## 1

## GEOLOGY AND GEOPHYSICS, B.A.

## LEARNING OUTCOMES

- Acquire quantitative and spatial reasoning skills and the ability to apply those skills to problems in geoscience.
- 2. Be able to explicate key biological, chemical and physical Earth structures, processes, the interactions between them, and the roles that they play in determining the state of the Earth system.
- 3. Utilize geological observations and measurements to solve problems involving the timing of geological events in Earth history.
- 4. Combine data and lab/field-based observations into a novel synthesis and/or description/model of how Earth systems operate.
- Be able to critique published scientific data, results, and interpretations thereof, as well as identify and assess related work in the scientific literature.
- 6. Be able to effectively communicate scientific concepts, methods, and results
