature reviews, presentations on specific topics); these are dependent on the individual student, attending physician, and clinical site. Each student's schedule individualized to meet each location's capacity and student preference.

**Requisites:** Graduate/professional standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Perform a hypothesis driven history and complete a targeted exam.

Audience: Graduate

2. Develop and present a weighted differential diagnosis, diagnostic and treatment plans.

Audience: Graduate

3. Complete written documentation in a comprehensive, concise, accurate and timely manner.

Audience: Graduate

4. Review, interpret and present current literature to support patient care.

Audience: Graduate

5. Develop clinically relevant questions to advance learning.

Audience: Graduate

6. Communicate effectively with patients, families, physicians and non-physician team members.

Audience: Graduate

7. Engage patients in shared decision making regarding tests, orders and procedures.

Audience: Graduate

# PATHO-BIOLOGICAL SCIENCES (PATH-BIO)

## PATH-BIO 150 – CONTEMPORARY TOPICS AND CAREERS IN THE VETERINARY SCIENCES

1 credit.

Topics of importance to the animal health field.

**Requisites:** None

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Articulate multiple career paths that a person can take if interested in a career in animal health and veterinary medicine.

Audience: Undergraduate

2. Describe the requirements and process for applying to veterinary medical school.

Audience: Undergraduate

3. Understand how to engage in career exploration.

Audience: Undergraduate

## PATH-BIO/PATH 210 – HIV: SEX, SOCIETY AND SCIENCE

3 credits.

HIV kills three million people per year, more than any other infectious disease. We will learn about the transmission, immunology, virology, vaccinology and societal impact of this virus. Six of the world's leading HIV scientists will give guest lectures.

**Requisites:** None

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Elementary

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Use science as a tool for understanding the world and solving problems.

Audience: Undergraduate

2. Understand how scientific data, social context, and political decisions impact prevention and treatment of infectious diseases in different community contexts.

Audience: Undergraduate

3. Identify obstacles to implementing effective disease interventions and understand ways to evaluate those interventions.

Audience: Undergraduate

4. Describe the steps of the HIV viral life cycle.

Audience: Undergraduate

5. Discuss how HIV's replication process leads to immune deficiency and AIDS.

Audience: Undergraduate

6. Describe immune responses against viral infection and list reasons why these responses fail to clear HIV infection.

Audience: Undergraduate

7. List reasons why it is challenging to cure HIV infection.

Audience: Undergraduate

8. Discuss approaches for making vaccines against other pathogens and list reasons why it is challenging to apply these approaches to HIV.

Audience: Undergraduate

9. Discuss and evaluate approaches for slowing the spread of HIV in the United States and other countries.

Audience: Undergraduate

10. Describe the processes by which HIV emerged to become a human pathogen.

Audience: Undergraduate

11. Discuss the sources of funding for the global response to HIV/AIDS and evaluate the efficacy of each in achieving its goals.

Audience: Undergraduate

12. Apply the concepts learned in relation to HIV to other emerging and re-emerging pathogens, such as Ebola virus, Zika virus, and/or SARS-CoV-2.

Audience: Undergraduate

### PATH-BIO 299 – INDEPENDENT STUDY

1-3 credits.

**Requisites:** Consent of instructor

**Repeatable for Credit:** Yes, unlimited number of completions

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Summarize intellectual growth associated with independent study work through mentor discussion

Audience: Undergraduate

2. Identify diversity of viewpoints through critical thinking

Audience: Undergraduate

3. Illustrate growth in reading, writing, and communication skills

Audience: Undergraduate

### PATH-BIO 307 – SUPERBUGS, SEX, & DRUGS: WHY MODERN MEDICINE NEEDS EVOLUTIONARY BIOLOGY

2 credits.

Explore the new frontier of evolutionary and ecological solutions to public health challenges through analyses and discussions. Evolution is often viewed as a purely historical topic disconnected from modern practical concerns. This view is incomplete: evolution plays a key role in many areas of modern life and underlies many public health challenges like drug resistance in bacteria and cancer, vaccine development, circadian medicine, and the 'spill-over' of pathogens from wildlife to humans (and vice versa). These issues, however, are intricately connected to social drivers like the use of antibiotics to treat viruses or as growth promoters in livestock. More evolutionary-guided solutions to understanding and addressing these challenges are critical for a sustainable and healthy future.

**Requisites:** (ZOOLOGY/BIOLOGY/BOTANY 151, BOTANY/BIOLOGY 130, ZOOLOGY/BIOLOGY 101, 102, or BIOCORE 381) and sophomore standing

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Learning Outcomes:** 1. Investigate the myriad ways in which a new (evolution-informed) way of looking at the world of veterinary and human medicine and public health is beneficial and necessary for modern medicine.

Audience: Undergraduate

2. Compare how goals of personal medicine and public health are similar and dissimilar.

Audience: Undergraduate

3. Evaluate case studies to compare how evolutionary principles can be used to improve standard approaches to treating cancer and drug resistant sexually transmitted infections, STIs.

Audience: Undergraduate

4. Articulate the consequences of pathogen evolution for disease outbreaks and control.

Audience: Undergraduate

5. Describe the genetic and behavioral reasons why there are increasing numbers of antibiotic resistant infections.

Audience: Undergraduate

6. Read and analyze data on the health status of populations.

Audience: Undergraduate

7. Critically evaluate and effectively use textbooks, current research literature, online information, as well as information related to scientific and biological issues in the popular press.

Audience: Undergraduate

**PATH-BIO/ENTOM/M M & I/ZOOLOGY 350 – PARASITOLOGY**

3 credits.

The biology of water-borne, food-borne, soil-borne and vector-borne parasites of animals including humans. Parasites are explored in the context of transmission, associated disease, diagnosis and treatment options, and environmental, cultural and socioeconomic drivers of disease epidemiology.

**Requisites:** ZOOLOGY/BIOLOGY 101 and 102, or ZOOLOGY/BIOLOGY/BOTANY 152 or ZOOLOGY 153, or BIOCORE 381

**Course Designation:** Breadth – Biological Sci. Counts toward the Natural Sci req

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Be conversant in terminology used in the field of Parasitology.

Audience: Undergraduate

2. Recall scientific and common names for parasites and hosts, and the name of the resulting disease in humans or animals.

Audience: Undergraduate

3. Attribute parasite behavior and characteristics to specific disease features in the host.

Audience: Undergraduate

4. Identify appropriate means to diagnose infections with parasites.

Audience: Undergraduate

5. Describe and identify factors that determine when, where, and why parasitic diseases exist.

Audience: Undergraduate

6. Integrate terminology, scientific nomenclature, diagnostic features and demographics to solve case studies where the parasitic culprit is unknown.

Audience: Undergraduate

7. Compare and contrast commonalities in parasite life cycles to demonstrate how flexibility in those life cycles has resulted in many different potential means of transmission.

Audience: Undergraduate

8. Deconstruct the impact of parasitic diseases on human and animal health, from disease symptoms and pathology in an individual, to socioeconomics in communities and countries.

Audience: Undergraduate

9. Identify reliable resources (primarily internet-based) available for researching the biology and epidemiology parasitic diseases.

Audience: Undergraduate

**PATH-BIO/MED HIST 370 – ADDRESSING CONTROVERSY: THE SCIENCE, ETHICS, AND PUBLIC DISCUSSION OF ANIMAL RESEARCH**

3 credits.

Addresses the science, ethics, history, and communication strategies associated with the use of animals in research. Seeks to identify and employ common ground among those with different perspectives to enable students to make good decisions about this contentious topic.

**Requisites:** Satisfied Communications A requirement

**Course Designation:** Gen Ed – Communication Part B

Breadth – Either Humanities or Natural Science

Level – Intermediate

L&S Credit – Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Spring 2024

**Learning Outcomes:** 1. Identify and employ communication practices that encourage tolerant and non-threatening discussion of controversial topics.

Audience: Undergraduate

2. Explain how scientific knowledge is acquired, with special reference to research with animals.

Audience: Undergraduate

3. Explain and compare ethical principles associated with animal use in research.

Audience: Undergraduate

4. Explore and apply principles of effective communication of complex and value-laden science.

Audience: Undergraduate

5. Describe the history and evaluate the present status of the animal research controversy.

Audience: Undergraduate

6. Construct and critique written and verbal presentations about animal research.

Audience: Undergraduate

7. Refine and defend your own position on animal research in a respectful and non-judgmental way that encourages additional dialog.

Audience: Undergraduate

8. Identify common ground among differing perspectives on animal research, and develop best practices for communicating this subject to diverse audiences.

Audience: Undergraduate

9. Practice critical reading, logical thinking, and the use of evidence.

Audience: Undergraduate

10. Employ appropriate style and disciplinary conventions in writing and speaking.

Audience: Undergraduate

11. Learn to use core library resources specific to the discipline.

Audience: Undergraduate

### **PATH-BIO 510 – VETERINARY IMMUNOLOGY**

3 credits.

Current concepts in basic and clinical immunology with special emphasis on domesticated species and aspects of immunology.

**Requisites:** Declared in Doctor of Veterinary Medicine with second year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Discuss and apply how the immune system in a healthy animal protects its host from infection and neoplasia.

Audience: Graduate

2. Discuss and apply the mechanisms underlying the failure of the body's defenses to protect against infections and neoplasia.

Audience: Graduate

3. Discuss and apply the mechanisms and consequences of over-reactions of the immune system.

Audience: Graduate

4. Discuss and apply how immune system can be manipulated by vaccination to protect against infections and other strategies to combat transplant rejection and treat cancer.

Audience: Graduate

5. Discuss and apply the immunological principles of diagnostic tests and how to interpret the results

Audience: Graduate

### **PATH-BIO 512 – INTRODUCTION TO VETERINARY EPIDEMIOLOGY**

2 credits.

Learn basic concepts and approaches to population problems in veterinary medicine. Methods appropriate to investigation of disease outbreaks, surveillance of animal disease and production and the design of epidemiological studies of the determinants of disease are presented.

**Requisites:** Declared in Doctor of Veterinary Medicine with second year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply the principles of causal inference to health-related outcomes

Audience: Graduate

2. Recognize the effects of bias, confounding and interaction on medical research

Audience: Graduate

3. Assess and evaluate health-related risk

Audience: Graduate

4. Measure and analyze patterns of health-related outcomes in populations

Audience: Graduate

5. Interpret diagnostic test results

Audience: Graduate

6. Evaluate the validity of medical information

Audience: Graduate

7. Communicate medical and scientific information to clients and the public.

Audience: Graduate

**PATH-BIO 513 – VETERINARY VIROLOGY**

2 credits.

Introduction to basic concepts in virology and covers biology and pathogenesis of viral diseases of animals with an emphasis on viruses important to veterinary medicine.

**Requisites:** Declared in Doctor of Veterinary Medicine with second year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Apply basic concepts of virology, including structure, replication strategies, pathogenesis, evolution, and antiviral therapy, to viral diseases

Audience: Graduate

2. Recall viral diseases and prion diseases of animals that are important in veterinary medicine and as zoonoses, describing clinical disease, prevention and control

Audience: Graduate

3. Integrate knowledge of pathogenesis to describe pathophysiology of viral diseases

Audience: Graduate

4. Apply concepts of diagnostic testing to diagnose viral diseases

Audience: Graduate

5. Analyze primary veterinary literature in the context of viral diseases

Audience: Graduate

6. Communicate concepts of viral diseases to a defined audience, such as clients, public health, or veterinary professionals

Audience: Graduate

7. Identify viral diseases that are considered foreign animal diseases

Audience: Graduate

**PATH-BIO 514 – VETERINARY PARASITOLOGY**

3 credits.

Basic veterinary parasitology with emphasis on biology, diagnosis, pathophysiology, treatment and management of parasitic infections of veterinary importance.

**Requisites:** Declared in Doctor of Veterinary Medicine with first year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Name and classify important veterinary parasite species by their scientific and/or common names, as appropriate.

Audience: Graduate

2. Recognize parasites based on the morphological features of different stages. Recognize the general size, shape, and diagnostic features of adults, larvae, eggs, cysts, etc.

Audience: Graduate

3. Identify how parasites of veterinary importance are transmitted.

Describe salient features of the life cycles of these parasites, including as definitive hosts, intermediate hosts, paratenic hosts, infective parasite stages, prepatent and patent periods, etc.; other factors influencing transmission such as host environment, diet, season, etc.

Audience: Graduate

4. Discuss the effects of parasites on their hosts. Describe the conditions under which disease is produced, the clinical signs and characteristics of disease, the role of host immunity, pathogenic mechanisms, and parasite stages responsible for pathology.

Audience: Graduate

5. Explain how parasite infections are diagnosed, treated and controlled. Describe techniques of diagnosis, availability and efficacy of treatment, and the respective roles of different methods of control (e.g., vector control, management practices, chemotherapy).

Audience: Graduate

**PATH-BIO 515 – REGULATORY VETERINARY MEDICINE AND PUBLIC HEALTH**

2 credits.

Role and regulatory obligations of the veterinary profession in preventing zoonoses, understanding the need for judicious use of antibiotics, and promoting the safety of food of animal origin.

**Requisites:** Declared in Doctor of Veterinary Medicine with third year standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Summarize and compare the clinical presentations of selected zoonotic diseases in both animals and humans.  
Audience: Undergraduate

2. Explain at a technical level, and in a language appropriate for educating clients, the role(s) that animals play in disease transmission and the relative risks for human infections posed by contact with animals.  
Audience: Undergraduate

3. Uphold the premise that “One Health” is an important framework for addressing important public health challenges and describe the ways that veterinarians are involved.  
Audience: Undergraduate

4. Outline the roles and responsibilities of veterinarians and government agencies in animal importation, response to disasters, animal abuse, and the control of zoonotic and animal diseases.  
Audience: Undergraduate

5. Outline the roles played by veterinarians in the safety of food of animal origin and how carcasses are processed and inspected.  
Audience: Undergraduate

6. Explain ways that veterinarians work to decrease antibiotic and other drug residues in food products and stem the emergence of antibiotic resistance through careful stewardship of antibiotics.  
Audience: Undergraduate

**PATH-BIO 517 – VETERINARY BACTERIOLOGY AND MYCOLOGY**

4 credits.

Emphasis on the pathogenesis of bacterial and fungal diseases of animals. Become familiar with the methods used to identify representative bacterial and fungal pathogens.

**Requisites:** Declared in Doctor of Veterinary Medicine with second year standing

**Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Construct a valid differential diagnosis list of bacterial or fungal organisms contributing to disease, given a patient signalment, presenting complaint, physical examination, and pertinent laboratory data.  
Audience: Graduate

2. Describe methods for proper collection and transport of samples for bacterial or fungal culture and identification.  
Audience: Graduate

3. Perform basic laboratory tests for identification of bacterial and fungal species (e.g. streak a bacterial culture plate, Gram stain, microscopic identification of bacterial and fungal organisms).  
Audience: Graduate

4. Prepare an appropriate diagnostic plan and interpret diagnostic test results for bacterial and fungal organisms.  
Audience: Graduate

5. Describe important features of treatment for bacterial and fungal diseases of veterinary species.  
Audience: Graduate

6. Discuss the importance of proper disinfection techniques for prevention of bacterial and fungal diseases.  
Audience: Graduate

**PATH-BIO 525 – ACTIVE, INTEGRATED LEARNING I**

1 credit.

Active Learning experience highlighting problem solving and critical thinking that horizontally and vertically integrates material from other veterinary medicine courses by using exercises constructed in the context of clinical cases or scenarios.

**Requisites:** Declared in Doctor of Veterinary Medicine with second year standing

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Create medical problem lists for individual animals and groups of animals using information collected from the signalment, history, physical examination, laboratory tests, diagnostic imaging, and additional ancillary tests and investigations.

Audience: Undergraduate

2. Develop a comprehensive differential diagnosis based on the presenting complaint, that is organized by body system or mechanisms of disease, and select relevant disorders for a ranked differential diagnosis based on collected evidence.

Audience: Undergraduate

3. Develop a diagnostic plan based on the ranked differential diagnosis.

Audience: Undergraduate

4. Prepare rounds presentations (short summaries), in an organized and succinct manner using medical terminology, that can be used for clinical presentations or with submissions for ancillary testing.

Audience: Undergraduate

5. Replicate these analytical problem-solving skills for diverse animal species that present with various complaints.

Audience: Undergraduate

6. Capitalize on the strengths of teams that are diverse in experience, interest, and problem-solving preference to explain and communicate complex clinical problems in a respectful and responsible manner.

Audience: Undergraduate

**PATH-BIO 526 – ACTIVE, INTEGRATED LEARNING II**

1 credit.

Active Learning experience highlighting problem solving and critical thinking that horizontally and vertically integrates material from other veterinary medicine courses by using exercises constructed in the context of clinical cases or scenarios.

**Requisites:** Declared in Doctor of Veterinary Medicine with second year standing

**Repeatable for Credit:** No

**Last Taught:** Spring 2025

**Learning Outcomes:** 1. Create medical problem lists for individual animals and groups of animals using information collected from the signalment, history, physical examination, laboratory tests, diagnostic imaging, and additional ancillary tests and investigations.

Audience: Undergraduate

2. Develop a comprehensive differential diagnosis based on the presenting complaint, that is organized by body system or mechanisms of disease, and select relevant disorders for a ranked differential diagnosis based on collected evidence.

Audience: Undergraduate

3. Develop a diagnostic plan based on the ranked differential diagnosis.

Audience: Undergraduate

4. Prepare rounds presentations (short summaries), in an organized and succinct manner using medical terminology, that can be used for clinical presentations or with submissions for ancillary testing.

Audience: Undergraduate

### **PATH-BIO/M M & I 528 – IMMUNOLOGY**

3 credits.

Development and functions of immune response in animals; a comprehensive study of experimental humoral and cellular immunity.

**Requisites:** (CHEM 104 or CHEM 109) and (ZOOLOGY/BIOLOGY 101, ZOOLOGY/BIOLOGY/BOTANY 151 or BIOCORE 383), or graduate/professional standing

**Course Designation:** Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

**Repeatable for Credit:** No

**Last Taught:** Fall 2024

**Learning Outcomes:** 1. Identify lymphatic tissues and describe their functions

Audience: Undergraduate

2. Differentiate between innate and adaptive immune responses

Audience: Undergraduate

3. State the products of B and T cell activation in adaptive immunity

Audience: Undergraduate

4. Describe the steps in B and T cell activation and the immune mechanisms regulating their activity

Audience: Undergraduate

5. Explain how the adaptive immune system recognizes diverse antigens

Audience: Undergraduate

6. Summarize coordination of innate and adaptive immune responses in host defense against cancer and infectious diseases

Audience: Undergraduate

7. List examples of when the immune system goes awry (hypersensitivity, autoimmunity)

Audience: Undergraduate

8. Apply course concepts to design new therapies for cancer, infectious disease, or organ transplant
