

GEOGRAPHY, B.A.

Are you passionate about environmental sustainability? Are you curious about what a socially just world might look like? Do you find physical landscapes inspiring? Are you interested in the analysis and visualization of data? Are you intrigued by the diversity of people and places around the world? Do you find the social life of cities fascinating? Are you kept up at night wondering why some places are rich while others are poor? If you answered “yes” to any of these questions, but especially more than one, Geography could be a great fit for you. Geography is especially ideal for individuals who have a wide range of interests spanning the natural sciences, humanities, social sciences, and data sciences.

Geography is an interdisciplinary field that seeks to understand patterns and interrelationships on Earth. These range from humans' relationships with the environment and the interactions of earth systems to the social worlds and built environments that different societies build to mapping and spatial analysis of big data. It is a rich and vibrant discipline that is essential to understanding the world and many of its problems. Geography thus offers a unique lens through which to illuminate the intertwined places, societies, and ecologies that comprise our diverse world.
