CARTOGRAPHY AND GEOGRAPHIC INFORMATION SYSTEMS, BA

LEARNING OUTCOMES

LEARNING OUTCOMES

- 1. Apply cartographic design principles and visual storytelling to transform geospatial data into actionable insights.
- Apply appropriate technologies and methods, including geographic information systems (GIS) and informed geodatabase design, to analyze qualitative and quantitative geospatial data.
- Use appropriate geographic concepts, methods, and technologies to interpret the dynamic interactions among human and natural characteristics of place and space.
- Combine geospatial theories, methodologies, and project management strategies to design and conduct ethical cartographic and geographic research and development.
- 5. Utilize appropriate GIS-based spatial decision tools to inform discussions of social, economic, and environmental issues that confront policymakers and citizens.
- Discuss complex geospatial data, concepts, and technologies using written, oral, and visual forms of communication appropriate for technical, non-technical, and community-based audiences.
